TRANSCRIPT OF RECORD

SUPREME COURT OF THE UNITED STATES

OCTOBER TERM, 1957

No. 29

THE UNITED STATES, PETITIONER,

vs.

CENTRAL EUREKA MINING COMPANY (A CORPORATION), ALASKA-PACIFIC CONSOLIDATED MINING COMPANY, IDAHO MARYLAND MINES CORPORATION, ET AL.

ON WRIT OF CERTIORARI TO THE UNITED STATES COURT OF CLAIMS

PETITION FOR CERTIORARI FILED OCTOBER 24, 1956

CERTIORARI GRANTED JANUARY 14, 1957

(Pages (1 to 862)

THE UNITED STATES

[fol. 128] REPORT OF COMMISSIONER

To the Honorable the CHIEF JUDGE AND ASSOCIATE JUDGES OF THE UNITED STATES COURT OF CLAIMS:

Pursuant to the orders of reference in the above-entitled cases, the undersigned Commissioner makes the following report of his findings of fact on all of the above-named cases which, by agreement among counsel at pretrial, have been consolidated for trial on the issue of liability only:

[fols. 129-137] 4. In the decisions by OPM and WPB to issue a "P", "M", or "L" order there was involved the consideration of a complexity of economic and production factors, but in general the principal purposes served by issuance of such orders were the conserving of essential materials, the conserving of the equipment used by non-essential industries, and the maximum utilization of available manpower. In different orders, a different purpose would be paramount.

[fol. 138] 18. By July 1942, there were indications that the production of nonferrous metals in the United States, particularly copper, would not be adequate to meet current and anticipated demands. This condition was due to very greatly increased wartime requirements and to a growing shortage of miners. Experienced copper miners were leaving the mines in large numbers, among other reasons because of the higher wages offered by the aircraft and shipbuilding plants and withdrawals due to Selective Service. Production was also hampered by low morale of the miners, their tendency to work a short week, and the lack of any organized program of recruitment of workers for this industry. An informal committee organized by officials of the War Department to develop a program for increasing production in the copper mining industry, submitted a re-

port on July 8, 1942. In that report it outlined the problem in the following terms:

* * * * * * *

> Since February of this year, the amount of copper allocated to mills to fill the orders of the Army and Navy has steadily fallen below the amount required for these orders; increasing from a net shortage of 9,000 tons in March to a net shortage of 23,000 tons in June.
>
> [fol. 139] The success of our armament program, consequently, is basically dependent on our ability to increase the production of basic raw materials such as copper and other nonferrous metals.
>
> The basic factors preventing or seriously hampering the desired increase in output in the copper mining industry are out-migration of the present labor force to other war industries because of more attractive wages and working conditions, excessive labor turnover within the industry, low morale of workers, the tendency of miners to work a short week, the effects of Selective Service withdrawals, and the lack of an organized program of recruitment of workers for this industry. In some important district[s] of Utah, Idaho, and Montana, the replacement of miners has been virtually impossible. In Arizona, Montana, and Utah, production schedules have already been retarded as a result of labor stringency.

* * * * * * *

Labor scouts employed by the aircraft and shipbuilding plants were working through the mountain states offering high wages and inducing men to leave the mines. The situation had become serious and WPB officials, aware of the foregoing facts, anticipated that it would become more serious in future months as a result of the continually increasing out-migration of copper miners from the mines. [fols. 140-152] 20. While this committee was studying the problem, the Labor Production Division of WPB began to give consideration to the shortage of miners in the nonferrous mining industry. The primary function of this Division was to develop programs for the best utilization

of labor in various industries. On July 4, 1942, the Acting Chief of the Priorities Branch of this Division sent a memorandum to the Director of Operations of the War Manpower Commission. In this memorandum he analyzed the May reports of the United States Employment Service. After pointing out the acute labor shortage in the nonferrous mining industry, he pointed out that in 1941 the 15 largest producers of gold in seven Western States had had 6,700 employees, that their gold mines were frequently located close to other nonferrous mining enterprises, all of which were experiencing labor shortages, and that some of the gold mines were owned by companies which operated nearby copper and zinc mines. He concluded as follows:

> Steps should be taken to remedy the critical labor situation in nonferrous metal mining, including arrangements for the transfer of miners from gold and silver mining to copper, lead, zinc, tungsten, chrome, and molybdenum mining. This can be done through curtailment of gold and silver production, but it would be necessary to make sure that the workers released went into nonferrous metal mining and did not go into war plants in the vicinity or on the West Coast. It has been customary for metal miners in the mountain states to move considerable distances with the opening and closing of mines and ordinary turnover.

[fols. 153-155] 29. The minutes of the interdepartmental Committee on Non-Ferrous Metals for September 15, 1942, provide in part as follows:

* * * * * * *

> Dr. M. Stow presented a report on the proposed order to curtail gold mining operations. He distributed a copy of the proposed order which, he said, had been brought up for consideration before the Clearance Committee.
>
> Dr. Stow explained that the persons responsible for drafting the order favored the method of curtailing gold mines by denying them serial numbers under P-56, rather than the type of blanket order which would shut down any gold mine whose gold ore production was above a stipulated proportion of its total produc-

tion by dollar value. Under the former type of order the gold mines would be closed by being denied serial numbers under P-56, as a result of which they would be unable to obtain either supplies or equipment and would be prohibited from using their present supplies and equipment.

* * * * * * *

The meeting was attended by representatives of the various minerals branches, the Mining Branch, the Labor Production Division, and the Legal Division of the War Production Board, as well as representatives of the War Manpower Commission, the Office of Price Administration, and the War Department. Dr. Wilbur Nelson presided at the meeting. Dr. Stow was immediately subordinate to Dr. Wilbur Nelson in the Mining Branch.

[fol. 156] 35. On September 29 Mr. Batt directed that a group of officials of representative gold mines be invited to a meeting in Washington on October 1, 1942. Five officials of gold mines representing about 75 percent of the tonnage of ore hoisted or treated attended, including officials of two of the companies which are plaintiffs in this suit. Several Members of Congress from gold-producing States were also present, as were representatives of the Army and the War Manpower Commission, as well as numerous representatives of WPB. Arguments were again presented as to the hardships that would be imposed upon the local communities, and even upon the States, if the gold mines were closed. There was also some discussion as to the extent to which gold miners would actually go to the other nonferrous mines.

[fols. 157-158] The latter part of the meeting was devoted to an analysis by the representatives of the gold mines present of available employment statistics, in an attempt to determine the number of miners and muckers who might be released by an order closing the gold mines, as distinguished from the total number of employees who would be released. It was the consensus of their opinion that the gold mines which would be affected by the order employed 3,270 workers, of whom 750 were engaged in dredging and 896 in hard-rock mining. They further believed that about 300 men in the latter category would have to be kept in the mines for maintenance purposes.

[fol. 159] 40. At the meeting of the War Production Board referred to in the preceding finding, the following were present:

Board Members, Alternate and Staff:

Mr. Donald M. Nelson, Chairman.

Vice President Henry A. Wallace, Chairman, Board of Economic Warfare.

Mr. Robert P. Patterson, Under Secretary of War, acting for Mr. Henry L. Stimson, Secretary of War.

Vice Adm. S. M. Robinson, Chief of the Office of Procurement and Material, Navy Department, acting for Mr. Frank Knox, Secretary of the Navy.

Mr. Jesse H. Jones, Secretary of Commerce.

Lt. Gen. William S. Knudsen, Director of Production, War Department.

Mr. Isador Lubin, acting for Mr. Harry L. Hopkins, Special Assistant to the President supervising the Defense Aid Program.

[fol. 160] Mr. Leon Henderson, Administrator, Office of Price Administration.

Mr. John Lord O'Brian, General Counsel, War Production Board.

Mr. W. L. Batt, Vice Chairman, War Production Board.

Mr. Ferdinand Eberstadt, Vice Chairman, War Production Board.

Mr. Milton Katz, Solicitor, War Production Board, acting for Mr. J. S. Knowlson, Vice Chairman, War Production Board.

Mr. Charles E. Wilson, Vice Chairman, War Production Board.

Mr. Ernest Kanzler, Director General for Operations, War Production Board.

Mr. G. Lyle Belsley, Executive Secretary War Production Board.

By Invitation:

Lt. Gen. Brehon B. Somervell, Commanding General, Services of Supply, War Department.

Rear Adm. H. L. Vickery, Vice Chairman, U. S. Maritime Commission.

Brig. Gen. Oliver P. Echols, Assistant for Procure-

ment Services, Office of Chief of Air Corps, War Department.

Mr. Will Clayton, Assistant Secretary of Commerce.

Mr. Paul V. McNutt, Chairman, War Manpower Commission.

Lt. William A. Weber, Assistant to the Vice Chairman, U. S. Maritime Commission.

Mr. Wayne Coy, Assistant Director, Bureau of the Budget.

Mr. Donald R. Belcher, Assistant Chief in Charge of Planning and Statistics, Navy Department.

Mr. A. I. Henderson, Deputy Director General for Industry Operations, War Production Board.

Mr. Robert R. Nathan, Chairman, Planning Committee, War Production Board.

Mr. Simon Kuznets, Chief, Program Analysis and Research Section, Planning Committee, War Production Board.

Mr. Wilbur Nelson, Administrator, Mining Branch, War Production Board.

Mr. Stacy May, Statistics Division, War Production Board.

Mr. Joseph L. Weiner, Deputy Director, Office of Civilian Supply, War Production Board.

Mr. Thomas C. Blaisdell, Jr., Member, Planning Committee, War Production Board.

[fols. 161-163] Mr. Fred Searls, Jr., Member, Planning Committee, War Production Board.

Mr. Frederick Roe, Assistant Executive Secretary, War Production Board.

It is again noted that the power and authority of the War Production Board was, by Executive Order 9024, vested in the Chairman, acting with the advice and assistance of the members of the Board.

[fols. 164-173] 44. The dominant consideration by Chairman Donald Nelson of WPB in the issuance of Limitation Order L-208 was the releasing of mine labor from the gold mines for employment in mines that were producing other metals, such as copper, which were in short supply and urgently needed in the war program. Another consideration in the issuance of the order was as stated in the preamble that the fulfillment of requirements for the defense

of the United States had created a shortage in the supply of critical materials which had been used in the maintenance and operation of gold mines.

Both objectives were in some measure accomplished with the closing of the plaintiffs' gold mines pursuant to the order.

45. Although the evidence is not satisfactory as to the authority of Ernest Kanzler, Director General for Operations, WPB, on October 8, 1942, to actually issue the order, since the parties agree that the order was issued, it is presumed that he was duly authorized by Chairman Donald Nelson to issue the order.

[fol. 174] FINDINGS RELATING TO PLAINTIFF IDAHO MARYLAND MINES CORPORATION

[fol. 175] 83. In May, 1944, the Policy Analysis and Records Branch of WPB submitted a report concerning Limitation Order L-208 providing in part as follows:

> It is generally agreed by the WPB divisions concerned with mining activities that a very small percentage of the released gold mine workers actually were employed by other mines. A majority of them probably went into work of greater value to the war effort than gold mining, such as lumbering, agriculture, construction, shipbuilding, aircraft manufacture;[96] but the fact remains that the primary justification for closing the gold mines was to get labor for the production of the strategic metals. Wilbur Nelson, Arthur S. Knoizen, present Director of the Mining Division, and F. H. Hayes, Chief of the Primary Production Branch

---

[96] A partial analysis based on the records of the Social Security Board indicates that the released gold mine workers went into a wide variety of occupations, including in addition to those mentioned in the text, coal mining, steel working, communications, transportation, and many others; they scattered in short, through a fair cross-section of American industry. Letter, John J. Corson, Director, Bureau of Old Age and Survivors Insurance, Social Security Board, to Stacy May, October 22, 1943.

[fols. 176-177] of the Copper Division, concur in the statement that the number of gold mine workers who went into other mines and remained there for a year or more was not over 100.[97]

84. Idaho Maryland had 212 employees on its payroll as of October 8, 1942. Of that number, 115 were underground workers. There were 81 employees who had terminated their employment with Idaho Maryland after October 8, 1942, who were thereafter reemployed by that firm, which obtained a record of the employees' intervening employment in most but not all instances. Of the 69 as to which the firm had a record of intervening employment, 6 were employed in other mining activities during some or all of the time they were out of the company's employ, 8 were in military service, 4 were employed in the Miners' Foundry, Nevada City, California, 6 worked with the railroads, 4 were employed in shipyards, and the remained as to which there was information were engaged in other types of employment.

[fols. 178-184] FINDINGS RELATING TO PLAINTIFF ALASKA-PACIFIC CONSOLIDATED MINING COMPANY

[fols. 185-188] 109. Although Order L-208 was revoked by the WPB on June 30, 1945, Alaska-Pacific did not resume operations until sometime in 1949.

[fols. 189-190] FINDINGS RELATING TO PLAINTIFF ERMONT MINES, INC.

132. There is no evidence that Ermont's mine was in operation on October 8, 1942, or that it closed as a result of Limitation Order L-208 issued by the War Production Board on that date. There is no evidence as to the number of employees in this mine at any date, as to the amount of any inventory of equipment and operating supplies which

it may have had, or as to the length of time that it could have continued operating its mine without priorities assistance.

Respectfully submitted.

William E. Day, Commissioner

[fols. 191-194] ARGUMENT AND SUBMISSION OF CASES—JAN. 12-13, 1955

On January 12, 1955 argument on the merits was begun by Mr. Edward W. Bourne for plaintiff Homestake Mining Company. Argued on the merits by Phillip Barnett for plaintiff Central Eureka Mining Company, by Mr. George Herrington for Plaintiff Idaho Maryland Mines Corp., and by Mr. O. R. Maguire, Jr., for planitiff Alaska-Pacific Consolidated Mining Company. Argument on the merits was begun by Mr. John Ward Cutler for plaintiffs Oro Fino Consolidated Mines, Inc. and Bald Mountain Mining Co., et al. Argument on the merits was begun by Mr. Kendall M. Barnes for the defendant.

On January 13, 1955, argument on the merits was concluded and the cases submitted on the merits by Mr. Kendall M. Barnes for the defendant, by Mr. Edward W. Bourne for the consolidated plaintiffs and by Mr. John Ward Cutler for plaintiff's Oro Fino Consolidated Mines, Inc., and Bald Mountain Mining Co., et al.

THE UNITED STATES

Opinion—Feb. 20, 1956

[fol. 196] *Mr. Phillip Barnett* for Plaintiff Central Eureka Mining Company. *Messrs. Ralph D. Pittman* and *Rodney H. Robertson* were on the brief.

Mr. John Ward Cutler for Plaintiffs Oro Fino Consolidated Mines, Inc., Bald Monntain Mining Company, Consolidated Mining Company. *Messrs. Hogan & Hartson* and Ermont Mines, Inc.

Mr. O. R. McGuire, Jr., for Plaintiff Alaska-Pacific Consolidated Mining Company. *Messrs. Hogan* x *Hartson* and *V. A. Montgomery* were on the brief.

Mr. George Herrington for Plaintiff Idaho Maryland Mines Corporation. *Messrs. Orrick, Dahlquist, Herrington & Sutcliffe* were on the briefs.

Mr. Edward W. Bourne for Plaintiff Homestake Mining Company. *Messrs. James D. Ewing, Eugene Z. Du Bose, Edward E. Rigney, J. Kenneth Campbell* and *James W. Misslbeck* were on the briefs.

Mr. Kendall M. Barnes, with whom was *Mr. Assistant Attorney General Warren E. Burger*, for the defendant. *Mr. Thomas H. McGrail* was on the brief.

LITTLETON, *Judge*, delivered the opinion of the court:

The plaintiffs were, at the times herein mentioned, the owners and operators of gold mines. On October 8, 1942, the War Production Board issued Limitation Order L-208 requiring certain so-called non-essential mines to close down and cease all mining operations, or any other operations in and about the mines, except to the minimum amount necessary to maintain the mines safe and accessible. Violations of the order were punishable by fine and imprison-

ment. By its terms, the order suspended for the life of the order the right of plaintiffs to mine and sell gold.

It is plaintiffs' contention that this action by the Government amounted in law to a taking, for a public purpose, of their right to make profitable use of their mining properties for which just compensation is due them under the Fifth Amendment to the Constitution. In the alternative, the plaintiffs contend that by virtue of the jurisdiction conferred on this court by the special jurisdictional act of July 14, 1952, 66 Stat. 605, they are entitled to recover for the closing of their mines the amount of losses incurred as a [fol. 197] result of Order L-208. It is plaintiffs' position that in the absence of the special jurisdictional act, this court would not have jurisdiction to render judgment in favor of a gold mine owner for losses incurred unless they could establish a compensable taking, but that the act conferred on this court jurisdiction to render judgment for such losses where they resulted from the issuance of L-208.

Following denial by this court of the Government's motion to dismiss the petition in the case of the *Idaho Maryland Mines Corp.* v. *United States* [1952] 122 C. Cls. 670, the instant cases were consolidated for trial before a commissioner of the court on the question of the Government's liability, the question of just compensation or the amount of damages being reserved for further proceedings.

By the time L-298 was issued by the War Production Board, on October 8, 1942, the President had delegated to that Board all allocation, priorities and requisitioning powers granted to him by Congress,[1] except the power to

---

[1] The Act of June 28, 1940, 54 Stat. 676, as amended by the Act of May 31, 1941, 55 Stat. 236, as further amended by Title III of the Second War Powers Act of March 27, 1942, 56 Stat. 177, gave to the President priorities and allocation powers and the authority to delegate such powers. Section 9 of the Selective Training and Service Act of September 16, 1940, 54 Stat. 885, 892, gave the President the power to place mandatory orders for products or materials required for the national defense, and provided for the payment of just compensation for such products, or as rental for any facilities or plants used by the United States. The Act of October 10, 1940, 54 Stat. 1090 authorized the

requisition real property. In general, the purposes to be [fol. 198] accomplished through the exercise of those powers were to increase production of raw materials and finished products needed for the national defense through the mobilization of the material resources and the industrial facilities of the nation. The Board's power to regulate the production and supply of materials, equipment and facilities necessary for the national defense was broad and was, in general, accomplished by the use of various orders, the most common of which were the "P" or priorities orders, the "M" or materials orders, and the "L" or limitation orders. "P" orders were usually addressed to buyers of materials, etc. and authorized them to attach to

---

President to take over for use or operation any military or naval equipment, etc., held for export purposes but whose exportation had been denied by law, and provided for payment of just compensation. The Act of October 16, 1941, 55 Stat. 742, authorized the President to requisition all other military or naval equipment not held for export. This act was amended in Title VI of the Act of March 27, 1942, *supra*, to eliminate the requirement that only equipment and machinery not in actual use by the owner could be requisitioned. Section 120 of the National Defense Act of 1916, 39 Stat. 213, authorized the President to place mandatory orders for the production of materials required for defense and for the seizure of plants refusing to cooperate. All of these acts provided for the payment of just compensation for any interest taken. The President delegated all the above authorities to the War Production Board or its predecessors in a series of Executive Orders as follows: Executive Order 8572, October 21, 1940, as amended by Executive Order 8612, December 15, 1940 (the Priorities Board); Executive Order 8629, January 7, 1941 (Office of Production Management); Executive Order 8875, August 28, 1941 (OPM and SPAB); Executive Order 8891, September 4, 1941; Executive Order 8942, November 19, 1941; Executive Order 9024, January 16, 1942 (WPB); Executive Order 9040, January 24, 1942; Executive Order 9125, April 7, 1942; Executive Order 9138, April 17, 1942; by Executive Order 9139, April 18, 1942, the President established the War Manpower Commission and transferred to it the labor supply functions of WPB's Labor Division.

their purchase orders a symbol entitling them over other users to a certain preference in delivery. "M" or material orders were allocation orders addressed to the manufacturers or distributors of materials. These orders were used to limit and define the use or the distribution of the particular material which was the subject of the order. "M" orders might also prohibit producers or distributors of certain materials or products from selling them to any buyer unless that buyer had a certain preference rating. "L" or limitation orders, were also related to the Board's allocation functions and were issued to curtail or prohibit the manufacture of end products which required the use of specified critical materials.

The mining industry, along with other industries, was subject to regulation of its acquisition and use of materials, supplies and equipment needed in the defense effort. A general repair order known as P-22 was issued on September 9, 1941, which authorized a variety of industries, including the mining industry, to use only the lowest preference rating, i. e., A-10, to acquire the materials needed for the repair of their mining property and equipment. On September 17, 1941, Preference Rating Order P-56 granted an A-8 preference rating to so-called recognized mining enterprises to acquire materials needed by them for operating supplies and for the maintenance of the mines' property and equipment. This order represented the first special treatment accorded to gold mines as distinguished from other types of mines, in that placer gold mines were expressly excluded from any benefits under the order. Lode gold mines were permitted the use of the A-8 rating because it was recognized that denying them repair and [fol. 199] maintenance supplies would cause depreciation of their installed equipment and structures, and because many lode mines produced metals other than gold which were useful to the defense effort.

As the critical materials supply situation became more acute, the Office of Production Management [2] found it necessary to take action that would insure a sufficient amount of

---

[2] At this time the Office of Production Management was still in existence. It was not succeeded by WPB until January 1942.

new and repair parts for the mines producing critical raw materials, and in order to do this it eventually became necessary to deny to mines whose production was predominantly gold the right to purchase any new machinery for use in that production, and to limit such gold mines to the lowest preference rating for the acquisition of maintenance, repair and operating supplies. Accordingly, on December 18, 1941, Preference Rating Order P-100 was issued granting the mines an A-10 or the lowest possible preference rating. On March 2, 1942, Preference Rating Order P-56 was amended to revoke the serial numbers of all gold mines whose total dollar production was more than 30 percent gold. Without a serial number, a gold mine could not acquire any materials needed for operating supplies, or supplies for the maintenance of their property and equipment. Over two hundred gold mines, including those of most of the plaintiffs herein, never again received serial numbers under Order P-56 and thus, by March 1942, a series of progressively more stringent regulations had virtually eliminated any opportunity for the gold mines to acquire critical materials and supplies needed for the national defense.

No agency of the Government was ever granted any real power to control civilian manpower during the war. However, the War Production Board found it necessary to take into consideration manpower problems obviously inherent in the overall problem of increasing the production of vital raw materials and finished products necessary for defense. Shortly after the establishment of WPB's predecessor agency, the Office of Production Management, an operating division known as the Labor Division was established in OPM to study and keep abreast of the labor requirements for national defense and to advise and collaborate with the [fol. 200] other divisions of OPM on all matters affecting labor.[3] In the summer of 1942, the Labor Division of what was now WPB, became concerned with the seriously increasing shortage of hardrock or underground miners in the vital nonferrous metal mines, particularly in the copper mines. This concern was shared by the recently

---

[3] OPM Regulation 5, March 18, 1941, 6 F. R. 1598, 32 CFR 2875—1941 Supp.

established War Manpower Commission and by the War Department which had become alarmed by the growing shortage in the output of copper. Upon investigation, these groups found that the exodus from the strategic metal mines was the result of the higher wages and better working conditions available to the miners in the aircraft and shipbuilding industries and on the armed services building construction projects frequently being carried on in the vicinity of the copper mines. It was also determined that a large number of experienced miners were being drafted into the armed services and Selective Service was adverse to granting deferments to such workers. Despite the urgings of mine employers and the government agencies involved to miners to stay on the job, the strategic metal miners continued to leave the mines for the more attractive job opportunities offered by other defense industries. Production was also hampered by the generally low morale of the miners, the short workweek in the mines, and the lack of any effective means of recruiting workers for work in the strategic metal mines.

During this same period the gold mines were losing experienced miners by virtue of the same circumstances, except that working conditions in many of the gold mines were good, many of the miners owned their own homes, and gold mining was often a family tradition from which they would not readily depart.

Based on 1940 and 1941 statistics furnished by the Bureau of Mines, the War Department, the War Manpower Commission and the War Production Board's Labor Division determined that if the gold mines could in some way be closed down, several thousand hardrock miners would immediately become available for work in the nonferrous metal mines, although no one was quite sure how they could be induced to go to work in such mines since no one had authority to require them to do so. A survey by WPB's [fol. 201] Mining Division revealed that the labor figures arrived at by the Labor Division were unduly optimistic and that the probable number of hardrock miners employed in gold mines was much smaller than the estimate based on the 1940 and 1941 figures; that after taking into consideration the number of hardrock miners who would be necessary to maintain the closed mines in safe condition,

and the number who were elderly men and home owners and thus unlikely to leave their homes unless forced to do so, a relatively small number of experienced miners would be thrown on the labor market for any purpose. The conclusions of the Mining Division were reinforced by data supplied by representatives of the larger gold mines who came to Washington to confer with officials of WPB and the Army, and also by Congressional Representatives of the mining States. Everyone involved in the ensuing controversy was aware that there was no power in any arm of the Government to force gold miners to work in the nonferrous metal mines, and no way to deny to gold miners opportunities to work in the same war industries or on the same armed services' construction projects that had been luring the nonferrous metal miners away from their jobs in the mines. Selective Service could not bring itself to grant deferments to miners. The Army indicated that it might furlough some four thousand soldiers who had mining experience, and condition their furloughs on their staying on the jobs in the nonferrous metal mines. But the Army was reluctant to grant those furloughs while the gold mines were still operating. Army officials were furnished with facts and figures showing that few hardrock miners would be released by the closing of the gold mines and that there was no way of compelling those miners to work in the copper mines and little likelihood that they would do so. Despite this, officials of the Army continued to bring great pressure to bear on the War Production Board to close down the gold mines, indicating that otherwise WPB would not being doing its part to increase production in the nonferrous metal mines. The Army's objection to the continued operation of gold mines appears to have been largely political rather than practical. Its reluctance to furlough trained soldiers was understandable, but the fact remains that it was the only governmental agency which had [fol. 202] sufficient control over manpower to compel persons under its jurisdiction to work in the nonferrous metal mines and continue to do so.

Over the vigorous objection of informed persons in and out of the War Production Board, the Board on October 8, 1942, issued L-208 which ordered the complete shutdown within 60 days of all the country's gold mines which did not

produce sufficient sfategic metals to warrant their holding serial numbers.

Within a relatively short time it became apparent that the closing of the gold mines was doing little to relieve the shortage of hardrock miners in the strategic metal mines. In fact, the record indicates that no more than 100 gold miners went into other mines and remained there for a year or more. Despite numerous appeals and a desire on the part of WPB officials to modify the order to permit the gold mines to operate at least on a break-even basis, the order was continued in effect and unchanged until the summer of 1945.

The record establishes that no one having anything to do with the issuance of L-208 believed that it was devised or intended to be devised for the purpose of conserving critical materials, equipment or supplies, inasmuch as existing preference orders had solved that problem in connection with the gold mines. Although WPB had full power to requisition any large inventories of supplies, materials, and equipment owned by the gold mines, or to authorize more essential users of such materials to place mandatory orders with the gold mines, no such power was ever exercised. In L-208 WPB did not even attempt to assure that those critical materials, equipment and facilities would be held for possible future requisition or order, but left the owners free to sell them to anyone they pleased, whether the prospective purchaser was engaged in essential defense work or not.

The record establishes that the purpose and intent of WPB in issuing L-208 was to deprive the gold mine owners and operators of the right to use their properties in the only way they could be beneficially used, i. e., to mine and sell gold for a profit, and that this was done in the unfounded hope that the underground workers thus deprived of their employment in the gold mines might seek employment in the nonferrous metal mines. The record fails to establish that the prohibition of gold mining was reason-[fol. 203] ably calculated to or in fact did increase the country's war efficiency.

The following contentions were made in the Homestake brief and were adopted in general by all the other plaintiffs. After discussing those contentions and disposing of them,

we shall take up separately the applicability of the conclusions reached to each of the plaintiffs.

Plaintiffs contend that L-208, while in form a regulation restricting their acquisition and use of critical materials needed for defense, was in substance a requisition or taking, for the life of the order, of plaintiffs' right to make profitable use of their gold mining properties for which taking the Government is liable to pay just compensation under the Fifth Amendment to the Constitution. Plaintiffs also contend that if the court should decide that L-208 was actually a regulation in substance as well as in form, it was arbitrary in that it went far beyond what was required by the exigencies of the war situation existing at the time of its issuance, bore no reasonable relation to its ostensible purpose of conserving critical materials needed in the defense effort, and in fact and law amounted to a taking of valuable property rights of plaintiffs for which just compensation should be paid.

The Government contends that regardless of how much damage plaintiffs may have suffered by virtue of their compliance with the provisions of L-208, the order was a proper exercise of the statutory regulatory powers over critical materials by the War Production Board; that it was issued to prohibit plaintiffs' use of those materials in a manner detrimental to the public safety in wartime; that the Government made no use of plaintiffs' property nor did the order represent any positive invasion of any of plaintiffs' property rights, and that no direct benefits accrued to the Government from the imposition of the order except the negative benefit arising from the prohibitions placed on plaintiffs' use of their property. Defendant urges that under these circumstances, plaintiffs' losses are no more compensable than were the losses suffered by the St. Regis Paper Company from the imposition on it of War Production Board General Preference Order M-251 (*St. Regis Paper Co.* v. *United States*, 110 C. Cls. 271; cert. den. 335 U.S. 815), or the losses [fol. 204] suffered by landlords who complied with wartime rent control regulations (*Bowles* v. *Willingham*, 321 U. S. 503, *Block* v. *Hirsh*, 256 U. S. 135, *Marcus Brown Holding Co.* v. *Feldman*, 256 U. S. 170). Defendant also contends that if WPB acted arbitrarily and without good cause in issuing L-208, then the order was unauthorized and illegal

and the Government is not liable to pay just compensation for losses occasioned by the unauthorified act of its agents, citing *Hooe* v. *United States*, 218 U. S. 322 and *United States* v. *North American Transportation & Trading Co.*, 253 U. S. 330. Defendant suggests that in this latter circumstance, plaintiffs should have refused to obey the order (*Morrisdale Coal Co.* v. *United States*, 259 U. S. 188), or they should have brought injunction proceedings against the officials of WPB to prevent enforcement of the order.

Our first problem is to determine the precise nature of the action taken by the War Production Board in its issuance of L-208, i. e., whether that action amounted to a regulation or a taking of plaintiffs' property rights. Next it must be determined whether WPB had the power to do what it in fact did, and finally whether the Government is liable for the injuries caused plaintiffs by the exercise of that power, even though the power was exercised arbitrarily.

The property which plaintiffs contend has been taken from them, and which defendant urges was merely limited in its usefulness to plaintiffs as a consequence of a valid regulation of scarce materials, was plaintiffs' right to make profitable use of their gold mining properties. As pointed out by Mr. Justice Roberts in *United States* v. *General Motors Corporation*, 323 U. S. 373, while "property" as that term is used in the Fifth Amendment certainly means the physical thing with respect to which the citizen exercises rights recognized by law, it also means the group of rights inhering in the citizen's relation to the physical thing, as the rights to exclusively possess, use and dispose of the physical thing. In this sense, the right of a gold mine owner to extract gold from his mine and to sell it for a profit, is a property right protected by the Constitution. *Pennsylvania Coal Co.* v. *Mahon*, 260 U. S. 393.

In order to determine whether that property right was "regulated" or "taken," or was merely injured as a conse- [fol. 205] quence of a regulation or of a taking of some other property or property right of plaintiffs, we turn to the limitation order itself and to the facts and circumstances of record surrounding its issuance.

The order was issued on October 8, 1942, by the War Production Board which had succeeded to all the powers and functions of the old Office of Production Management

and the Supply Priorities and Allocations Board. The preamble to L-208 reads as follows:

> The fulfillment of requirements for the defense of the United States has created a shortage in the supply of critical materials for defense, for private account and for export which are used in the maintenance and operation of gold mines; and the following order is deemed necessary and appropriate in the public interest and to promote the national defense.

The statutory authority cited at the conclusion of the order was section 2 (a) of the Act of June 28, 1940 (54 Stat. 676), as amended,[4] which granted to the President the power to establish priorities and to allocate materials. The President's allocation powers were expressed in the following language (56 Stat. 178), which it will be noted, closely resembles the above quoted language in the preamble of L-208:

> * * * Whenever the President is satisfied that the fulfillment of requirements for the defense of the United States will result in a shortage in the supply of any material or of any facilities for defense or for private account or for export, the President may allocate such materials or facilities in such manner, upon such conditions and to such extent as he shall deem necessary or appropriate in the public interest and to promote the national defense.

As further authority for its issuance, the order cited Executive Order 9024 (January 16, 1942), abolishing SPAB and establishing the War Production Board, Executive Order 9040 (January 24, 1942), abolishing the Office of Production Management and transferring to WPB all of its duties and powers along with those of the old SPAB, and providing that WPB should perform the functions and exercise the authority vested in the President by section 120 of the [fol. 206] National Defense Act of 1916 (39 Stat. 312). Section 120 of the last mentioned act provided that the President in time of war might, through the head of any

[4] Act of May 31, 1941 (Pub. Law 89), 55 Stat. 236; Act of March 27, 1942 (Pub. Law 507), 56 Stat. 177.

Government department or agency, place mandatory orders with individuals, firms, associations, etc., for products produced by them; that if there was a refusal to make or sell at a reasonable cost any product required in response to such mandatory orders, the President, through the head of any department, might take immediate possession of the plant. The section provided for the payment of compensation for any product or material acquired by mandatory orders, or as rental for the use of the manufacturing plant. Executive Order 9125, April 7, 1942, also cited in L-208, contained the President's delegation of his allocation and priority authority to WPB pursuant to Title III of the Second War Powers Act of 1942, 56 Stat. 176.

Order L-208 provided that for the purposes of the order all gold placer or lode mines located in the United States or its territories or posessions which did not hold serial numbers under Preference Rating Order P-56 were deemed "nonessential mines".[5] The order then required such nonessential gold mines to do the following: (1) to close down as soon as possible after issuance of the order; (2) to cease acquiring, consuming or using any material, facility or equipment for the purpose of breaking any *new* ore or for the purpose of carrying on any development work; (3) on or after 60 days from the issuance of the order, to cease acquiring, consuming or using any material, facility or equipment to remove *any* ore or waste from the mine, above or below ground, or to conduct any other operation in or about the mine except to the minimum amount necessary to maintain the buildings, machinery and equipment in repair, and the mine's access and development workings safe and accessible; (4) to refrain from using any preference rating to acquire any material or equipment for consumption or use in the operation, maintenance or repair of the mines covered by the order, except with the permission of the Director General for Operations. The order provided that the Director General for Operations, WPB, might assign [fol. 207] preference ratings only for obtaining the mini-

---

[5] This provision had the effect of including in the operation of the order all mines whose gold production in dollar value exceeded 30 percent of its total production.

mum amount of material needed to maintain the nonessential gold mines in safe condition during the closedown. Violations of the provisions of the order were made a crime punishable by fine or imprisonment. The order provided that persons affected by the order might appeal to the Board by letter and that the Director General for Operations might thereupon take such action as he might deem appropriate.

The preamble to the order, the authority cited at the end thereof, and the prohibition placed upon the acquisition of critical materials, indicate that the order was merely intended to allocate *away from* the so-called nonessential gold mines materials, equipment and facilities which were in short supply and needed for defense. A study of the balance of the order, particularly in the light of certain facts of record, persuades us that the order was not intended to be an allocation order. Insofar as the order prohibited the acquisition of materials, equipment and facilities, certain existing orders, P-56 and P-100, already prevented the acquisition by the gold mines of any such materials except, in the case of P-100, where gold mines did have the lowest priority rating in existence for repair parts, and that could have been revoked. The record establishes that gold mines, particularly the Homestake mine, had on hand in October 1942 large amounts of materials, equipment and facilities needed in the mining of gold and that Homestake, and some of the others whose circumstances we shall discuss separately, could have continued operations with such inventories for a considerable period after October 8, 1942. L-208 did not in fact "allocate" any of such materials, equipment or facilities away from the mines but, on the contrary, left the mine owners and operators free to dispose of them in any manner they saw fit, by delivering or selling them to nonessential users or by keeping them in the mines. What the order did do, and do directly, was to prohibit the continued operation of the gold mines.

A comparison of L-208 with General Preference Order M-251 which was involved in the *St. Regis* case, *supra*, may aid in evaluating the Government's contention that the two orders were alike in their purpose, operation and effect, and [fol. 208] that the loss of the gold mine owners' right to make profitable use of their mining properties was merely

a consequential injury resulting from a valid allocation of critical materials away from the mines in the same way that the injury to the paper company's right to do business was the consquence of a valid allocation of pulpwood away from the company.

The preamble to the St. Regis Order, M-25, was in all material respects identical with the preamble of the gold order, L-208.[6] The order was issued on October 19, 1942, ten days after the issuance of the gold order, and the authority cited for its issuance was identical with that cited in the gold order.

Order M-251 provided that in areas declared by WPB's Director General for Operations to be shortage areas, the Director General could allocate the available supply of pulpwood held or accumulated in that area away from and to specific persons; that he could direct the holders of pulpwood in the area to maintain their accumulations of pulpwood *available for disposition* by the Director General who might direct the delivery of specific quantities of such accumulated pulpwood to specific persons. The Director General was authorized to direct that no one in the area might acquire, consume, process or deliver any pulpwood of the types defined, and which were held or accumulated in the area, *except as the Director General might order*. The Director General was also authorized to require the manufacture of particular types of woodpulp or other wood products by manufacturers. On October 23, 1942, this order was applied specifically to the St. Regis Paper Company and that company was forbidden to acquire, consume, process

---

[6] General Preference Order M-251 contained the following preamble:

"The fulfillment of requirements for the defense of the United States has created in certain areas and is expected to create in other areas a shortage in the supply for defense, for export and for private account, of wood for pulp and lumber, and has created a shortage in the supply for defense, for export and for private account of various materials and facilities required for the production of pulpwood; and the following order is deemed necessary and appropriate in the public interest and to promote the national defense."

or deliver any pulpwood, except on authorization or by direction of the Director General for Operations of WPB. Immediately upon issuance of the order to St. Regis, that company was directed by the Director General to deliver during the month of November its entire inventory and supply of pulpwood to specified persons "at regularly es- [fol. 209] tablished prices and terms", subject to OPA regulations. St. Regis was permitted to continue processing and manufacturing its customary products from pulpwood during the balance of October. Although the order did not direct plaintiff to close its factory and plaintiff was left free to make any use of its factory it could, its inability to secure pulpwood resulted in the closing of the mill, plaintiff having decided that it was not feasible to convert its facilities to some other type of manufacturing that would not require the use of pulpwood.

In its suit in this court, the St. Regis Paper Company contended that M-251 amounted to a temporary taking of its paper factory and of its right to do business. Although it was not made an issue in the case, M-251 probably did amount to a taking of plaintiff's inventory of pulpwood (cf. *Edward P. Stahel & Co., Inc., et al.* v. *United States*, 111 C. Cls. 682 cert. den. 336 U. S. 951), but plaintiff did not sue for the taking of its pulpwood, probably because shortly after the order was issued plaintiff received what it considered to be just compensation on the mandatory sales to the Government's designees pursuant to M-251. The court held that M-251 did not require the closing of plaintiff's plant nor did it interfere with plaintiff's use of the plant; that on the contrary, the order represented a valid exercise of WPB's admitted power to allocate a scarce material such as pulpwood, and that any injury to plaintiff's profitable use of its plant, or any loss in value of its plant, were merely consequential and therefore did not amount to a taking and were not compensable. The terms of the order itself certainly bore out the court's conclusion since the order merely represented an attempt by the Government to secure all the available supply of pulpwood in the area by freezing the supplies on hand with the owners in the area and immediately placing mandatory orders directing delivery to specified users elsewhere, and by prohibiting the users in the area in question from acquiring any more pulpwood.

Like M-251, the gold order prohibited the acquisition, consumption or use of certain personal property used in the mining of gold. L-208 did not, however, require the gold mine owners to hold for the use or disposition of the Government their inventories and supplies of the personal [fol. 210] property covered by the order but left the owners free to use that personal property in any way they wished except in the mining of gold. The plaintiffs might have sold their inventories of machinery, supplies and equipment to any user whether or not that user was conducting a business which was essential to the defense effort. The record establishes that the Government did not intend to, nor did it ever, requisition any of this personal property or direct the mine owners to sell it to anyone else. From the language of the order itself and from the circumstances surrounding its promulgation, it is apparent that its only purpose was to deprive the gold mine owners and operators of their right to make use of their mining properties.

Since the subject matter of L-208 was the gold mine owners' right to make use of their gold mines and was not the materials equipment and facilities they had on hand and in which the Government apparently had little interest, the next question is whether L-208 amounted to a "regulation" of that property right or to a "taking."

"Regulation" implies a degree of control according to certain prescribed rules, usually in the form of restrictions imposed on a person's otherwise free use of the subject matter of the regulation. Where the restrictions imposed are temporary and narrow, and where the persons on whose property the restrictions are imposed are assured an opportunity to receive "reasonable" compensation as determined by an impartial arbiter, the courts have held that enforcement of such regulations has not deprived the owner of the regulated property of due process, nor has it resulted in the "taking" of a property right in the constitutional sense. Typical of this type of regulation are the rent control regulations referred to above, regulations issued under the renegotiation statute (*Lichter* v. *United States*, 334 U. S. 742) limiting the right to make excessive profits on war contracts, and restrictions imposed in mortgage moratorium legislation (*Home Building & Loan Association* v. *Blaisdell*, 290 U. S. 398). On the other hand, where the re-

strictions imposed by the so-called regulations are so broad that the owner of the property regulated is deprived of most or all of his interest in the property, for all practical purposes there has been a taking of that property. *Louis-*[fol. 211] *ville Bank* v. *Radford*, 295 U.S. 555.[7]

The case of *Edward P. Stahel & Co., et al.* v. *United States*, referred to earlier herein, has much in common with the issues raised in the instant controversy as well as with those involved in the earlier case of *St. Regis Paper Co.* v. *United States, supra.* In the *Stahel* case, as in the others, plaintiffs alleged that an order of the Office of Production Management (predecessor agency to the War Production Board) though in form a regulation, operated in such a manner as to take valuable property rights of plaintiffs without payment of just compensation. The order in question was General Preference Order M-22 issued on October 16, 1941. M-22 prohibited the owners of raw silk, including the plaintiffs, from selling or delivering their silk to any user but the Government or persons designated by the Government, and further provided that any orders placed with such owners by the Government or its designees had

---

[7] *The Home Building & Loan Association* case, *supra*, involved the constitutionality of a Minnesota statute which, in time of economic depression sought to relieve the plight of needy mortgagors by providing for a possible extension of the redemption period of their mortgaged property. Citing the many safeguards contained in the statute to protect the rights of the mortgagee and the fact that the mortgagee would ultimately receive all that he was entitled to under the mortgage, the Court upheld the statute as a *limited* and *temporary* restriction on the mortgagee's right to enforce his contract, such restriction being justified by the great public calamity, i. e., the depression. This case was relied on by the mortgagor, Radford, in *Louisville Bank* v. *Radford, supra*, to uphold the constitutionality of the Frazier-Lemke Act of 1934, which also sought to relieve the plight of needy mortgagors during the depression. The Supreme Court held that the restrictions imposed by the federal act were neither limited nor temporary and that they amounted to a taking of valuable property rights of the mortgagees without any compensation whatsoever.

to be accepted and filled. The order did not prohibit the acquisition of raw silk by the plaintiffs. Some two months after the issuance of M-22, the Government and its designees began placing mandatory orders with plaintiffs for the silk which was paid for, upon delivery, at the OPA price. Plaintiffs sued for additional compensation for the silk, alleging that the "taking" had occurred on the issuance of General Preference Order M-22 on October 16, 1941, and that, accordingly, they were entitled to recover an additional amount to compensate them for delay in payment, plus amounts expended for storage and handling of the silk after October 16, 1941, until the silk was finally delivered [fol. 212] to and paid for by the Government or its designees. The Government contended that M-22 was merely a regulation which placed certain limitations or restrictions upon plaintiffs' right to sell their silk and that these limitations were imposed in the proper exercise of the sovereign's lawful power to allocate scarce materials in wartime *away from* nonessential to essential users, and that while the restrictions imposed in the interest of the defense effort may have decreased the value of the silk to the plaintiffs, the silk was not taken on October 16, 1941, citing *Omnia Commercial Company, Inc.* v. *United States*, 261 U. S. 502, *Bowles* v. *Willingham*, 321, U. S. 503.[8] The Government pointed out that on October 16, 1941, when the

---

[8] In the *Omnia* case the Government had requisitioned the entire output of steel by the Allegheny Steel Company and had directed the company not to comply in that year with any contract calling for steel. The Omnia Commercial Company had a contract with the Allegheny company entitling Omnia to Allegheny's steel at a price well under the market. Omnia sued the United States alleging that the Government had "taken" its right to have its contract with Allegheny performed. The court held that the contract had not been taken but only its performance frustrated and that Omnia's loss of the expected profit was a consequential loss resulting from lawful governmental action of requisitioning Allegheny's steel. In the *Bowles* v. *Willingham* case the Supreme Court held that rent control imposed only temporary and narrow restrictions on an owner's use of his property.

order was issued, the Government did not take any positive action regarding plaintiffs' property which, on the contrary, was left in the possession and control of the plaintiffs subject only to the negative power of the Government evidenced by the restriction that it might not be sold or delivered to anyone but the Government or its designees. The court held that the restrictions imposed by M-22 on plaintiffs' use of its silk were so broad that, for all practical purposes, plaintiffs were deprived of their silk; that although the silk did remain in the actual possession of the plaintiffs after October 16, 1941, it was held not for their own use but for the use of the Government whether the Government ever exercised its right under the order to demand delivery of the silk or not.[9] The court noted that the Government had the statutory power to requisition plaintiffs' silk and pay just compensation therefor on October 16, 1941, and held that the Government's choice of a gen- [fol. 213] eral preference regulation as a means of acquiring the use of plaintiffs' property in preference to a formal requisition did not depriv the operation of M-22 of its character of a taking, or lessen plaintiffs' constitutional right to just compensation. Plaintiffs' recovery included an additional amount to compensate them for delay in payment, plus amounts expended by them in handling and storing the silk after October 17, 1941.

It seems to us that the restrictions placed by L-208 on the right of gold mine owners to mine and sell gold were neither conditional nor limited and were as complete as were the restrictions placed on plaintiffs' silk in the *Stahel* case. In neither the *Stahel* case nor the instant case did the Government, through the orders issued, attempt to vest in itself title to the subject matter of the orders, or to assert any proprietary rights in the subject matter. In both cases the orders merely sought to impose certain negative restrictions on the otherwise free use of their property by

---

[9] In its motion for a new trial which was denied, the Government pointed out that under the court's decision a holder of silk on October 16, 1941, who had never received a mandatory order for any of its silk, would still be entitled to the same compensation as the holder who sold all of his silk on mandatory orders.

the owners. If plaintiffs' silk was taken by M-22 because that order served to deprive plaintiffs of all beneficial use of their silk, regardless of the fact that physical invasion of the property right was merely threatened in the order and might never have taken place, it would seem to follow that L-208 was equally a taking of the right of the gold miners to make profitable use of their mining properties by mining and selling gold.[10] It also appears that the loss of the gold mine owners of their right to mine gold was the direct result of L-208 and was not a consequential loss in the sense that it was the result of the exercise of defendant's power to allocate scarce materials, or to take such materials, as plaintiffs' loss in the *St. Regis* case, [fol. 214] *supra*, because, as we have seen, L-208 neither allocated nor took plaintiffs' inventory and supply of critical materials, equipment and facilities.

To allocate means to distribute or assign. Allocation is the act of distributing or of putting one thing to another. Insofar as L-208 prohibited the *acquisition* by gold mine owners of materials, equipment and machinery, the order was allocating the available supply of those items *away*

---

[10] It is not contended that their right to mine and sell gold was acquired by defendant in the sense that the Government actually took possession of the mines and carried on the business for its own benefit. It is contended, however, that the Government deprived plaintiffs of their right to make profitable use of their mining properties for the period during which the order was in effect and that this deprivation amounted to a taking. That Government action short of acquisition of title or short of physical occupancy may constitute a "taking" in the constitutional sense has been upheld by the Supreme Court. *United States* v. *General Motors, supra; United States* v. *Welch*, 217 U.S. 333; *Richards* v. *Washington Terminal Co.*, 233 U.S. 546. As Justice Roberts pointed out in the *General Motors* decision, it is the "deprivation of the former owner rather than the accretion of a right or interest to the sovereign" which constitutes the taking, and if the effects of the Government's actions are so complete as to deprive the owner of all or most of his interest in his property, that property has been "taken."

from the gold mines so that there might be more to distribute or allocate to mining enterprises considered to be more essential to the war effort. Insofar as L-208 prohibited the mine owners from using any of the materials, supplies, equipment, machinery and facilities owned by them and on hand, that prohibition allocated nothing, i. e., it distributed nothing because the order contained nothing which required the gold mine owners to sell those items to the more essential users. Furthermore, because the order merely deprived the owners of the machinery, materials, supplies, etc., on hand, of the use thereof for one single purpose, i. e., for the continued mining of gold and left the owners free to otherwise dispose of those items as they pleased, that prohibition did not amount to a "taking" of the materials, equipment, machinery, etc., owned by the gold mine owners and operators. The fact that occasional voluntary sales of idle gold mining-machinery were made to some more essential mines does not give to that part of L-208 prohibiting the owners from using those items to mine gold the character of an allocation order; it merely emphasizes the fact that those items were not "taken." But the petitioners herein are not suing for the taking of their machinery, facilities and supplies on hand.

We turn next to a consideration of whether L-208 was in fact a limitation order. Limitation orders were used to supplement priority orders which were not always effective to keep nonessential manufacturers of nonessential products from acquiring critical materials. Such nonessential manufacturers, even with the lowest priority rating, might be able to pick up from time to time a significant amount of critical materials which at a later time might be needed by essential manufacturers. To remedy this situation, limitation orders were directed to the manufacturers of *specified end products* which were considered nonessential in [fol. 215] war time, such as office machinery, furniture, bicycles, stoves and passenger automobiles, and they prohibited the manufacture of such end products into the manufacture of which went critical materials.

No critical materials went into the end product of a gold mine, i. e., refined gold. The gold mining industry used critical materials only for the maintenance, repair and operation of the mines. If it had been the sole purpose

of WPB to prevent gold mines from *acquiring* critical materials to a greater extent than they were already prevented by P-56, under which they could acquire nothing because their serial numbers had been revoked, and under P-100 under which they could acquire only limited amounts with their lowest (A-10) priority rating, that part of L-208 which absolutely prevented the acquisition of those materials to operate the mines, effectively did that.

It has been suggested by defendant that a further purpose of a limitation order was to prevent the consumption of critical materials already on hand and owned by a nonessential industry in order to "conserve" such critical materials. The question immediately arises in connection with L-208: In what significant way did L-208 *conserve* such critical materials, i. e., the equipment and machinery and supplies of the gold mines? Presumably something is "conserved" for the purpose of putting it to some more important use, otherwise what is the object of "conservation"? A material may be in short supply but if it is not needed by anyone, it seems hardly a proper object of conservation, and if it is kept idle or saved up, it would appear to be merely hoarded rather than conserved. Also, if something is scarce and is urgently needed by others, it cannot be said to be conserved unless the so-called conservation measure makes some effective provision for getting that scarce and needed material into the hands of essential users. The provision may appear in the same measure or in a supplemental measure. This was not done in L-208 and it was this omission which robs the order of the character of a *bona fide* limitation order.

[fol. 216] L-208 was labeled a "Limitation Order", and up to a point it followed the pattern of true limitation orders. But a limitation order has a specific purpose: it is issued to conserve critical materials so that those materials may be used by essential war industries. It is not issued to insure that those critical materials will deteriorate through disuse or be preserved for future by the nonessential owners thereof. L-208 made specific provision for the gold mine operators to preserve their own critical machinery and equipment so that they, i. e., the nonessential owners, would have that equipment and machinery in good condition for use in gold mining when the limitation order was finally lifted.

Paragraph (b) (3) of L-208 provided that no gold mine operator might acquire, consume or use any critical material, facility or equipment *except to the minimum amount necessary to maintain the gold mine's buildings, machinery and equipment in repair and its access and development workings safe and accessible.* Paragraph (c) of the order authorized the Director General for Operations of WPB to assign such preference ratings as might be required to gold mine operators to enable them to obtain the minimum amount of critical materials necessary to maintain their nonessential mines on the basis set forth in subparagraph (b) (3), i. e., to keep their machinery and equipment in repair, *inter alia.*

The above makes it quite clear that the "conservation" brought about by L-208 with respect to the mining machinery and equipment owned by the mine operators was not the usual conservation purpose of a limitation order of WPB, i. e., conservation so that the equipment, machinery and materials owned by a manufacturer of nonessential products might be converted to the manufacture of essential end products either by the owner or by some manufacturer of an essential end products. Any actual conservation intended and brought about by that part of L-208 which prohibited the use of the gold mine owners' equipment and machinery for the mining of gold was for the purpose of conserving that equipment and machinery for future use by the nonessential gold mines in the production of nonessential gold.

In summary, it appears to uset that only to the extent that L-208 prohibited the *acquisition of new materials and equip-*
[fol. 217] *ment* was that order either a limitation or an allocation order. The balance of the order, having to do with the prohibition of the consumption and use of materials, equipment and machinery owned by the mines and on hand, in the operation of the gold mines, was not intended to and could not, under the very terms of the order itself, accomplish any of the purposes of allocation or limitation orders. Since that prohibition on use of materials and equipment on hand was neither a limitation nor an allocation order, the destruction of the right to mine and sell gold was not consequential to a limitation or allocation order.

L-208 was aimed, in all its provisions, directly at the beneficial use of the mining properties of the gold mine owners, and the only intention reasonably inferrible from the language of the order itself and the circumstances surrounding its issuance was an intent to temporarily deprive them of that property right. By the issuance of Order L-208 the defendant prohibited the carrying on of otherwise lawful mining operations and thereby placed a definite servitude on plaintiffs' profitable use of their mines which resulted in a temporary taking of that property right. See *Peabody* v. *United States*, 231 U. S. 530; *Matthews* v. *United States*, 87 C. Cls. 662, 720.

We come next to the question whether the War Production Board had the necessary authority to issue an order which would have the effect of depriving plaintiffs of their right to make profitable use of their mining properties. The Government contends that if, as argued by plaintiffs, WPB acted "arbitrarily" in issuing L-208, it acted without authority and the Government is not liable to pay just compensation for property destroyed by the unauthorized act of its agents.

While it is true, in general, as urged by defendant, that the Government is not liable for damages occasioned by the unauthorized acts of its agents, the problem of determining whether or not a particular act was "authorized" is not always a simple one.

If the statute under which the Government agent is acting specifically forbids the particular act complained of, that action is clearly unauthorized and the Government will [fol. 218] not be liable for damages resulting from that action. *Hooe* v. *United States*,[11] *supra*.

---

[11] In the *Hooe* case a federal statute provided that in renting space for Government use, Government officials might not obligate the Government for the future payment of money in an amount in excess of the appropriation. A Government official rented from plaintiff a part of his building at a rental in the full statutory amount, but occupied additional space in the building for which plaintiff was not paid. Plaintiff sued for the additional rent either on the ground of an implied contract or as just compensation for private property taken for public use. It was held

If an agent of the Government acts without any statutory authority, that action is unauthorized and the Government will not be liable for damages resulting from that action. In such a case the injured person's remedy would be by injunction against the individual government official acting without authority. *Youngstown Sheet & Tube Co.* v. *Sawyer*, 343. U. S. 579. In that case the President issued an order directing the Secretary of Commerce to take and operate most of the Nation's steel mills. Although there were in existence at that time two statutes authorizing the President to take both personal and real property under certain conditions, the Supreme Court held, and the Government admitted, that those conditions were not met. Furthermore the Court noted that the seizure technique to solve labor disputes in order to prevent work stoppages was not only unauthorized by any congressional enactment but that Congress had refused to adopt that method of settling labor disputes when it was considering amendments to the Taft-Hartley Act in 1947. The Court further held that not only was there no statutory authority for the seizure or taking of the steel mills, but also there was no constitutional authority for such a taking in that the President had no such inherent power. In the instant case Congress had by legislative enactment given the President authority to take for title or for use both real or personal property or interests therein, and those statutes did not impose "cumbersome, involved, and time-consuming" conditions referred to by the Supreme Court in connection with the statutes referred to in the *Youngstown* case. On the contrary, the conditions imposed by the wartime statutes were simple, and involved (1) that the taking be [fol. 219] *deemed* by the President or his designee to be necessary for the prosecution of the war and (2) that just compensation be paid the owner of the property interest taken. It is true that the wartime statutes under which the President and WPB operated did not specifically authorize the closing of any business as a means of taking

---

that the Government was not liable on either theory since the officer acted without lawful authority when he did anything which tended to commit the Government to pay more rent than the statutory maximum and that in so doing he was not representing the United States.

over that business. But the closing amounted to a taking and the President and WPB were authorized to take private property when, *in their opinion*, such taking would be in the interests of national defense. We have here then, merely the use by WPB of an unorthodox and perhaps *unauthorized means* of accomplishing an *authorized end* or result, i. e., a taking. And if a taking is authorized by Congress, it is compensable under the Constitution despite the means used to accomplish it, as we shall discuss more fully hereinafter.

Where the agent's actions are not prohibited by statute and where they are within the general scope of his authority, although under general law they may be tortious, the modern trend is to hold such actions to be the acts of the sovereign. This subject was discussed at some length in *Larson* v. *Domestic & Foreign Corp.*, 337 U. S. 682, in which the Court held that the District Court did not have jurisdiction to grant an injunction preventing officials of the War Assets Administration from selling coal to anyone other than the petitioner on the ground that the suit was actually one for specific relief against the Government which had not consented to be so sued. The petition in that case alleged that the War Assets Administration had sold certain surplus coal to the petitioner; that the Administrator for that agency had then refused to deliver the coal to petitioner and had entered into a new contract to sell the coal to others; that the petitioner's contract with the Government was an immediate contract of sale under which title to the coal had passed to the petitioner; that, accordingly, retention of the coal by the Administrator, after demand, was a conversion of petitioner's property and the Administrator's actions illegal so that the relief prayed for was not against the Government but against the Administrator individually to enjoin his threatened tortious action. The Supreme Court held that the Administrator had statutory [fol. 220] authority to make decisions concerning the meaning and effect of the contracts he entered into on behalf of the Government, and that such authority included the authority to make incorrect as well as correct decisions, whether of law or of fact; that any action taken pursuant to an incorrect decision was not, *ipso facto*, an unauthorized or illegal act, but might well be the act of the sovereign even

where the act involved the wrongful withholding of property belonging to the petitioner, i.e., a conversion. The Supreme Court then held that the action of an officer of the sovereign, "be it holding, taking or otherwise, legally affecting the plaintiff's property," could only be regarded so illegal as to permit suit for specific relief against the officer as an individual where that action was clearly outside the officer's statutory powers or where, though within those powers, the powers themselves were constitutionally void. The Supreme Court stated at page 695:

> Thre is, therefore, nothing in the law of agency which lends support to the contention that an officer's tortious action is *ipso facto* beyond his delegated powers. Nor, we think, is there anything in the doctrine of sovereign immunity which requires us to adopt such a view as regards Government agencies.

The Supreme Court concluded that since the Administrator's tortious actions were taken pursuant to erroneous decisions (of law) which he was authorized to make, he was acting for and as the representative of the Government and not in his individual capacity. The injunction was denied because it would have required specific relief against the Government itself. The Supreme Court suggested that the petitioner's remedy was in the Court of Claims for damages for breach of contract or for just compensation for the taking of the petitioner's coal.

Where a Government agent exercises a statutory power in a manner not provided for in the statute, the courts have held that his action was not "unauthorized" if the result of the action was one contemplated by the statute. In *Hurley v. Kincaid,* 285 U. S. 95, petitioner had obtained an injunction in the District Court restraining certain Government officials from proceeding further with the construction of a flood control project then being carried out under the Federal Flood Control Act. It was clear that the continued [fol. 221] construction would necessarily destroy portions of plaintiff's property. The lower court granted the injunction on the ground that the Government officials were acting "illegally" and therefore in their individual capacity in threatening to proceed with the project without first acquiring by formal eminent domain proceedings, as they

were specifically required to do by the Flood Control Act, the necessary flowage rights over petitioner's land. The Supreme Court reversed the action of the lower court granting the injunction, on the ground that the acts complained of were the acts of the sovereign and not the individual acts of the officials; that the Flood Control Act authorized the taking of petitioner's land or of an easement therein; that the only "illegality" involved was the failure of the Government officials to compensate petitioner for the land taken and that such a circumstance afforded no basis for an injunction where, as in that case, compensation might be procured by the petitioner in an action at law in the Court of Claims. The Supreme Court held that the Fifth Amendment assured plaintiff of just compensation but that (p. 104, footnote 3) it did not entitle him to be paid the compensation in advance of the taking:

> Even where the remedy at law is less clear and adequate, where large public interests are concerned and the issuance of an injunction may seriously embarrass the accomplishment of important governmental ends, a court of equity acts with caution and only upon clear showing that its intervention is necessary in order to prevent an irreparable injury.

Although the Supreme Court did not characterize as "arbitrary" the action of the Government officials in refusing to institute condemnation proceedings as provided for in the Flood Control Act, it would seem that such action was arbitrary in the same manner that a willful breach of a Government contract by a contracting officer is arbitrary. In neither case, however, are such arbitrary actions "unauthorized" in that they were forbidden by statute or were clearly outside the scope of the powers delegated by statute.

A regulation may be so arbitrary in its application to the particular subject matter and under the circumstances that it actually results in the regulatory body exercising powers not conferred on it by statute. This was the case in *Berwind-*
[fol. 223] *White Coal-Mining Co.* v. *United States*, 9 F. 2d 429. Plaintiffs therein were owners of coal mines and private coal cars. They sought to enjoin the enforcement of an order of the Interstate Commerce Commission relating to the distribution among bituminous coal mines of coal

cars during times of car shortages. Enforcement of the order would have prevented the plaintiffs from using their private coal cars. The court observed that the rights of private car use and ownership are recognized by Congress, and that Congress had not delegated to the Commission any power over private car owners or over the soft coal industry. The court held that in issuing the order in question the Commission, through what purported to be an exercise of its regulatory power over carriers, actually abolished the use of private coal cars to a substantial extent and thus deprived the private car owners of the full enjoyment of their rights to operate their mines and supply themselves with coal from other mines. The order of the Commission was held to be unjust and unreasonable and to amount to an unlawfully arbitrary exercise of power which had the effect of regulating that which the Commission had no power to regulate.

It would seem to follow from the above, that the "arbitrary" action of a Government official is not necessarily "unauthorized" and "illegal" if the action represents an exercise of powers delegated to the official by the sovereign.

In the instant case the record establishes that as an order allocating critical materials away from a nonessential user, LL-208 was arbitrary and unreasonable. The amount of such materials which were thereby prevented from being delivered to the gold mines was not significantly greater than was already prohibited by existing priority orders, and a simple revocation of those orders insofar as they applied to the gold mines, would have cut off all such deliveries. L-208 did not require the owners of the critical materials to hold the materials they had on hand for the use of the Government or some essential user to be designated by the Government, nor did it require that the owners deliver the materials to such essential users, but rather left them free to dispose of the critical materials in any way or to anyone they pleased. The only use which the gold mine owners were forbidden to make of the critical materials, equipment and supplies which they owned and had on hand, was in the [fol. 223] operation of their gold mining properties. Despite its preamble and the authority cited for its issuance, the language of the order itself and the circumstances surrounding its issuance indicate that neither its purpose nor

its effect was to conserve or allocate critical materials, equipment and facilities needed for defense, but was rather to deprive the gold mine owners of their right to make profitable use of their gold mines. Viewed as a taking of that property right, the order was equally arbitrary since the record discloses that those officials responsible for its promulgation either knew or should have known that the only reason for the order, i.e., relieving the manpower shortage in the nonferrous metal mines, would not be accomplished thereby. However, we think that the only "illegality" involved in WPB's arbitrary action was its failure to pay just compensation for the property right of which plaintiffs were deprived, because we believe that WPB had the necessary statutory authority to take this property. By October 1942, Congress had conferred upon the President authority to requisition, place mandatory orders for, or take for title or for use, any real or personal property or interests therein which he deemed necessary to successfully prosecute the war. These statutes left the determination of war necessity to the absolute discretion of the President, but they required the payment of just compensation for any property taken or used. Congress also authorized the President to take possession of factories or other business establishments and to operate them if it was deemed by him to be in the interests of the national defense to do so. All these powers were delegated to the War Production Board except the President's power to condemn real property. Although none of the statutes contained specific language authorizing the requisition of a business in order to keep that business from operating at all, if the Government felt that the idleness of a business would be of benefit to the defense effort but did not believe the business sufficiently evil or dangerous in wartime to justify its closing,[12] we suppose its powers of requisitioning were broad enough to permit such action, subject, however, to the obligation to pay just compensation [fol. 224] to the owner. Neither party has suggested that the Government lacked such power.

Defendant also urges that if, as plaintiffs contend, the only purpose of the order was to divert manpower from the gold mines to the nonferrous metal mines, then the action

---

[12] *Hamilton* v. *Kentucky Distilleries Co.*, 251 U. S. 146.

taken by WPB in issuing the order was unauthorized because the War Production Board had no authority to issue orders affecting manpower.

From our study of the statutes, executive orders and regulations relating to WPB, we think that WPB was authorized to take into consideration the manpower implications of any order it might issue. The relationships between manpower and the consumption of scarce materials, and between manpower and increased production of vital end products, are of too obvious significance in the whole war production situation to suppose that they were not the legitimate concern of the War Production Board. The establishment of the Labor Division early in the life of the Office of Production Management and the presence on the War Production Board itself and on the War Manpower Commission of the Director of the Labor Division, are ample evidence of this concern. While Congress never enacted legislation which gave the Government the power to order a civilian worker to leave one job and go to another, or to order an employer to discharge an employee in order that the employee might be hired by someone else, it was no objection to an order of the Government, otherwise valid, that one of the results of its enforcement would be a better utilization of available manpower in the interests of the national defense. That the main objective of the gold limitation order may have been to bring about a shift in the employment of underground gold miners from the gold mines to the nonferrous metal mines is, we think, immaterial on the issue of the order's validity, since the order did not in any of its provisions attempt to exercise authority with respect to manpower and provided no possible basis for any attempted enforcement of the latent manpower purpose.

The only circumstance under which the Government may escape the obligation to pay for property which is destroyed or taken by the authorized action of its agents, is where, in time of war, that property is inherently dangerous, or is be-[fol. 225] ing used in such a manner as to clearly endanger the public safety. *Hamilton* v. *Kentucky Distilleries Co.*, 251 U. S. 146; *United States* v. *Caltex*, 344 U. S. 149. Gold mines which did not possess a serial number under WPB Order P-56 because they did not produce significant amounts of critical metals in addition to gold, were determined by

WPB to be "nonessential," but we know of no precedent which would justify our holding that a nonessential industry or business was, *ipso facto*, one endangering the public safety in time of war. That such an industry could be regulated, and strictly regulated in wartime, is unquestioned, and resulting losses are not compensable if the action taken is truly regulatory in nature. But the power to regulate a nonessential but nondangerous industry in wartime is not the power to destroy, and limitation is not the equivalent of confiscation. *Stone* v. *Farmers' Loan and Trust Co.*, 116 U. S. 307, 331. As the Supreme Court said in *Pennsylvania Coal Co.* v. *Mahon*, 260 U. S. 393, 415, "The general rule at least is that while property may be regulated to a certain extent, if regulation goes too far it will be recognized as a taking."

That the taking of the gold mine owners' right to make use of their mining properties was not in fact necessary to the successful prosecution of the war, and that the officials responsible for the issuance of L-208 either knew or should have known this fact, does not, we think, relieve the Government of its obligation to pay just compensation for the destruction of this right. The statutes and executive orders granting to the Government authority to take property which would aid in the prosecution of the war left to the discretion of those officials to whom the authority was delegated the determination of "war necessity." No tests or procedures were prescribed in connection with the making of that determination and no criteria furnished. That the determination was without foundation would be no defense in a prosecution by the Government of the owner for refusal to give up his property on the Government's demand for it accompanied by a tender of just compensation. Similarly, we think the same lack of wisdom in determining that the Government actually needed certain property which it took [fol. 226] or destroyed would be no defense to the Government in a suit by the owner for just compensation.

That the Government did not make any physical use of the gold mines does not deprive its action of its character of a taking. The Supreme Court has held that *destruction* of private property for a *public purpose* is the equivalent of a *taking* of private property for a *public use*. *United States* v. *Welch*, 217 U. S. 333; *Kimball Laundry Co.* v. *United States*, 338 U. S. 1.

In concluding that L-208 amounted to a temporary taking of plaintiffs' profitable use of their mining properties for which just compensation should be paid, we have had the following considerations in mind. If L-208 had merely denied plaintiffs the right to acquire any materials, facilities or equipment needed to operate a gold mine and, as a result thereof, plaintiffs had ultimately found it necessary to cease operations because of lack of needed materials, new or repair parts, their losses would have been consequential to the exercise by WPB of its lawful regulatory power of allocation in connection with scarce materials and therefore would not have amounted to a taking. If WPB had had the power to allocate civilian manpower from and to industries, and, as a result of its allocation, plaintiffs' mines had been forced to close down, there would similarly have been no taking. If L-208 had not only denied the gold mines the right to acquire materials, equipment and facilities but had ordered the mine owners to cease using what they had on hand, to hold them for the possible use of the Government, and not to dispose of them to anyone but the Government or its designees, such an order would have amounted to a taking by the Government of those materials, facilities and equipment, whether the Government or its designees ever actually took physical possession of them or not, and the loss of the gold mine owners' ability to carry on their business would have been consequential to the taking of the materials, equipment and facilities and would not have been compensable under the Fifth Amendment.

L-208 did not do any of the above things except to deny the gold mine owners and operators the right to acquire additional materials, facilities and equipment. However, the [fol. 227] loss of plaintiffs' right to make profitable use of their mining properties was not, in many cases, the result of that denial. The record establishes that a number of the plaintiffs herein could have operated for a time at least with what they had on hand and without acquiring any additional materials, facilities and equipment which were under Government restriction. How long they could have operated is of importance on the question of damages rather than of liability. But L-208 did not stop with a mere denial of the right to acquire materials, equipment and facilities. The real substance and intent of the order was embodied in the prohibition directed at the continued op-

eration of the gold mines. The so-called limitation on the gold mine owners' use of the equipment and supplies and facilities which they owned was not intended to make those items available to the Government or to the war effort but was expressly included in the order to insure that they would not be used in the mining of gold, and was part and parcel of the express order to cease doing business.

We conclude that L-208 by prohibiting the carrying on of otherwise lawful mining operations placed a servitude on plaintiffs' profitable or beneficial use of their mines and thus amounted to a temporary taking of that property right in the case of those mine owners and operators who were forced to close their mines by virtue of their compliance with those provisions of L-208 which prohibited them from using their materials, facilities and equipment to mine gold and which ordered them to close down their mines. Such mine owners and operators are entitled to be paid just compensation within the meaning of the Fifth Amendment to the Constitution.

Homestake Mining Company

The Homestake Mining Company is a California corporation. Homestake is and was in 1942 the owner of patented mining claims covering more than 5,000 acres of mining properties containing gold-bearing ores of great value located in the Black Hills area of South Dakota near the city of Lead. For some 65 years prior to October 8, 1942, Homestake had been engaged in the business of mining, processing and selling gold, and in 1942 it was the [fol. 228] largest gold producer in the United States.

The mine was located in an isolated area and was therefore required to observe a policy of self sufficiency. From its early days it maintained larger inventories of supplies and equipment than was customary in most mining enterprises. It owned extensive timberlands which provided lumber needed for the mine. It had developed a coal mine, and it produced all of its own electric power. Prior to the issuance of L-208, Homestake had completed two deep mine shafts and had equipped them with modern hoists. It had also erected a new lumber mill. Its steam power plant was relatively new and its ore processing mills were in excellent operating condition.

The mine maintained its own foundry and machine shops to fabricate and repair a variety of mining and processing equipment. Homestake's inventory of supplies and materials, which it could not make for itself, was sufficient in October 1942, to permit the company to operate its mine during the entire period of the closure. Dynamite, which the company would have had to obtain within a few months, was readily available without restriction.

The working and living conditions at Homestake in 1942 were superior to those of any of the nonferrous metal mines to which the Government hoped to transfer the Homestake miners. Homestake had lost some of its manpower in October 1942, but had it been permitted to continue operations it could have maintained normal production levels by using mining techniques requiring less labor and by increasing its workday from seven to eight hours.

In October 1942, the Homestake mine constituted the largest single source of potential nonferrous metal mining labor, with a total payroll of approximately 1,800 workers of all kinds. Following the closing order, Homestake released 473 men of whom 183 were classified as miners, 39 of whom had had less than six months' experience. The nearest nonferrous metal mines were about 500 miles from the Homestake mine—Anaconda copper mine at Butte, Montana, and the Climax molybdenum mine at Climax, Colorado. Representatives of the United States Employment Service attempted to induce released Homestake workers to accept employment at those nonferrous metal mines. Fifty-[fol. 229] one Homestake employees accepted employment at Climax, 41 staying less than 6 months and only 6 remaining as long as a year. One hundred seventy-eight Homestake employees went to Anaconda and more than 100 left before the end of a year. Between October 8, 1942 and November 12, 1942, the United States Employment Service placed 207 Homestake employees of all kinds in other mining districts. A number of these employees, however, returned to Lead shortly after November 12, 1942.

Prior to October 8, 1942, employement at Homestake had not suffered as had employment in the nonferrous mines and, although some employees had left the mines, most of the old employees stayed on. The reasons for the greater stability of employment in this mine, which constituted the

largest single source of experienced miners, were probably the good living conditions, the free medical and hospital service, group insurance, pensions, recreational and other facilities provided for Homestake employees by the company. These conditions were unusual in the mining industry and had no counterpart in the nonferrous metal mines.

After the issuance of L-208, Homestake was permitted to hoist and process ore already broken until the latter part of May 1943. After June 1, 1943, the mine was closed for all except maintenance purposes until July 1, 1945, when the mine was reopened.

Without acquiring new machinery, parts, supplies or other materials, and with a greatly reduced labor force, Homestake could have operated profitably during the entire period of closure.

Although Homestake had a large inventory of supplies and materials, and large amounts of machinery and equipment in good condition, neither WPB nor any other Government agency sought to requisition, purchase or compel the transfer thereof to the Government or to a war industry.

The properties of Homestake were useful for no other purpose than the production of gold and were adaptable to no other use than the conduct of a gold mining business. The closing of the mine had far-reaching and drastic repercussions in the city of Lead and in the surrounding communities. The population of Lead declined sharply. More than 750 homes and apartments were left vacant and 36 [fol. 230] business establishments which had served the communities were closed. About ten percent of the State's annual revenue derived from Homestake was lost to the State.

We conclude that L-208 amounted to a temporary taking of the profitable use of the Homestake mining properties for which Homestake is entitled to be paid just compensation within the meaning of the Fifth Amendment to the Constitution. The case will be remanded to a commissioner of the court for trial on the question of damages.

Idaho Maryland Mines Corporation

Idaho Maryland Mines Corporation, a Nevada Corporation, owned in fee certain gold mining properties known as the Idaho Maryland Mines, consisting of approximately

8,000 acres of gold-bearing lands situated in the Grass Valley Mining District in the County of Nevada, State of California, together with all the necessary mining plant and equipment located on those lands.

On October 8, 1942, Idaho Maryland had extensive equipment and facilities for the operation of its mining enterprise, including machine shops, electric shops, welding shops, blacksmith shop, carpenter shop, cyanidation plant and smelting plant, a sawmill and other mills, all the usual automotive and other equipment. It also had on hand a large inventory of supplies and materials necessary for operating the mine, including pipe and rail, steel, drill steel, tires, tubes, repair parts for milling machinery, valves, pipe fittings, mercury, etc. The mine was a fully developed one comprising extended drifts, cross-cuts raises and winzes, fully equipped with modern mechanical equipment. The mine had its own timber supply and its own sawmill. Its electric power was furnished by the Pacific Gas and Electric Company and there was no shortage of electric power at the mine nor was it curtailed during the shutdown period.

Prior to the issuance of L-208, the mine had lost considerable manpower. Its payroll was reduced from 800 employees to 212 employees [13] between December 1941 and [fol. 231] October 8, 1942. Alterations in mining methods enabled the mine to continue a profitable operation with the smaller force of workers.

With a greatly reduced labor force and without acquiring any critical material, supplies, equipment or facilities subject to Government control, Idaho Maryland could have operated its mining properties on a profitable basis during the entire period of L-208.

The properties of Idaho Maryland were useful for no other purpose than the production of gold. Its various machine shops were not capable of being utilized in the mass production of any item.

The closing of the mine caused considerable community dislocation and individual hardship in Grass Valley, Cali-

---

[13] The average age of the 212 employees was 47.7 years. Forty-three of the underground workers were 50 years of age or over.

fornia, which was wholly dependent upon the operation of the gold mine for its continued prosperity. Since 1848, the principal occupation of the inhabitants of the communities of Grass Valley and Nevada City had been gold mining.

On May 3, 1944, Idaho Maryland was permitted by WPB to resume operations on a limited basis to be carried out with a force not to exceed 200 men who were required to be over 40 years of age and not employed by other industries. Production was limited to 7,800 tons of ore per month, but because of the length of time it took to prepare for production and to open up the necessary ground workings after extensive damage caused by the shutdown, Idaho Maryland was not able to produce 7,800 tons a month in 1944. Permission to hire additional labor was denied by WPB on November 24, 1944.

The closing of Idaho Maryland was brought about by reason of compliance with the provisions of L-208 which ordered that the mine be closed and that the owners not use materials, supplies, machinery and facilities on hand to operate the mine. We conclude that L-208 amounted to a temporary taking of the profitable use of the Idaho Maryland mining properties for which Idaho Maryland is entitled to be paid just compensation within the meaning of the Fifth Amendment to the Constitution. The case will be remanded to a commissioner of the court for trial on the question of damages.

[fol. 232] Central Eureka Mining Company

Central Eureka Mining Company, a California corporation, owned approximately 641 acres of gold-bearing land located at Sutter Creek, Amador County, California. On October 8, 1942, the mine had been producing gold for about 80 years. It then employed 117 men of whom 73 were classified as underground workers. The average age of these employees was 41.74 years. Most of them were married and had children and a number owned their own homes in the vicinity of the mine. Following the closing of the mine, the company was permitted to retain 42 men for maintenance purposes.

Central Eureka's equipment included machine shops, electrical shops, blacksmith shop, carpenter shop, an assay office, a complete mill from primary crush to cyanidation,

and its own source of timber. It had all the automotive and other necessary equipment required to carry on its mining operations and the servicing of the underground workings. On October 8, 1942, the company was operating profitably and could have continued to so operate throughout the entire period of the L-208 closure without acquiring any critical materials, machinery or equipment and with a reduced force of labor. The properties of the company were useful for no other purpose than the production of gold, and were adaptable to no other use than the conduct of a gold mining business.

Following the issuance of L-208, Central Eureka attempted to operate a copper mining project at Battle Mountain, Nevada, but abandoned the work in the summer of 1943. Central Eureka leased some mining equipment to individuals engaged in tungsten mining. It does not appear that any of the company's equipment or materials were ever requisitioned by the Government or acquired on mandatory orders by the Government's designees.

The closing of Central Eureka mine was brought about by compliance with the provisions of L-208 which ordered the mine to close and to cease using its materials, supplies, machinery and equipment to operate the mine. We conclude that L-208 amounted to a temporary taking of the profitable use of the mining properties of Central Eureka for which Central Eureka is entitled to be paid just compensation within the meaning of the Fifth Amendment to [fol. 233] the Constitution. The case will be remanded to a commissioner of the court for trial on the question of damages.

Oro Fino Consolidated Mines, Inc.

On October 8, 1942, certain gold mining properties located in Ophir Mining District, Placer County, California, were operated by J. C. KempvanEe under lease, dated September 5, 1935, from Hazel P. Gridley. Subsequent to receipt of L-208 from WPB, the lessee was permitted by WPB to continue the removal and milling of broken ore until January 15, 1943. Thereafter, operations at the mine were discontinued and the mine closed down.

As of October 8, 1942, there were approximately 11 employees in the mine as contrasted with about 40 in normal times. The mine was equipped with the necessary machin-

ery and equipment on October 8, 1942, but how long the mine could have continued in operation without acquiring additional materials, supplies or equipment, is not established by the record. The mine could be used for no other purpose than the production of gold, and its closing in early 1943 was due to compliance with those provisions in L-208 which ordered the mine to be closed and prohibited the operator from using materials, equipment and facilities on hand to operate the mine.

Defendant raises a special defense in this case. Defendant urges that plaintiff, Oro Fino Consolidated Mines, Inc., is not the real party in interest and that the claim, if any, with respect to the closing of the mine, resides in J. C. KempvanEe because the assignment of the lease by KempvanEe to the corporation did not include this claim. Plaintiff argues that the language of the assignment is sufficiently broad to cover the claim of KempvanEe against the United States.

The assignment, dated February 2, 1950, states that the lessee, KempvanEe

> "does hereby sell, assign, transfer and grant unto Oro Fino Consolidated Mines, Inc., a corporation, all right, title and interest in and to that certain mining agreement and the real property therein described and all rights arising by virtue of said agreement, dated [fol. 234] September 5, 1935, by and between Hazel P. Gridley, a widow, designated as lessor and J. C. KempvanEe, designated as lessee, * * *."

At the time of the alleged taking, KempvanEe was the owner of the lease covering the mining properties and the damage, if any, was to KempvanEe. It appears that in 1948 the financial backer of KempvanEe died and he turned for financial assistance to another individual who suggested that the mining operation be incorporated. As a result, the plaintiff corporation was organized on January 4, 1950, and on February 2, 1950, KempvanEe assigned his rights in the lease to the corporation.

We think it immaterial whether or not the somewhat ambiguous assignment conveyed to plaintiff the original lessee's right to receive just compensation or not since, if it did, the anti-assignment statute, 31 U. S. C. 203, bars plain-

tiff's recovery. *United States* v. *Shannon*, 342 U. S. 288; *Potts* v. *United States*, 130 C. Cls. 88. In the *Shannon* case, the Shannons had purchased from the Boshamers a tract of land part of which had previously been leased by the Boshamers to the United States. Buildings on the land had been damaged by soldiers of the United States, and the contract of sale to the Shannons provided that the sellers, the Boshamers, released to the purchasers any claim, reparation, or other cause of action against the United States Government for any damage caused the property. The Boshamers were themselves unwilling to institute a claim against the United States. The Supreme Court held that the assignment of the claim fell clearly within the ban of the Anti-Assignment Act as a voluntary assignment, as distinguished from an assignment by operation of law. In the *Potts* case, *supra*, Potts held an oil and gas lease on land inundated by Lake Texoma with the building of Denison Dam. Drilling operations by Potts were damaged by the rising water in 1945. In 1950 Potts assigned the lease to Godfrey and O'Hearn. All three persons sued the United States for a taking. The Court of Claims denied the claims of Godfrey and O'Hearn, holding that whatever claim Potts may have had against the Government, he could not validly assign it to anyone.

If the assignment in evidence in this case did not convey to this plaintiff the claim of KempvanEe against the United [fol. 235] States, plaintiff is obviously not the real party in interest. If the assignment did convey the claim, recovery is barred by the anti-assignment statute. Accordingly, the petition of Oro Fino Consolidated Mines, Inc., is dismissed.

Alaska-Pacific Consolidated Mining Company

Alaska-Pacific Consolidated Mining Company is a State of Washington corporation owning and operating mining properties located in the Willow Creek (Wasilla) Mining District in the Territory of Alaska. The properties consisted of an underground or lode mine with about 5 miles of underground workings and with two entries. The mine is in an isolated area and except for timber, all supplies, including foodstuffs, were imported from the States by ship, rail and truck. Because of its isolation, the mine custom-

arily carried a substantial inventory of parts, equipment and supplies and at the time the mine was closed by virtue of L-208, Alaska-Pacific had an inventory of parts, equipment and supplies sufficient to permit continued operations for at least one and one-half years. A company village was maintained at the mine, consisting of the mine and mill buildings, various warehouses, shops, dormitories, a school and an office building, a store, messhall and various recreational facilities.

The normal crew at the mine was about 125 men. On October 8, 1942, the mine had a crew of 101 men. The only other mines in Alaska at that time, aside from gold mines, were two coal mines. Only three of Alaska-Pacific's employees had any coal mining experience. There appears to have been an aversion, at least on the part of Alaskan gold miners, to working in coal mines, partly because of the hazards involved and partly because the equipment and machinery were different. Although the record does not establish the exact number of gold miners who transferred to the two coal mines, there were at least four and possibly a few more.

Alaska-Pacific was able to produce a small amount of concentrate essential to the smelting of copper and a certain amount of tungsten. WPB was inclined to permit the mine to continue operating for the production of tungsten and, in response to a series of appeals, the mine was permitted to continue operations until August 8, 1943, on which date WPB [fol. 236] required the mine to close down. Subsequent to the closure of the mine, Alaska-Pacific sold most of the perishable items in its inventory to such agencies as the Alaska Road Commission and the Alaska Railroad, and stored at the mine the other items.

The closing of the Alaska-Pacific mine was brought about by reason of compliance with the provisions of L-208 which ordered that the mine be closed and that the owners not use the materials, supplies, equipment and facilities on hand to operate the mine. We conclude that L-208 amounted to a temporary taking of the right of Alaska-Pacific to make profitable use of its mining properties, for which it is entitled to be paid just compensation within the meaning of the Fifth Amendment to the Constitution. The case will be remanded to a commissioner of the court for trial on the question of damages.

Bald Mountain Mining Company

Bald Mountain Mining Company is a South Dakota corporation owning certain gold-bearing lands in Lawrence County, South Dakota. On October 8, 1942, Bald Mountain was engaged in mining gold on those properties. Pursuant to appeals to WPB, Bald Mountain was permitted to continue gold mining operations until August 8, 1943.

On October 8, 1942, Bald Mountain employed approximately 150 men. How many of these men were hardrock miners or where they went after the mine closed in August 1943, the record does not disclose.

It appears that the mine closed in August 1943, because of L-208. The mine was reopened shortly after revocation of L-208 in the summer of 1945. The record does not disclose the nature or size of the mine's inventory of mining equipment, materials and supplies on hand when the mine finally closed, or how long the mine could have continued to operate without acquiring new materials, etc.

We conclude that L-208 amounted to a temporary taking of the right of Bald Mountain to make profitable use of its mining properties for which it is entitled to be paid just compensation within the meaning of the Fifth Amendment to the Constitution. The case will be remanded to a commissioner of the court for trial on the question of damages. [fol. 237] In that connection, however, consideration should be given to the probable length of time Bald Mountain could have operated its mine without acquiring additional materials, facilities or equipment for which priorities were requred during the period L-208 was in effect and while the mine was closed.

Alabama-California Gold Mines Company

Alabama-California Gold Mines Company, a State of Washington corporation, owned certain gold-bearing lands located in the State of California. On August 8, 1942, Alabama-California closed its gold mine and ceased all operations because of its inability to secure sufficient manpower or materials. Inasmuch as the mine of Alabama-California was not closed by virtue of compliance with the provisions of L-208, there has been no taking of its right to make profitable use of its mining properties and the petition will therefore be dismissed.

Consolidated Chollar Gould & Savage Mining Company

Consolidated Chollar Gould & Savage Mining Company, a California corporation, owned certain gold-bearing lands in Story County, Nevada. Its method of operation on October 8, 1942, was an open-pit one. It had explored the location and size of the veins of gold and silver through an underground shaft, but finding the cost of mining through that shaft to be excessive, it had stripped off the rock above the veins containing precious metal, and was recovering ore by use of power shovels. Some time prior to the issuance of L-208 officials of the mine had determined that because of the shortage of rubber essential to the trucking of waste from the stripping operations, the development of new ore would no longer be practicable. The mine's management had also been making preparations to conduct operations which would consist of rehandling previously mined and processed ore, and machinery was installed for this purpose. On October 30, 1942, the company requested of WPB permission to conduct operations which would consist of the rehandling of previously mined and processed ore (tailings). It represented that such operations would require a crew [fol. 238] of only six men who would be available from the local community and were of such an advanced age that they were precluded from employment in copper mines or defense plants. It also stated that the planned operations would require no steel consumption and that the supplies on hand and available from mines already closed down would enable the operations to be carried to completion. WPB permitted such operations to be carried on first to February 26, 1943, and then to June 30, 1943.

The above-described rehandling operations proved to be financially impractical and on April 28, 1943, Consolidated Chollar requested permission of WPB to resume its normal open-pit operations. It stated that it expected equipment to be available as a result of the completion of defense projects in the area, and that it would require no more than 20 men from the locality whose average age was over 50 years. Consolidated stated that steel consumption would be low and that it had the necessary steel on hand to operate for at least six months. Consolidated had been granted a serial number for use in its permitted rehandling operations, but on June 19, 1943, WPB refused to transfer the application of

that number to the resumption of open-pit operations. Consolidated then advised WPB that there were 15 men not suitable for work in war industries available in the locality and that there were sufficient operating supplies and fabricated repair parts on hand, with the exception of sodium cyanide, for the conduct of open-pit operations for six months. It stated that if such operations were authorized, priority assistance for supplies and equipment would not be required for six monts except in the event of unexpected equipment breakdown.

On August 28, 1943, WPB issued Serial No. 36-26-T under Preference Rating Order P-56 which had the result of removing this plaintiff from the restrictions of L-208, and permitted the mine to conduct open-pit operations. It was also authorized by the serial number to the use of a priority rating for obtaining maintenance, repair and operating supplies. The rating was extended through the first and second quarters of 1944.

In December 1943, Consolidated Chollar advised WPB that during the previous ninety days' operations under its [fol. 239] serial number it had been unable to bring its operations up to capacity because of the inefficiency of available labor and the lack of adequate equipment in the form of power shovels and trucks but that it hoped this condition would improve in time. It stated that with 23 men it had been producing an average of 320 tons per day, compared with 400 tons per day in 1942, with approximately the same number of men.

The record does not disclose how long Consolidated Chollar continued open-pit operations under its serial number or its reasons for discontinuing its operations if, in fact, it did discontinue them.

The record discloses that after the war Consolidated found it necessary to first remove overburden from above the ore vein because no ore was clear for breaking. The reason for this was that during the effective period of L-208, Consolidated Chollar had been able to process all the ore which it had stripped of overburden prior to the close of 1942.

From the above, it appears that open-pit mining operations of Consolidated, in which it was engaged in October 1942, were not discontinued as a result of the issuance of L-208 except for the period from sometime in November

1942 to August 28, 1943, and during that period Consolidated was permitted to carry on the rehandling of previously mined and processed ore in accordance with plans it had made early in 1942. We conclude that while Consolidated's operations were curtailed by WPB, they were never required to close down as provided in L-208, nor were they ever made to comply with that part of the order which prohibited the use of materials, equipment and facilities owned by them for any purpose having to do with the operation of the mine. The right of Consolidated Chollar to make profitable use of its mining properties was regulated but it was not taken or destroyed for any period and this plaintiff is accordingly not entitled to recover. The petition of Consolidated Chollar Gould & Savage Mining Company will therefore be dismissed.

Ermont Mines, Inc.

Ermont Mines, Inc., an Oregon corporation, owned a compact block and contiguous quartz lode mining claim, desig- [fol. 240] nated by numbers 1 through 34 inclusive, and located in the County of Beaverhead, State of Montana.

At the time of the issuance of L-208 in October 1942, Ermont was working claims numbered 1 (with drifts on claims numbered 2, 3 and 4); 2 (working over into claim number 6), 7, 9, 19, 20, 23, 24, 28 and 32. After receiving the WPB order to close down pursuant to L-208, Ermont continued taking out ore already mined, ran it through the mill and refinery, and shipped it to the mint. Sometime in November, the mine and buildings were closed and a watchman was employed to look after the property.

On October 8, 1942, Ermont employed a crew of men adequate to work the above claims. The men had homes in the vicinity of the mine. The mine had sufficient supplies, machinery and equipment in good working order which would have enabled the mine to continue operations for at least a year from October 8, 1942, if the mine had not been closed down pursuant to L-208. Mining operations were resumed at Ermont at sometime subsequent to the revocation of L-208.

We conclude that L-208 amounted to a temporary taking (for at least one year) of the right of Ermont to make profitable use of its mining properties for which Ermont Mines,

Inc., is entitled to be paid just compensation within the meaning of the Fifth Amendment to the Constitution. The case will be remanded to a commissioner of the court for trial on the question of damages.

In summary, the following plaintiffs have established their right to recover just compensation for a temporary taking of their right to make profitable use of their gold mining properties and their cases will be remanded to a commissioner of the court for trial tn the question of damages: Homestake Mining Company; Idaho Maryland Mines Corporation; Central Eureka Mining Company; Alaska-Pacific Consolidated Mining Company; Bald Mountain Mining Company, and Ermont Mines, Inc. In view of our decision in these cases it is unnecessary to discuss the various contentions relative to the special jurisdictional act of July 14, 1952, 66 Stat. 605.

The petitions of Alabama-California Gold Mines Co., and Consolidated Chollar Gould & Savage Mining Company will [fol. 241] be dismissed, inasmuch as it does not appear that they were closed down as a result of compliance with the provisions of L-208, which circumstance also removes them from any possible coverage by the special jurisdictional act.

The petition of Oro Fino Consolidated Mines, Inc., will be dismissed for the reasons set forth hereinbefore. It is so ordered.

MADDEN, *Judge*, and WHITAKER, *Judge*, concur.

JONES, *Chief Judge, dissenting:*

I concede that that part of order L-208 which directed certain mines to be closed down was invalid. The statute did not authorize such action. Paragraph (b) (1) of that order undertook to do that and was therefore issued without authority. However, paragraphs (b) (2) and (3) of the same order, which forbade the use of critical materials in nonessential industry, were valid exercises of the President's power under the allocation statute and they would have produced the closing down of the mines whether or not paragraph (b)) (1) had been included.[1] I would hold that paragraph (b) (1) of order L-208 should therefore be con-

[1] The full text of L-208 is set out in finding 43.

strued as mere surplusage and not an exercise of the President's powers of eminent domain. Since the valid portions of the order would have produced the closing of the mines, the added part of the order becomes immaterial.

During the war limitation orders were issued to curtail or prohibit the use of critical materials in the manufacture of nonessential products. L-208 (b) in its second and third paragraphs did just that. The majority concedes that such mines as did not have critical materials on hand are not entitled to recover for the reason that the gold mining process did consume critical materials and that regulations (other than L-208) depriving the operators of the effective right to acquire such materials were valid under the statute.

It follows that L-208, in so far as it prohibited the acquisition of critical materials, was valid. In so far as this order or other priority or allocation orders, either working together or separately, forbade the use of critical materials on hand for nonessential purposes, they were also valid wartime regulations. *St. Regis Paper Co.* v. *United States*, 110 C. Cls. 271; cert. den., 335 U.S. 815. I do not think it [fol. 242] matters whether the acquisition or use of critical materials was prohibited by L-208 or by it in conjunction with other priority or allocation orders.

The majority concludes that those operators who had critical materials on hand are entitled to recover for the time tha tthese materials would have allowed them to continue operation. In this respect the court seems to rely mostly on its conclusion that in so far as L-208 prohibited the use of critical materials on hand, it was arbitrary. The court bases this conclusion in turn primarily on the fact that the Government took no affirmative steps to allocate the materials "away from" the gold mine operators into more essential uses.

We do not think this was necessary under the circumstances. If indeed these materials were critical, then it is natural to expect that, under the operation of supply and demand, such materials would find their way into essential uses. In fact it would have been wholly impracticable in a great national emergency for any agency of government to allocate and assign every bolt, nut, and piece of critical materials. Thus, for example, even those who were engaged

in essential wartime industry were often merely given priority orders which were little more than hunting licenses and those industries had the task of locating and securing the critical materials. The fact that our nation, unprepared though it was, was able to produce wartime materials on a vast scale is a magnificent tribute to our free economy.

It was reasonable to suppose that the gold mine operators would attempt to reduce their capital investment in materials which they had no authority to use. This did in fact happen in the case of the Central Eureka Mining Company which leased some of its equipment to persons engaged in tungsten mining. Thus, while it may be true that there were other motives and purposes in issuing L-208 than the allocation of critical materials, I do not think that in so far as L-208 was intended to allocate critical materials it was arbitrary. There can be no question that some strategic materials could be expected to be saved by the dual prohibition of forbidding the gold mines to acquire new strategic materials and preventing the use of the ma- [fol. 243] terials and equipment they had on hand.

It cannot be said that L-208 and concurrent orders in their prohibition of the use of strategic materials on hand had no reasonable relation to the execution of the lawful purpose of allocating strategic materials. *Jones* v. *City of Portland*, 245 U.S. 217, 224. That this may have been done more effectively by other means does not matter.

The President had neither the constitutional power nor the statutory authority to close the mines directly. It is probable that as a legal matter the enforcement of that part of the order which directed the closing of the mines could have been enjoined. However, in wartime that is not a very practical remedy because it puts any individual or company in the position of hindering the war effort. In any event the Supreme Court has ruled that the defendant cannot be held for damages flowing from an unauthorized act of its officials. *Federal Crop Insurance Corp.* v. *Merrill*, 332 U.S. 380, 384. Besides, if that portion had been enjoined, the valid portions of the order, as well as concurrent orders freezing the uses of critical materials, would have remained in effect. These would have compelled the closing of the mines, and the injunction would have been useless.

There is no doubt that plaintiffs were damaged by the necessity of closing the mines. War produces many hardships. It entails many sacrifices. When ceiling are placed on the prices of the products of farm and factory, when wages are frozen and when young men are taken and sent to face hardships and even death on distant battlefields at a small rate of pay in the fixing of which they have had no part, when prices generally are fixed, when all the interests of the nation are fused in the common purpose—losses are inevitable. No nation could justify such action in normal times. It would be next to impossible to measure and pay all the losses involved in an all-out war.

If the Congress should see fit to acknowledge liability to these owners on the ground that their losses were unusual, the court should willingly undertake to determine the amount, but unless this is done I do not think the court should select these losses to be compensated.

[fol. 244] — LARAMORE, *Judge*, dissenting:

The majority opinion points out that L-208 was not an allocation order, as it purported to be, but rather was clearly an order closing gold mines deemed nonessential to the war effort; *i.e.*, those mines whose gold production in dollar value exceeded 30 percent of their total production.

There was no authority vested in the President to directly close a business. The President could regulate the gold mines, allocate materials away from them, or requisition their materials, or even the business itself, if he determined their need essential for defense, and that such need was immediate and would not admit delay or resort to any other source of supply, and all other means of obtaining the use of such property for defense had been exhausted. See Act of October 16, 1941, 55 Stat. 742. Instead of determining that these gold mines were needed for defense, the President determined that they were nonessential and that the national defense would be better served by their closing.

The majority considers the closing under such circumstances to be a taking of plaintiffs' right to do business and compensable under the Fifth Amendment. I believe that the President lack the constitutional power and statutory authority to close these mines and, therefore, the unauthorized closing could and should have been enjoined. *Youngstown Sheet & Tube Co.* v. *Sawyer*, 343 U.S. 579.

Inasmuch as the President lacked authority to close these mines, and such closing has not been ratified by Congress, the unauthorized closing is not compensable under the Fifth Amendment. *Hooe* v. *United States*, 218 U.S. 322; *United States* v. *North American Transportation & Trading Company*, 253 U.S. 330; *United States* v. *Goltra*, 312 U.S. 203.

Findings of Fact

The court, having considered the evidence, the briefs and argument of counsel, and the report of Commissioner William E. Day, makes the following findings of fact:

[fol. 245] 1. On January 7, 1941, the President of the United States established the Office of Production Management, hereinafter referred to as OPM, and delegated to it the powers and duties described in Executive Order 8629 (6 Fed. Reg. 191) and Executive Order 8942.[1] On August 28, 1941, the President by Executive Order 8875 established the Supply, Priorities and Allocations Board, hereinafter referred to as SPAB, and directed it to determine general policies for OPM.

2. By Executive Orders issued January 16 and January 24, 1942,[2] the President established the War Production Board, hereinafter referred to as WPB, and vested in the Chairman of that Board, acting with the advice and assistance of the members of the Board, the functions and powers formerly vested in OPM and SPAB. The Chairman of WPB was authorized by the Executive Order of January

---

[1] In Executive Order 8629, the President delegated his priorities power under section 2(a) of the Act of June 28, 1940, 54 Stat. 676, and his power of requisitioning under section 9 of the Act of September 16, 1940, 54 Stat. 885, 892, including the power to take possession of plants. Further requisitioning power conferred on the President by the Act of October 10, 1940, 54 Stat. 1090, and the Act of October 16, 1941, 55 Stat. 742, were delegated to OPM by Executive Order 8942, Nov. 19, 1941.

[2] Executive Order 9024, January 16, 1942; Executive Order 9040, January 24, 1942. The latter order delegated to WPB the President's power under section 120 of the National Defense Act of 1916, 39 Stat. 213, to place mandatory orders and to take possession of plants.

16, 1942, to exercise the power, authority and discretion conferred upon him through such officials or agencies as he might determine.

3. The function of WPB and its predecessor agencies was to exercise general direction over the war procurement and production program, to regulate the production and supply of materials and equipment necessary for the national defense, and after the declaration of war for the prosecution thereof, and to determine when and what manner priorities should be accorded to deliveries of such material and equipment. These agencies fulfilled this function by the issuance of various orders, the most common of which were designated as "P" orders (priorities), "M" orders (materials), and "L" orders (limitation).

The "P" orders were generally addressed to buyers of materials and authorized them to attach to their purchase orders a letter or symbol entitling them to preference in [fol. 246] delivery. Once having been granted, this preference could usually be applied on a repetitive basis.

The "M" orders were usually directed to the manufacturers or distributors of materials and were aimed at controlling either the use or the distribution of particular materials. These orders frequently prohibited producers from selling to any buyer unless the buyer had some preference rating.

The "L" orders were usually issued to prohibit or curtail the manufacture of end products containing critical materials, continued production of which would have necessarily consumed such critical materials. Sometimes an additional purpose of such "L" orders was to accomplish the conversion of scarce manufacturing facilities to war production.

"L" orders were issued prohibiting or limiting the production of end products such as office machinery, furniture, bicycles, stoves, refrigerators, laundry equipment, automobiles, and other products. In most instances a prohibition against the production of a product resulted in the facilities being transferred to war production. Thus, the automobile industry's facilities were largely converted to war purposes although some of the facilities may have become inoperative because of a lack of adaptability to other purposes or to war production.

Issuances of "L" orders sometimes released manpower employed in the production of the prohibited end products. Working with the particular industry branch involved in the "L" order, the Labor Production Branch[3] of WPB, assisted in making arrangements whereby the application of the "L" order to the industry would be most effective in terms of the utilization of the services of the manpower so released.

Where an area was threatened with serious economic dislocation by reason of the threatened closing down of a primary industry resulting from an "L" order because substitute materials were not available to produce that in-
[fol. 247] dustry's product, either the area or the industry could be certified as "distressed" by WPB. Such a certification entitled the firms in the area to special treatment in the awarding of war orders, i.e., the orders did not have to go to the lowest bidders, and financial assistance could be given to enable the plants to convert. The entire washing machine industry was so certified.

The preference ratings assigned under the "P" orders originally ranged from A-1 to A-10, with the highest rating, A-1, being further subdivided. There was no control over the number of buyers who might be given a particular rating, and a buyer having one of the lower preference ratings might and often did find it impossible to purchase any material because the holders of the higher ratings had exhausted the available supply.

4. In the decisions by OPM and WPB to issue a "P", "M", or "L" order, a number of considerations might be

---

[3] On March 18, 1941, OPM issued Regulation 5 (6 F. R. 1598, 32 CFR 2875—1941 Supp.), establishing a new operating division known as the "Labor Division". The functions and duties of this division were (1) to ascertain labor requirements for national defense; (2) to develop programs and coordinate efforts for assuring an adequate and trained labor supply for defense purposes; (3) to advise regarding problems and standards of work and employment in defense industries; (4) to assist in the prevention and adjustment of labor controversies which might retard the defense program; (5) to advise and collaborate with other divisions of OPM on all matters affecting labor.

involved such as the conserving of essential materials, supplies and equipment for use in essential war industries, the increasing of production of strategic raw materials or essential end products, and the maximum utilization of available manpower. In the earlier months of the war some areas of the country were still suffering from large scale unemployment.

5. On July 29, 1941, OPM issued Preference Rating Order P-23 in order to facilitate the acquisition of materials by producers of machinery and equipment used in the mining, beneficiation and preparation of coal and metallic ores. Said order authorized such producers to use a preference rating of A-3 for the acquisition of such materials.

6. On September 9, 1941, OPM issued Preference Rating Order P-22, known as the General Repair Order. It authorized a broad variety of industries, including mines and quarries generally, to use an A-10 rating for the acquisition of material needed for the repair of their property or equipment.

7. On September 17, 1941, OPM issued Preference Rating Order P-56 and amended it on September 22, 1941. Said order, as amended, authorized recognized mining enterprises to use a preference rating of A-8 for the acquisition of materials needed for operating supplies and for the main- [fol. 248] tenance of the property and equipment of such mines. Under the terms of said order OPM was to issue so-called mine serial numbers to all mines certified by an appropriate agency of a State, Territory or possession as constituting a recognized mining enterprise.

Placer gold mines but not lode gold mines were expressly excluded from the benefits of Order P-56. Placer mining is the derivation of gold from streamborne materials in contrast with lode mining which is the underground working of auriferous quartz veins in hard rock.

The reason for the distinction between lode and placer mines in the assignment of preference ratings under Order P-56 was set forth in a report entitled "Status of Gold Mining" submitted to SPAB on November 18, 1941, by its Executive Director, Donald Nelson. The report read in part as follows:

> * * * Most lode mines are underground, and consequently subject to the hazards of rapid depreciation if

they are shut down. Flooding by water is the chief hazard. Though not all lode-mining is deep enough to suffer seriously if a shutdown occurs, continuity of operation is clearly desirable to prevent depreciation of installed equipment and structures. On the other hand, placer operations can be discontinued (and often are, seasonally) without injury to equipment. * * *

Another reason for this distinction was stated in November 1941 by Dr. Wilbur Nelson, who was then Priorities Specialist and Administrator of Order P-56 and who later became the Chief of the Mining Branch of WPB, to be "that we felt that we must start restricting mining activities where they were not essential to the production of materials needed in a defense effort." This referred to the fact that placer mines produced only gold, while many lode mines produced other metals.

8. In the memorandum submitted to SPAB on November 18, 1941, Mr. Donald Nelson had reviewed the problems relating to furnishing materials both to gold mines in the United States and to gold mines in foreign countries, and had said, in part:

> 1. A general announcement of policy toward gold-mining is needed. Otherwise, specific *administrative* actions will be questioned by the mines as unfairly dis- [fol. 249] criminatory. This is particularly necessary if the purchase of new machinery for gold production is to be virtually prohibited after November 30. A necessary preliminary to such a declaration would be a request to the Treasury for an immediate formal opinion on the significance of new gold production to monetary policy. It is to be emphasized that from a consumption of scarce materials standpoint, this whole issue is a minor one. Only about $7,000,000 of equipment, not including a lesser amount for repairs and maintenance, is involved annually at a maximum. Such importance as the issue possesses is largely political. It is political from two opposing standpoints—that of popular reaction to the continuation of an industry widely regarded as unnecessary (to the point of jocularity), and contrariwise, that of the regional interests delineated in the report.

2. The continuation of the right of lode gold mines to use the A-8 rating under Order P-56 could be made entirely discretionary with the Director of Priorities. The guiding principle might be established by SPAB of requiring their purchases to be held to the bare minimum necessary to prevent disastrous shut-downs. SPAB might also wish to establish a separate test of eligibility in terms of the amount of other more useful metals that are produced jointly with gold. For example, if the selling value of the essential metals is 25 percent and that of gold produced 75 percent, the mine might be permitted to buy machinery and supplies on the same basis as other essential metal producers. Or the minimum ratio might be set at 40 percent in the value of other metals, and 60 percent gold. The intent would be to avoid any discouragement to production of the essential metals.

3. An alternative, and more drastic policy would be to eliminate all domestic gold mines, whether lode or placer, from Order P-56 and also from the general repair Order, P-22. Gold mine operators would thus be forced to buy repairs and supplies without A-ratings, but could apply for special help on Form PD-1. It is quite possible that only very gradual declines in output and employment would result, because of managerial ingenuity. Here again, exceptions could be made for mines producing other metals.

4. In lieu of any blanket privileges to foreign mine operators, all foreign mine needs could be reviewed continuously with the Economic Defense Board, so that considerations of inter-American and British American policy could be consistently applied to decisions authorizing or forbidding shipments of gold-mining machinery and repair parts. No serial numbers au- [fol. 250] thorizing several purchases would be issued, but applications for individual shipments would be entertained. Here again, the specific quantities of burdened material (which are not large) are not the issue, but the political considerations involved and the question of treating nonessential industries consistently are paramount. In the special case of Canada, the Joint Economic Committees could secure all relevant statistical data.

5. Some special basis of treatment might be worked out for Alaska, where gold mining assumes the proportions of a majority industry. To cut off suddenly all shipments of new equipment needed for replacement, and to make it unduly difficult to secure supplies, might have several effects upon employment in Alaska, and upon the revenues of the Territory. The Labor Division might be asked for a formal opinion on the probable impact upon employment in the Territory of the restrictions suggested in this report. The Territorial Government could also be asked for a formal report on the importance of gold mining, with all relevant statistical data.

On November 24, 1941, a meeting concerned with priorities and export licenses for gold-mining machinery was called by A. A. Berle, Jr., Assistant Secretary of State. It was attended by representatives of the Treasury Department, the Federal Reserve Board and OPM, as well as the State Department. The consensus of opinion at such meeting was reported that:

> * * * preference ratings for gold mining equipment should be granted only after careful scrutiny with a view to maintaining, at the very most, existing rates of output and to refusing equipment for any expansion of output; subject to exceptions in cases where extraordinary hardship might result—as in the case of isolated communities having no alternative forms of employment—preference ratings for exports of gold mining equipment should be made to depend on a showing that the maintenance of the present level of gold production is necessary (a) to supply dollars for an otherwise deficit dollar position in the balance of payments of the country (or in the case or South Africa, for the dollar position of the sterling area), or (b) for special political reasons; whenever the current gold mining is maintained mainly to prevent a dollar deficit and especially where the labor could be used for more direct contribution to defense production, this Government should endeavor to find other means of [fol. 251] meeting this deficit such as lend-lease activities, purchase of gold "in the ground" for postwar

delivery, and the like. To give effect to the foregoing conclusions, no general priority ratings for gold mining equipment, including repair and replacement parts, should be granted but individual consideration should be given to each application on its merits unless adequate periodic compliance investigations can be made (particularly in Canada) as is done in the United States.

On December 2, 1941, SPAB, having before it the report of the November 24 meeting quoted above, directed Donald Nelson to obtain the official opinions of the State Department, Treasury Department, Federal Reserve Board and the Board of Economic Warfare on "supplying gold mining equipment abroad and on other possibilities of providing dollars to offset probable dollar deficit positions."

9. Donald Nelson complied with the directions of SPAB, and secured the official comments of these departments and agencies. The Secretary of the Treasury stated in part as follows:

> * * * Domestic gold production in wartime serves no military purpose, but does consume labor and materials that have usefulness in military production, particularly in the mining of scarce metals. We do not believe, therefore, that domestic gold mines should receive any preference rating for machinery unless the gold is produced with a substantial amount of much needed by-product metals or ores, or unless it is produced in a mine so peculiarly situated that serious and sustained unemployment of men not eligible for defense jobs would result from its shutdown.

The Secretary of State confined his reply to the subject of supplying gold-mining equipment abroad, and said in part:

> It is the Department's opinion that preference ratings for gold mining equipment should be granted only after careful scrutiny with a view to maintaining, at the very most, existing rates of output, and to refusing equipment for any expansion of output. * * *

The Chairman of the Board of Governors of the Federal Reserve System stated in part that:

> Priority measures tending to reduce new gold production under present circumstances are, in my judgment, highly desirable. The United States stock of [fol. 252] gold is already redundant. Its dollar value is more than five times as great as in the 1920's. From the standpoint of credit control in this country further additions to gold stock are not only unnecessary; they are harmful. By swelling excess bank reserves, they add to inflationary dangers and make the maintenance of a stable and productive economy more difficult. From the standpoint of war output of the allied countries, the materials, machinery, and labor devoted to gold production are largely wasted.
>
> * * * * * * *
>
> Since new gold output is largely unnecessary and diverts materials, machinery, and labor from production of war supplies, I strongly favor curtailing it so far as is practicable through the priorities system. I would suggest that no machinery be allowed to foreign mines for the expansion of gold output; and that machinery and supplies for the maintenance and repair of gold mines should be restricted to the minimum consonant with the principles adopted by the Supply Priorities and Allocation Board for other nondefense industries.

Milo Perkins, Executive Director of the Board of Economic Warfare, after discussing the question of supplying mining equipment to foreign gold mines, proceeded to outline a policy with an ultimate objective of eliminating the domestic gold-mining industry in the postwar era. In this connection he stated:

> The system of priorities on gold mining equipment was devised as part of the general effort to economize on scarce facilities and thereby to maximize the joint war effort of the nations fighting for the democratic cause. But in dealing solely with the question of gold mining equipment there is a danger of losing an opportunity both to solve the longer-term aspects of the

gold problem and to maximize the joint war effort. Such an opportunity exists now. The United States can and should use the power that it derives from being practically the sole buyer of the yellow metal in order to initiate a program of a gradual reduction in gold production. Such a program would contribute to a maximization of the joint war effort and, at the same time, would facilitate a solution of the postwar gold problem.

* * * * * * *

It is essential therefore, that a reduction in gold mining should be envisaged for the postwar period. It is, however, obviously impossible to effect a cessation of gold production overnight because of the enor- [fol. 253] mous dislocation it would involve in the national economies of the more important gold producing countries. The purchase of gold in the ground leaves the problem unsolved, and merely adds to the difficulties of the immediate postwar period. A program of gradual reduction and final cessation of all new gold production spread over a period of fifte-n to twenty years is the only satisfactory solution to the general gold problem. This is the moment to institute such a program. Further, the United States possesses the necessary powers to initiate such a program. Being practically the only buyer of the yellow metal, the United States is in a position to demand that its future purchases will be on an increasingly restricted scale. * * *

On December 23, 1941, Donald Nelson sent his summary of the foregoing letters to SPAB in the following terms:

As directed by the Board at its December 2d meeting I have obtained the official opinions of the State Department, Treasury Department, Federal Reserve Board and Board of Economic Warfare on supplying gold-mining equipment abroad and on other possibilities of providing dollars to offset probable dollar deficit psitions.

The following is a summary of these opinions:

1. In a war economy labor, materials, and machinery applied to gold production are largely wasted.

Moreover, dollars made available through Lend-Lease, R. F. C. and stabilization loans, etc., have made new gold unnecessary as a provider of dollar exchange. Therefore:

(a) Nothing should be allowed for expansion, although minimum amounts for maintenance and repair should to some extent be provided.

(b) Only high-grade ores or those yielding high percentages of other minerals useful in the war effort should be mined.

(c) Labor, materials and machinery should be converted to more vital production except where extreme political or economic hardship would result.

2. In-the-ground purchase of gold is neither necessary nor desirable. It is an experiment which raises serious complications and not only fails to solve the present problem but also presents a new one for the postwar period.

3. Agreements should be entered into with gold producing countries, to the end that they do not divert labor, materials and machinery from more essential uses to gold production.

[fol. 254] On the same day SPAB adopted the spirit of these recommendations. It stated:

It was the judgment of the Board that in view of the military program only limited priorities and export licenses should be granted to the gold mining industry,

and it was agreed

that in granting priorities and export licenses for gold mining machinery, materials should not be allowed for expansion of production although minimum amounts for maintenance and repair may be provided.

10. On December 18, 1941, OPM issued a new General Repair Order, Preference Rating Order P-100, to replace Order P-22, which was revoked on the same day. The stated purpose of Order P-100 was to effectuate the policy of SPAB in maintaining governmental, charitable and in-

dustrial property located in the United States, its territories and possessions, upon an adequate operating basis, without expansion or improvement of facilities except where duly authorized or approved. Industries coming within the terms of Order P-100 were entitled to an A-10 Preference Rating (the lowest rating used) for their maintenance, repair and operating supplies.

P-100 represented a continuation of SPAB's policy of granting some preference rating for maintenance, repair and operating supplies to industries in general without regard to essentiality in the war program, and this policy prevailed throughout the war. This policy was designed to avoid unnecessary dislocations in the civilian economy. The percentages of critical materials such as steel, aluminum and copper used in all industries for maintenance, repair and operating supplies ranged from one-half of one percent to three percent of the total amounts available for the entire economy.

11. On December 31, 1941, OPM issued Preference Rating Order P-56-a to supersede P-23, which had expired on that date. Order P-56-a continued to authorize the manufacturers of mining machinery to use a preference rating of A-3 to acquire material entering into the production of machinery and equipment ordinarily used in the mining industry, including the gold-mining industry.

[fol. 255] 12. By a letter dated February 18, 1942, John P. Gregg, Assistant Chief of the Bureau of Priorities, WPB, proposed to C. H. Matthiessen, Jr., Chief of that Bureau, that gold and silver mines be closed forthwith in order to conserve materials. The letter stated in pertinent part:

> 4. The Committee is of the view that the restrictions with respect to materials to be used in the mining of gold and silver are not sufficiently restrictive and that a limitation order should be drafted forthwith to stop production of gold and silver in the United States, appropriate consideration being given to the continuance of such production in Canada, Mexico, South Africa, and other areas now permitted to obtain materials and equipment from this country under Lend-Lease or direct purchase.

13. Said proposal of February 18, 1942, to close the gold and silver mines as a means of conserving materials was rejected. Instead, on March 2, 1942, WPB amended Preference Rating Order P-56 so as to deprive gold and silver mines of all priority ratings formerly available to them under that order. This was accomplished by revoking the so-called mine serial numbers of all mines the production of which in dollar value consisted of more than 30 percent of gold and/or silver.

14. Although the amended Order P-56 required the revocation of the mine serial numbers held by gold mines coming within the foregoing 30 percent exclusion clause, in actual practice WPB restored such numbers to mines whose production included significant quantities of materials important to national defense. However, over 200 gold mines, including those of the plaintiffs herein, never again received serial numbers under Order P-56.

15. The amended Order P-56 was the subject of vigorous objections in the mining districts, and public meetings were held in Reno, Nevada, and Denver, Colorado, to protest the amendment. These meetings were attended by the Governors of five states, several United States Senators and Representatives, mine operators, Wilbur Nelson as Chief of the Mining Branch of WPB, and other interested parties.

16. In addition to the aforementioned meetings the 30 percent exclusion clause was the subject of extensive hearings before a special Senate Committee (U.S. Senate, 74 [fol. 256] Cong., 2d Sess., Subcommittee of the Special Committee on the Investigation of Silver, *Hearings*, May 5, 6, 8, and 28, 1942).

17. WPB on May 15, 1942, amended Order P-56 so as to eliminate the 30 percent exclusion clause. However, the amendment effected no practical change, since no person could use the ratings assigned by Order P-56 unless a serial number was granted by WPB. After March 2, 1942, serial numbers were never restored to gold and silver mines producing no substantial quantities of critical materials.

The gold mines excluded by the above amendments to Order P-56 were reduced to the same priority position as that of the least essential industries in the United States, i.e., they were entitled only to an A-10 preference rating for

the acquisition of maintenance, repair and operating supplies under Order P-100. They were excluded from obtaining any critical materials which might have been needed by any of the nonferrous metal mines or by any other industry deemed by WPB to be more essential. While it was possible for gold mines excluded from any benefits under P-56 to apply for equipment under the general repair order P-100, the demand for desired equipment was so far above available supply that the possibility of the gold mines obtaining any was remote. Thus, by March 2, 1942, a series of progressively more stringent priority regulations had succeeded in virtually eliminating the potential acquisition by the gold mines of critical materials, supplies and equipment.

18. By July of 1942, the Labor Division of the War Production Board, and officials of the War Department and the War Manpower Commission, were all becoming concerned with the fact that the production of nonferrous metals in the United States, particularly copper, would not be adequate to meet current and anticipated demands. Investigation revealed that this condition was due not only to the increased wartime demands, but to an alarming shortage of miners in the nonferrous metal mines. The agencies concerned were agreed that the success of the country's armament program was basically dependent on increased production of basic raw materials such as copper and other nonferrous metals.

The reasons for the poor production of nonferrous metals were found to be (1) the out-migration of workers in the nonferrous mines to other war industries offering [fol. 257] higher wages and better working conditions, (2) drafting of the workers for the armed services by Selective Service, (3) excessive labor turnover within the industry, (4) low morale of the workers, (5) the short workweek in the mines, and (6) the lack of an organized and effective program of recruitment of workers for this industry.

Labor scouts employed by the aircraft and shipbuilding plants were working through the mountain states offering high wages and were inducing men to leave the mines. Armed services construction projects in the vicinity of the

mines offered higher wages and were recruiting miners for work on such projects.

19. An informal committee organized by officials of the War Department to study the copper shortage situation submitted a report on July 8, 1942, recommending a program for dealing with the problem. For the War Manpower Commission it recommended a program for the recruitment of mine labor, involving among other things the expansion of the offices and personnel of the United States Employment Service in the mining areas, and including "a program for the orderly transfer of workers in gold mines and other nonessential industries to the nonferrous mines," as well as assistance in securing Selective Service deferments for mining occupations. For the WPB, the report recommended a Labor-Management Production Drive Committee to secure increased production through improved morale and greater efficiency; the report then recommended that:

> 2. Production of gold, with the exception of required amounts of essential silicious gold ores, should be curtailed by an order of the War Production Board to free labor which is urgently needed in the nonferrous mines which are essential to the war effort. * * * *

For the War Labor Board the recommendation was that in the cases then pending before it, involving about half of the copper-mining industry, it give careful consideration to the wage differential problem. The recommendations for the Army and Navy were the establishment of morale building programs for the miners and the exertion of influence on their contractors to prevent further recruitment from the nonferrous mines.

[fol. 258] 20. The Labor Production Division [4] of WPB was also studying ways to relieve the shortage of underground workers in the nonferrous metal mining industry. On July 4, 1942, the Acting Chief of the Priorities Branch of the Labor Production Division sent a memorandum to the Director of Operations of the War Manpower Com-

---

[4] See footnote 3, supra, for the functions and duties of this division.

mission who was also in charge of the Labor Supply[5] functions of WMC at that time. The memorandum pointed out the acute labor shortage in the nonferrous metal mining industry and observed that the 15 largest producers of gold in seven Western States had some 6,700 employees; that the gold mines of these producers were sometimes located in the vicinity of nonferrous metal mines and that in some cases one company would own both a gold mine and a nonferrous metal mine in an area. The statistics upon which the above figures were based were as of 1941, and were later found not to represent the situation in the summer of 1942, because the gold mines, as well as the nonferrous metal mines, had been losing workers to the war industries and the draft. The 6,700 figure employed in the memorandum represented employees of all kinds, including clerical employees, and no figure was given of the number of hardrock miners which were the type of employee needed in the nonferrous metal mines. In speaking of the "15 largest producers of gold in seven Western States", the memorandum did not point out that several of such gold producers also produced nonferrous metals in substantial quantities and therefore would not be classified as gold mines for the purpose of any anticipated action.

The above memorandum described the large turnover in employment in the copper mines and the steady decline in over-all employment; it noted that most of the men leaving the copper mines were going into war plants or were being drafted into the armed services, and that the companies were requesting permission to hire Japanese and Mexican labor in their operations. The memorandum concluded as follows:

> Steps should be taken to remedy the critical labor situation in nonferrous metal mining, including arrangements for the transfer of miners from gold and [fol. 259] silver mining to copper, lead, zinc, tungsten, chrome, and molybdenum mining. This can be done through curtailment of gold and silver production, but it would be necessary to make sure that the workers

---

[5] When the War Manpower Commission was organized under Executive Order 9139, April 18, 1942, WPB's labor supply functions were transferred to WMC.

released went into nonferrous metal mining and did not go into war plants in the vicinity or on the West Coast. It has been customary for metal miners in the mountain states to move considerable distances with the opening and closing of mines and ordinary turnover.

21. On July 9, 1942, the General Counsel of the War Manpower Commission sent to a member of his staff a memorandum concerning the possibility of transferring gold miners to work in the nonferrous metal mines. The memorandum stated:

> At a meeting of the War Manpower Commission yesterday, the following problem was referred to this office.
>
> General McSherry [Director of Operations of WMC] wishes to secure the release of men employed in the gold mining industry for transfer to the copper mining industry. Concededly the War Manpower Commission cannot accomplish this result directly. May the result be accomplished (1) by the War Production Board refusing to the gold mine operators critical materials used in their operations thus compelling the closing of the mines; (2) may the Chairman of the War Manpower Commission direct the War Production Board to take that action?
>
> The specific situation suggested is simply illustrative of the general problem in this field.

22. The proposal for closing the gold mines in order to divert their miners to nonferrous metal mines was gaining momentum in August 1942, and accordingly, Wilbur Nelson, Chief of the Mining Branch, WPB, who was not in sympathy with the method of the proposed plan, expressed opposition to it on August 14, 1942, in a memorandum to H. O. King, Chief of the Copper Branch, WPB, reading in pertinent part as follows:

> The Mining Branch views with serious alarm the dissipating of the only appreciable reserve of highly competent mining labor through the hasty closing of the gold mines in the United States.

The gold and silver miners constitute the last reservoir of the skilled mining labor. We must, therefore, [fol. 260] be certain that that labor is directed toward the most critical points before permitting it to be disbursed. [Sic.]

The present critical situation developed when copper, lead, zinc, mercury and other miners left their jobs and went to the West Coast on shipbuilding and on aircraft jobs, and into the mountain areas in new war industries work.

If we close down the gold mines while these same opportunities are available for work at substantially high rates of pay in other war industries, the miners will not move to a copper, lead, or zinc mine but will do just as their predecessors have done, move on to other more fruitful jobs on the coast.

Logic dictates this, for when a copper miner at Butte is willing to leave his home and go to the coast, I am sure that a gold miner, living in the excellent living conditions at Lead, is not going to leave his family and stop at Butte if he could go to the west coast.

. . . . . .

23. Late in August 1942, Guy N. Bjorge, General Manager of plaintiff Homestake Mining Company, the largest gold-mining company in the United States, learned that consideration was being given by the Government to a proposal to close domestic gold mines in order to divert their miners to the nonferrous metal mines. He therefore went to Washington and conferred with several officials of WPB, including Donald Nelson, Chairman, and Wilbur Nelson, Chief of the Mining Branch, as well as Brigadier General McSherry, Director of Operations of the War Manpower Commission, and Lieutenant General Somervell, commanding the Services of Supply, War Department. In the course of these conferences Mr. Bjorge furnished figures as to the small number of men who might be obtained for work in the copper mines by such order. He pointed out that many men had already left the Homestake Mine in 1942 for the same reasons that men had left the copper mines, mainly to accept employment at West Coast aircraft factories and

shipyards. Mr. Bjorge also pointed out that the miners remaining at Homestake were an older, more stable class of men, a large percentage of whom were home owners, and asserted his belief that it was improbable that they would leave their homes for the poor housing facilities and undesirable working conditions at the nonferrous metal mines. [fol. 261] 24. On August 26, 1942, United States Senator Pat McCarrran of Nevada wrote a letter to Donald Nelson, Chairman of WPB, setting forth various reasons why he believed the proposed closing of the gold mines would not accomplish its purpose of obtaining any considerable number of miners for the nonferrous metal mines. Senator McCarran wrote, *inter alia:*

* * * * * * * *

> In the first place, the transfer of necessary labor from closed gold and silver mines to mines producing copper, lead, zinc, etc., would be negligible, due to the fact that very few operations exist today where only gold and silver are mined, and in these districts (mainly, the Homestake Mining activity in South Dakota and the Mother Lode Mining district in California), the number of men who could be so transferred is small. Many of the usual workers have joined the armed forces; many are familiar only with the routines of this type of mining and cannot be successfully transplanted. Thus little good would result and great hardships would be inflicted upon affected families and communities.
>
> Secondly, there is no rule or procedure by which such workers could be legally forced to transfer to other mines. The labor that would be denied employment by reason of the shutting down of the mines producing gold and silver would most likely go to the places where they would receive higher wages than are paid in mines.

* * * * * * *

On September 1, 1942, Donald Nelson replied to Senator McCarran in pertinent part as follows:

* * * * * * *

A serious study has been and is being made of sources from which mine labor could be made available to the nonferrous metal mines. Naturally, our thoughts have included gold mines, but we have not at this time reached any conclusion thereon.

We quite agree that no legal power exists today by which workers may be forced to transfer to other mines. This accentuates the mine labor problem which faces us today.

Because of your experience in mining matters, and the factual evidence you secured in your recent hearings in the West, I am asking our people responsible for mine production to carefully consider your suggestions.

* * * * * * *

[fol. 262] 25. The minutes of the War Production Board for the meeting held September 1, 1942, provide in part as follows:

1. Labor Supply for Copper, Lead, and Zinc Industries

The Chairman stated that since the labor supply in the copper industry had reached a critical stage and already had resulted in a decline in the production of copper, he had asked the Labor Production Division and the Copper Branch to report to the Board on the Manpower problem in the nonferrous metals industries (Doc. 135).

Mr. King reported that 6,000 miners have been lost by the copper, lead, and zinc mines to other industries during the past several months and that the shortage of labor will become increasingly acute next year when new facilities will require 2,000 additional miners. Preliminary reports indicate a shortage of 2,100 workers in smelters and refineries. Mr. King pointed out that the loss of 5 or 6 thousand workers at the copper mines might so influence the subsequent fabricating processes that 100 thousand workers in war plants at the end product state would be affected. Although monthly production of copper increased steadily from early 1941 to a peak of 95,000 tons in May and June 1942, output in July dropped 5,000 tons

to 90,000. The copper outlook is even more critical than shown by the drop in production, since at many mines labor is being transferred from developmental and stripping operations, necessary to provide for future production, to current ore extraction. The position of the smelters and refineries is exemplified by a smelter at Tacoma where output of 2,000 tons of copper per month is being lost for lack of only 300 unskilled common laborers. Mr. King emphasized that production at the mines, smelters and refineries will continue to fall unless the exodus of labor is checked and the supply of workers augmented. Output of lead and zinc likewise declined in July, and the labor-production situation in these metals is similar to that in the copper industry.

Mr. Lund pointed out that there is general agreement that the higher wages paid to workers in competing occupations in other industries are the prime factor causing the out-migration of labor from the mines and mills. Average weekly earnings in April of 37.28 dollars for mine workers and 35.18 dollars for smelting and refining workers compared with an average of 53.30 dollars in shipbuilding and 45.94 dollars in aircraft, the principal competing industries. Corollary factors in the out-migration of workers have been [fol. 263] rumors of ceilings on wages and proposals to confine workers to their present jobs, the hazards of mining, and inadequate housing and transporation facilities.

Mr. Lund pointed out that the decision of the War Labor Board, expected within a month on 30 or 40 cases involving higher wages for copper miners, will have an extremely important bearing on the out-migration problem.

Mr. King reported that following a resolution of the War Production Board (See WPB Minutes, March 3, 1942, Item 7), labor-management committees were established in the metal mining areas and the importance of having mine workers stay at their jobs was publicized. On June 13, 1942 the Chairman of the War Production Board formally launched the War Production Drive in the nonferrous metals industries

by a radio address to the miners at Butte, Montana.

As further steps in halting out-migration, the Inter-Departmental Committee on Nonferrous Metals was established on August 11 and various letters and literature have been prepared for distribution to mine operators and labor unions; an order has been prepared to prohibit the use of materials in nonessential gold mines, which may free about 8,000 workers; plans to prevent employment of miners on Army and Navy construction projects are being considered; and training programs are being introduced into mining properties. To increase the efficiency of present working forces, mine equipment is being accorded high priority ratings, and labor is being trained and upgraded by improving working and living conditions, and by lowering age and other restrictions on hiring. Mr. Lund observed that in many cases labor standards have shown no change from those existing in normal times when a surplus of labor is available. He suggested that the pooled employment interviews which the War Manpower Commission is now conducting in some parts of the country should be pursued with increasing vigor.

Mr. Lubin inquired if the order to prohibit the use of materials in nonessential gold mines had actually been issued and, if not, what steps are being taken toward its issuance. Mr. King replied that a first problem is to define a nonessential gold mine since gold is frequently found in association with other metals and it is necessary to avoid denying materials to mines that produce important quantities of a critical metals jointly with gold. It is hoped that an appropriate definition can be developed very shortly and an order issued promptly thereafter.

* * * * * * *

[fol. 264] The Chairman remarked that since other uses have been cut to a minimum, the major use of copper is in munitions, especially small arms ammunition, and any reduction in the copper supply will be reflected in a reduced output of ammunition. He expressed the belief that the War Production Board

must take an active and leading role in assuring an adequate supply of copper and Mr. Lubin added the suggestion that the concern of the War Production Board in this problem is sufficiently great to establish its own employment offices, if this is necessary to obtain additional copper miners.

After further discussion it was agreed that:

> Inadequate production of copper, lead, and zinc will result inevitably in reduced output of munitions, including small arms ammunition needed by the fighting forces. The output of these metals is now being reduced by a shortage of manpower in mines, smelters and refineries.
>
> The War Production Board is charged with the primary responsibility for providing the maximum possible production of critical metals, but the solution of the problem of assuring a sufficient supply of labor involves the responsibilities of other agencies of the Government as well. The coordination of the efforts and activities of other agencies of the Government with those of the War Production Board is needed, therefore, to ensure an adequate supply of critical metals.
>
> The War Production Board urges all agencies involved to promote and support such actions as may be necessary to provide to nonferrous mines, smelters, and refineries a supply of labor adequate for the maximum possible output of such metals. It is especially important that the facilities of the United States Employment Service be expanded and strengthened to meet this particular need.

* * * * * * * *

The Chairman referred to above was Mr. Donald Nelson, Chairman of the War Production Board. The Mr. King referred to was Mr. H. O. King, Chief of the Copper Branch, Industry Operations, WPB. The Mr. Lund referred to was Mr. Wendell Lund, Director of the Labor Production Division, WPB. The Mr. Lubin referred to was Mr. Isadore Lubin, acting for Mr. Harry L. Hopkins, Special Assistant to the President.

[fol. 265] 26. On September 4, 1942, Mr. A. I. Henderson,

Deputy Director General for Industry Operations, WPB, directed that an order be drafted by the Miscellaneous Minerals Branch which would curtail the output of gold and which would not be related to Preference Rating Order P-56.

27. On September 9, 1942, Mr. R. J. Lund, Chief of the Misellaneous Minerals Branch, sent the following memorandum to Mr. A. I. Henderson:

> At a meeting held in your office on September 4, attended by Messrs. Dodge and Scribner of your staff, Mr. Parks of the Miscellaneous Minerals Branch, and Mr. Stow of the Mining Branch, you issued instructions that an order be drawn up either by the Miscellaneous Minerals Branch or the Mining Branch which would curtail the output of gold and which would not be connected with Order P-56. You indicated that this Branch should prepare the order but that the order could be administered by this Branch or the Mining Branch as later determined.
>
> It was understood that the purpose of the order was to make mining labor now producing gold available to copper and other strategic nonferrous metal mines. This end can be attained by WPB only through its authority to control materials.
>
> Attached is copy of the order[6] for your consideration. This order has not been circulated, except in discussions with the Mining Branch.
>
> The order is designed to close all mines producing gold to the extent of 50 percent or more of the value of the total output. In considering the order the following matters are pertinent:
>
> (1) Number of mines affected
>
> Based on 1940 production figures obtained from the Bureau of Mines, the latest they were able to supply, about 220 lode mines will be affected by the order. This figure is not exact, because production in the 1941 or 1942 base period specified in the order is not strictly comparable with the 1940 picture. Geographic distribution of these lode gold mines

[6] The copy of the order is not in evidence.

is as follows: California, 58; Colorado, 32; Montana, 30; Nevada, 27; Arizona, 18; Alaska, 12; Idaho, 12; Utah, 8; South Dakota, 6; with the remainder distributed among five other states.

Detailed data on placer operations affected by the order are not presently available, but the Bureau [fol. 266] of Mines reported that in 1940 a total of 3,107 placer mines produced gold and silver in the United tSates, and 1,069 in Alaska. Undoubtedly, sizable numbers of these produced such small quantities that they would be exempted by the order.

The Bureau of Mines reported that in 1940, there were 49 connected-bucket floating gold dredges operating in Alaska, 46 in California, 12 in Idaho, 7 in Montana, 6 in Oregon, 1 in Colorado, and 1 in Nevada. In addition there were large numbers of mechanized placer operations using drag line and power-shovel excavators, but no separate figures on these operations are available.

(2) Labor involved

Based on 1941 data, latest available from the Bureau of Mines, approximately 12,400 employees in lode gold mines will be thrown out of work by the order. Incomplete data indicate that about 70 percent of this labor is employed underground. Geographic distribution of this total labor was as follows: California, 3,394; South Dakota, 2,123; Colorado, 1,689; Alaska, 1,251; Arizona, 911; Montana, 602; Nevada, 601; Idaho, 590; Utah, 484; with the remainder distributed in a number of Western and Eastern states.

No detailed data are available showing number of employees in placer operations, except that the number would probably amount to at least several thousand in the United States and perhaps two thousand in Alaska.

(3) Estimated recapture of employees affected

Assurances were given by General McSheery at a meeting of the Interdepartmental Committee on Non-Ferrous Metals, September 8, that the U. S. Employment Service had adequate staff available to go immediately into the several hundred mining

camps which might be affected by the gold curtailment order and to recruit labor for transfer to copper mines and other nonferrous metal mines in dire need of such labor. At a previous meeting of this Committee, an estimate was made that about 25 percent of the mine labor might be recaptured for work in other mines.

(4) Other metals lost

Production of other metals in 1940 by mines affected is as follows: copper, 2,751,000 pounds; zinc, 92,000 pounds; lead, 12,047,000 pounds; silver, 4,947,000 ounces. Other metals such as antimony, [fol. 267] arsenic, tungsten, molybdenum and manganese are also produced in minor amounts by some of these mines.

(5) Fluxing ore problem

Some gold mines affected by the order produce large tonnages of siliceous ore required by smelters working primarily on other nonferrous metals, such as copper, lead and zinc. This flux is necessary to their operation, and gold values in the flux naturally make operations more economical than by adding barren siliceous material which may, or may not, be available at the smelter.

(6) Critical materials saved

Sizable amounts of critical materials will be saved in closing these gold mines. Estimates as to total current consumption of such materials are not available but the general order of magnitude of such consumption is indicated by the fact that in 1939 gold mines in the United States (excluding Alaska) spent about $17,000,000 on supplies and materials, $2,000,000 for fuel and about $5,000,000 for purchased electric energy.

(7) Effect on economy of states and communities

Shutting down the operations at mines affected by the order will result in loss of sizable tax revenues, in respect to state tax revenues alone, in some of the states involved. There has been insufficient time to obtain complete data on this point, but two examples are cited as follows: (a) In South Dakota, total state taxes collected in fiscal year 1941, exclu-

sive of motor fuel taxes, amounted to $11,700,000; taxes paid to the state by mines in South Dakota affected by this order amounted to $1,000,000, or about 9 percent of the total; (b) in Nevada total taxes collected in fiscal year 1941, excluding motor fuel taxes, amounted to $3,300,000, of which about $65,000, or 2 percent, was collected from mines affected by this order.

Losses in county and municipal taxes will be felt much more severely by the communities in the vicinity of the mines. In this respect, shutting down mining operations is not comparable with shutting down other industrial operations in communities where enterprise is diversified; in the West it is generally true that the mine is the sole major source of income for local communities. For example, it has been reported that the Homestake Mining Company pays 65 percent of the local community taxes [fol. 268] and 50 percent of the county taxes; that the wage earners and those servicing them pay the balance largely from the $4,500,000 in annual wages paid by the company. At least 19,000 people, the population of the county, are directly or indirectly dependent upon its operation.

For reasons stated in the last paragraph, hardships faced by old established mine employees will be severe. There is virtually no possibility of converting the facilities at the mines to war work.

(8) Probable loss of deep mining operations and dredging equipment

Although the order permits gold mining companies to maintain buildings, machinery and equipment in repair, and to keep access and development workings in a safe and accessible condition, it is probable that most of the deep mines situated in heavy, caving ground will be unable to take full advantage of these provisions in the order. As a result it is probable that many of these old, deep mines may never be reopened.

Costly dredging equipment forced to lie idle will be subject to more rapid depreciation than if it were maintained in operation.

The suggestion was made at a meeting this morning that the order should be tightened further by lowering the exemption from the 4,000-ton figure to 1,500 tons annually, or a monthly rate of 100 tons. Such a change would result in a large increase in the number of mines affected by the order, in the total labor involved, and in items 3 to 6, inclusive, discussed above. Tabulations covering these smaller operations are just now being made, so details in respect to these items cannot be presented herewith. The order will be modified to the lower exemption figure before clearance, if these studies indicate a considerable amount of labor involved.

A factor which would tend to lower the number of mines affected, labor involved and other items discussed above, is the fact that many of the gold mines affected by the order have already been forced to curtail or close operations through difficulties encountered in obtaining material and equipment, or through loss of labor to other industries. In one known instance, a recent fire destroyed the mill of a sizable mine so this operation is completely shut down and no labor available for recruitment.

There is, of course, an appeal provision in the order, through which, again, the number of mines, number of employees, other critical materials and fluxing ores af- [fol. 269] fected will be lowered from the estimates cited in items 1 to 5 above.

Concluding Statement

Administration of an order such as the above, entirely divorced from provisions of Order P-56, necessarily involves duplication of work, both here in Washington and in the companies affected by the order. Those gold mines producing needed metals and fluxing ores will have to submit an appeal under the provisions of the order before they can be exempt. There is no practicable way of defining, in an order, such mines that should be exempted. This appeal procedure duplicates, in large measure, the appeals that were already made under the administration of P-56, and it is likely that the repercussions throughout the min-

ing industry of such duplication of effort will be unwholesome.

Without using the mine serial numbers already established as a means for determining essential mining operations, there appears to be no alternative other than to use a percentage value basis in defining gold mines, and to provide for continued operation of essential ones through an appeal procedure.

Other pertinent considerations are presented in the attached memorandum to you from Dr. Wilbur Nelson, and I suggest that they be given careful attention.

The adverse repercussions mentioned above might be overcome in some measure by including an additional provision in the accompanying order which would automatically exempt those gold mines now having serial numbers until they are notified by the Director General for Operations that they are to cease operation. Each of these cases, in the meantime, should be fully reviewed and judged in the light of the more acute situation now prevailing.

I shall await your written instructions before proceeding further.

28. On September 11, 1942, Mr. J. M. Scribner, an assistant to Mr. A. I. Henderson, sent the following memorandum to Donald Nelson:

In accordance with instructions issued by Mr. A. I. Henderson, you will find attached a copy of the proposed curtailment order on gold. This order is in process of circulation in accordance with the procedure for order clearance and should be presented to the Clearance Committee for action about September 21.

Mr. Henderson requested that the order be prepared in a manner completely divorced from Order P-56. [fol. 270] However, in his absence, after a consultation with Mr. H. W. Dodge and Dr. Wilbur A. Nelson, and a meeting with Messrs. Fred M. Eaton, Richard Lester, and myself, it was determined to be most practical that the order not be divorced from P-56.

The effect of this order will be to close down all gold mines not having a mine serial number, within 30 days from issuance. It is the intention of the Mining Branch

to review all mine serial numbers assigned to mines producing 50% or more gold in dollar value and to withdraw such serial numbers unless the balance of the production represents critical materials urgently needed for the war effort in amounts sufficient to justify continuance of the operation.

In addition to the draft of the proposed order, there was also included an explanation of its effect in the following terms:

> The Order requires that all mines producing gold, except those having a serial number under P-56, cease operation and development within 30 days after the date of issuance of the Order. The Order makes provision for the minimum maintenance and repair necessary to maintain the mines plant in condition and for the granting of preference ratings to accomplish this after application made to the Director General for Operations.
>
> All gold mines which produce needed quantities of copper, lead, zinc, and other minerals, or of silicious fluxes, already hold serial numbers under Order P-56. Therefore, the mines closed down by this proposed order would be only those which have, after examination by the Mining Branch, already been determined to be nonessential to the war effort.
>
> The result of closing these nonessential mines will be to conserve all the material which they have been using for operational and development purposes. Heretofore they have merely been denied the right to use the high preference ratings granted by Order P-56, but have been able not only to obtain certain material under P-100, but also to use their own inventories.

29. The effect of the proposed limitation order was further summarized in the following terms at about the same time:

> A draft of a limitation order on materials and supplies for gold mining is being circulated within the War production Board. The order provides for complete shutdown of nonessential mines in the United States with the following exceptions:

(1) Mines producing less than 1,200 tons of ore per year will be permitted to continue operations at [fol. 271] their rate of operation in 1941 or early 1942. Such mines are usually individual or partnership enterprises worked by men who are not likely to be employed by others.

(2) A limited amount of supplies and equipment will be made available for the purpose of keeping the mines accessible and safe. This is intended to avoid flooding or otherwise damaging mines which would be in a position to produce after the emergency has passed.

A nonessential mine is defined as a mining enterprise in which gold is produced, unless the operator holds a serial number for such enterprise issued under Preference Rating Order P-56, as Amended. Since producers of siliceous fluxing ores and of complex ores containing substantial amounts of critical metals as well as gold have already been granted serial numbers, the order will not affect the production of essential metals.

The basic purpose of this curtailment of gold mining is, of course, to free manpower for the mining of essential minerals, particularly nonferrous metals such as copper, zinc and lead. Because many of the gold mines are located much closer to other mines producing such strategic metals as mercury, molybdenum, tungsten, vanadium, chromium, manganese, etc., it is expected that workers will also be made available to these industries.

The War Manpower Commission through the Employment Service is now taking steps to insure orderly recruiting of these gold miners and to provide for a minimum of delay in reemployment as well as to provide transportation expenses. It is expected that this procedure will make possible the maximum diversion of labor to essential mining industries where their skills can be used to best advantage.

Beside diverting manpower to essential industries, this order, when in effect, will also conserve some materials and supplies used in gold mining, such as mercury, drill steel, etc.

30. The minutes of the Interdepartmental Committee on Non-Ferrous Metals for September 15, 1942, provide in part as follows:

* * * * * * *

Dr. M. Stow presented a report on the proposed order to curtail gold mining operations. He distributed a copy of the proposed order which, he said, had been brought up for consideration before the Clearance Committee.

[fol. 272] Dr. Stow explained that the persons responsible for drafting the order favored the method of curtailing gold mines by denying them serial numbers under P-56, rather than the type of blanket order which would shut down any gold mine whose gold ore production was above a stipulated proportion of its total production by dollar value. Under the former type of order the gold mines would be closed by being denied serial numbers under P-56, as a result of which they would be unable to obtain either supplies or equipment and would be prohibited from using their present supplies and equipment.

Mr. Harbison [Army representative] expressed some concern over the delay in issuing the gold order. He outlined the steps that various agencies had taken to meet the manpower shortage in nonferrous metal mines, and pointed out that the transfer of gold miners to essential mining was being held up by lack of a gold curtailment order. He pointed out that the U.S. Employment Service had been unable to obtained any recruits at Rapid City, South Dakota, because the gold Mines had not been closed down, although Anaconda Copper Mining Company had agreed to pay transportation costs. He made it clear that the War Department was impatient at the delay.

Mr. Lester of the War Manpower Commission asked that his organization be kept informed of what mines would be affected by the directive, in order that representatives of the Employment Service might be on the spot beforehand.

In this connection, since the primary purpose of

the order was to free manpower rather than to curtail materials, Mr. Lipkowitz suggested that an advisory committee be established with representatives from Labor Production Division and War Manpower Commission.

The meeting was attended by representatives of the various minerals branches, the Mining Branch, the Labor Production Division, and the Legal Division of the War Production Board, as well as representatives of the War Manpower Commission, the Office of Price Administration, and the War Department. Dr. Wilbur Nelson presided at the meeting. Dr. Stow was immediately subordinate to Dr. Nelson in the Mining Branch.

31. The draft of the proposed limitation order for the goldmining industry was submitted to Morris Creditor, Special Assistant to Donald Nelson. On September 15, 1942, he sent the following comments upon it to Donald Nelson:

[fol. 273] I have reviewed the proposed limitation order for the gold mining industry and I wish to raise certain points as to the soundness of such an order.

You will recall that we received a letter from Senator Gurney on August 31 in which he set forth the harmful effects that such an order would have on the economy of the State of South Dakota. In your reply you stated in effect that we were confronted with the manpower problem and something had to be done to overcome the losses of production which are being experienced in the mining of copper and other strategic materials through the shortage of experienced miners.

In the preamble of the limitation order no mention is made of manpower requirements. It simply states that the order is made necessary because of the shortage in the supply of critical materials which are used in the maintenance and operations of gold mines.

It would seem to me that if the order is based on the premise of critical materials alone, the question might be raised as to why such an order would not apply to materials being sent by this country to other gold mines in Canada, South America, and South Africa.

If the main purpose of this order is to divert miners from the gold mining industry to copper and other mining industries, it seems to me that there is no assurance that this order would accomplish the desired results. As Gustav Peck pointed out to you in his memorandum of September 9, it would be too bad to close the Homestake Mine, for instance, without the assurance that most of the miners will continue to practice their trades in the copper mines.

Would it not be more practical to accomplish the purposes by a freeze order similar to that which is now in effect for workers in the copper mines and the lumber industry. This may be more drastic but, on the other hand, may give better assurance that the miners in the gold mines would eventually find their way into the copper mines. Consideration might also be given to the idea of having the Army give indefinite furloughs to Service men who in the past were engaged in the mining of nonferrous materials.

Even aside from the possible dissipation of these skilled miners into other occupations, there is a question whether the closing of all the gold mines will release any relatively large number of workers. As I understand it, in the case of Homestake Mine the proposed order would affect only about 450 miners. This is the largest gold mine and has from a third to a half of all the miners to be released. The Alaska-Juneau miners, incidentally, will be stuck in Alaska. Where [fol. 274] are they expected to go?

I am sure that a great deal of thought has been given to the proposed limitation order on gold mining, but unless there is a high degree of assurance that the main purposewill be accomplished; namely, the diversion of these miners to the nonferrous mines, I feel it is important to weigh the adverse effects it might have in other directions.

Actually, only a small amount of critical materials is used in gold mining. Hence, if it is contemplated to issue the order in its present form, the preamble should give the real reason; which is to divert this labor to more necessary industries.

32. On September 17, 1942, Mr. J. M. Scribner, assistant to Mr. A. I. Henderson, sent the following memorandum to Dr. Stow of the Mining Branch:

> Acting in accordance with instructions received from Mr. Donald Nelson's office this morning, please be advised that the gold order is to be cleared with all of the branches involved as promptly as possible, but it is not to be presented to the Clearance Committee for clearance until further word is received from Mr. Nelson's office.
>
> The order is to be held in the branch in such shape that it may be presented to the Clearance Committee for action immediately upon advice from Mr. Nelson's office that it is to go through.

33. On September 25, 1942, representatives of the branches of WPB concerned with mineral production met and discussed the proposed gold limitation order which, by that time, had been designated L-208. A resolution was passed urging that representatives of the gold-mining companies be called to Washington to discuss the proposed gold order so that:

> A. Where possible, existing organizations may be utilized for important mining operations, or prospective operations, necessary in the war effort.
>
> B. Labor, and especially experienced miners, can be made available to the mining industry, rather than lost to vital metal production.

34. On September 25, 1942, William L. Batt, Vice Chairman of WPB, sent a memorandum to A. I. Henderson, Deputy Director General for Industry Operations, WPB, which stated, *inter alia:*

> [fol. 275] I have told the Chairman that my judgment is that the limitation order on gold mining should be released at the appropriate time, and he has agreed. It was the consensus of opinion that we should wait until the War Labor Board had acted on certain wage matters, and I shall expect to be advised when the situation is clear on this point.
>
> It seems to me imperative that we very carefully word our press release so that the predominant objec-

tive, namely of releasing less essential labor for more essential requirements, shall be clearly evident. And I particularly direct the attention of those who have to do with this matter at this point.

* * * * * * *

35. On September 30, 1942, a conference was held in Mr. Batt's office. Senator McCarran of Nevada and Senator Gurney of South Dakota, as well as Congressman Englebright of California, and Congressman Case of South Dakota, attended. Samuel Hill of the War Manpower Commission and members of the WPB staff, including Wilbur Nelson and Samuel Lipkowitz, also attended. The Members of Congress spoke of the hardships that would be imposed on the inhabitants of the gold mining communities and of the detrimental effects on the morale of such people if the mines should be closed down by the issuance of a WPB order. The WPB representatives, except Wilbur Nelson, countered with statements emphasizing the need for labor in copper mines. Some discussion arose as to the number of gold mine employees who would be released by such a closing order.

36. On September 29, 1942, at the direction of W. L. Batt, Wilbur A. Nelson telephoned the following representatives of the gold mining industry and requested them to attend a meeting in Washington: Guy N. Bjorge, General Manager of Homestake Mining Company, Errol MacBoyle of Idaho Maryland Mines Corporation, Merrill Shoup of Golden Cycle Corporation, Carroll Searles of Newmount Mining Corporation, and Thomas McCormack of the Natomas Company. The meeting took place on October 1st and lasted for approximately five hours.

Those in attendance at the meeting included W. L. Batt, Wilbur A. Nelson, Allen Buchanan and Samuel Lipkowitz of WPB's Labor Division, Messrs. Hill, Harbison, Ayer, [fol. 276] Hayes, Heikes and Hatch, General Lucius Clay representing the War Department Services of Supply, General Frank J. McSherry of the War Manpower Commission, Senator Chan Gurney and Representative Francis Case of South Dakota, Representative Harry Englebright of California, and the five aforementioned representatives of the gold mining industry.

At the opening of the meeting Mr. Batt stated that he had brought the gold mine operators to Washington to tell them that a decision had been made to close the gold mines in order to transfer the released labor to the copper mines. In justification of such an order, Mr. Lipkowitz of WPB's Labor Division stated that there were between 10,000 and 12,000 men who were then employed in the gold mines. The gold mine owners immediately protested that the figures stated were completely inaccurate; that the gold mines had already lost their most active men who had either gone to the shipyards and aircraft plants on the West Coast or had been drafted into the Armed forces; that the miners remaining in the gold mines were settled residents of their communities and that it was doubtful that they would move away to work in the copper mines if the gold mines were closed.

In response to General McSherry's statement that the need for underground workers in the copper mines was urgent, Mr. Bjorge of Homestake pointed out that it was unreasonable to hope that gold miners would accept the jobs which the nonferrous metal miners were already leaving for more desirable employment, and that it was more likely to expect that miners forced to leave Homestake would go to the same type of more desirable jobs to which the copper miners were going. He also pointed out the great hardships which the closing of the Homestake mine would inflict upon the local communities and upon the State of South Dakota. Similar arguments against a closing order were advanced by the other gold mine operators and by the Senators and Representatives in attendance. Messrs. Hatch, Heikes and Ayer, all of WPB, questioned the possible effectiveness of the proposed order. General Clay, representing the Army, spoke strongly in support of a closing order. Late in the meeting, Wilbur A. Nelson undertook to determine how many miners and muckers would actually be released by a closing order.

[fol. 277] 37. On October 3, 1942, Wilbur Nelson furnished Mr. Batt with figures which he had obtained directly from the gold mine operators. He reported that while there were 3,270 workers employed by gold mining companies at that time, only 896 of them were hardrock miners and muckers. He further reported that approximately 300 of these men would be needed to maintain the buildings, machinery and

equipment in repair, and the access and development workings safe and accessible as provided for under the proposed order. The WPB representatives, except Wilbur Nelson, dredges in the United States were put on a stand-by basis, it would make available only about 600 miners and muckers for other mining enterprises "provided they [could] all be induced to go into other mines."

38. On October 1, 1942, Mr. Batt sent the following memorandum to Donald Nelson, Chairman of the WPB:

> The more I study the gold mining situation, the more uncertain I am as to the form which a restriction of operations should take. Complete closing without exceptions will produce very serious economic dislocations, and the total possible gain in men is a small figure. If the question comes up in your press conference, I would suggest that you refer to the need for miners and the lack of need for gold, and say that the matter is being studied from all angles.

39. On October 2, 1942, Under Secretary of War Robert P. Patterson sent Mr. Batt the following letter:

> I hope that prompt and effective action will be taken with regard to gold mining. I need not call your attention to the urgent need for more miners in the production of copper and other nonferrous metals as you know the situation as well as I do. The longer the delay in shutting down gold mining, the further off will be the relief of the copper shortage. The matter has hung fire for some time, and I trust that there will be no further delay.
>
> If it is thought best to have the order approved by the War Department and the Navy Department, I will be glad to give the War Department's aproval, and I believe that Mr. Forrestal will do the same for the Navy.

[fol. 278] On October 5, 1942, Under Secretary of War Patterson and Under Secretary of the Navy Forrestal sent the following memorandum to Donald Nelson:

> The case of gold mining presents sharply the question whether we mean business or not in doing everything possible to push war production.

There are two thousand to three thousand hard-rock miners engaged in gold mining, now of no use in war production. These men could help out substantially in relieving the labor shortage in copper mining. They will not help out in copper mining so long as gold mining is carried on.

The present situation in production of copper, due to shortage in the supply of miners, is so alarming that the Army is about to furlough soldiers to go back to work on mining of copper. This is a hard step for the Army to take. But the effect of this step and others will not give complete relief if nothing is done to transfer gold miners to copper mining.

The matter has hung fire for some time. We deem it of the utmost importance that prompt action be taken and that half measures be avoided.

41. The matter was presented to the War Production Board at its meeting on October 6, 1942. The minutes of that meeting, insofar as here material, and which accurately reflect what transpired, read as follows:

Mr. Batt reported that the matter of shutting down United States gold mines had been receiving detailed attention. On conferring with Brigadier General McSherry of the War Manpower Commission and representatives of the gold mining companies, it had been found that at present the gold mining industry employs 3,270 workers; 750 are engaged in dredging and only 896 are hard-rock miners. Loss of labor to the Services and to war industries, and higher costs have already sharply curtailed operations of all domestic mines except Homestake. Homestake's labor force has dropped from a peak of slightly over 2,000 workers to 1,876, including lumbermen and machine shop workers. If Homestake were shut down except for standby operations, all but 500 of these workers could be released for work elsewhere. Lead and Deadwood, South Dakota, with aggregate populations of 16,000 are totally dependent on the mine's operation.

Although it has recently emphasized other forms of production, the State Department, because of broad in- [fol. 279] terminal considerations, heretofore has urged

that gold mining in South Africa and Honduras be maintained. The South African economy and the stability of the present government are largely dependent on gold mining. The basic industries of Honduras are the cultivation of bananas, of which exportation to the United States has been reduced to 20 percent of normal, and gold mining. Mr. Leon Henderson reported that Canadian gold mining is being curtailed very sharply. The Vice President pointed out that questions pertaining to production of gold abroad should appropriately be discussed with the Board of Economic Warfare.

Mr. Batt stated that after investigation he recommends that: (1) All nonessential domestic mining of gold other than that incident to the mining of critical metals be stopped as soon as possible and not later than within 60 days; and (2) gold mines not producing critical metals be allowed to continue standby maintenance operations lest it be impossible to reopen them at the close of the war.

General Somervell stated that because of the critical shortage of copper, which is drastically curtailing ammunition production, the Army has taken the unusual precedent of furloughing 4,000 soldiers to work in the copper mines and that, under these conditions, failure to stop gold production immediately would be inexcusable.

After further discussion it was agreed that:

> An order shall be issued by the War Production Board stopping all nonessential domestic gold mining operations within 60 days and thereafter permitting only minimum maintenance to keep mines dewatered and in standby condition.

42. Those in attendance at the October 6, 1942, meeting of WPB to consider the gold closing order included Donald M. Nelson, W. J. Batt, A. I. Henderson, Wilbur A. Nelson, Under-Secretary of War Robert P. Patterson, Lieutenant General Brehon B. Somervell, and Paul V. McNutt, Chairman of the War Manpower Commission. The meeting was also attended by numerous other persons who were there for the purpose of considering the so-called feasibility program. The gold curtailment order was discussed for some

fifteen to thirty minutes and it was decided to issue the gold closing order immediately.

43. On October 8, 1942, the WPB issued Limitation Order L-208 directing that operations at gold mines not holding [fol. 280] serial numbers under Order P-56 be discontinued. Order L-208 read as follows:

> The fulfillment of requirements for the defense of the United States has created a shortage in the supply of critical materials for defense, for private account and or export which are used in the maintenance and operation of gold mines; and the following order is deemed necessary and appropriate in the public interest and to promote the national defense.
>
> *Section 3093.1—Limitation Order L-208*
>
> (a) *Definitions.* For purposes of this order, "nonessential mine" means any mining enterprise in which gold is produced, whether lode or placer, located in the United States, its territories or possessions, unless the operator of such mining enterprise is the holder of a serial number for such enterprise which has been issued under Preference Rating Order P-56.
>
> (*b*) *Restrictions upon production.*
>
> (1) On and after the issuance date of this order, each operator of a nonessential mine shall immediately take all steps as may be necessary to close down, and shall close down, in the shortest possible time, the operations of such mine.
>
> (2) In no event on or after 7 days from the issuance date of this order shall any operator of a nonessential mine acquire, consume, or use any material, facility, or equipment to break any new ore or to proceed with any development work or any new operations in or about such mine.
>
> (3) In no event on or after 60 days from the issuance date of this order shall any operator of a nonessential mine acquire, consume, or use any material, facility, or equipment to remove any ore or waste from such mine, either above or below ground,

or to conduct any other operations in or about such mine, except to the minimum amount necessary to maintain its buildings, machinery, and equipment in repair, and its access and development workings safe and accessible.

(4) The provisions of this order shall not apply to any lode mine which produced 1200 tons or less of commercial ore in the year 1941, provided the rate of production of such mine, after the issuance date of this order, shall not exceed 100 tons per month, nor to any placer mine which treated less than 1000 cubic yards of material in the year 1941, provided that the rate of treatment of such placer mine, after [fol. 281] the issuance date of this order, shall not exceed 100 cubic yards per month.

(5) Nothing contained in this order shall limit or prohibit the use or operation of the mill, machine shop, or other facilities of a nonessential mine in the manufacture of articles to be delivered pursuant to orders bearing a preference rating of A-1-k or higher, or in milling ores for the holder of a serial number under Preference Rating Order P-56.

(c) *Restrictions on application of preference ratings.* No person shall apply any preference rating, whether heretofore or hereafter assigned, to acquire any material or equipment for consumption or use in the operation, maintenance, or repair of a nonessential mine, except with the express permission of the Director General for Operations issued after application made to the Mining Branch, War Production Board.

(d) *Assignment of preference ratings.* The Director General for Operations, upon receiving an application in accordance with paragraph (c) above, may assign such preference ratings as may be required to obtain the minimum amount of material necessary to maintain such nonessential mine on the basis set forth in subparagraph (b)(3) above.

(e) *Records.* All person affected by this order shall keep and preserve, for not less than two years, accurate and complete records concerning inventory, acquisition, consumption, and use of materials, and production of ore.

(f) *Reports.* All persons affected by this order shall execute and file with the War Production Board such reports and questionnaires as said Board shall from time to time prescribe.

(g) *Audit and inspection.* All records required to be kept by this order shall, upon request, be submitted to audit and inspection by duly authorized representatives of the War Production Board.

(h) *Communications.* All reports to be filed, appeals, and other communications concerning this order should be addressed to:

War Production Board
Mining Branch
Washington, D. C. Ref: L-208

(i) *Violations.* Any person who wilfully violates any provision of this order, or who, in connection with this order, wilfully conceals a material fact or fur- [fol. 282] nishes false information to any department or agency of the United States, is guilty of a crime, and upon conviction may be punished by fine or imprisonment. In addition, any such person may be prohibited from making or obtaining further deliveries of, or from processing or using, material under priority control and may be deprived of priorities assistance.

(j) *Appeal.* Any person affected by this order who considers that compliance therewith would work an exceptional and unreasonable hardship upon him may appeal to the War Production Board, by letter, in triplicate, setting forth the pertinent facts and the reason he considers he is entitled to relief. The Director General for Operations may thereupon take such action as he deems appropriate.

(k) *Applicability of Priorities Regulations.* This order and all transactoins affected thereby are subject to all applicable provisions of the Priorities Regulations of the War Production Board, as amended from time to time.

(P. D. Reg. 1, as amended, 6 F. R. 6680; W. P. B. Reg. 1, 7 F. R. 561; E. O. 9024, 7 F. R. 329; E. O. 9040, 7 F. R. 527; E. O. 9125, 7 F. R. 2719; sec 2 (a), Pub.

Law 671, 76th Cong., as amended by Pub. Laws 89 and 507, 77th Cong.)

Issued this 8th day of October, 1942.

Ernest Kanzler
Director General for Operations

44. Coincident with the issuance of L-208, the War Manpower Commission issued a directive relating to the employment of workers previously employed as production or maintenance workers in gold mines. This directive was issued on October 7, 1942, by Paul V. McNutt, Chairman, and stated in material part as follows:

I. On and after the date hereof no employer shall hire in, or hire for work in, Alaska or any State west of the Mississippi River, any person who on or after October 7, 1942, has ceased to be employed as a production or maintenance worker in connection with gold mining except upon referral of such worker to such employer by the United States Employment Service.

II. No person who on or after October 7, 1942, has ceased to be employed as a production or maintenance worker in connection with gold mining shall be referred by the United States Employment Service to any work in Alaska or a State west of the Mississippi River other [fol. 283] than work in essential nonferrous metal mining, milling, smelting, and refining activities unless such referral would be in the best interests of the war effort or unless the denial of such referral would entail an undue hardship upon the individual concerned, as determined in accordance with regulations and standards prescribed by the Chairman of the War Manpower Commission.

45. Immediately following the issuance of Order L-208 on October 8, 1942, a statement was issued by Paul V. McNutt, Chairman, War Manpower Commission, and Donald Nelson, Chairman, WPB, appealing to all workers in gold mines to transfer to nonferrous metal mines and not to other war industries.

46. The dominant consideration by Chairman Donald Nelson of WPB in the issuance of Limitation Order L-208 was

the releasing of mine labor from the gold mines for employment in mines that were producing other metals, such as copper, which were in short supply and urgently needed in the war program.

47. The closing of the gold mines did very little to relieve the manpower shortage in the nonferrous metal mines because (1) a relatively small number of the type of worker needed in those mines, i. e., hardrock miners, were released (finding 37); (2) a number of these men were required to remain in the gold mines to keep them in safe condition; (3) the older and more settled experienced miners remained in their home communities doing what they could to make a living or remaining idle; (4) most of the younger hardrock miners released sought employment in the better paying war industries, construction projects, or were drafted in the armed services. Approximately 100 hardrock miners are known to have gone to work in the nonferrous metal mines and to have remained there for a year.

48. Although the preamble to the order stated that it was issued to conserve critical materials, supplies and equipment needed for defense and in short supply, the only part of the order itself which attempted to effect such a conservation was that part which prohibited the gold mines from acquiring such materials, and that acquisition had already been effectively curtailed and in large part cut off by existing priority orders (finding 17). That part of the order which [fol. 284] prohibited the use by the gold mines of the supplies, materials and equipment and facilities they owned and had on hand did nothing to assure that those materials etc., would be available for use by more essential industries of by the Government. The order left the owners free to dispose of them as they pleased.

49. Prior to the issuance of L-208, and afterwards until the end of the war, critical materials, machinery and equipment subject to allocation and control by WPB were shipped in substantial quantities to foreign countries for use in their gold mining industry. These countries included South Africa, Canada, Honduras, Nicaragua and Columbia, in all of which gold mines continued to operate throughout the war.

50. On and prior to October 8, 1942, officials of WPB who were responsible for the issuance of L-208 knew (1) that

existing priority orders insured that the gold mines would not receive any critical materials needed by more essential users; (2) that the closing of the gold mines would release only a small number of hardrock miners and helpers; (3) that no agency of the Government had the power to compel these men to accept employment in the nonferrous metal mines; (4) that in all likelihood unemployed gold miners would accept employment in shipbuilding, aircraft and construction industries rather than go to work in the nonferrous metal mines where wages were low and working and living conditions poor; (5) that L-208 was not in fact directed at the known reasons for the shortage of underground workers in the nonferrous metal mines, i. e., low wages, bad working and living conditions, and the refusal of Selective Service to defer miners; (6) that a substantial number of the employees of the gold mines were middle-aged men with families who owned their own homes and would not leave their communities if any alternative were possible; (7) that in many instances the communities in the vicinity of gold mines were entirely dependent upon the operation of the mines for their continued prosperity; (8) that the deeper mines were likely to deteriorate and become flooded if closed down, and that many operators would not be able to afford the cost of keeping their mines safe and accessible or their machinery, equipment and buildings in repair during a long period of unproductivity.

[fol. 285] 51. It is reasonable to conclude that in issuing L-208 WPB acted without any justifiable anticipation that the order would bring about the transfer of more than an insignificant number of hardrock miners to the nonferrous metal mines.

52. On October 10, 1942, 21 United States Senators from 12 gold-producing Western States sent the following letter to the President of the United States:

> Some days ago the War Production Board announced a decision to close all gold mining operations in the United States. This order was made by the Board against the emphatic protest of those representing the largest mining operations engaged in the mining of gold from lode and placer operations.
>
> The largest mining operations affected by this order

are in the states of South Dakota, California, and Colorado.

The Homestake Mine in South Dakota has been operating for some sixty years and has supported a community immediately surrounding the operation of some sixteen or eighteen thousand souls.

The Mother Lode Mines in California extend along the western base of the Sierra-Nevada range of mountains for a distance of 150 miles or more. These mines have been depended upon by communities the total of which would approximate one hundred thousand souls.

The population dependent on the Cripple Creek Mines of Colorado has varied from time to time and is not definite at this moment. Suffice it to say that it would be in the neighborhood of five or six thousand souls.

The economy of communities and states in which these mining operations are located has depended largely upon these operations, in that all of these mines have contributed materially by way of taxation to the states, counties, and municipalities in which they are located.

The labor employed by these mining operations in the respective states has been to a very large extent contributed by the communities that surround the respective mine operations. Homes have grown up through the years in each of these communities, and sons followed their fathers into the mines.

The record made before the War Production Board discloses that in each of these mining communities the young men, that is, men under 50 or thereabouts, have already either gone into the military branches of the United States, or have gone into war activities where alluring wages attracted them. The record discloses that the men now engaged in mining operations in the [fol. 286] mines affected by the order are by and large about 50 years of age or over. The record before the War Production Board discloses that, the men now engaged in mining operations in these localities have, with but rare exception, been employed in the mines of the respective localities for many years.

It is stated that object of the order made by the

War Production Board closing down these gold mines is because of a shortage in the supply of critical materials for defense, and the making of the order is supported by the theory that the labor employed in these gold mines will go into mines of copper or lead or zinc.

We respectfully draw your attention, Mr. President, to the record as made before the War Production Board that if all of the gold mines affected by the order of the Board are put on a standby basis, that is, if they are permitted to retain only enough labor to keep the mines from becoming flooded and caved, there will be in all about 2,020 of all types put out of employment.

The record before the Board shows that there may be another 500 men put out of employment from other mines of smaller capacity, making a total of 2,520 men put out of employment from lode mines.

It is estimated that the number of men put out of employment from dredger operations will be about 750 men. The men engaged in dredger operations are as a rule much older than those engaged in lode mining, at the present time.

It is estimated that the total number of men put out of employment by the order of the War Production Board will be approximately 3,270. The record before the Board establishes that of this number about 900 are miners and muckers.

From this number, it is estimated that between 150 and 200 miners and muckers would be necessary to retain the gold mines and dredges in a stand-by condition; hence, not to exceed 750 men, accustomed to actual mining and generally termed "miners" and "muckers" would be available for employment in mines of copper, lead or zinc.

The record made before the War Production Board discloses that miners, who have been for a long time engaged in gold mining, do not go into the mining of other minerals, such as copper, lead and zinc. There are many reasons stated for this custom.

It is emphatically stated before the War Production Board that if this mine labor population is released [fol. 287] from employment in the gold mines in the respective states, only a negligible number, if any at

all, will seek employment or remain employed in mining operations of other metals.

The impairment of the morale of communities in the states affected by the order of the War Production Board; the far-reaching effect upon the economic structure of the communities; the irreparable destruction of private property that will be accomplished by the flooding and caving of gold mines; the discouragement and heartache that will come into thousands of homes, many of them the homes of boys now in the military service of this country, but whose parents and relatives remain in the communities affected by this order—all of these things will not be compensated by the negligible number, if any, of mine laborers who will go from the closed mines to communities far remote to engage in other mining activities.

We respectfully draw your attention to the fact that at this very time Great Britain is urging and aiding the production of more gold by the gold mining operators of South Africa.

We respectfully draw your attention to the fact that our neighbor ally in this war, the Dominion of Canada, is going forward and encouraging the production of gold in that country, and in a telephonic communication within the past few days with those in authority on the subject in Canada, the information was received that the Canadian government has no intention of closing down its gold mine operations.

We respectfully urge that no beneficial result inuring to the defense of the United States in its time of war will flow from the order made by the War Production Board closing the gold mines of this country. The record needs no emphasis that great and irreparable injury will result.

We respectfully bring this matter to your attention with the request that you stay the order made by the War Production Board affecting the gold mine operations of the United States, at least until the whole subject of marshalling of manpower and the allocation of labor may be considered, and the vital questions involved, concluded; thus that the gold ming industry of the United States may not be subjected to unwar-

ranted and unusual hardship and injury which may not eventually be considered necessary, and which may not be equitably borne by other industries.

[fol. 288] In May 1944, the Policy Analysis and Records Branch of the WPB submitted a report concerning Limitation Order L-208 providing in part as follows:

> It is generally agreed by the WPB divisions concerned with mining activities that a very small percentage of the released gold mine workers actually were employed by other mines. A majority of them probably went into work of greater value to the war effort than gold mining, such as lumbering, agriculture, construction, shipbuilding, aircraft manufacture;[96] but the fact remains that the primary justification for closing the gold mines was to get labor for the production of the strategic metals. Wilbur Nelson, Arthur S. Knoizen, present Director of the Mining Division, and F. H. Hayes, Chief of the Primary Production Branch of the Copper Division, concur in the statement that the number of gold mine workers who went into other mines and remained therefor a year or more was not over 100.[97]

Findings Relating to Plaintiff Homestake Mining Company

53. Homestake Mining Company (hereinafter referred to as Homestake) is and was at all times herein mentioned

---

[96] A partial analysis based on the records of the Social Security Board, indicates that the released gold mine workers went into a wide variety of occupations, including in addition to those mentioned in the text, coal mining, steel working, communications, transportation, and many others; they scattered, in short, through a fair cross-section of American industry. Letter, John J. Corson, Director, Bureau of Old Age and Survivors Insurance, Social Security Board, to Stacy May, October 22, 1943.

[97] Wilbur Nelson and Arthur S. Knoizen, in interviews with the writer, March 7, 1944; F. H. Hayes, in an interview with writer, March 4, 1944.

a corporation organized and existing under the laws of the State of California.

54. Homestake is and was at all times herein mentioned the owner of patented mining claims covering more than 5,000 acres of mining properties containing gold-bearing ores of great value located in the Black Hills area of South Dakota, near the city of Lead, South Dakota.

55. On October 8, 1942, and for 65 years prior thereto, Homestake was and had been engaged in the business of mining, processing and selling gold, and in 1942 was the largest gold producer in the United States.

56. On October 15, 1942, Homestake notified its employees of the issuance of Order L-208 and informed them of the necessity of concluding its gold-mining operations pursuant [fol. 289] to the order. Homestake urged such employees as would be released to consider the opportunities for employment in the copper mines.

57. Pursuant to the terms of Order L-208 Homestake discontinued breaking new ore on October 15, 1942, and began to lay off miners on that date.

58. On or about October 17, 1942, Homestake appealed to WPB, requesting permission to continue mining operations on the ground that Order L-208 would work an exceptional and unreasonable hardship upon it. On November 25, 1942, WPB decided the appeal, granting Homestake only limited relief. The WPB advised Homestake of this decision in a letter dated November 25, 1942, which stated in part as follows:

> Permission granted to remove and mill broken ore from underground and refill the stopes with suitable material during a period of six months beginning December 8, 1942, provided that no more than 60 employees are at any time assigned to or used in such operations and provided further that workers shall not be assigned to such operations when the War Manpower Commission finds that they are needed in mining operations elsewhere. Permission is denied to break any new ore or to proceed with any development work or any new operations in or about the Homestake mines.

59. Homestake, with the aid of the limited additional personnel authorized by WPB, continued the hoisting and

processing of ore already broken from on or about October 15, 1942, until the latter part of May 1943. After June 1, 1943, the Homestake gold mine was closed down for all purposes, except necessary maintenance, until on or about July 1, 1945. It reopened on that date and has operated continuously since then.

60. On October 8, 1942, the life of operations of Homestake's gold mine based on ore bodies, indicated by reserves of ore in sight and ore that could be expected from development, was at least 20 years at the then current rate of mining.

61. Homestake, at the time of its founding in 1877, was located in an isolated part of the United States and as a result was required to maintain a policy of self-sufficiency. From its early days it established a program of maintaining larger inventories than customary in most mining en- [fol. 290] terprises. Prior to October 8, 1942, Homestake had acquired extensive timberlands which provided lumber for the mine, and continued this program up to the time of the issuance of Order L-208. Prior to October 8, 1942, Homestake also had developed a coal mine, and was producing its own electric power.

62. In October of 1942, Homestake had recently completed two deep mine shafts equipped with large modern hoists, and had erected a new lumber mill. Its steam power plant was relatively new and its ore processing mills were in excellent operating condition.

63. On October 8, 1942, Homestake maintained its own foundry and machine shops used in the fabrication and repair of a variety of mining and processing equipment. In addition, Homestake was capable of supplying all of its own needs with respect to mine timber, coal, and electric power.

64. The chief items of materials and supplies used by Homestake in its mining and milling operations consisted of pipe, rail, rock drills, parts for rock drills, drill steel hoisting ropes (wire), electrical wire, cyanide, lime, shoes and dies for stamp mills, balls and rods for grinding mills, liners for grinding mills, and cones and mantles for crushers. Items of necessary equipment included locomotives, mine cars and mechanical shovels.

Homestake's inventory of these and other necessary ma-

terials and supplies was sufficient to operate its mine during the entire period of the closure. This did not include items such as dynamite and explosives. Only a three-months' supply of dynamite was on hand on October 8, 1942, but it was readily available without restriction.

65. At no time did WPB requisition or order Homestake to surrender or transfer any of its supplies, equipment or machinery, nor did it make any inquiries regarding the amount, nature or availability of Homestake's supplies, equipment and machinery, although the Board was furnished with an inventory of supplies on hand and other information relating to equipment and machinery.

66. The working conditions at Homestake and the living conditions in the communities surrounding Homestake in 1942 were superior to those at the nonferrous metal mines to which the Government sought to transfer the Homestake [fol. 291] miners. Homestake employees enjoyed free medical and hospital services, group insurance, pensions, recreational facilities, and many of the older miners owned their own homes. In 1942, approximately 440 of Homestake's employees had seen more than 21 years of service with the mine, and some had been employed there for more than 40 years. For these reasons, Homestake had enjoyed greater employment stability than the nonferrous metal mines despite the lure of higher pay in the war industries.

67. In October 1942, Homestake had sufficient labor available to operate at full capacity. Even in the event of reduction of available manpower Homestake could have maintained normal production levels by using mining techniques requiring less labor and by increasing its workday from seven to eight hours.

68. The Homestake Mining Company released 437 men from its employment during the period from the issuance of L-208 on October 8, 1942, to a date shortly prior to November 12, 1942. Of these 437 employees, 391 came from the mine department, 21 from the metallurgical department, 21 from the mechanical department, and 4 from the carpenter department. Of the 391 employees from the mine department, 183 were classified as miners on Homestake's payroll. And of these 183 miners, 39 had less than six months' experience. Of the 437 released, 110 men did not register with the United States Employment Service. Of the re-

mainder, 207 of them were placed by the United States Employment Service in other mining work as of a date shortly prior to November 12, 1942.

Homestake reported to the U. S. Social Security Agency that it had in its employ during the third quarter of 1942 a total of 2,129 employees. In its report for the fourth quarter of 1942, the company reported that 921 of these employees received less wages than they had received in the preceding quarter, which indicates that these employees were separated from the company's employ before December 31, 1942. Of these 921, there were 401 also reported by another employer, although not previously so reported, which indicates that these employees transferred to such other employers after leaving the Homestake Mining Company. These figures did not include transfers after Decem- [fol. 292] ber 31, 1942, although Homestake continued limited operations through that date.

69. In October 1942, Homestake was the largest single source of potential nonferrous metal mining labor. Representatives of the United States Employment Service, immediately following the issuance of L-208, attempted to induce released workers to accept employment at the Anaconda copper mine at Butte, Montana, and the Climax Molybdenum mine at Climax, Colorado, both about 500 miles from the Homestake mine.

Fifty-one Homestake employees accepted employment at Climax. Forty-one stayed less than six months and only six employees remained as long as one year.

One hundred and seventy-eight Homestake employees accepted employment at Anaconda, and of these more than 100 left before the end of a year. A great many Homestake employees never transferred to nonferrous metal mines but remained at the mine doing maintenance work, remained idle at home, or went into other pursuits. As early as November 1942, some of the miners who had been assigned to jobs in other mining districts began returning to Lead.

70. The properties of Homestake were useful for no other purpose than the production of gold and were adaptable to no other use than the conduct of a gold mining business.

71. The closing of the Homestake mine pursuant to Order L-208 had far-reaching and drastic repercussions in the city of Lead and the surrounding communities. The population

declined sharply, more than 750 homes and apartments were left vacant and boarded up, and 36 business establishments which had served the communities were left vacant.

72. In the years immediately prior to the issuance of Order L-208, the State of South Dakota received about $1,000,000 per year, or approximately ten per cent of its annual revenues, from Homestake. The State was deprived of this source of revenue by the order closing the gold mines.

73. Without acquiring new machinery or repair parts, or supplies on which there were restrictions concerning acquisition, and with a reduced labor force, Homestake could have operated profitably during the period of closure.

74. By reason of the issuance of Order L-208 Homestake was deprived of the use and benefit of ownership of its gold [fol. 293] mining properties, to wit, the right to obtain gold from the ore bodies on its properties and to sell such gold.

75. No compensation has been paid to plaintiff Homestake by defendant for the closing of its mine as hereinbefore described.

FINDINGS RELATING TO PLAINTIFF CENTRAL EUREKA MINING COMPANY (A CORPORATION)

76. Central Eureka Mining Company (hereinafter referred to as Central Eureka) is a corporation organized and existing under the laws of the State of California, with its principal places of business located in Sutter Creek, Amador County, California, and in San Francisco, California.

77. On October 8, 1942, Central Eureka owned approximately 641 acres of gold-bearing land located at Sutter Creek, Amador County, California. On that date, the mine employed a total of 117 men, of whom 73 were classified as underground workers.

The average age of the total number of employees was 41.74 years; 74.36% of the employees were married and had an average of 2.64 dependents. These employees had resided in the community wherein the mine was located for an average of 4.26 years, and 31 of these employees owned their own homes in that community.

78. Immediately following the issuance of L-208 on

October 8, 1942, all but 64 men left the mine, that group having been retained by the company to maintain the mine until January 1943, when the National War Labor Board ordered that thereafter the company would not be authorized to employ more than 42 men in the maintenance of the mine. The record does not disclose how many of either the 64 or the 42 men were underground workers.

79. Prior to October 8, 1942, Central Eureka Mining Company was engaged in the successful operation and development of its gold mining property at a profit. In the five-year period immediately preceding the issuance of L-208, the company paid $355,414.04 in Federal and State taxes. During that same period of time the company paid to its shareholders dividends in the amount of $1,182,900.

[fol. 294] 80. On October 8, 1942, Central Eureka had an inventory of supplies on hand which would have enabled the mine to operate for a period of two or three years without replenishment.

81. Central Eureka's mining equipment included on October 8, 1942, machine shops, electrical shops, blacksmith shop, carpenter shop, an assay office, a complete mill from primary crush to cyanidation, its own source of timber, automotive and all other necessary equipment required to carry out mining and servicing of the underground workings and the extraction of gold from ore bodies.

82. During the period October 8, 1942 to June 30, 1945, while L-208 was in effect, Central Eureka, which had been producing gold for about 80 years, could have continued to operate its mine on a satisfactory basis with a reduced force of men. It had on hand sufficient inventory for that purpose and had approximately 100,000 tons of blocked out ore (exposed on four sides) in reserve and had additionally inferred ore and probable ore in reserve which would substantially increase the 100,000 ton figure.

83. The properties of Central Eureka Mining Company were useful for no other purpose except the production of gold, and were adaptable to no use other than the conduct of a gold mining business. The mine was closed by reason of compliance with L-208.

84. Within six weeks after the issuance of Order L-208,

Central Eureka applied for a serial number under P-56 for the operation of a copper-mining project at Battle Mountain, Nevada. Some mining equipment was transferred from its gold mine to this copper project. It was closed down by Central Eureka about the middle of 1943.

85. In addition, Central Eureka leased some mining equipment, including flotation machines and feeders, agitators, classifiers, sand pumps, filters and compressors, to individuals who were engaged in tungsten mining. This material would not have been so leased had it not been for the issuance of Order L-208.

86. On December 9, 1943, Central Eureka, by its general superintendent, wrote the following letter to the Mining Division of WPB:

> [fol. 295] As General Superintendent of the Central Eureka Mining Company, an Amador County, California gold producer closed under War Production Board Order L-208 and placed on a maintenance basis, I wish to call your attention to our position as well as similar gold operations.
>
> The cost of keeping our mine unwatered and of doing absolutely essential retimbering and repair work is becoming a great burden on this Company's treasury. If it became necessary to abandon the mine entirely and allow it to fill with water, I question seriously whether we or anyone else would be able to undertake a rehabilitation project at the present price of gold.
>
> It appears to me that the situation could be helped very much if we could have the sympathetic consideration of the people charged with the administration of Order L-208 in a relatively small departure from the provisions of the Order. Such departures might include (1) the hiring temporarily or permanently of a few additional men, either as replacements or to meet emergencies, (2) the permission to extract a small amount of ore to help out the heavy deficit of the maintenance operation and to allow variations from time to time in the tonnage extracted, and (3) the consideration of use or exchange of a small amount of strategic materials as required. So far, we have been unable to make Washington officials understand these

operating problems. I do not believe that such misunderstanding is the result of being arbitrary but is probably due to the fact that they are too far away from our operations to see the true picture. My thought is that if the administration of Order L-208 could be decentralized and placed in the hands of some Western representative—either Mr. Lane in Denver or Mr. Keating in San Francisco—our operations would receive a more sympathetic consideration based upon a personal understanding by the Administrator. I feel personally that this could be done without interfering in any material way with the purposes of Order L-208; understanding of course that the purpose of Order L-208 is the conservation of manpower and strategic materials for the war effort.

It is of vital concern to this Company and to this community to keep our operation alive if at all possible. The lack of authority given local administrators with respect to Order L-208 seems to unfairly discriminate against the gold mining industry as compared to other forms of business which have been forced to indirectly reduce operations. A local administrator with adequate authority could help materially to clear up this feeling on the part of the gold operators and [fol. 296] of the citizens of the gold mining communities.

Your early consideration of this request would be greatly appreciated.

87. On December 17, the WPB acknowledged and on December 22, 1943, replied to the above letter in part as follows:

> Supplementing our letter of December 17, your problem has been discussed very thoroughly in conference and we fully understand your problems on maintenance in keeping your mine open and ready for operation.
>
> We suggest that you file and appeal from this order, stating your problems in detail, advising what is involved in getting your mine in operation and maintaining it on a minimum basis. In your appeal, also state whether manpower is available, and if so, can you get certification from the War Manpower Commission to

use these men if they are not needed in other essential war industries.

We assure you that as soon as this appeal is filed, we will give it immediate consideration to see what can be done to give you some relief under the order.

We also suggest that you file with your appeal, the possible requirements of material of all types that you will need for approximately a year. If this is not possible, six months will suffice.

* * * * * * *

There is no evidence of an appeal under L-208 other than the letter quoted in finding 86.

88. By reason of the issuance of Order L-208, Central Eureka was deprived of the use and benefit of ownership of its gold mining properties, i. e., the right to obtain gold from the ore bodies on its properties and to sell such gold.

89. No compensation has been paid to Central Eureka by defendant for the closing of its mine as hereinbefore described.

90. On June 30, 1945, the WPB revoked Order L-208. Thereafter in 1947 or 1948 Central Eureka reopened its mine and has operated it continously since.

FINDINGS RELATING TO PLAINTIFF IDAHO MARYLAND MINES CORPORATION

91. Idaho Maryland is now and was on October 8, 1942, and at all times hereinafter mentioned has been, a corporation [fol. 297] duly organized and existing under the laws of the State of Nevada.

92. Idaho Maryland is now and at all times herein mentioned has been the owner in fee of certain gold-mining properties known as the Idaho Maryland Mines, consisting of approximately 8,000 acres of gold-bearing lands situated in the Grass Valley Mining District in the County of Nevada, State of California, together with all necessary mining plant and equipment located on said lands.

93. Idaho Maryland operated the above-described mining properties for many years prior to October 8, 1942, and continuously since July 1, 1945. It was recognized on October 8, 1942, as the second largest gold mine in the United States in terms of ore removed and treated.

94. Idaho Maryland's mining equipment located on said lands included on October 8, 1942, machine shops, electric shops, welding shops, blacksmith shop, carpenter shop, cyanidation plant and smelting plant, a sawmill and other mills, shops, automotive and all other necessary equipment required to carry out mining and servicing of the underground workings and the extraction of gold from the ore bodies.

95. It would not have been necessary for Idaho Maryland to acquire, during the life of L-208, any critical materials, supplies, equipment or facilities to enable it to continue operation on a profitable basis, because, (1) the mine was a fully developed mine comprising extended drifts, crosscuts, raises and winzes, fully equipped with a large amount of modern mechanical equipment, including an efficient hoisting layout; (2) the company owned sufficient equipment in good condition, a large inventory of supplies and materials necessary for operating the mine, including large quantities of pipe and rail, steel, drill steel, building machine repair parts, tires, tubes, repair parts for milling machinery, valves, pipe fittings and miscellaneous supplies, a large supply of mercury and all other materials required to operate the mine. At no time during the war were industrial or commercial explosives, including dynamite, fuses and caps, subject to priority restrictions, and were available in large supply in the open market.

[fol. 298] 96. During the period of close down, Idaho Maryland was not wholly dependent upon the use of the mining machinery and equipment actually owned by it on October 8, 1942. There was a considerable quantity of secondhand mining machinery available at all times in California which could have been purchased by Idaho Maryland had the necessity arisen. Secondhand mining machinery was not rationed and was freely obtainable in the open market.

97. Idaho Maryland owned and operated its own cyanidation plant, but such operation was not essential to the continued operation of the mine as a gold mine. Two-thirds of the gold content of the ore is and was on October 8, 1942, recovered at the Idaho Maryland Mine in the amalgamation process, and prior to subjecting ore concentrates to the cyanidation process. Some of the free gold was recovered on

the jig table prior to the amalgamation process. The Idaho Maryland mining properties are peculiar in that the ore contains considerable free gold. The cyanidation process is a further treatment of the residue of the concentrates to recover the remaining gold. The concentrates could have been sent to the American Smelting and Refining Company Smelter at Selby, California, for smelting and the final recovery of the remaining gold therefrom. The Selby smelter operated during the entire period of the war.

98. Idaho Maryland operated its own saw mill and had its own supply of timber. The mine obtained its power in 1942 from the Pacific Gas and Electric Company and continued to use such power throughout the period of shutdown. There was no shortage of electric power at the mine nor was it curtailed or restricted during the shut down but was available at all times.

99. The operations at Idaho Maryland were curtailed due to the loss of manpower between December 1941 and October 8, 1942. The payroll was reduced from over 800 employees to 212 employees between those dates. As the separations of employees reduced the number of employees, it became necessary before the closedown ordered by L-208 to alter their mining methods so as to more effectively utilize the employees who had stayed.

100. On October 8, 1942, 116 of Idaho Maryland's remaining employees were underground workers. The average age [fol. 299] of all employees as of October 8, 1942, was 47.7 years and 43 of the underground men were over the age of 50. If *all* of Idaho Maryland's underground workings had been kept safe and accessible as permitted by L-208, none of the 116 underground workers would have been released.

101. During the period of October 8, 1942, to June 30, 1945, while Order L-208 was in effect, Idaho Maryland could have continued to operate its mine, except for the prohibition contained in Order L-208, on a satisfactory basis with a reduced force of men by resorting to shrinkage stoping, which is a method of operation requiring fewer underground men. This method of operation has been customarily followed in the Idaho Maryland Mine. It is a method customarily used in other gold mines, such as Homestake. It would also have been possible to operate with a reduced crew by eliminating extensive development work.

Extensive development work is not necessary in a mine such as Idaho Maryland, located in a well-known mineralized area such as Grass Valley Mining District. In fact, Idaho Maryland has operated continuously without the necessity of having blocked out proven ore bodies.

102. Upon the issuance of Limitation Order L-208 on October 8, 1942, Idaho Maryland, under threat of criminal persecution for failure to comply therewith, immediately notified its employees that the mine was being closed down and discontinuing work. In compliance with said order Idaho Maryland completely closed down the opration of its gold-mining properties and suspended all mining production from and after the period prescribed in said Order L-208, to wit, on October 15, 1942.

103. The properties of Idaho Maryland are, and were, useful for no other purpose except the production of gold, and said mining properties were adaptable to no profitable use other than the conduct of a gold-mining business and were not capable of being used for any purpose other than the production of gold.

The blacksmith shop, machine shops and other shops and equipment of Idaho Maryland, which were used for the repair and maintenance of mining machinery, were not capable of being utilized in the mass production of any item and were not devoted to any other use during the period of [fol. 300] shutdown following the issuance of L-208.

104. With a greatly reduced labor force and without acquiring any critical material, supplies, equipment or facilities subject to government control, Idaho Maryland could have operated its mining properties on a profitable basis during the period L-208 was in effect.

105. On October 8, 1942, there were 81 employees who had terminated their employment with Idaho Maryland after October 8, 1942, who were thereafter reemployed by that firm, which obtained a record of the employees' intervening employment in most but not all instances. Of the 69 as to which the firm had a record of intervening employment, 6 were employed in other mining activities during some or all of the time they were out of the company's employ, 8 were in military service, 4 were employed in the Miners' Foundry, Nevada City, California, 6 worked with the railroads, 4 were employed in shipyards, and the remainder as

to which there was information were engaged in other types of employment.

106. Grass Valley, Nevada County, California, located near Idaho Maryland's gold mining properties, was wholly dependent upon the operation of the gold mine for its continued prosperity. The closing of the mine caused considerable community dislocation and individual hardship. Since 1848, the principal occupation of the inhabitants of the communities of Grass Valley and Nevada City had been gold mining.

107. Pursuant to an appeal taken by Idaho Maryland Mine to the War Production Board, the mine was permitted to complete a second exit between the mine and the Brunswick Mine which was required by California State Law. On December 13, 1943, Idaho Maryland filed a second appeal calling to the attention of the Board specific conditions which existed underground in the mining properties by reason of the shutdown. The underground workings were caving and collapsing and the mine contended that it was essential for the protection of the underground workings that mining operations be resumed forthwith. On May 3, 1944, Idaho Maryland was permitted by WPB to resume operations on a limited basis wit hnot over 200 men who must be over 40 years of age and not working for other industries. Production permitted was limited to 7,800 tons [fol. 301] of ore per month but Idaho Maryland was not able in 1944 to reach that production because of the time it took to prepare for production and to open up the necessary ground workings due to the destruction which had already occurred to the mine. A third appeal on November 24, 1944, asking permission to hire additional men was denied.

108. By reason of the issuance of Order L-208, Idaho Maryland Mine was deprived of the use and benefit of ownership of its gold mining properties, i. e., the right to obtain gold from the ore bodies on its properties and to sell such gold.

No compensation has been paid to Idaho Maryland by defendant for the closing of its mine as hereinabove described.

Findings Relating To Plaintiff Oro Fino Consolidated Mines, Inc.

109. The petition as to this plaintiff was originally filed on February 8, 1950, in the name of Oro Fina Consolidated Mines, Inc. Thereafter on September 9, 1952, an amended petition in this case was filed in the name of Oro Fino Consolidated Mines, Inc.

110. Oro Fino Consolidated Mines, Inc. was incorporated under the laws of the State of Nevada on January 4, 1950.

111. Under date of September 5, 1935, Hazel P. Gridley leased to one J. C. KembpvanEe certain gold mining property in Ophir Mining District, Placer County, California, known and described in the lease as the Ora Fina Mine. J. C. KempvanEe thereafter operated this property as Oro Fino Consolidated Mines, but this was simply a trade name, and the lessee continued to be the said KempvanEe.

112. Mr. KempvanEe was operating said gold-mining properties on October 8, 1942. On November 16, 1942, he requested permission of the War Production Board to continue the removal and milling of broken ore until January 15, 1943, representing that there were then 1,912 tons of broken ore in the mine. Such permission was granted by the War Production Board under date of December 2, 1942. The record does not disclose when operations at the mine [fol. 302] actually ceased, but it was apparently prior to March 27, 1943. The mine has never operated since that date.

113. As of October 8, 1942, there were approximately 11 employees in the mine as contrasted with about 40 in "normal" times. The record does not disclose the employments into which these men went following the closing of the mine, although it does show that as of November 8, 1942, one of these employees was awaiting a call to duty in the armed forces.

114. There is no evidence in the record as to the amount of machinery or equipment in the mine as of October 8, 1942, or as to the availability of materials for the maintenance of such machinery or equipment. The mill had been newly erected in 1938, and there were certain parts available for its maintenance, although it does not appear how long the mill could have continued operating without replenishment of this inventory of parts. The record does not

indicate the disposition, if any, which was made of these parts and equipment following the closing of the mine.

115. The properties of Oro Fino were useful for no other purpose than the production of gold and were adaptable to no other use than the conduct of a gold mining business.

116. By reason of the issuance of L-208, Mr. KempvanEe was deprived of the use and benefit of the gold mining properties leased by him, i. e., the right to mine and sell gold.

117. In 1948 a Mr. MacBoyle, Mr. KempvanEe's financial backer, died. Mr. KempvanEe then turned to Mr. Nugent for financial assistance as there were certain royalty payments under a lease and certain other expenses recurring. Mr. Nugent agreed to furnish such assistance and did so. He suggested that the operation be incorporated. On January 4, 1950, Oro Fino Consolidated Mines, Inc., was organized. On February 2, 1950, Mr. KempvanEe assigned all his right, title and interest in the lease of the mining property from Mrs. Gridley to Oro Fino Consolidated Mines, Inc.

The assignment provides in part as follows:

> The undersigned J. C. KempvanEe does hereby sell, assign, tranfer and grant unto ORO FINO CONSOLIDATED MINES, INC., a corporation, all right, title and interest in and to that certain mining agreement and the real property therein described and all rights arising by virtue of said agreement, dated September 5, 1935, by [fol. 303] and between HAZEL P. GRIDLEY, a widow, designated as lessor and J. C. KEMPVANEE, designated as lessee, * * *
>
> Said agreement is hereby incorporated herein and made part hereof for all purposes as though fully set morth herein.

118. No compensation has been paid to Mr. KempvanEe or to Oro Fino Consolidated Mines, Inc., by defendant for the closing of the mine as hereinbefore described.

Findings Relating to Plaintiff Alaska-Pacific Consolidated Mining Company

119. Alaska-Pacific Consolidated Mining Company (hereinafter referred to as Alaska-Pacific) has been since prior to October 8, 1942, and still is a corporation organized and existing under the laws of the State of Washington. Alaska-Pacific is the successor in interest by way of merger of two predecessor corporations and has been, since 1938, the sole operator of the mining properties referred to hereinafter.

120. Alaska-Pacific is the owner and operator of certain mining properties located in the Willow Creek (Wasilla) Mining District in the Territory of Alaska. With the exception of two groups of mining claims hereinafter noted, all of Alaska-Pacific's properties on October 8, 1942, and thereafter were held in fee or by location notices which later matured into patents in fee issued to Alaska-Pacific by the defendant. As to one of the excepted groups, that known as the "Alaska Free Gold" claims, bearing General Land Office Survey No. 980, Alaska-Pacific held the mining rights on October 8, 1942, and has continued to hold them since then, by virtue of a lease and royalty agreement, coupled with a purchase option, which does not expire until 1961. The other excepted group, namely, the Hamburger, Red Eye and Weeny claims, were held by Alaska-Pacific on October 8, 1942, and are still so held by virtue of location notices.

121. On the aforesaid properties, Alaska-Pacific, since 1938, and its predecessors before them, operated an underground or lode mine, consisting of about 5 miles of underground workings with two entries.

122. Geographically, Alaska-Pacific's mine is located about 20 miles from Wasilla and 28 miles from Palmer, in an isolated section of the Wasilla precinct, there being no [fol. 304] other inhabitants except a few miners employed in neighboring mines. Except for timber which was purchased locally, all supplies, including foodstuffs, were imported from the States. These supplies moved by ship to the port of Seward, thence by railroad a distance of about 409 miles to Wasilla and thence by truck to the mine. Because of climatic conditions, as a result of which the road was often blocked, the isolation of the mine and the uncertainty of steamship schedules, Alaska-Pacific customarily followed a practice of carrying a substantial inventory of

parts, equipment and supplies. At the time of the closure of the mine by virtue of Order L-208, Alaska-Pacific had in inventory, parts, equipment and supplies sufficient to permit continued operations for at least one and one-half years, special efforts having been made to accumulate a substantial inventory not only because of the foregoing factors but in anticipation of possible shortages.

123. Because of its isolated location, a company village was maintained at the mine, consisting of the mine and mill buildings, various warehouses, shops, dormitories, a school and an office building, a store, a messhall and various recreation facilities. All buildings were of frame construction and were serviced with central underground water and sewage systems. Because of severe winter conditions with snows ranging to 25 feet in depth and temperatures ranging to minus 50 degrees, and because of heavy rains in other periods of the year, constant maintenance and attention to surface installations were required to prevent early deterioration and serious damage from the elements.

124. Normally, Alaska-Pacific operated its mine with a crew of about 125 men. In October of 1942 it had a mining crew in its employ of 101 men. Of these, only three had experience in mining other than gold mining, that being in the employ of either of the two coal mines then operated in Alaska.

Aside from the two coal mines, there were no other types of mines in Alaska except gold mines.

125. Alaska-Pacific not only produced gold from its mine but also, as a kind of byproduct, a type of concentrate essential to the smelting of copper. Alaska-Pacific's concentrates were shipped to the Tacoma Smelter, Washington, and furnished about 10 percent of its requirements.

[fol. 305] 126. Under date of October 15, 1942, Alaska-Pacific submitted an appeal to the WPB for relief from the provisions of Order L-208. This appeal emphasized:

* * * * * * *

> First: The position of the company as a tungsten producer, actually and potentially.
>
> Second: The position of this company as the supplier of valuable and necessary materials to the copper smelting operations of A. S. & R's Tacoma Smelter.

* * * * * * *

It also referred to the hardship upon the company and its employees of closing the mine, and requested:

* * * * * * * *

> In the light of these showings, and particularly in view of the progress made by this company in the production of a strategic metal, we again request the Board to restore the P-56 rating which had been revoked by the general order of March 2nd last. If the said rating is granted, the company will agree to curtail its gold production by at least 50% by ceasing development of sections of its mine where no deposits of scheelite in recoverable quantities exist.

* * * * * * *

The WPB granted this appeal, by telegram reading as follows:

> Re Your appeal from order L-208 you are hereby authorized to continue operations until December 8th, at your Independence Mine under the following conditions: During that period you will drill, break and develop, as rapidly as possible, the Scheelite ore shute you have opened, in order to show the monthly tonnage of Scheelite which you can mine, treat and ship to the Metals Reserve Company's stockpile at Anchorage (stop) You are; under the terms of the order, permitted to remove from the mine any other ore broken and in the mine as of October 15th, and mill the same (stop) You are at the same time required to prepare that partof your mine not carrying [T]he Scheelite ore to be in stand by condition by December 8th (stop) On or before November 30, you must furnish a complete progress report to us on your tungsten development and also on the amount of broken ore you have removed from your mine and milled, with metallic content (stop)

[fol. 306] 127. Under date of November 27, 1942, Alaska-Pacific submitted to the WPB a report on its scheelite (tungsten) production, as requested in the grant of the appeal. This report pointed out that approximately 2,000 tons of ore had been processed since the grant of the appeal, yielding

113 pounds of gold, 56 tons of concentrates for the Tacoma smelter, and about 20 tons of crude scheelite ore containing at least 80 units of tungsten trioxide. In the letter transmitting the report, Alaska-Pacific stated that:

> * * * By no stretch of the imagination is scheelite likely to become anything more than an important by-product of our gold operation. Actual financial loss will attend the scheelite phase of our operations, and such losses are likely to persist for the entire period during which scheelite is produced, unless subsidies are granted, or scheelite prices raised. * * *
>
> * * * * * * *
>
> The scheelite situation at Independence, is in the same category. Frankly, it is a case of no gold, no scheelite. We cannot waste the economic metal in order to produce the uneconomic one. This company would be hard put to maintain its predominantly gold workings in standby condition and at the same time undertake production of scheelite at a loss, unless income from its gold production was continued.
>
> We submit this letter and the accompanying Progress Report with confidence that the evidence offered will justify the issuance to us, at an early date, of a priority rating which will affectively [sic] suspend L-208 as it may apply to our operation at Independence. In the event that your Board should determine upon action according further time extension in the application of the order, we wish to suggest that not less than six months be accorded us, as any shorter time would be inadequate to bring our scheelite potentialities into production upon an efficient basis. The extension should permit continued normal gold production, so that the hardships referred to in our Appeal of October 15th would not materialize, and so that scheelite production, carried on at a loss, would be reasonably compensated for.

Under date of December 11, 1942, the WPB granted Alaska-Pacific an additional period of operation, its letter of authorization reading in material part as follows:

> [fol. 307] After careful consideration of the facts presented in your Appeal, the following relief from Order L-208 is hereby authorized:
>
> Permission is granted until June 8, 1943, to continue your normal lode mine operations of breaking, drawing and milling gold-bearing ore, for the purpose of producing tungsten-bearing ore and upon the condition that plans for proceeding with this operation shall meet with the approval of the War Production Board.
>
> The provisions of Order L-208 are waived to the extent required to obtain the relief authorized above, provided that Order L-208 in all other respects and all other Orders and Regulations of the War Production Board are fully complied with.

128. Alaska-Pacific submitted certain additional reports and requests for relief in the succeeding months. In a report submitted under date of January 26, 1943, it stated that approximately 35 tons of scheelite ore had been produced in two full months, which "exceeded the 3% minimum of contained WO-3 prescribed by Metals Reserve Company."

129. Under date of April 14, 1943, the Director of the Mining Equipment Division of WPB wrote to Alaska-Pacific in part as follows:

> * * * Your report on the recovery and production of tungsten, and the information contained in the report by the United States Geological Survey, would indicate that it is neither desired or advisable, to attempt to continue your operations on any other basis than for the production of gold with tungsten as a by-product. The limited amount of tungsten that might be produced by hand-sorting of the ore is not impressive. Additional tungsten might be recovered by proper mill treatment of the ore, but the time involved in determining the method of recovery to be used in making installations in your plant, the manpower required in the operation

of your mine and mill, the materials consumed, and the potential tungsten production, do not justify the continuation of your project.

It is the opinion of all groups concerned, after a thorough review of your case, that neither your present production of tungsten or potential production under either of the proposed plans for recovery, justifies the continued operation of your gold mine.

The production of a high iron sulphur concentrate as diluent, for use at the Tacoma Smelter, through the [fol. 308] mining and treating of an estimated 30,000 tons of ore annually, to produce 1,000 tons of concentrates, is not economical in the use of manpower or materials consumed. Every possible effort is being made to provide that type of flux from other than a gold mine. For these reasons, the issuance of a serial number under Order P-56 for your gold mine, has not been recommended.

The grant permitting continuation of your gold mining operations at the Independence Mine, Wasilla, Alaska, expires June 8, 1943. You are hereby advised that your mine and mill should be placed in standby condition by that date. This is in accordance with the policy of the War Production Board, established through the issuance of Limitation Order L-208, directing the closing of all nonessential mines in the United States. This policy has been extended to Latin America and other foreign countries, through the curtailment of supplies and materials being furnished for gold mining. The reduced consumption of materials, supplies and equipment, through the cessation of gold mining, transfer of idle equipment for use in production of strategic materials and defense projects, has been effective in stimulating production, accelerating completion of projects and reducing the load on the production lines, which are needed to produce for direct military requirements, as well as our vital industries.

130. Under date of May 12, 1943, Alaska-Pacific submitted to WPB a final and voluminous appeal, emphasizing the hardship to itself and its employees which would result from the close down of operations.

By telegram of June 6, 1943, the WPB allowed a further extension of operations to August 8, 1943. On June 21, 1943, the administrator of Order L-208 wrote to Alaska-Pacific advising that after August 8, 1943, the mine must be placed in standby condition.

131. On July 29, 1943, Alaska-Pacific sent the following letter to the WPB Mining Branch:

> This is to advise you and the various members of the Board that on or before August 8th, 1943, our operations near Wasilla, Alaska, will be closed down pursuant to the above referred to Order and the various directions issued thereunder. This step is taken by us under the threat of the criminal and other penalties which are provided for in the order. It is not voluntary on our part, but under express protest. [fol. 309] We hereby advise you of such protest and that we reserve all of our legal rights against those responsible for the promulgation and enforcement of this order, it being the position of this company that the order itself and the various actions taken under it are without sufficient foundation in law and are illegal.
>
> We are unable at this time to estimate the extent of the damage which we may sustain by virtue of the enforcement of this order. However, you are advised that it will amount to a substantial sum.

On August 13, 1943, the administrator of Order L-208 wrote the following letter to Alaska-Pacific:

> Your letter of July 29 with reference to the closing of your Independence Mine at Wasilla, Alaska, has just been brought to my attention.
>
> We regret that conditions necessitated the action which made the closing of your mine necessary, however, we feel that you are following the wisest course by ceasing operations at the expiration of the extension of the grant made to your company. Little hope of extension could be anticipated in view of present conditions in Alaska, with respect to coal shortage and the difficulty in securing men to work in those mines.
>
> We trust that your company will encourage in every way possible the transfer of men released from your

operations, to coal mines. That is one of the most important contributions that could be made to the war effort at this time.

132. The plaintiff received a formal notice dated August 13, 1943, from the WPB in the following terms:

> This is with reference to your appeal filed under date of May 12, 1943, requesting relief from the provisions of Limitation Order L-208.
>
> An extension of time was given you on the grant under which you had been operating, permitting you to continue your operations until August 8, 1943, under the same limitations and prohibitions as the original grant.
>
> You ask that an exception be made in your case by the grant of permission to continue your lode mine operations in the Independence Mine located at Wasilla, Alaska, for the purpose of extracting gold in conjunction with your tungsten ore production.
>
> The Appeals Board has given full and careful consideration to all of the facts brought out in your appeal and has consulted the War Manpower Commission as to the advisability of permitting your workers to con- [fol. 310] tinue in a non-essential mine. It is the War Manpower Commission's belief that your workers can be utilized to better advantage in the war effort in the coal mining operations in your immediate vicinity.
>
> Therefore, we regret to inform you that your appeal for relief from Order L-208 must be denied.

133. There is no competent evidence in the record to show the employments to which former employees of Alaska-Pacific transferred upon the closing of the mine on August 8, 1943. On the whole, gold miners are unfavorably inclined toward employment in coal mines, partly because of the hazards involved and partly because equipment and machinery are different. Although the record does not establish the exact number of gold miners who transferred to the two coal mines, at least four, and possibly a few others, did. There were no other strategic-metal mines in Alaska for the gold miners to transfer to.

134. Subsequent to the closure of the mine, Alaska-Pa-

cific sold most of the perishable items in its inventory to such agencies as the Alaska Road Commission and the Alaska Railroad, and stored at the mine the other items.

135. Prior to the closure pursuant to L-208, Alaska-Pacific was operating its mining properties at a profit.

136. By reason of the issuance of L-208 Alaska-Pacific was deprived of the use and benefit of ownership of its gold mining properties, i.e., the right to obtain gold from the ore bodies on its properties and to sell such gold.

137. No compensation has been paid to Alaska-Pacific by defendant for the closing of its mines as hereinbefore described.

Findings Relating to Plaintiff Bald Mountain Mining Company

138. Bald Mountain Mining Company (hereinafter referred to as Bald Mountain) is a corporation incorporated under the laws of the State of South Dakota.

139. On October 8, 1942, Bald Mountain was the owner of certain gold-bearing lands in Lawrence County, South Dakota. On that date it was engaged in mining gold on said properties.

[fol. 311] 140. Subsequent to the issuance of Limitation Order L-208 by the War Production Board, Bald Mountain filed an appeal for relief from its provisions, and was granted permission to remove broken ore from the mine and to operate its mill up to June 1943. This firm continued operation on that basis to that date. The War Production Board granted permission to continue operations to August 8, 1943, but notification of this action was received by this plaintiff after it had already ceased operations.

141. Bald Mountain had approximately 150 employees shortly before October 8, 1942. The record does not disclose the nature of the employments to which these men shifted after the closing of the mine.

142. The record does not disclose the nature or size of Bald Mountain's inventory of mining equipment, materials and supplies as of October 8, 1942, or the length of time it could have continued to operate without replenishment of such inventory. The record does not disclose the extent, if any, to which this plaintiff may have sold or otherwise

disposed of any of its mining equipment during the period its mine was shut down.

143. Bald Mountain reopened its mine shortly after the revocation on June 30, 1945 of Limitation Order L-208, and has remained in operation since.

144. By reason of the issuance of L-208 Bald Mountain was deprived of the use and benefit of its ownership of its gold mining properties, i.e., the right to obtain gold from the ore bodies on its properties and to sell such gold.

145. No compensation has been paid to Bald Mountain by defendant for the closing of its mine as hereinbefore described.

Findings Relating to Plaintiff Alabama-California Gold Mines Company

146. Alabama-California Gold Mines Company (hereinafter referred to as Alabama-California) is a corporation organized under the laws of the State of Washington.

147. On October 8, 1942, Alabama-California was the owner of certain gold-bearing lands located in the State of California.

[fol. 312] 148. On August 8, 1942, Alabama-California closed its gold mine, and ceased all operations at the mine either that day or the next. This closing was the result of a shortage of manpower and materials, and the possibility that such a closing would be necessary had been contemplated by the Board of Directors for several months.

149. During the year 1943, Alabama-California sold $40,000 to $50,000 worth of supplies and materials from its mine. Additional sales were made thereafter, and in 1949 most of the balance of the machinery and equipment at the mine was sold.

150. Alabama-California has never reopened its gold mine since its closing in August of 1942.

Findings Related to Plaintiff Consolidated Chollar Gould & Savage Mining Company

151. Consolidated Chollar Gould & Savage Mining Company (hereinafter referred to as Consolidated Chollar) is a corporation organized under the laws of the State of California.

152. On October 8, 1942, Consolidated Chollar owner certain gold-bearing lands in Story County, Nevada.

153. On October 8, 1942, the above-named firm was operating a mine producing gold and silver on this property, the proportion of the two metals produced being about fifteen ounces of silver to one of gold. Its method of operation at that date was an open-pit one, that is to say, it had explored the location and size of the veins of gold and silver through an underground shaft, but finding the cost of mining through that shaft to be excessive, had stripped off the rock above the veins containing precious metal, and was recovering ore by use of power shovels. It had limited its operations exclusively to open-pit mining sometime prior to the middle of 1942 when the underground mining was discontinued.

154. Prior to the issuance of Order L-208, from about March 1942 until such issuance, it had been apparent to this plaintiff's officers that the pit operations of stripping off the surface rock, or overburden, preliminary to mining the gold and silver ore, were becoming prohibitively curtailed because of the shortage of rubber essential to the trucking of waste from the stripping operations. For several months [fol. 313] prior to October 30, 1942, in anticipation of that point when the development of new ore would no longer be practicable, Consolidated Chollar's management had been making preparations to conduct operations which would consist of the rehandling of previously mined and processed ore. Machinery was installed for this purpose.

The record does not show the extent of the open-pit operations which had been conducted by this firm.

155. On October 30, 1942, Consolidated Chollar requested of the WPB permission to conduct operations which would consist of the rehandling of previously mined and processed ore called tailings. It stated that the operations would require a crew of only six men and that they would be available from the local community and were of advanced age so they were precluded from employment in copper mines or defense plants. It also stated that the planned operations would require no steel consumption and that the supplies on hand and available from mines already closed down would enable the operations to be carried to completion.

On November 25, 1942, Consolidated Chollar was notified by the WPB that it was authorized to conduct the rehandling operations desired, and on February 26, 1943, this authority was extended to June 30, 1943.

156. Consolidated Chollar's operations involving the rehandling of previously processed ore turned out to be unsuccessful and resulted in financial loss. On April 28, 1943, it advised WPB of this and requested permission to resume its normal operations consisting of open-pit mining. It informed the WPB that a resumption of such operations had been impossible three to six months previously because of the lack of adequate equipment but that it then anticipated equipment would be available for a resumption of normal operation as a result of the completion of defense projects in the area of its operations.

Consolidated Chollar anticipated that its return to open-pit operations would require not to exceed 20 men from the locality whose ages averaged over 50 years. This plaintiff also anticipated that steel consumption in the open-pit operations would be extremely low and estimated that there were sufficient steel-contained materials on hand to last about six months. Necessary operating supplies and fab-
[fol. 314] ricated repair parts were expected to amount to about $6,000 per month.

One June 19, 1943, the WPB refused to transfer the application of serial number 36-209, which had authorized Consolidated Chollar's rehandling operations, to the resumption of open-pit mining, and thereby refused it permission to resume open-pit operations.

157. On June 23, 1943, in furtherance of its attempts to obtain permission to conduct open-pit operations, Consolidated Chollar advised the WPB by letter that there were 15 men not suitable for work in war industries available in the locality and that there were sufficient operating supplies and fabricated repair parts on hand, with the exception of sodium cyanide, for the conduct of operations for six months. It stated in this letter that if such operations were authorized, priority assistance for supplies and equipment would not be required for six months except in the event of unexpected equipment breakdown.

158. On August 28, 1943, the WPB issued Serial No. 36-26-T under Preference Rating Order P-56 which had the result of removing Consolidated Chollar from the restrictions of Order L-208. It was permitted to conduct open-pit operations as a result of the issuance of this serial number. Also, it was authorized by the serial number the

use of a priority rating under P-56 for the obtaining of maintenance, repair, and operating supplies. The rating was extended at least through the first and second quarters of 1944.

By letter dated December 10, 1943, Consolidated Chollar reported to the WPB in respect to its operations under the serial number for the previous ninety days, as follows:

> Owing to inefficiency of available labor and lack of adequate equipment in the form of power shovels and trucks for the pit operation we have as yet been unable to bring the operation up to capacity. As time goes on we hope this condition will improve.

The letter also stated that up to and including November 30, 1943, it employed 23 men and that the average daily tonnage of ore produced was 320 tons. These figures compared with the 1942 operations which resulted in a total [fol. 315] tonnage of 144,192 tons, or roughly 400 tons per day, with about 23 or 24 employees.

The record does not disclose how long this plaintiff continued operations under the aforementioned serial number or its reasons for discontinuing its operations, if it did.

159. After the war when Consolidated Chollar resumed operations, it conducted open-pit operations. At that time this plaintiff found it necessary to first remove overburden from above the ore vein because no ore was clear for breaking. The reason for this was that during the effective period of Order L-208, it had been able to process all of the ore which it had stripped of overburden prior to the close of 1942.

160. From the issuance of L-208 to August 28, 1943, Consolidated Chollar was permitted to carry on the rehandling of previously mined and processed ore in accordance with plans the company had made early in 1942. From August 28, 1943, to the end of the war, Consolidated was in possession of a serial number which permitted it to carry on open-pit mining operations and to use a priority rating under P-56 to obtain maintenance, repair and operating supplies. Consolidated Chollar was never required to close its mine under L-208.

FINDINGS RELATING TO PLAINTIFF ERMONT MINES, INC.

161. Ermont Mines, Inc. (hereinafter referred to as Ermont), is a corporation organized under the laws of the State of Oregon.

162. On October 8, 1942, Ermont was the owner of a compact block and contiguous Quartz Lode Mining Claim, designated Nos. 1 through 34 inclusive, located in Montana unorganized Mining District, County of Beaverhead, State of Montana.

163. In October 1942, Ermont was working claims numbered 1 (with drifts on claims numbered 2, 3 and 4), 2 (working over into claim No. 6), 7, 9, 19, 20, 23, 24, 28, and 32. After receiving WPB order to close down in October 1942, Ermont continued taking out the ore already mined during the latter part of October and into November, ran it through the mill and the refinery and shipped it to the mint. [fol. 316] Thereafter the mine and buildings were closed and a watchman was employed to look after the property.

164. On October 8, 1942, Ermont employed a crew of men, number not established, adequate to work the above claims. The men had their homes in the vicinity of the mine. The mine had sufficient supplies, machinery and equipment, in good working order to continue operations for at least a year from October 8, 1942, if the owner had not closed down in compliance with L-208. Mining operations were resumed at Ermont at some time subsequent to the revocation of L-208 in 1945.

174. By reason of the issuance of L-308 Ermont was deprived of the use and benefit of its ownership of its gold mining properties, i.e., the right to obtain gold from the ore bodies on its properties and to sell such gold.

175. No compensation has been paid to Ermont by defendant for the closing of its mine as hereinbefore described.

CONCLUSIONS OF LAW

Upon the foregoing findings of fact, which are made a part of the judgments herein, the court concludes that as a matter of law plaintiffs Homestake Mining Company, No. 50195; Idaho Maryland Mines Corporation, No. 50182; Central Eureka Mining Company, No. 49468; Alaska-Pacific Consolidated Mining Company, No. 49693; Bald

Mountain Mining Company, No. 50214, and Ermont Mines, Inc., No. 50214, are entitled to recover, the amounts to be determined in further proceedings under Rule 38(c) before a commissioner of the court.

The court further concludes that as a matter of law plaintiffs Oro Fino Consolidated Mines, Inc., No. 49486; Alabama-California Gold Mines Co., No. 50214, and Consolidated Chollar Gould & Savage Mining Company, No. 50214, are not entitled to recover and their petitions are therefore dismissed.

[fols. 317-318] ORDER OVERRULING MOTION FOR NEW TRIAL —July 12, 1956

On March 21, 1956 defendant filed a motion for a new trial.

On July 12, 1956 defendant's motion for a new trial was overruled with an opinion by Littleton, Judge. Judges Madden and Whitaker concurred. Judges Laramore and Jones (Chief Judge) dissented. Said opinion is as follows:

Mr. Kendall M. Barnes, with whom was *Mr. Assistant Attorney General Warren E. Burger*, for the defendant.

OPINION ON DEFENDANT'S MOTION FOR NEW TRIAL—
July 12, 1956

LITTLETON, *Judge*, delivered the opinion of the court:

In support of its motion for a rehearing in the above cases, the Government says that the court erred in holding that the issuance of War Production Board Limitation Order L-208 amounted to an exercise of the Government's wartime power of requisitioning or eminent domain because (1) in issuing L-208 the Government did not ex-

pressly intend or purport to exercise such requisitioning powers and (2) if L-208 was an "invalid" order, as defendant insists the court held it was, it conferred no right on the plaintiffs to just compensation. On the whole record the court is of the opinion that defendant's motion should be denied.

Defendant attempts to create the impression that this court held that the War Production Board purported to act under a single act, i.e., the Act of October 16, 1941, 55 Stat. 742, containing certain requisitioning powers, when it issued L-208, whereas, defendant says, the record in these cases will not support such a conclusion.

The court did not hold that WPB purported or intended to exercise any of its several requisitioning powers when it issued L-208. The court noted the various authorities actually cited at the conclusion of L-208 including Executive Order 9024 which contained a delegation of the President's requisitioning authority conferred by section 120 of the National Defense Act of 1916 (39 Stat. 312). Beyond that, the court merely noted the various statutes in effect on [fol. 321] the date of the issuance of L-208 which gave the Government wide powers to take private property needed by the Government to carry on the defense of the country in wartime, and held that under such a statutory scheme the Government appeared to have had adequate power to take what it in fact took from the plaintiff gold mine owners and operators.

On the matter of whether WPB "intended" or "purported" to act under any of the statutes giving the Government the power to take or requisition private property for war purposes, the court held that WPB purported to issue a priorities and allocation regulation; that to the extent that L-208 prevented the gold mine owners and operators from acquiring new equipment, material and facilities, L-208 was a proper priorities and allocation order, but that to the extent that L-208 denied those owners the right and clear authority which they and every other citizen have to make use of the materials, facilities and equipment which they owned and had on hand, in the operation of their legitimate and legal mining enterprises, L-208 had the effect of completely depriving them of a valuable property right. The court then held that because the Government had the

authority to exercise the power of eminent domain and thus to deprive the gold mine owners of that property right, the Government must pay just compensation therefor whether this was done by the WPB in one form or another."

The court did not hold, as counsel for defendant says it did, that L-208 was an invalid order. The court held that to the extent that L-208 actually allocated scarce materials away from the gold mine owners and operators it was a valid allocation order, but that to the extent that it deprived the gold mine owners of the right to use their mining properties by "immobilizing" the materials, equipment, and facilities owned by them and which they had on hand and needed to use to operate their mines, the order amounted to a temporary taking of their right and authority to profitably operate their mines.

The court expressly stated that an unauthorized taking is not compensable. It also stated that where there exists authority for a taking of a type of property and the Government, as it did here, takes that property, the use by [fol. 322] the Government of a means of acquiring that property, which means was not specifically spelled out by some specific statute, does not relieve the Government of the obligation of paying just compensation, citing, among others, the case of *Edward P. Stahel & Co., Inc., et al.* v. *United States*, 111 C. Cls. 682, cert. den. 336 U.S. 951. Where there is authority to take and a taking is accomplished, it is compensable. In the *Stahel* silk cases the Government had the statutory authority to take plaintiffs' silk; the Government did not "purport" to exercise that power but rather it purported to exercise a regulatory power by issuing Order M-251 freezing or immobilizing the silk in the hands of the owners themselves until the Government should place mandatory orders requisitioning the silk. This freezing order was held to be a taking and, because the Government had the necessary power and statutory authority to "take" the silk, the court held that it must pay just compensation for it and it did so.

Defendant next attempts to analyze some of the requisitioning statutes noted by the court, in order to indicate that WPB did not in fact invoke any of those statutes when it issued L-208. This court did not hold that WPB invoked

those statutes any more than it held that the Government invoked the requisitioning statutes available to it in the *Stahel* silk cases. In fact, this court noted that WPB issued L-208 with the express (see preamble to the order) intention of exercising only its priority and allocation powers. The court held that what WPB said it was doing and what it in fact and law did, were two different things and that the Government could not escape the obligation of paying just compensation for what it had the authority to take and in fact took, simply by calling its action of taking a "priorities order" or an "allocation order".

Defendant's counsel also says that the expression used by the court, "war necessity", does not appear in the "taking statute" of October 16, 1941, *supra*. In using that expression the court was merely paraphrasing, as it had a right to do, the statutory language concerning the basis for the President's determination that the property proposed to be taken was necessary to the prosecution of the war; that the property was needed for the defense of the [fol. 323] United States; that the need was immediate and impending and that all other means of getting the property had been exhausted. Inasmuch as that statute and other requisitioning statutes then in existence required no particular procedure to be followed in the making of those determinations and provided no appeals therefrom, the court held such determinations were within the discretion of the President or his delegees.

The main complaint of defendant's counsel seems to be that this court held that the Government had the necessary authority to take plaintiffs' property whereas the question of "authority" was not exhaustively briefed by the parties to the court.

It should be noted that this is the *first* occasion in this lengthy litigation on which the Government has taken the position that it lacked authority to take plaintiffs' property. No such contention has heretofore been made. Up to this point, defendant has contended that it did not take the property but merely "regulated" it. It would seem that as a defense "lack of authority to take", if there was any such lack of authority, which we think there was not, should have been raised and supported at an earlier stage. However, both parties may have felt that authority to take this prop-

erty in wartime was perfectly clear, or they may have felt the point was decided in the court's decision in *Oro Fino Consolidated Mines, Inc.* v. *United States*, 118 C. Cls. 18, in which the court held that if the Government took anything from the gold mine owners when it issued L-208, "it cannot escape liability by pleading that it lacked authority to take what it did in fact take and retain," citing *International Paper Co* v. *United States*, 282 U.S. 399. The court in the *Oro Fino* case even went so far as to say that if L-208 resulted in an *unauthorized* taking, "it was a taking of which the Government retained the benefit and for which it would therefore be obligated to pay."

In the *Central Eureka* opinion, the court did not go as far as suggested in the *Oro Fino* decision because the court found that the existing statutory scheme at the time of the issuance of L-208 contained sufficient authority to cover the taking complained of and thus avoided that twilight [fol. 324] area involving the right to just compensation where authority to take the property involved is not clear. On that point, in the recent decision of the Supreme Court in *Bill Hatahley et al.* v. *United States*, No. 231, decided May 7, 1956, the Court stated:

> * * * The fact that the agents [of the Government] did not have actual authority for the procedure they employed does not affect liability. There is an area, albeit a narrow one, in which a government agent, like a private agent, can act beyond his actual authority and yet within the scope of his employment. * * *

The point involved in the *Central Eureka* opinion was not the lack of authority to take, but rather the use by the Government of an *unauthorized means* of accomplishing an *authorized* taking. The court held that the use of an unauthorized means of taking what the Government had the authority to take, did not relieve the Government of the obligation to pay just compensation for what it took, citing *Edward P. Stahel, supra*, (silk cases), and *Hurley* v. *Kincaid*, 285 U.S. 95, (in which the Government took by *flooding* what the statute said it must take by *condemnation proceedings*).

The final position of defendant's counsel seems to be that the only cases in which the Government may be required to

pay just compensation for property which it is authorized to take and does take, are those cases in which the Government has expressly invoked a particular taking or requisitioning statute, has used the precise means of taking provided for in that statute, and has then refused to pay for what it has taken. This theory, if adopted, would rule out many taking cases among which are cases such as the silk cases, the set-aside order cases, the flooding cases, the Causby chicken farm case, and, in fact, most of the "taking" cases.

In these cases the court held simply that what the War Production Board did through the issuance of L-208 amounted to and constituted a taking through the placing of a servitude upon the use by plaintiffs of their property and plaintiffs were accordingly held entitled to recover. From this it seems clear, under the decisions, that there was a temporary taking under the Fifth Amendment. The court did not hold that there was anything illegal about the [fols. 325-326] issuance of L-208 so far as its provisions were concerned. It merely held that when a Government agency has the power to take private property, as the War Production Board did, it does not have to act in some particular formal way in order that its action shall amount to a taking.

In view of the fact that defendant's allegations of error are based on a demonstrably mistaken understanding of the court's opinion and upon conclusions clearly not warranted by that opinion, inasmuch as the court did not hold that L-208 was an invalid order and did not hold that the War Production Board purported to act under or invoke the requisitioning powers contained in any particular statute, defendant's motion for a new trial is overruled.

MADDEN, *Judge*, and WHITAKER, *Judge*, concur.
LARAMORE, *Judge*, and JONES, *Chief Judge*, dissent.

[fol. 328] IN THE UNITED STATES COURT OF CLAIMS

Nos. 49468, 49486, 49693, 50182, 50195, 50214

CENTRAL EUREKA MINING COMPANY (a Corporation), ORO FINA CONSOLIDATED MINES, INC., Alaska-Pacific Consolidated Mining Company, Idaho Maryland Mines Corporation, Homestake Mining Company, Bald Mountain Mining Company, Inc., et al.

v.

THE UNITED STATES

MEMORANDUM RE PRETRIAL CONFERENCE—Filed October 3, 1952

The parties met, pursuant to notice of the Commissioner, at the United States Court of Claims Building, Washington, D. C., on October 1, and 2, 1952.

The following were present:

Honorable Samuel E. Whitaker, Judge.
Honorable William E. Day, Commissioner.

Phillip Barnett, Esq., Ralph Pitman, Esq., James D. Ewing, Esq., Eugene Z. DuBose, Esq., George Herrington, Esq., William H. Orrick, Jr., Esq., Guy Martin, Esq., George A. Nugent, Esq., Kingdon Gould, Esq., O. R. McGuire, Counsel for plaintiffs.

Kendall M. Barnes, Esq., Thomas McGrail, Esq., Counsel for defendant.

Judge Whitaker participated in the discussions during the morning session on October 1.

The parties, through counsel, agree that a joint trial may be had as to the cases listed in the caption in accordance with the provisions of Rule 38(a) limited to the question [fol. 329] of liability, pursuant to Rule 38(c), reserving to any party the right to introduce evidence regarding facts peculiar to a particular case, the matter of just compensation to be treated separately after the question of liability is finally determined.

Counsel for each party handed to the Commissioner a list of witnesses to be called as to its case in chief, with the exception of counsel for Central Eureka who advised that

its list of witnesses was identical with that of Idaho Maryland.

Plaintiffs offered as Plaintiffs' Exhibit No. 1 a report dated June 1, 1944, entitled, "The Closing of the Gold Mines (August 1941 to March 1944)," Report No. 9, Policy Analysis and Records Branch, Office of the Executive Secretary, War Production Board. This exhibit was admitted over objection of counsel for the defendant who will state his objection fully at the trial.

Counsel agree that copies of any exhibits may be received in evidence with the same force and effect as the originals thereof, subject to check for authenticity by either party.

Counsel for the plaintiffs and for the defendant are agreed that the documents listed below are admissible upon the proffer of any party without objection as to genuineness or authenticity, other objection to the admissibility of any document being reserved by all counsel. Counsel further agree that the only objections which might be made with respect to any such documents would be on the basis of relevance or materiality, reserving to each party the [fol. 330] right to complete any documents which are incomplete.

Plaintiffs' Exhibits for Identification

2. House Committee hearings on H.R. 4393, A Bill for the Relief of Owners of Gold Mines as Result of Operation of L-208, December 18 and 20, 1945, February 14 and 15, 1946, March 11 and 12, 1946.

3. OPM Document, Part 959-Materials for the Production of Mining Machinery and Equipment Specified Herein, Preference Rating Order No. P-23, dated July 29, 1941.

4. OPM Document, Part 982-Mines (Maintenance, Repair, and Supplies), Preference Rating Order No. P-56.

42. Memo to Howard L. Young from D. M. Nelson directing him to prepare a reply to the attached ltr dated May 24, 1943, signed by 30 Senators.

[fol. 333] 43. Memo dated June 7, 1943, from M. Creditor to Donald M. Nelson.

44. Memo dated July 10, 1943, from A. S. Knoizen to Hiland G. Batcheller. (3 pages)

45. Memo dated Aug. 26, 1942, from Donald M. Nelson to H. W. Dodge, directing him to prepare a reply to the attached ltr to Mr. Nelson dated Aug. 26, 1942, from Hon. Pat. McCarran.

46. Memo dated May 6, 1943, from Edward H. Rott to A. S. Knoizen.

47. Memo dated April 17, 1943, from Edward H. Rott to A. S. Knoizen.

48. Memo dated Sept. 7, 1943, from Gilbert J. Brown to Hugh S. Porter re Final Report on Gold Mining in Canada.

49. Ltr dated Sept. 29, 1942, from Hon. Pat McCarran to Donald Nelson, enclosing clipping from The Washington Post of the same date.

50. Memo dated Oct. 20, 1941, from Shaw Livermore to E. B. George.

51. Memo dated Oct. 30, 1943, to Hiland G. Batcheller, John J. Hall and Howard J. Young from A. S. Knoizen.

52. Memo dated Apr. 30, 1943, from Wilbur A. Nelson to Howard I. Young. (5 pages)

53. Memo dated Mar. 30, 1943, from A. S. Knoizen to William L. Batt and Howard I. Young re South African Gold Mines.

The right is reserved to all parties to offer additional documents.

Upon the production of a certified copy of the Certificate of Incorporation for Idaho Maryland, defendant withdrew denial previously made to that allegation of the petition and agreed that Idaho Maryland Mines Corporation is a Nevada corporation.

[fol. 334] A trial was set for 10 a. m., November 19, 1952, to be held in Seattle, Washington, for the purpose of presenting proof on behalf of Alaska-Pacific. It is estimated that this will take about three days.

The cases were also set for trial in Washington, D. C., beginning at 10 a.m., on January 5, 1953, and continuing from day to day. The defendant will be expected to continue with its proof upon the closing of proof by the plaintiff.

Respectfully submitted,

William E. Day, Commissioner.

ORDER EXTENDING TIME TO FILE PETITION FOR WRIT OF CERTIORARI

Upon Consideration of the application of counsel for petitioner,

It Is Ordered that the time for filing petition for writ of certiorari in the above-entitled cause be, and the same is hereby, extended to and including October 24th, 1956.

Earl Warren, Chief Justice of the United States.

Dated this 9th day of October, 1956.

[fol. 336] SUPREME COURT OF THE UNITED STATES, OCTOBER TERM, 1956

[Title omitted]

ORDER ALLOWING CERTIORARI—January 14, 1957

The petition herein for a writ of certiorari to the United States Court of Claims is granted, and case transferred to the summary calendar.

And it is further ordered that the duly certified copy of the transcript of the proceedings below which accompanied the petition shall be treated as though filed in response to such writ.

[fol. 1] IN THE UNITED STATES COURT OF CLAIMS

Nos. 49,468, 49,486, 49,693, 50,182, 50,195, 50,214

CENTRAL EUREKA MINING COMPANY, ORA FINA CONSOLIDATED MINES, ALASKA-PACIFIC CONSOLIDATED MINING COMPANY, IDAHO MARYLAND MINES, HOMESTAKE MINING COMPANY, BALD MOUNTAIN MINING COMPANY, ET AL., Plaintiffs,

vs.

THE UNITED STATES, Defendant

Transcript of Testimony

Seattle, Washington,
Wednesday, November 19, 1952,
at 10 o'clock a. m.

TESTIMONY FOR PLAINTIFFS

The parties met, pursuant to notice of the Commissioner, at the time above stated, in Customs Court Room, Federal Building, Seattle, Washington.

APPEARANCES

Present: Hon. William E. Day, Commissioner; O. R. McGuire, Jr., Esq., V. A. Montgomery, Esq., Phillip Barnett, Esq., William H. Orrick, Jr., Esq., and Carlton Connor, Esq., counsel for plaintiffs; and Gorden F. Harrison, Esq., counsel for defendant.

Mr. R. B. Draper, a reporter, was thereupon sworn by the [fol. 2] Commissioner to well and truly take down and transcribe the questions propounded to and the answers given by the witnesses, and to do all other things required of the reporter.

Pursuant to the order of reference by the honorable, The United States Court of Claims, in the above-entitled cause, testimony on behalf of the plaintiffs was taken, as follows:

The Commissioner: All right, gentlemen, if you are ready, you may proceed.

COLLOQUY

Mr. Barnett: Your Honor, before we start, there is probably an oversight in the memorandum of the pre-trial conference, dated October 3, on page 2, at the second para-

graph, and after the words "Idaho-Maryland", there should be added "Homestake."

The Commissioner: May I see it, please?

Mr. Harrison: Mr. Commissioner, I would like to say that I have with me the original pre-trial conference memorandum, and all of the exhibits.

Mr. Barnett: The list of the witnesses will be the same as the Idaho-Maryland and the Homestake.

Mr. Harrison: I thought I would like counsel to know that I have all of the exhibits here.

The Commissioner: As I recall, Mr. Ewing, at the pre-trial conference, indicated that he was going to send over a list of the witnesses and furnish it to me, and I don't believe I have received it.

[fol. 3] Mr. Connor: No, that has not been completed yet.

Mr. Barnett: If you will recall, Your Honor, we stated that our witnesses would be the same as Idaho-Maryland and Homestake.

The Commissioner: I don't have a list from Homestake.

Mr. Barnett: When it is submitted, all of the witnesses will be the same.

The Commissioner: I think we had better read the pre-trial memorandum as it is now, because there was a list, as I recall, from Idaho-Maryland.

Mr. Connor: I think we submitted a list, but I think it was the preliminary list.

The Commissioner: No, I don't believe you did.

Mr. Connor: I know there is one being worked on.

The Commissioner: As a matter of fact, that doesn't make too much difference, anyway. What I was driving for, more than anything else, was to get counsel to working on the preparation of it.

Mr. Connor: You have succeeded in that.

Mr. McGuire: May we proceed?

The Commissioner: Yes.

Mr. McGuire: The first witness will be Mr. Harold H. Waller.

[fol. 4] HAROLD H. WALLER, a witness produced on behalf of the plaintiffs, having been first duly sworn by said Commissioner, was examined, and in answer to interrogatories, testified as follows:

Direct examination.

By Mr. McGuire:

Q. Mr. Waller, will you state your full name and address for the record?

A. Harold H. Waller, and my business address is 416 Queen Anne Avenue, Seattle.

Q. What is your occupation, Mr. Waller?

A. Civil engineer and surveyor, licensed civil engineer and licensed surveyor, and I am also United States Deputy Mineral Surveyor for Alaska.

Q. When were you appointed to that position?

A. 1912, by the Department of the Interior.

Q. Now, will you state for the record a summary of your professional background?

A. I am a graduate of the University of Washington in civil engineering, and I have practiced civil engineering all of my life, and a great part of my practice has been the surveying of mining claims for patents.

Q. Now, are you familiar with the mining property of the plaintiffs in this case?

A. I am.

[fol. 5] Q. And located in the Wasilla precinct in Alaska?

A. Yes, I am.

Q. Will you state for the record what your activity has been, with respect to those properties?

A. I surveyed for patent nearly all of the mining claims that are now owned or held by the Alaska-Pacific Consolidated Mining Company.

Mr. McGuire: Will you mark this, please? I think, in these cases, it will be well for the exhibits to be marked with the initials of the individual plaintiffs, and I think we may start off with Plaintiffs' AP No. 1.

(Said document was marked for identification as Plaintiffs' Exhibit AP No. 1.)

By Mr. McGuire:

Q. Mr. Waller, I hand you a map, which has been marked for identification as Plaintiffs' AP Exhibit No. 1, and ask you if you can identify that exhibit?

A. Yes, I can. I drew it.

Q. You personally drew it?

A. Yes, I did.

Q. In what year, Mr. Waller?

A. I will have to look at the date of it. I don't see a date on here; it ought to be on there. Yes, it is obscure on this one. It is August, 1941, and September, 1942. It was [fol. 6] brought down to date in September, 1942, because the original date would be the first draft of it.

Q. From what source did you draw the information, whereby you delineated the boundaries of the claims shown on this map?

A. This map was drafted by me from data obtained from the patent surveys, which I executed for the plaintiff, and also from the field notes of adjoining properties which were surveyed both by me and one Charles S. Hubbell, another mineral surveyor, with whom I had been associated since 1912. Consequently, I had access to all of the records, all of the surveys, which are shown on this map.

Q. Is this map a true and accurate representation of the boundaries of the various claims that are indicated on the map?

A. Yes, they are; and furthermore, all of these claims were surveyed for patent, I believe, with the exception of one or two small ones; and all our field notes and plats were turned into the Public Survey Office in Juneau, Alaska, which is a branch of the Department of Interior, and were approved and accepted by them as being correct.

Q. Mr. Waller, will you explain for the record the procedure that is followed in surveying mineral claims?

A. The procedure that is followed in mineral claims is laid down by the manual of surveying instructions, and the [fol. 7] mining laws of the United States. Shall I describe it further?

Q. Yes, give us a general idea of it, please.

A. When an owner of a mining claim wishes to obtain title to it from the United States Government, his first

step is to obtain from the local recorder of the mining district in which the claim is situated, a certified copy of the original location notice. This location notice is attached to a form, which states that it is an application to the United States Land Office for a patent covering such mining claim.

Q. I don't want to interrupt your chain of thought, but will you explain for the record what a location notice is.

A. A location notice is the notice required by law, when a prospector stakes a mining claim. To make that location valid, he must first stake out on the ground, with a suitable monument, either a wooden post, or stone cairns, or some other type of monument, which is evidence to the public of being a monument; he describes the claim as close as can be, and writes that description in the location notice. He is then required by law to record that location notice with the local recorder, who is a government officer, and that goes into the record book of that precinct.

The Land Office—and when I say "Land Office",—it used to be called the General Land Office, which is now the United States Bureau of Land Management, but at the time these surveys were made, it was the General Land [fol. 8] Office, so I will refer to the General Land Office. When application for a patent survey was made to the General Land Office, a deposit was also made with the application, and the Surveyor General of the Public Survey Office of the Land Office then issued an order, to the U. S. Deputy Mineral Surveyor, whom the applicant has designated, to execute that survey of the mining claim, giving it a number, which appears here on this plat for each group of mining claims, and ordering the Deputy Mineral Surveyor to execute that mining claim, the survey of the mining claim, in accordance with the mining laws of the United States.

Q. Then what is done by the Deputy Surveyor, following that order, Mr. Waller?

A. The Deputy Mineral Surveyor moves onto the ground, and actually executes the survey, according to the mining laws. That is a very complicated question, because it involves so many different angles, but the maximum size of a mining claim may be 1500 feet long, and 600 feet wide, or 300 feet either side of the lode line.

The surveyor is required to first locate, by preliminary survey, the original location monuments that were put there by the prospector; he is also supposed to locate on the ground the legal discovery of valuable minerals, that the prospector based his valid location on. The surveyor then is required to run the survey of the claim within the [fol. 9] location monuments, as set by the prospector. In case he finds that the prospector overran—in other words, had his claim too long and too wide—he is required to pull in the end lines or sidelines the legal distance.

If there are overlapping claims by other prospectors, he is required to find those, and locate them on the ground, and show them on his map and in his field notes.

The Mineral Surveyor is then required to set permanent corners, according to the requirements of the mining laws, and mark them in certain ways, so that they can be identified. He is required to put in reference marks to all of those corners. He is also required to run the actual boundaries on the ground, and show any items of topography. He is also required to locate and measure up all of the work that the prospector or applicant performed on this mining claim, such as tunnels, roads, buildings, and other improvements; and then the surveyor is required to appraise the value of these improvements, and make a report of them in his field notes, to go to the United States Land Office.

He is required to certify, under oath, that at least $500 worth of improvements have been made in the ground, or in such manner that would benefit and tend to the development of this mining claim.

After all of this is done, field notes and plats are pre- [fol. 10] pared and filed with the United States Land Office; they are inspected and approved by the United States Land Office.

And incidentally, the surveyor is under $5,000 bond, payable to the United States Government, to back up the accuracy of his work; but the surveyor is not paid by the government; he is paid by the applicant for the surveying of these lands. That is the law.

Q. And from the survey made, all of the necessary data is taken down in what, Mr. Waller, and recorded in what book?

A. They are recorded in what we call a surveyor's field book, and I have brought down some, if you want them in evidence. They are taken down, more or less in shorthand fashion. From those are transcribed the typewritten field notes, and the plats, such as this, filed with the United States Land Office as a basis for application for patent.

Q. When you said plats such as this, you were refefring to Plaintiffs' Exhibit AP No. 1?

A. Yes, sir.

Q. Do you have available here in the courtroom the transcribed field notes, which were filed with the government, and from which that plat was made?

A. I do.

OFFER IN EVIDENCE

Mr. McGuire: If the Court please, I offer in evidence Plaintiffs' Exhibit AP No. 1. I have furnished a photostatic copy of it to the government; I don't know whether it has reached Mr. Harrison or not.

[fol. 11] Mr. Harrison: No, it has not.

By Mr. Harrison:

Q. Mr. Waller, I notice on this exhibit for identification, Plaintiffs' AP No. 1, various names set forth in blocks. Do those names have any particular significance?

A. You are referring to the names of the mining claims?

Q. Yes; names like Independence, Brightness No. 3, Hamburger, Redeye, and so on.

A. The prospector, when he stakes a mining claim, can call it anything he wishes, and that is a matter of record, and goes in with the original location notice, and is recorded; from that time on it is a matter of record. There is no restriction as to what he can call it.

Q. Well now, would you explain the significance of the various colors used in the blocks. I notice one is called "Independence claims", and another "Alaska Free Gold claim" and "Jap claim" and "Black claim", and the claims held by location. Will you explain those, please?

Mr. McGuire: Those colors were placed on there not by Mr. Waller, but by another witness for the plaintiffs, and will be connected up by subsequent testimony.

Mr. Harrison: What I am trying to determine is—we

have here an exhibit which, on its face, purports to be a map of the Alaska-Pacific Consolidated Mining Company's [fol. 12] properties, and as I look at it, it seems to have all kinds of names and colors, and it doesn't seem to be tied down to Alaska-Pacific, in any way, on its face.

Mr. McGuire: It will be.

Mr. Harrison: It will be?

Mr. McGuire: Yes.

Mr. Harrison: I don't want to let this in evidence until such foundation has been laid, but I do have a few more questions to ask of this witness.

The Witness: I can explain it, if you wish.

By Mr. McGuire:

Q. Will you explain the numbers appearing on the exhibit, after the names of the various companies?

A. Those are the survey numbers issued by the Surveyor General of the General Land Office to the surveyor, when he gives him a survey order to survey a piece of land. For example, No. 980—all of the claims numbered 980 were included in one group. That was based upon a survey order from the Surveyor General's office, and were surveyed as one group, although each individual claim was run out, and the corners staked in the field. Still there was one application, and the same thing applies to all of the other like numbers on the map.

By the Commissioner:

Q. What is the significance of the heavy blue lines? [fol. 13] A. These (indicating)?

Q. Yes.

A. Those were drawn by me to designate the boundaries of the properties owned or claimed by the Alaska-Pacific Consolidated Mining Company. The light lines I have colored were neighboring claims, which were not included in these properties.

By Mr. McGuire:

Q. What is the significance of the dotted line appearing in the group of claims headed by Survey No. 958-A and Survey No. 980?

A. Those designate underground workings, such as tunnels, drifts, stopes, grades, the way they would appear, looking down at it from a surface view.

Q. The underground workings of the Alaska-Pacific Consolidated Mining Company?

A. Yes; those are workings which were used before the application for patent was made, to support the application.

Q. Now, with respect to the Granite Mountain No. 2 claim, I notice there are two of them, one designated old and one designated as new. What is the reason for that, Mr. Waller?

A. Survey No. 961, which covers Granite Mountain No. 2, and Granite Mountain No. 3 claims, were made about 1912, but for some reason or another, unknown to me, they were never patented; that is, the government did not, at any [fol. 14] time prior to a certain date in 1940, I believe, issue title to that land; so it was necessary, according to the mining laws, to continue to do assessment work on those two claims until title was issued. We found out, while I was working for Alaska-Pacific, that the assessment work on these two claims had been overlooked, and it was then necessary to go up and re-stake those two claims and apply to the Surveyor General for a new survey order and a new number, and they were resurveyed exactly along the same lines they were surveyed back in 1912, and they were actually patented, I believe, as survey No. 2046.

By the Commissioner:

Q. Getting back to my question about the heavy blue lines, you said they represent land owned or claimed by Alaska-Pacific. What is the distinction?

A. When a patent is issued, the company actually owns it; after the United States Land Office has issued title for the land, then the company can actually own the ground. Up to that time, it simply holds it by right of possession, and having staked it.

Q. Is there any indication as to which—by color, or otherwise, as to which is claimed, and which is owned?

Mr. McGuire: All of that is in evidence, Mr. Commissioner.

The Commissioner: The reason I am asking the question

is because I am thinking about the ruling of the Commis-
[fol.15] sioner with respect to the admissibility of this exhibit.

Mr. McGuire: Obviously, Mr. Waller is not competent to testify as to the titles to the properties. I offer the exhibit as a delineation of the boundaries by the survey, but we will have a subsequent witness to prove the actual title to these various claims, and that will apply to this particular numbered claims.

Mr. Harrison: Before you rule, I would like to ask a few more questions.

The Commissioner: All right. Let us go off the record a minute.

(Here followed discussion off the record.)

The Witness: The heavy lines include within their boundaries all of the mining claims which the Alaska-Pacific Consolidated Mining Company had employed a surveyor to execute a patent survey on. Whether or not, as a result of that, title was issued, I do not know, but you notice all of those within the heavy blue lines have numbers, which means that they had had—the Surveyor General had issued survey numbers and authorized a mineral survey—I did most of it, and Hubbell did the rest of it—to execute a patent survey on those mining claims for this company, within the boundaries of those lines, or these companies' predecessors.

By Mr. Harrison:

Q. Mr. Waller, you indicated that you did not make the
[fol. 16] actual survey of all of these applications for patents?

A. I didn't execute all of the surveys actually as U.S. Mineral Surveyor. I originally went into the country in 1910 and 1911, before I became United States Mineral Surveyor, and worked with Mr. Hubbell, who surveyed, at that time, Survey 980 and Survey 958-A and 958-B, those two. I did all of the rest.

Q. You did all of the rest?

A. Yes, sir.

Q. But not as Deputy Mining Surveyor?

A. Well, I assisted on Survey 980 and Survey 958-A and

958-B, which is the mill site, the Independence mill site. I actually acted as principal surveyor, as mineral surveyor on the balance of them, on the rest of them.

Q. Now, do you know whether or not the results of your survey, as sent to the General Land Office, were actually approved and accepted by the General Land Office as accurate?

A. To the best of my knowledge, they were. If they were not, that means that the General Land Office would hold up or reject any of the surveys which were made, and I don't recall that any of them were held up or rejected; they certainly would have notified me, if they had been.

Q. Do you recall whether or not, when you made these various surveys, as Deputy Mineral Surveyor for the Government, the applications were in the name of the Alaska-Pacific Company, or any of their representatives, or in the [fol. 17] names of individuals?

A. Surveys No. 980 and 958-A were executed in the names of others, predecessors of the Alaska-Pacific Consolidated Mining Company.

Q. Do you know about the balance of these claims?

A. The balance—our field notes show that, but I believe they were.

Mr. McGuire: Mr. Waller, I suggest that you refresh your recollection from the field notes, and then testify to their accuracy.

I suggest that Mr. Waller read those off for the record.

The Witness: Surveys 958-A and 958-B were executed by the Alaska Gold Quartz Mining Company in August, 1911. I assisted Mr. Hubbell on that survey.

By Mr. Harrison:

Q. Is Mr. Hubbell living or dead?

A. Yes, he is.

Q. He is living?

A. Yes, he is now 100 years old.

Mineral Survey 980, executed by the Alaska Free Gold Mining Company, in July, 1913.

Survey No. 2038, executed by Alaska-Pacific Consolidated Mining Company, by myself, in July to September, 1938.

Survey No. 2041, Alaska-Pacific Consolidated Mining Company, executed by myself, in April to August, 1938.

[fol. 18] Survey No. 2037, executed by Alaska-Pacific Consolidated Mining Company in August and September, 1938.

Survey No. 2046 for the Alaska-Pacific Consolidated Mining Company, by myself, in July, 1939.

Survey No. 2047, by Alaska-Pacific Consolidated Mining Company, by myself, in July and August, 1939.

Survey No. 2093 was executed by the Alaska-Pacific Consolidated. I haven't got the field notes here, but my recollection is it was in 1940.

Survey No. 2094, executed by Alaska-Pacific Consolidated Mining Company, by myself, in August and September, 1941.

No. 2040 was for the Alaska-Pacific Consolidated Mining Company, by myself, in 1939.

Q. Mr. Waller, it would be your testimony, then, that all but 958-A and 958-B and 980 were actually surveyed for the plaintiff in this case?

A. May I ask permission to speak to Mr. Montgomery a minute?

Q. That is all right with me.

A. Will you repeat your question, please?

Q. My question, as I recall it, was, it is your testimony, Mr. Waller, that all of these applications, as designated by numbers here, were surveyed, except for 958-A and -B and 980, for the plaintiffs in this case?

A. Yes, correct.

[fol. 19] Q. Do you know whether or not a patent, when issued, contains a description of the land covered by the patent?

A. It does, yes. I would like to say that all of the ones I have seen, do. I have seen quite a few patents, and they all do: they describe the property.

Mr. Harrison: May I ask counsel for the plaintiffs if he intends to produce the patents?

Mr. McGuire: They are here.

Mr. Montgomery: We have the patents in court here, the original patents, and of course there will be some chain of title, also.

Mr. Harrison: Defense counsel feels that this exhibit, at this time, is premature, because no foundation has been laid to show that these claims, which were not surveyed by

the plaintiffs, were ultimately acquired by the plaintiffs, and without the patents, which we feel to be the best evidence of title, in contrast to a map, which represents a survey conducted, I think, in 1941, we feel that it would be incompetent at this time. We recognize that, if subsequent testimony ties in the locations, as shown on this plaintiffs' Exhibit AP No. 1 with the patents, and with the chain of title properly correlated, then at that time we might be glad to withdraw our objection.

The Commissioner: It may be admitted.

[fol. 20] (Said map, marked "Plaintiffs' Exhibit AP No. 1", admitted in evidence and made a part of this record.)

By Mr. McGuire:

Q. Mr. Waller, will you tell us, from your general knowledge, what procedure is followed by the government agency, the General Land Office, or the Bureau of Land Management, after your survey is turned into them?

A. They inspect it; their office engineers check the computations and the field notes; and in many cases, they send inspectors to the field to check up.

Q. Do they compare the survey that you turn in with any key maps in their possession?

A. Yes; they have a key map of the mining district, showing all of the surveys which have been executed there, and you can obtain from the General Land Office, the Public Survey Office, a map of the district, showing all of the claims that have been surveyed in that whole district. They call that the district map.

Q. If the Land Office were to find that a survey, which you turned in, conflicted with a patent previously issued, what would be their disposition on the patent?

A. Our survey would be rejected, and the surveyor would be reprimanded for making such a survey.

Q. And no patent would be issued, based on it?

[fol. 21] A. Absolutely not.

Q. Now, when an applicant files an application for a patent, is he required to post that application and make publication of it in any manner?

A. After the survey has been approved by the Land Office, then the applicant is notified then to post upon the land a map, and a copy of the advertisement that is run in

the local newspaper, and it has to be so posted and advertised for a certain number of days, as prescribed by law, that is the notice to the public that that mining claim is being patented, and all adverse claimants are supposed to appear before the Land Office and file counterclaims within certain prescribed time limits; if that isn't done, they are barred by the statute.

Q. As a matter of caution, I think I had better ask Mr. Waller if patents, when issued as a result of his survey, do not bear survey numbers, which were assigned by the Land Office?

A. Yes.

Q. And if they do not also refer, by name, to the named claims?

A. You say, do they?

Q. Yes.

A. All the ones I have ever seen, did.

Q. So that, if, for example, the plaintiffs were to apply [fol. 22] for a patent on Beefsteak claim, and survey number of 2037 were assigned by the government, and you made the survey, and returned it promptly, and the patent eventually issued, the patent when issued would bear the name "Beefsteak", and would also refer to the same No. 2037?

A. Yes.

Q. And the boundary which you have delineated on Plaintiff's Exhibit AP 1 would be the boundary of Beefsteak and Survey No. 2037, and would show on this plat a description that would be identical with the description of Beefsteak, as it appears by metes and bounds in the patent, itself; is that correct?

A. Yes, sir; with this exception: That any adverse claims which have been approved by the Land Office would be approved—that area would be eliminated.

Q. Would be eliminated from the patent?

A. Yes. For example, your Beefsteak claim—that has three claims overlapping. Now then, if the Land Office had decided, after proper investigation, and hearing, and so forth, that Beefsteak only was entitled to the balance, after these conflicts had been taken out, then the patent would describe what was left.

Q. That's right. And in drawing this plat, however,

you took the description from your field notes and the patents?

A. Yes; when we make a survey, we describe any known [fol. 23] conflicts; we set them up in a table, in our survey. We say the area of the Beefsteak is so many acres, and the area of the conflict of Eagle No. 24 would be so many acres, and the conflict with the Mock Duck would be so many acres; and then it is up to the attorneys for the applicant to work it out as to what area Beefsteak will finally cover.

It may be that the Land Office would reject those adverse interests; it depends entirely on the evidence.

By the Commissioner:

Q. But that is all resolved when the patents are issued?

A. Yes, the Land Office takes care of that.

By Mr. McGuire:

Q. One final question: Does the Land Office permit any application to bear a name which has already been taken out by any other applicant, that is, the name of a claim?

A. Yes, they do. You can have any number of duplications on names.

Mr. McGuire: That is all.

The Commissioner: Just a moment. I think there is no connection between the Homestake as it appears on that map, and one of the plaintiffs in this case?

Mr. McGuire: None, at all.

Cross-examination.

By Mr. Harrison:

Q. Mr. Waller, I asked you if the survey measurements [fol. 24] that are made in connection with Exhibit No. 1 were accepted by the Land Office, and I think you responded that, so far as you know, they were, or else you would have heard from it, or something along that line?

A. Yes.

Q. And I asked you also, I believe, if you knew whether or not patents had been issued on various claims in Plaintiffs' Exhibit AP 1, and I think you testified, if I am not

mistaken, that you were not sure about all of them. Did you so state?

A. The law under which we operate as mineral surveyors bars us from acting as attorney for our clients, so we do not know when patents are issued; we are not notified, they are not sent to us, but they are sent to the applicants' attorney.

Q. Let me ask you this: Were patents issued for the various claims outlined on Plaintiffs' Exhibit 1?

A. Were they?

Q. Were the patents issued?

A. I, personally, do not know.

Q. I think, about three minutes ago,—didn't you testify that you compared the chart that you prepared as Plaintiffs' Exhibit 1, with the description—the metes and bounds descriptions in the patents that were issued?

A. No; according to our survey and field notes.

Q. According to your field notes——

[fol. 25] A. I said patent surveys.

Q. Yes.

A. I said this map was prepared from the patent surveys which were filed.

Q. I understand.

A. Here (indicating) is the return of the patent survey to the Land Office, and what happens to it after it is filed with the Land Office and accepted,—the responsibility of the surveyor ceases. From that time on, it is up to the attorney to carry the ball.

Q. Just so the record will be clear, you did nothing, in the preparation of Plaintiffs' Exhibit AP 1, to compare the metes and bounds description therein, with the patents, assuming that there were patents actually issued to cover those particular locations; is that correct?

A. These (indicating) simply cover patent surveys. This is a patent survey here (indicating).

Q. My question was, was that correlated by you with the patents, themselves, the descriptions there?

A. No.

Mr. Harrison: I have no more questions.

The Commissioner: Anything further, Mr. McGuire?

Mr. McGuire: No, sir.

The Commissioner: Any other questions?

Mr. Barnett: I would like to ask one question, Your [fol. 26] Honor, please.

By Mr. Barnett:

Q. In reference to the dimension of the claim, Mr. Witness——

A. Waller.

Q. Mr. Waller, I want to ask you one question.

A. All right.

Q. In reference to the maximum distance or footage of the claim, you were referring to the territory of Alaska; is that correct?

A. That is the mining laws of the United States.

Q. Does that cover all of the territories and the States?

A. All the States and territories.

Q. I thank you.

By Mr. Harrison:

Q. Mr. Witness, when you speak of the mining laws of the United States, do you have any particular period of time in mind?

A. You mean——

Q. The mining laws of the United States, as they existed in 1912, or 1913, or currently?

A. Well, any surveys which are executed have to be executed according to the laws at the time they were executed, but not now. In other words, when we were making [fol. 27] those surveys in 1912, we were working under the mining laws as they were set up at that time. Any amendments or changes that have been made since, of course, the Mineral Surveyor has to conform to. However, they haven't been changed very much during the years.

Q. Is this process of staking claims still current?

A. Absolutely, yes.

Mr. Harrison: That is all.

The Commissioner: I have a question.

The Witness: That is on the unsurveyed public lands of the United States that I am referring to. When you get into the National Forests, or other reservations of the government, they set up rules of their own.

By Mr. Harrison:

Q. Are all these claims of the plaintiffs in this case staked on government-owned land?

A. They were staked on unsurveyed public lands.

Mr. Harrison: I thank you.

By the Commissioner:

Q. I was wondering about the statement that you made, with respect to the limitation imposed by the statute are on the amount or extent of a claim filed by an applicant.

A. Yes.

Q. By that I mean a plat indicating a larger area. Is that limitation inapplicable, if accompanied by the claims of several prospectors?

[fol. 28] A. This one location, like the Beefsteak, cannot be more than 1500 feet long and 300 feet wide, containing 21 and some fraction acres, and any one location cannot encompass more than that area or length and breadth.

Q. And that one location is limited to one individual?

A. There, again, the mining laws have changed, from time to time. They allow a prospector to stake, maybe, two a month, and maybe, with a power of attorney, they might have power to stake two more, and in that way, if you go into a new mining district, armed with a power of attorney, the law allows you to stake so many a month, and so on. Then companies like Alaska-Pacific can buy that prospector's interest, and the company can go out and stake it. There is no law against a corporation doing it.

Q. But the limitation is related to time?

A. In the beginning, yes.

By Mr. Montgomery:

Q. I think, for further clarification, for an individual location on one particular mineral discovery—isn't that right?

A. Well, the law requires that every one of these claims, like the Beefsteak, has to have a discovery; is that what you mean?

Q. Yes.

A. And it is up to the surveyor, when he surveys it, to [fol. 29] verify that discovery and locate it.

By the Commissioner:

Q. How do you do that?

A. Well, you have to go out and find it.

Q. That is a little hard, isn't it?

A. Well, sometimes it is a little hard. On lode claims, it is difficult. The mineral is supposed to be in place, and you can see it, and a mining engineer can tell whether it is mineral land, or not, or whether it is solid granite, or if it has quartz in it, or any valuable mineral. Sometimes it requires assay, that is true, but the burden of proof is up to the mineral surveyor to prove that it is a valuable discovery; that is a part of his job.

Q. Well now, what is the significance of the title "U. S. Deputy Mineral Surveyor"? Are you appointed as a surveyor by the government?

A. Will you hand me that shingle over there (indicating)?

Mr. McGuire: You had better read that into the record, Mr. Waller.

The Commissioner: I see a certificate here by the United States Surveyor General for Alaska.

By the Commissioner:

Q. Would that have the same effect, if we can draw the comparison, of a member of the bar of the court?

A. Right.

[fol. 30] Q. You are actually working for the people who are concerned with the mining; you are not working for the government?

A. No.

Q. But this accredits you with the government, I gather, as a qualified surveyor?

A. Do you want me to read it?

Mr. McGuire: I think you had better read it into the record, and explain the significance of it.

The Witness: It reads: "United States of America. To all to whom these presents shall come, Greetings:

"Know ye that, imposing special trust and confidence in the integrity, ability and discretion of Harold H. Waller, I do appoint him to be United States Mineral Surveyor for the District of Alaska, and do authorize and empower

him to execute and fulfill the duties of that office, according to law, and to hold said office with all the rights, emoluments thereunto legally appertaining to him, the said Harold H. Waller, during the pleasure of the Surveyor General of the United States for the District of Alaska for the time being.

"In testimony whereof, I have hereunto affixed my signature. Given under my hand and seal at Juneau, Alaska, the fourth day of June in the year of Our Lord 1924, and the Independence of the United States of America, 148."

Signed "Carl Field, Surveyor General for Alaska."

[fol. 31] I wish to qualify the statement I made in the beginning, that I have been Mineral Surveyor since 1912. We have to have a new appointment. This is the only shingle I have, the only one they ever sent me, but Mr. Ballinger, when he was Secretary of the Interior, came to Seattle, and I was appointed first in 1921, and I have held that appointment ever since, and it runs in four-year appointments, with $5,000 bond, taken out every four years. We only have to take an examination the first time, and we get it renewed without examination.

By Mr. McGuire:

Q. Let me ask one further question. You said there could be duplication of names, as between various mining claims. Is there any duplication of survey numbers, as between claims?

A. There isn't supposed to be. If it is, it is in error.

Q. If a patent issue, bearing Survey No. 2037, for example, that might refer—or is supposed to refer only to the claim which bears No. 2037?

A. Yes; under the jurisdiction of the United States Land Office. In other words, there might be—in Colorado, there might be another such number as that, but not another such number as that in Alaska for a mining claim.

The Commissioner: Any further questions?

Mr. Harrison: I have no further questions.

The Commissioner: The witness may step down.

[fol. 32] (Witness excused.)

The Commissioner: We will recess for five minutes.

(Thereupon, a five-minute recess was taken in the hearing.)

Mr. McGuire: The next witness will be Mr. Horvath.

PAUL HORVATH, a witness produced on behalf of the plaintiffs, having been first duly sworn by said Commissioner, was examined, and in answer to interrogatories, testified as follows:

Direct examination.

By Mr. McGuire:

Q. Mr. Horvath, will you state your full name and present address for the record?

A. Paul Horvath, 1215A Force Street, Whittier, California.

Q. What is your occupation, Mr. Horvath?

A. At the present, I am a retail food operator.

Q. Was there a time when you were employed by the Alaska-Pacific Consolidated Mining Company?

A. Yes, sir.

Q. Will you give the details of your employment by them?

A. I first went with the Alaska-Pacific Consolidated in 1937, and worked for them through 1943. I was away for a short time in 1938, and was with them until the closure in 1943.

Q. In what capacity were you employed by the company?

A. In several capacities.—During my closing period [fol. 33] there, I was mostly camp manager and mine manager.

Q. Prior to that time, what were your duties?

A. Prior to that time, I was a storekeeper, and prior to that I was working underground as a miner, with the men.

Q. Now, what were your duties as mine office manager and camp superintendent, or camp manager?

A. My duties were the purchasing of all material that came into camp, issuing vouchers, buying all of the supplies for the camp, and supervision of the entire camp, itself, and of the record and records of bookkeeping for the mine.

Q. What were your duties with reference to the personnel of the company?

A. I had authority to both hire and fire personnel.

Q. Did you, in fact, hire and fire personnel?

A. Yes, I did.

Q. As a matter of fact, you hired all of the personnel, other than the supervisors, did you not?

A. Yes, I did.

Q. And during what period of time did you exercise the authority to hire and fire personnel?

A. During 1941, 1942 and 1943.

Q. Now, Mr. Horvath, will you give us a general description of the properties, the physical properties of the Alaska-Pacific Consolidated Mining Company, as they existed, as you knew them?

[fol. 34] A. Yes. They were located in the Willow Creek District, about 20-odd miles out of Wasilla, which was our unloading place, or the railroad terminal, and situated in the Talkeet Hills district, and about 3,500 feet elevation, and with a roadway leading to both Wasilla and Palmer.

Q. And how far from the mine was Palmer?

A. Palmer was about 28 miles from the mine.

Q. Now, Wasilla you said was the rail unloading point?

A. That was our unloading point, yes, sir; at Wasilla.

Q. And all supplies had to be brought in over the railroad, and then trans-shipped by truck at Wasilla, and thence overroad to the mine?

A. To the mine, yes, that is correct.

Q. Now, where did the railroad lead, to what point?

A. The railroad, of course, started at Seward, the gateway to the Territory, in southern Alaska. The ships unloaded at Seward, and the railroad line ran from Seward through Fairbanks, and Anchorage being an intermediate point, and Wasilla was about 40 miles out of Anchorage, along the way to Fairbanks, without stopping——

Q. Approximately how far from the port of Seward was Wasilla, by rail?

A. I would say about 400 miles, roughly 400 miles.

Q. I believe you testified that Wasilla was about 20 miles [fol. 35] from the mine, by road; is that correct?

A. I said, roughly, 20 miles, and possibly 25 miles.

Q. Who maintained the road between Wasilla and the mine?

A. Between Wasilla and the mine, the Alaska Road Commission maintained it only up to a point, and that was a point of about six miles before reaching the mine. The stopping point might be referred to as "Fish Hook Inn", and from that point to the mine, a distance of another six miles, the mine, itself, maintained it.

Q. Now, can you give us a general description of the mining camp?

A. The mining camp, yes, sir; starting across from the mine buildings, themselves, which were situated on the west hillside, the mill buildings housed the entire power plant, the diesel engine, which produced the electricity. The entire camp was run on a diesel electric basis; and under the same roof, of course, our milling units and flotation units were installed, and the various bunkers for receiving the ore from the lower levels coming out of the mine. Coming from the mines into the camp, the road was lined with warehouses, various warehouses, and various shops, such as the tin shop, the tinsmith shop, the pipe shop, the carpenter shop, and the framing sheds for our timber; and coming into the camp, a large warehouse building, which housed all of the facilities for perhaps 50-odd men; and on the opposite side were two large dormitories, which [fol. 36] housed in the neighborhood of 80 or 85 men, each, with various recreation facilities in each, comprising a billiard room, a card room, and so on, and also drying rooms, to dry the men's clothing. The other building contained a movie theater, which was also used as a school room for the miners' youngsters.

On into the camp, the office building, which also housed the company's store, or commissary, as we refer to it, which had all of the clothing and food and odds and ends, and so on, and the original cookhouse structure, which handled our food problems for many years, up until 1942, at which time we moved into a new house, which was built a little below the camp.

Above the old cookhouse was also the original house, housing quarters for the miners, running down to the new cookhouse, where there was a new messhall, we called it, with facilities there for feeding 300 men at one feeding; and above that, quarters for the cookhouse crew, and also several apartments for the staff members.

In the camp, also, we had tanks erected to carry our diesel oil supply throughout the operating period, and various docks where we stored our lubricating oils, timbers, mining props, and usually our rails, pipes, and for the entire camp, we had a large incinerator plant for the disposal of the camp refuse.

[fol. 37] That pretty well covers the campsite.

Q. Now, did any of the miners maintain dwellings anywhere near the camp?

A. Yes; immediately out of the camp, on the main entry road into the camp, perhaps one-eighth of a mile, the miners themselves had constructed, at their own cost, small dwellings, where they and their families lived.

Q. And at the time of closure, about how many of those dwellings were there?

A. At the time of the closure there were perhaps 25 or 30 of those dwellings built.

Q. Were all of these buildings frame buildings?

A. Yes, all frame buildings.

Q. Now, were there any other towns or villages, or any evidence of civilization, closer than Wasilla?

A. Close to Wasilla, I was going to mention the mine immediately above the Independence mine, which is known as the Gold Quartz mine. That is just above the hill, at an elevation of perhaps 200 or 300 feet, a small mining operation, I think, employing a dozen men or so; and above that, farther, yet, up into the very top of the valley, a little mine known as the High Grade mine, which was quite inactive; you might say they were prospecting.

Now, going down the hill, there was nothing beside Wa-

[fol. 38] silla and Palmer.

Q. Now, from what source did you draw your supplies for your operations? From what source did you acquire your supplies?

A. From what source?

Q. Yes; did they come from the States?

A. All of our supplies came from the States, with the possible exception of timbers, which we bought locally.

Q. Did you follow the practice of accumulating substantial quantities of supplies on hand?

A. Yes, we did. That is, of course, something we always did, for various reasons, the most important of which, of course, was the isolation of the camp, and the fact that the

winter months developed very bad road conditions, and the hazards of transporting certain items of equipment and supplies in the wintertime; and then again, of course, the uncertainty of your steamship connections many times, such as the strikes that we always have, which would tie up shipments of items, and more or less necessitate a carrying of heavy inventories for good operation.

Q. What were the climatic conditions at these locations?

A. The climatic conditions—well, the summer was generally from about the first of June, when the snow was generally off of the road, and during the summer months, we generally had rain, I would say 70 per cent of the time. [fol. 39] Winter began generally in late September; we generally had snow on the ground any time after the middle of September, and many years quite heavy. During the winter months, we have very heavy drift snows, and road-block conditions, and so forth, but winter conditions generally break about the latter part of May.

Q. What were the temperature ranges?

A. The temperature ranges—the summer temperature, I would say, was about 70, which was a top figure, and in the wintertime anything down to 50 below zero. In fact, we have had oil lamps freeze up, because it was so cold.

Q. Now, does the severity of the climate impose considerable maintenance problems, with respect to the buildings?

Mr. Harrison: If the Court please, I am going to register an objection. It is my understanding that we are not concerned here with the damages feature, and this question might pertain to damages. I have been pretty liberal in allowing a lot of things into the record, which I confess I don't see the materiality of; but I think the description of the property might well be pertinent to the question of what the plaintiff actually owned, in the way of property; but as fas as the conditions that existed at the mine, whether they be climatic, or whether they relate to the working conditions, is to me something that I fail to see in relation to any issue in the case.

[fol. 40] Mr. McGuire: Perhaps I can explain that. We will contend, of course, that this particular location—the climate is such a severe climate that; in order to maintain these buildings in any condition, at all, they had to be kept

in use. These conditions were brought to the attention of the government, before the closure order was effective as to this particular mine; and it will be our contention that the order was particularly arbitrary, with respect to this particular claimant or plaintiff, due, in part, to the fact that the government knew, or certainly should have known, from a reading of the documents in the case, that the closing down of operations would result in the destruction of these buildings.

The Commissioner: Overruled. He may answer.

Mr. Harrison: May we have a continuing objection to this type of evidence?

The Commissioner: Yes.

By Mr. McGuire:

Q. The question was whether the severity of the climate imposed any particular maintenance problems, with respect to these buildings?

A. Yes, it did; it definitely did. You continually had the snow-removal problem, which was quite severe. In fact, we have had snow so high that it would come to the top of buildings 25 or 30 feet in the air, and in order to save the heavy weight from breaking these buildings down, it re- [fol. 41] quired constant care to keep these buildings cleared off and cleaned off; likewise, to keep the roads open, so traffic could be maintained through to the camp.

Mr. Harrison: Your Honor, I would like to have the record reflect that I also object on the basis that whether or not the order was arbitrary is an issue in this case, but whether it was particularly arbitrary as to this particular plaintiff is beside the point. The order must stand or fall on whether or not it was arbitrary, and I feel that the only possible way they can show it was particularly arbitrary and was particularly damaging to them, is to get into the damage phase of the case, but I would like the record to reflect the objection.

The Commissioner: All right.

By Mr. McGuire:

Q. Now, ordinarily, would there be any difference between the maintenance problem, if a building was in use and if the building was not in use?

A. Oh, yes. Of course, as I mentioned before, because of the severe weather, your plumbing and your heating impose quite a problem in keeping them open and in repair. It is certainly much simpler, with people on hand to catch these various things as they develop, before they can cause serious damage.

Q. If the buildings were heated, I take it that there would [fol. 42] not be so much problem with respect to the weight of the snow on the roofs?

A. That is true. All of the roofs of the buildings were of corrugated sheet metal, and with a very high pitch, in order to take away the heavy snows, and of course it requires heat in order to do that.

Q. Now, what type of water system was there in the camp?

A. Well, in the camp, we had a water system that originated from several sources: One, an underground reservoir system we had built in the workings that had been used and discontinued, or built for that specific purpose; and another, several dams above the campsite, that we built ourselves, which supplied water to the entire camp; and there was a four-inch line, as I recall, leading from the workings and the dams.

Q. Was the central water system piped to various locations?

A. Piped to various locations, yes. In fact, the mill was the distributing point; the four-inch line ran into the mill, and from the mill into the various buildings, pipes of smaller sizes.

Q. Was that water system subject to damage, if not continuously in use?

A. Yes, it was.

Q. What type of water system was employed in the village?

[fol. 43] A. In the village, they had something of the same order. The villagers, themselves, in fact, installed their own water system; they purchased the pipe and built their own little dam above the village on another creek, running down the outside of this valley, and made their own dam and piped their own water into their own homes.

Q. That, again, was a central water system?

A. Yes, sir.

Mr. Harrison: Let us have the witness testify.

By Mr. McGuire:

Q. Now, did you have charge of the inventory at the camp, during the period immediately preceding the closure?

A. Yes, I did.

Q. What would be the chief items of that inventory?

A. The chief items?

Q. Yes.

A. Well, I would say your timber, your explosives, your powder, your detonators, your various machine tools, machine replacement parts, lubricants, diesel fuel for operation, of course, food, tin for the tinsmith's shop. We did our own building of vent pipes, iron of all sizes for the machine shop and the blacksmith shop, drilling steel, the drills themselves, additional pipe, rails; and of course, in the store, we carried a good supply of clothing and food of all kinds to supply the men. They had pretty full coverage.

[fol. 44] Q. Did you carry grinding balls for the mill?

A. Yes; grinding balls for the mill, and liners, replacement liners, and replacement parts for the flotation units, and classifiers, and various chemicals for our milling process, and agents for the flotation process.

Q. Calcium carbide is one?

A. Yes; calcium carbide, yes. We used that underground, and carried a good supply of carbide always.

Q. What about belting and transmission supplies at the mill?

A. We had a very good supply of them on hand.

Q. Now, at the time of the closure, what was the condition of the inventory, with respect to these supplies?

A. Well, we had a tremendous supply on hand. We had supplies to run for a considerable period of time, with what we had stored. Of course, I don't know, but I would say we had a year or a year and a half supplies on hand, and they were very necessary supplies for the operation.

Q. So that, at the time of the closure, if I understand you correctly, the company could have operated the mine for a period of a year or a year and a half, without any additional supplies?

A. Yes, with a few exceptions, I would say, for the food, which we had to ship quite regularly. We had a tremendous supply of food, and the fact that we couldn't get a lot of [fol. 45] that locally, when needed, I would say we carried

about a six-months' supply. Dry storage food, we carried about a six-months' supply. On fresh stuff, naturally, we got it as we needed it, every three weeks or a month.

Q. Now, was any special effort made to accumulate a large inventory?

A. Yes.

Q. What was the reason for that?

A. Well, several reasons, and it always comes back to one thing, and that is, because of the location of the place, first of all; and second, the continuing of the operation, and the possibility of various shortages, we would get things and have them on hand.

Q. You speak of shortages that might develop. Was there some anticipation of possible shortages at that time?

A. Was there?

Q. Yes.

A. There was, perhaps, for some items, yes.

Q. You mean that, in anticipation of possible shortages, you acquired substantial supplies?

A. That's right.

Q. Now, would these supplies have been easily disposed of by sale, at the time of the closure?

Mr. Harrison: I think that is very hypothetical, and I object to it.

[fol. 46] The Commissioner: Sustained. The mine was closed, then, was it?

Mr. Harrison: Yes.

By Mr. McGuire:

Q. Speaking generally, was the transportation cost a large part of the cost of acquiring supplies and bringing them to the mine?

A. The transportation was really a big item there, yes.

Q. Taking timber, for example, what was the chief cost of the timber, as included in the inventory at the mine?

A. Well, the transportation, of course, of the timber. As I say, we purchased all of our timber locally, and hauling it to the mine was a tough problem.

Q. And with respect to the heavy items of balls, and ball bearings, and pipes and rail and iron fittings, was the transportation cost again the chief factor of that?

A. I don't quite follow your point. What do you mean, chief factor? The chief factor in the cost, you mean?

Q. Yes, that's right.

A. Yes, it was, on those items, mill balls, definitely were, and items like that. The value of the things themselves wasn't very great, but the transportation exceeded the cost of the articles.

Q. At the time of the closure, did you take an inventory of all of these supplies on hand?

[fol. 47] A. Yes, I did.

Q. And was that recorded?

A. It is recorded. In fact, the record is still at the mine; it is all set up in a card index system.

Mr. McGuire: I am going to make an offer, at this particular time, to make those records available to any agent that the government may care to send to the mine, to verify the condition of the inventory at the time of closure.

The Commissioner: That would go to the matter of damages, I would think.

Mr. McGuire: No, no sir. The government has taken the position, as I understand it—and they certainly made that clear in order L-208—that this order was issued to conserve materials. This mine had on hand—we will prove that through oral testimony, and offer corroborative evidence in the form of the inventory of materials on hand sufficient to operate for a year or a year and a half by a mill which was in an isolated portion of Alaska; and we will argue, with respect to this particular mine, that it had no particular purpose, whatever, so far as the conservation of material is concerned.

Mr. Harrison: I would like to say that the order was not directed to this particular mine, and also the fact that they might have had a lot of critical materials on hand is no argument that those critical materials could not, in one way or another, be put to better use in the war effort.

[fol. 48] Of course, we have our general objection to materiality, anyway. As far as this inventory is concerned, I suppose it is something in writing?

Mr. McGuire: Yes.

Mr. Harrison: It is pretty unrealistic to try to check that writing, today. If you had the inventory here, and had somebody who made the inventory swear, under oath, that

the inventory was accurate, it would be possibly be the best evidence we could present of that, I suppose, at this time.

By Mr. McGuire:

Q. Did you, personally, prepare the inventory?

A. Of course, I assisted in it. I think we can possibly get another man that—Dan is dead, isn't he?

Q. Yes, Dan Hickman——

A. Hickman died, didn't he?

Q. Yes.

A. He is the man who actually typed it up for us on the cards.

By Mr. Harrison:

Q. Is he the man who physically made the inventory?

A. He put it on the cards. It is in the record in the form that you will see. In other words, they were taken from rough forms made on the scene, and placed on these forms for a permanent record.

Mr. Harrison: I don't see how the government can admit [fol. 49] it in evidence, without objection, an inventory made by a man who is not in court and prepared to testify that the written account of the inventory is accurate.

The Commissioner: There has been no offer of the inventory; it is merely an offer by counsel of the fact that such an inventory was made.

The Witness: I think a lot of that can be borne out by many sales that have been made since then, from this particular inventory, and much of it is still there and in existence today; in fact, the great bulk of it is there.

By Mr. McGuire:

Q. At whose direction was this inventory made?

A. At whose direction?

Q. Yes.

A. Mr. Stoll, then general manager of the organization.

Q. Now, in the course of your duties with respect to the hiring and firing of personnel, did you become acquainted with the personnel?

A. Quite well; I knew the men very intimately, some of them, in fact.

Q. What was the normal size of the mining crew?

A. The normal size? I would say about 125 men.

The Commissioner: Is that in what period? Is that in the period of operation?

Mr. McGuire: The normal size of the crew during the [fol. 50] period of operation.

By Mr. McGuire:

Q. Now, at the time of—in October, 1942, do you recall the size of the crew, at that time?

A. October of 1942?

Q. Yes.

A. In the neighborhood of 100 men.

Q. How many mills were you operating at that particular time?

A. Two mills.

Q. Now, do you recall when Order L-208 was issued, in October, 1942?

A. Yes, I do.

Q. Did it receive publicity, and come to the attention of the mining crew?

A. Oh, yes, definitely.

Q. What effect, if any, did the order have upon the mining crew?

A. Well, in some instances,——

Mr. Harrison: I am going to raise another objection to the effect of the order. I don't see what difference it makes, what the effect of the order was on the mining crew.

The Commissioner: Sustained. You might inquire what the miners did, following the order, if you care to.

[fol. 51] By Mr. McGuire:

Q. What did the miners do, following the issuance of the order?

A. Quite a number of them left our employment, knowing that—or sensing the inevitable closure.

By the Commissioner:

Q. Do you know where they went?

A. Some of them, I do, yes, sir; some, I do not. As I say, I knew some of them quite well.

By Mr. McGuire:

Q. Where did they go?

A. Some of them stayed in the Territory, some went to Anchorage, and some came outside to the States.

Mr. Harrison: I would like to make objection to that testimony as to where the miners went, or what they did, because the order may have been—I certainly don't think it was, but even if it were a miserable failure, I don't see how that could reflect on whether or not the act was arbitrary. Did the people, at the time the order was issued, act in an arbitrary way?

That is the issue in this case. What happened afterwards is immaterial.

Mr. McGuire: What people are you speaking of?

The Commissioner: What people?

Mr. Harrison: The War Production Board has been ac-[fol. 52] cused of making an arbitrary order, and the defendant contends it was not an arbitrary order. The fact that the order may not have been as successful as hoped for is completely immaterial. At the time they passed this order, the facts that they had on hand at that time, we think, made their action in good faith in passing the order; and whether or not miners transferred, or did not transfer, or what happened, or did not happen, is completely immaterial, and we would like a continuing objection to any such testimony.

By Mr. McGuire:

Q. I hand you a document, consisting of four pages, which I request the reporter to mark as Plaintiffs' Exhibit AP-2 for identification, and ask you what it is?

(Said document was marked for identification as Plaintiffs' Exhibit AP No. 2.)

The Witness: This is the payroll for the month of October, 1942.

By Mr. McGuire:

Q. Have you compared the list of names on this document with the actual payroll records?

A. I have, yes, sir.

Mr. McGuire: I have available in the courtroom the original payroll records of the company for the month of October, 1942, which are available for examination by government counsel.

[fol. 53] By Mr. McGuire:

Q. Are the names that appear on Plaintiffs' Exhibit AP-2 for identification the same names which appear on the payrolls of the Alaska-Pacific Consolidated Mining Company for the month of October, 1942?

A. They are the same names.

Q. Now, opposite each name there is a description, such as opposite the name of Abrahamson, there is the word "mucker". What does that mean?

A. Mucker is an underground worker, who does the basic labor work; in fact, he is the laborer of the mining business; he does the shoveling work in the mining business.

Q. This list of terms which appears opposite the names on the list—is that the name of the job held by that particular man?

A. The name of the job held by that person, as shown on our payroll records.

Q. Now, that is an asterisk after the name of some people, and down below there is a notation, "worked until closure". What does that mean?

A. That means they worked until the closing period in 1943, the 8th of September, 1943; that they worked up until that time. The 8th of August is correct.

Q. Now, opposite some names that is a question mark. What does that mean?

[fol. 54] A. A question mark?

Q. Yes.

A. That means that I don't recall the men—I mean, as to their disposition, or very little about them.

Q. Opposite the names of others, still, there is a notation, such as, in the case of Betts, Thurman Betts, "local trucking". What does that indicate?

A. That means that is what he was doing after he left our employ. I happen to know that; personally, that he went to the valley; in fact, he and his brother both started a little trucking business, a private business, based out of Wasilla, Alaska.

By the Commissioner:

Q. So you were only there a month after the close-down?

A. Yes; after the closure in 1943, I was there another month. I was there until the middle of September.

By Mr. McGuire:

Q. Then, with reference to these notations, which follow the names of certain of these men, are they intended to indicate what happened to the man after he left the employ of the Alaska-Pacific, but prior to the closure?

A. Prior to the closure?

Q. Yes.

A. Prior to the closure, that's right.

Q. Do you know that these occupations indicated after [fol. 55] the men's names were, in fact, the places where they went, and the occupations that they took after leaving the company's employ?

A. Well, in the cases where I have indicated it, yes. In other words, after they left our employ, they did construction work, or took work with the local trucking company. Those are the men that I actually know went to this other work.

Mr. McGuire: If the Court please, I offer in evidence Plaintiffs' AP Exhibit No. 2.

Mr. Harrison: I am going to object to it, until I ask some more questions.

By Mr. Harrison:

Q. You say you know that these comments were the destinations of the various individuals, besides whose names the comments are made?

A. Yes.

Q. You say you know that?

A. Yes.

Q. I want to ask you, which one of these cases you actually know that, from personal observation——

A. That's right.

Q. That the man actually went——

A. Yes.

Q. Let's take Mr. Dimmick, and the comment says, "To [fol. 56] Armed Services.

A. That's right.

Q. Do you know he went in the Army?

A. That's right. I saw him in uniform, and shook hands with him in uniform, and said goodbye to him.

Q. Now, let's take Erickson, and it says "To States". Do you know he actually went to the States?

A. Why, yes; he bought a ticket in Anchorage, on the Alaska Steamship, and went outside, yes.

Q. Did you see him sail?

A. I didn't see him sail, no.

Q. He could have stayed in Alaska?

A. He could have; that's possible, but not very likely, though.

Q. I don't want to be picayunish, but I feel, if we were to go down all of these names,——

A. You see, I didn't mention the names of men that I definitely didn't know. Those I didn't know, I indicated. I couldn't know them all.

Q. I have grave doubts about whether or not you know that these actual people—that you could actually start at the top and testify that they went here or there. That is what you believe to be so?

A. That is what I believe to be so, because of my association with them. After all, I did know them quite well, and [fol. 57] lived with them, and worked with them. In fact, some of them I still maintain relations with, today; I still exchange letters with them, and have visited with many of them. I saw one of them last week at Lake Tahoe, one of these men, when I hadn't seen him for years.

By Mr. McGuire:

Q. And what is he doing in Tahoe?

A. He is a retired businessman, taking care of the water valve that controls the level of the water in Lake Tahoe; he stands there and turns a knob.

Q. Let's go down the list. The first man's name you indicated is George Bahns, and the comments is "To construction work." How do you know he went to construction work?

A. Well, George was a blacksmith; I knew him very well; he was with us for many years, and he left, and he went to town, and he would hang around town for two or three weeks, before he did anything.

Q. When did he leave?
A. He left the mine—let me see!

By Mr. Harrison:

Q. His leaving had nothing to do with L-208?
A. Whether it did, or not, I don't know.
Q. I would assume that only those marked with the asterisks had anything to do with L-208.
A. I didn't say that, whether they did, or they didn't. [fol. 58] I didn't say that. Other than a few cases—I mean a real close case. As a matter of fact, I think this man I mentioned at Tahoe—he left because of L-208; that I know, and perhaps some others, but the majority—no, I don't know that. Many of them did, of couse.

Mr. Harrison: I can't possibly let this in evidence, without going down the list, and finding out the facts about each particular individual, when he left, and how he knows that these people left.
Mr. McGuire: I will do just that, and satisfy you.
Mr. Harrison: All right.
Mr. McGuire: I will go back to Bahns.
Mr. Harrison: You understand, of course, that I am going to object to the materiality of this thing, and if it should go in, I want it completely verified by the pay rolls.
Mr. McGuire: That can be verified here.

By Mr. McGuire:

Q. Going back to Bahns, the comment is "To construction work." How do you know he went into construction work?
A. He went into construction work right in Anchorage. He went out to the base, on construction work, the work of constructing an Army base there.
Q. How about——

By Mr. Harrison:

Q. How do you know that?
[fol. 59] A. I saw the man, and talked to him, and said, "What are you doing, George?" And he said, "I am out here, working with Morrison-Knudson, working on a building out here."
That is how I know that.

Q. When did he leave the mine?

A. When did he leave the mine?

Q. Yes.

A. Let me see if I have any record of that. I will have to go to the pay roll record to find that.

Q. Well, was it around——

A. It was sometime after October of 1942; just exactly when, I am not positive.

Q. You haven't got an asterisk after his name, because he didn't work until the closure?

A. No. In fact, as I say, I saw him several times during the following year, after this particular time. As a matter of fact, I could go to the records and let you know exactly the day he left.

By Mr. McGuire:

Q. If you want to do that——

A. I can do that on any of them. I never went into that much detail on the October, 1942, pay roll. I did on the closing period, however.

Q. Now, coming back to Thurman Betts, you have a notation that he went to local trucking. How do you know that? [fol. 60] A. By seeing him, and talking to his brother. I saw him and his brother together, and they started a little trucking agency out of Wasilla. That is a matter of record. If I am not mistaken, they are still running the trucks out of here. They haul oil to various locations. In fact, they started a route that went over the Alcan Highway, trucking material even into the States. That is the business they went into.

Q. Now, Alan J. Dezanger, you say he went into construction work?

A. Yes; the reason I know that man particularly well, he was a utility man. He was an older man, went to work as a laborer, after he was laid off.

By Mr. Harrison:

Q. How do you know that; did you see him working?

A. I didn't see him working.

Q. In Anchorage?

A. Like I saw the man on the street. Have you ever been to Anchorage?

Q. No, but the point is, I don't think you are actually competent to say he went to work in Anchorage, unless you were there, and unless you saw him working in Anchorage.

A. I was there, and I saw the man in Anchorage. I didn't see him on his actual job. I stopped the man on the street, and I said, "What are you doing, George?"

[fol. 61] Q. What did he say, if anything?

A. I do not know, I couldn't tell you exactly verbatim what he said, but he said he was working out on the base, which was his comment, and they were working on the base at that time.

Q. This is in Anchorage?

A. That's right, in Anchorage. Men of that type were just laborers, what particular job he was doing, I don't know. He was working on the base, doing construction work on the base. He went to construction work on the base, like so many of these men did.

By Mr. McGuire:

Q. Now, Martin Boscovich—is that a similar case?

A. Yes, sir.

Q. It shows that he went to construction work in Anchorage?

A. Yes.

Q. How do you know that?

A. Well, the fact that you mentioned Boscovich—that was a Slavonian man, and a Slavonian name, and in our pay rolls, we had a considerable number of Slavonian people, and they centered in town around one hotel, the Fifth Avenue Hotel in Anchorage; in fact, a location where, many times, I would walk in and find labor, and I think I knew every Slav or Slavonian that had visited that hotel. In fact, I know that, to this day, I can recruit labor there right [fol. 62] now, and these men, just about all, without exception, lived there; and invariably, on my trips to town, I would stop there and talk to these men. Many of them were close personal friends. That's one that brought that to my mind. I speak a little of their language, the reason they accept me, too.

Q. Now, Hugo Brodin, you say went to construction work at Anchorage?

A. Yes; he was another. He was a blacksmith, and he went to work as a laborer—a pretty good blacksmith, too.

Some of these men, incidentally, I saw in Anchorage, after the layoff, and during this period, and many of them had made considerable money at our mines before leaving, and did nothing, except lie around hotels and take it easy for a considerable period of time, and you could see them sitting in hotel lobbies any time you wanted to see them.

By the Commissioner:

Q. There has been testimony here with respect to what many of these people did, beyond the month after you left,——

A. You mean after the closure?

Q. Wait a minute! Wait until I ask the question.

A. I am sorry.

Q. Does that go beyond the period which you have stated, the time you left, namely, about a month, or longer, after the closure?

[fol. 63] A. Some of them do, yes, sir.

Q. Which ones?

A. Which ones?

Q. Yes.

A. I think I have a list here, perhaps, after my departure, and the men I saw after that, maybe a year or two years later, and talked to them.

The first man on the list here, Adams, he went to work at the Northern Commercial Company at Anchorage, and stayed there all during the war, after he left our employ. I know him.

Then there is Joseph Arkus, after he left our employ, he went to work in a camp in Anchorage, as a flunkey.

Max Bohman,—he went to work in town, as a cook. He was our cook during the closing period. He was a German alien.

Q. The point I have in mind is this: After you left, how do you know they stayed there?

A. After I left, how do I know they stayed in that employment?

Q. Yes.

A. I don't know exactly, with the exception that, after returning to Alaska in 1945 and again in 1949, I had a chance to renew a lot of acquaintances; in fact, I re-hired a lot of these men.

[fol. 64] The Commissioner: Off the record.

(Here followed discussion off the record.)

The Commissioner: Well, the only way he would know—after these men left, the only way he would know where these people were was by talking with them.

Mr. McGuire: I know; but my examination was confined to the names that are on Exhibit AP-2, that has been offered for identification. I am speaking of the period between October, 1942, and the date of the closure, and this mine did not close until August of 1943, due to certain extensions, so Mr. Horvath was on the scene during all of this period I am speaking of now. I have not come to the period following August, 1943, and at that point, I will examine him very closely as to how he knows what happened to the man, but at the moment my examination is confined to the period Mr. Horvath was on the scene.

Mr. Harrison: I will say that all of this is immaterial, anyway. Right now, the question we have is whether or not we are going to admit in evidence a document here, which will indicate the ultimate destination of some individual, some former workers. I want to know when they left, how long they stayed at the places they did go, and what personal experience enables him to qualify to testify, and I think that is going to be a long job, and I am prepared to stay for a couple of days, if need be.

[fol. 65] Mr. McGuire: I am prepared to stay here——

Mr. Harrison: I think the whole thing is immaterial, and I think I should warn you of that.

Mr. McGuire: The materiality, if the Court please,—I am glad Mr. Harrison brought that up—I am not just doing this for the sake of burdening the record. We will show you, and put in the record, the fact that Alaska-Pacific obtained several extensions from this order, and filed several appeals to the government, and made representations in these appeals as to just what would happen, among other things, to the men, if they were laid off, as a result of the mine being shut down, and that is in black and white; we told the government, in black and white, that these men would not go into coal mines, and that they would not do anything, and they were unemployable.

What I am now doing here with this witness is verifying, with this witness, the facts which we told the government,

in black and white, before the government issued the final closing order, and required the mine to shut down.

Mr. Harrison: There is nothing in the record to show that these men left Alaska-Pacific mine, and went to these other places, because the mine was closed; there is nothing to show the foundation for that.

Mr. McGuire: That has nothing to do with it. We told you, we told the government, that this is what would happen [fol. 66] to the men, if this mine were shut down; and the reason why we knew it was because the testimony that this witness was giving just now shows what happened to some of the men.

Mr. Harrison: This witness can't testify that the reason it happened was because this mine was closed.

Mr. Connor: I think we have to have a little sense in this thing. For instance, with Homestake, with all of our records,—are we going to spend three months, taking the testimony of each of our workers. I think we have got to arrive at some sensible way of handling this, or we are going to be on trial for the next ten years.

Mr. Harrison: I am sure counsel for the defendant has no desire to be facetious. I will be glad to let in any evidence that is competent, but if it is not competent, I think it is my duty to the government not to let it in.

Mr. Connor: I think that this is a good time, perhaps, for us to have a meeting of the minds, and let the Comissioner decide the proposition, how he wants us to produce this proof.

I am willing to do it any way the Commissioner wants to do it, but I think we ought to have some understanding along the line some place.

Mr. McGuire: To review the situation for the moment, what I am proving is what became of some of these men who left this mine afte the issuance of L-208, and during the pendency of the appeal filed by Alaska-Pacific, and [fol. 67] based, in part, on the fact that this order would not produce any available manpower for the coal mines in Alaska. This is how the company knew it: They knew that this blacksmith would not go to work out there in a coal mine, but he went out and became a laborer.

So that, when they filed the appeal with the government, they were not talking from fright; they knew exactly what

they were talking about, for these reasons, and this is the man who can testify to it; so it is extremely material, I think, if the Court please.

Now, as to the competency of his testimony, that is another matter; but I think, as to the matter we are talking about now, the question of competency is not in issue, because he saw them in Anchorage.

As to the men who were available, as to where the men went after they left Alaska, that is another question, and we will go into that in a moment.

The Commissioner: The question I asked was, did this exhibit—you have already offered it. There has been an objection, and you asked a number of questions after the objection, to establish the competency of the exhibit. There is no indication that is any limitation in point of time.

How could this witness know what happened after he left?

Mr. McGuire: He doesn't know. He just knows he went to [fol. 68] construction work after the mine was closed down, for some time, and that is material in the case, we say.

Mr. Harrison: Of course, I feel that, in addition to that, there has to be a showing that this particular individual left the mine because of L-208; and the mine was not closed at the time these people left, so L-208 had not taken effect as to the Alaska-Pacific Mining Company; so how can they be charged against L-208? I say they can't, and this witness certainly can't testify what was in their minds, when they left.

Mr. McGuire: I have answered that several times, but I will do it again, Mr. Harrison. You say it is immaterial, unless we can connect it with L-208. I deny that. I say it is completely material, because this shows, and the witness has testified as to what happened to some men, and the records that we got from the government, in the course of our appeals, stated that the men would not leave this mine, who happen to have been laid off at the time of the closure, and would not go into the coal mines. Our people knew that, because they knew what happened to these men.

The Commissioner: I am prepared to rule on the exhibits.

Because of the indication that some of the names—as to where some individuals might have gone, I am going to sustain the objection of the government. I mean that the witness, if he is able to testify where the employees did go,

[fol. 69] may do so; but it seems to me there is a better way to establish the evidence you are attempting to establish.

Mr. McGuire: I am going to do it orally, Your Honor. I was trying to take a shortcut with this exhibit. I will sit here all afternoon, and ask this man what happened to these people, name by name.

By Mr. McGuire:

Q. Now, do you know or did you know a man by the name of Hugo Brodin?

A. Hugo Brodin?

Q. Yes.

A. Yes, I did.

Q. Was he on the payroll in October, 1942?

A. Yes, he was.

Q. Did he leave the employ of the company some time between October, 1942, and the time of the closure?

Mr. Harrison: Let's not lead the witness.

The Witness: Yes, he did. He left the employment after October, 1942.

By Mr. McGuire:

Q. Now, will you state to what employment he went, if you know?

A. Hugo went to construction work on the base.

Mr. Harrison: I object to the answer, without foundation being laid to show the basis for his knowledge.

[fol. 70] The Witness: Merely my word on it.

The Commissioner: Objection sustained.

By Mr. McGuire:

Q. Do you know to what employment he went? Don't say what employment but do you know where he went after he left your employ?

A. To what employment?

Q. Yes.

A. He went to work for one of the contractors on the base that was being constructed in Anchorage.

Q. I am asking you if you know just where he went?

A. Yes, I know.
Q. And on what basis do you know?
A. By meeting the man on the street, and talking to him.
Q. And you met him in Anchorage?
A. In Anchorage.
Q. After leaving your employ?
A. After leaving our employ.
Q. What did he tell you?

Mr. Harrison: Objected to as hearsay.
The Commissioner: Objection sustained.

By Mr. McGuire:

Q. What did you say to him, when you met him?
A. I don't recall the exact words, but "What are you doing?" or "How are you doing?" or something to that [fol. 71] effect, and he told me where he was working, and what he was doing.
Q. And what did he say?

Mr. Harrison: An objection.
The Commissioner: Sustained.
Mr. McGuire: An exception, of course.
The Commissioner: Do you feel that you have any way of establishing this kind of proof?
Mr. McGuire: We can subpoena the records in Alaska.
The Commissioner: No, I am not talking about subpoenaing the records; but it does seem to me that it would be easy to get the Social Security records, on a cooperative basis, so the government can check the Social Security records, and the other accounting records, to know, to see just the employment of the individuals, following their departure from the mine, and that would be something definite.

An individual might have told the witness that he was doing so-and-so, and that might not be the fact.

Mr. McGuire: That may be true, but that goes to the weight, if the Court please, but hardly to the competency.
The Commissioner: There was an objection, and I have got to sustain it.
Mr. McGuire: There are any number of exceptions to the hearsay rule. Here is the general manager of the company, and he tells things that were done in the regular

course of business, and he wanted to find out where a man [fol. 72] went, why somebody left there, and he asked the man, and the man told him.

That may not have much weight, but it is certainly competent and an exception to the hearsay rule.

The Commissioner: If you can show me I am wrong, I will be glad to reconsider my ruling.

We will recess until 2 o'clock.

(Thereupon, a recess was taken in the hearing until 2 o'clock, p.m.)

AFTERNOON SESSION

(The hearing was resumed, at the time above-mentioned, pursuant to the recess previously taken.)

PAUL HORVATH, resumed the witness stand and was examined and testified as follows:

Direct Examination (Resumed)

By Mr. McGuire:

Q. With reference to Plaintiffs' Exhibit AP-2, for identification, which the Court has excluded up to now, it is your testimony, as I understand it, that the names which appear on that exhibit are the names of persons on the pay roll of the Alaska-Pacific Consolidated Mining Company in the month of October, 1942?

A. That is correct.

[fol. 73] Q. And I believe you testified that, as to the names opposite which the asterisk appears, those individuals remained in the employ of the company until the closure?

A. Yes, sir.

Q. The closure took place when?

A. August 8, 1943.

OFFER IN EVIDENCE

Mr. McGuire: If the Court please, I offer, or re-offer Plaintiffs' Exhibit AP-2, for the limited purpose only of establishing the names of the persons on the pay roll as of

October, 1942, and the names of the persons on the pay roll as of October, 1943.

Mr. Harrison: I object to this exhibit.

The Commissioner: It may be received.

(Said pay rolls of Alaska-Pacific, marked "Plaintiffs' Exhibit No. AP-2, admitted in evidence and made a part of this record.)

The Commissioner: The effect of that ruling, and the offer, as I understand it, is to let in the exhibit, consisting of the names and the identification or the classification of the work done by the individual, and the dates, without regard to where the individual may have gone?

Mr. McGuire: That is correct. As I understand, it is not received as proof of the type of work to which the individual may have gone after leaving our employ.

The Commissioner: That is right. I wanted to get that clearly shown.

[fol. 74] By Mr. McGuire:

Q. Now, Mr. Horvath, what other types of mining operations were carried on in Alaska in 1942 and 1943, other than gold mining?

Mr. Harrison: I object to the competency of this witness to answer the question, and I object to its materiality.

The Commissioner: Does he know? If he does know, the objection is overruled.

Mr. Harrison: I would like to say that I object to the answer, until he has first laid the foundation to show that he does know.

The Commissioner: All right.

By Mr. McGuire:

Q. Mr. Horvath, were you familiar with mining operations in Alaska, other than gold mining?

A. Yes, sir.

Q. Do you know the names of all of the companies engaged in mining operations, other than gold mining?

A. No, perhaps not all, but I know a few in the vicinity of where I was located.

Q. Do you happen to know whether there were any min-

ing companies engaged in the mining of copper, for instance,-

A. No.

Q. —in 1942 and 1943?

[fol. 75] A. Copper? None that I know of.

Q. Were there any companies engaged in coal mining?

A. Coal mining, yes.

Mr. Harrison: I am going to object to this line of testimony as being immaterial to this case. If we are attacking an order of the War Production Board, then I think it has to be attacked on its over-all intention and its over-all objectives. I think whether or not, in Alaska, there happen to be some copper or coal mines, is immaterial.

The Commissioner: Objection overruled.

By Mr. McGuire:

Q. Do you know the names of the companies engaged in coal mining?

A. Yes, I do. The closest one to us was the Evans-Jones Coal Company, just about 40 miles out of Palmer, Alaska, and the other one was just about in Fairbanks, itself, known as the Healy River Coal Company.

Q. There were only two coal mining operations in Alaska, during 1942 and 1943?

A. Yes, to my knowledge, that is true; that is all there were, at that time.

Q. How far was the Healy River Coal Mining Company from the mine of the Alaska-Pacific Consolidated Mining Company?

A. Healy River was perhaps 150 miles farther north.

[fol. 76] Q. Now, were you familiar with the experience of the mining employees in the employ of the company in October, 1942, previous to the closure?

A. I didn't get the question?

Q. I said, in the course of your duties, did you become familiar with the previous experience of the personnel of the mining employees of the company in 1942?

A. Yes.

Q. Was it a part of your duty to learn what their prior employment experience had been?

A. Yes, it was. As hiring agent, naturally I checked the references, and so on, to a certain extent.

Q. Now, were there any persons in the employ of the company in October, 1942, who had had experience in coal mining?

Mr. Harrison: An objection. Perhaps it is best that I just register a continuing objection to anything that may come along, because I don't think what happened in this particular company and what type of experience their men happen to have is at all material to the issue, as I see it, and the only issue is whether the War Production Board arbitrarily issued the order.

I think that the over-all figure—I mean, as far as what was in the mind of the War Production Board, was reasonably calculated—that is, that the order was reasonably [fol. 77] calculated to obtain an ostensible purpose, and the fact that, with one company, certain conditions did or did not exist, I cannot see is material. If it concerns the over-all picture of gold mining operations, that might be material, I don't know, but I certainly don't think that what one particular company's circumstances were is material.

The Commissioner: The objection may be shown in the record.

Mr. Harrison: As to all of this line of testimony?

The Commissioner: Yes.

Mr. McGuire: The objection is overruled?

The Commissioner: Yes.

By Mr. McGuire:

Q. Will you answer the question?

A. The question was, how many men had had previous coal mining experience?

Q. Yes.

A. To my knowledge?

Q. Yes.

A. In looking over this list, very few. In fact, I think I can give you an accurate figure. To my knowledge only about three men.

Q. Three men?

A. About three men, and one not necessarily as a coal miner, but worked in a coal mine as a blacksmith.

[fol. 78] Q. When you say you looked over this list, you

are referring to the list of persons on the pay roll as of October, 1943?

A. That is correct.

Q. Now, have you had occasion to become familiar with the attitude of gold miners towards entering the employ of coal mines?

A. Yes, I think I have.

Q. What is, generally, their attitude, and particularly, with respect to the personnel employed by the Alaska-Pacific Consolidated Mining Company?

Mr. Harrison: I object to the witness being asked to testify what the attitude of someone else is. How does he know what their attitude is?

The Witness: I have been a miner myself, and I should know.

Mr. McGuire: He testified that he was an employee of this company for five years, and lived with these men every day, and he certainly ought to be able to tell what their attitude was.

The Commissioner: You are asking about somebody else' state of mind, are you not?

Mr. McGuire: I am asking, in general, the attitude of gold miners to coal mining.

The Commissioner: I will overrule the objection. We [fol. 79] don't have a jury here, and I can settle this question, myself.

By Mr. McGuire:

Q. What is the attitude of gold miners, generally, towards entering coal mining?

A. Generally, it is not favorable. Most gold miners, or hard-rock miners, as we call them,—they never have had experience in coal mining, which is an entirely different field, a different line. They don't care for the coal mines. First of all, it is very hazardous work, and gold mining is just the opposite: you don't have the hazards in gold mining that you have in coal mining. That is probably the primary reason.

Q. Just for the record, would you give some details as to the differences between gold mining and coal mining?

Mr. Harrison: No, Just a minute!

By Mr. Harrison:

Q. Have you ever been a coal miner?
A. No, sir.
Q. Have you ever been in a coal mine?
A. Yes.
Q. How many times?
A. Perhaps half a dozen times.
Q. What were you doing there?
A. Visiting the coal operators up there.
[fol. 80] Q. Did you ever study coal mining?
A. No, sir; I never did; just general knowledge.
Q. When were you in these coal mines?
A. During the years, perhaps, 1942 or 1943.
Q. Which mines were you in?
A. I was in, I think, about all of them. I was in the Evans-Jones coal mine, and also in a few prospects that had been shut down, or were inoperative, and one of them was the Buffalo Coal Mining Company, looking at it with the engineers, years ago, with the possible prospect in mind for our company to go into, but it never materialized, and we never took it on.
Q. You never did any coal mining, yourself?
A. As a worker, no, sir.

Mr. Harrison: I don't think this man is qualified to answer the question as to the difference between coal mining and gold mining. He might know about gold mining—he says he has done that—but I don't know how he could draw the contrast between coal mining and gold mining, when he hasn't done it.

The Commissioner: Overruled.

The Witness: First of all, the difference in coal mining and gold mining is quite basic and elementary, in that, first of all, entirely different machinery and equipment is used; entirely different machinery and equipment; in fact, en-[fol. 81] tirely different mining practices are used. I would have been a novice, myself, in the coal field. I admit I know nothing about coal mining, because it is so different from hard-rock mining. I just noticed it as an observer.

By Mr. McGuire:

Q. A man skilled in using gold mine machinery would not necessarily be able to use coal mining machinery?

A. No; that is correct.

Q. Or different types of tools employed?

A. Yes; different machinery, and different safety factors that are employed in coal mining, that you do not have in gold mining.

Q. Are you referring principally to the question of the explosive conditions in coal mining?

A. That is correct, which is, I would say, one of the basic differences, from my observation of coal mining.

Q. To your knowledge, did many of these men in the employ of the company in October of 1942, enter the employment of either of the two coal companies in Alaska?

A. As I say, a few did, enter into the Evans-Jones Coal Mine, that I know about, yes.

Q. How do you know that they did?

A. How do I know?

Q. Yes.

A. I know by having talked to these men. We re-em- [fol. 82] ployed several of them after our reopening in 1949, and I think the records of the coal mining companies show that, if you want to look into them.

Q. You said a few men. About how many would you say?

A. Let me take a look at my list here, and maybe I can give you the exact figure. That is from October, 1942, you are talking about?

Q. Yes, October, 1942.

A. I know of four men, from October, 1942.

Q. By the way, I forgot to ask you earlier, but you said you were operating two mills at Wasilla at the time of the closure. Did you have any more than two mills on hand?

A. Yes; we had an extra mill on hand, but not in operation; in fact, not installed.

Q. A spare mill?

A. A spare mill, completely spare mill, yes.

Q. What was the capacity of these three mills?

A. Well, these mills were what we term 35-ton-capacity. Marcy gold mills. When I say 35 tons, they were rated at 35 tons, and that means 35 tons minimum output. How-

ever, their tonnage may have varied, depending on the liners in these mills at certain stages; and perhaps the output might have been 50 tons, per day, on these mills, but at other times only 30, because of the heaviness of the liners. As you use them, you gain more grinding space, and you handle more tonnage, but they are rated at 35 tons.

[fol. 83] Q. Were you familiar with the underground workings, at the time of the closure?

A. Yes, I was.

Q. Just what was the extent of these workings; will you give us some approximation of the mileage involved?

A. Of our underground workings?

Q. Yes.

A. I would say, roughly, five miles of workings.

Q. That included not only the entry tunnels, but also the cross courses?

A. I might explain that, or clarify it better by explaining the type of mining that it was.

We went into the hill at our camp level, or main haulage level, which, in that case, was just about a mile long, to get to what we called our working race. This race goes up into our workings, up in the tunnel into the mine, and from there we had take-offs at various levels, from which we had either production or development work going on.

Q. Were these workings timbered?

A. Sir?

Q. Were these workings, in part, timbered?

A. Were they timbered?

Q. Yes.

A. Yes, some were timbered and some were not. In hard [fol. 84] rock mining you have many areas where you go through solid granite, where timbering is not necessary. Timbering is just generally put in places where it is necessary.

Incidentally, that particular mine was recognized as a very safe mine, in very good, solid ground, and timbering was generally carried on to a minimum, and it was not necessary in many places.

Q. Was it a dry mine, or a wet mine?

A. Well, some areas were wet, and some were dry. That is a hard question to answer. Some areas were extremely wet, and others were extremely dry. The reason I say that,

I worked in the south workings, myself, in the early years, and that was just as dry as a bone, as opposed to the north workings, that was so wet that we couldn't put clothing on and stay dry.

Mr. McGuire: If the Court please, there was a suggestion made, prior to the recess, that if the plaintiff would supply a list of the men involved, the government would undertake to obtain from the Social Security Administration such information as the Social Security has with respect to the subsequent employment of these men, after they left the employ of the Alaska-Pacific Consolidated Mining Company; and I would like to be certain that the government would do that, and supply that information for the Court, before I close.

The Commissioner: I think we had better furnish one [fol. 85] additional bit of information along with that,—the numbers.

Mr. McGuire: The numbers, yes.

Mr. Harrison: Well, I am not going to commit the government to do that. Of course, I am not the regularly assigned counsel, but my position at the present time, as defense counsel's position, that it would be asking the government to undertake a great deal of work to try to help the plaintiff prove something which is, in the government's view, completely immaterial to this case.

Furthermore—

The Comissioner: I think, as Commissoner, I am going to call upon the government to cooperate with the plaintiffs in getting the information sought. The plaintiffs could file a motion for call and get the information.

Mr. Harrison: If he files a motion for call, we would have the opportunity of outlining why we feel we should not be put to that burden. If all of the gold mines did the same thing, we might have, conceivably, hundreds of names to look up, and the task of doing that would be very great, I imagine; and I actually think, myself, that the important think is not the individual man, but if they want to try to introduce some proof as to how many men went to what we call essential mines, they can do that by more competent statistics of the particular employment by the particular companies, and I don't think that would be material, either. [fol. 86] I think the only thing that is material is that,

at the time this order was promulgated, what information was available, and what rights, what reasonable rights did the WPB have to expect certain results. Whether the results were obtained, or not, I think is immaterial; but speaking for myself, and as government counsel presently sitting in the case, I certainly could not commit the government to voluntarily assuming the job of working up all of these names.

The Commissioner: I am going to use, as I say, whatever authority, as Commissioner, I have, to require the government to do that, and even though Mr. Harrison is not able to make the commitment, I am going to see if it is at all possible, when I return to Washington, to take the matter up with Mr. Barnes, and I will ask that he communicate directly with Mr. McGuire on this point.

Mr. McGuire: Would that also include the request that the government check the records of the Alaska Employment Compensation Commission, because certain men may have obtained no other employment.

The Commissioner: Is that a government agency?

Mr. McGuire: That is an agency of the Territorial Government.

The Commissioner: If that is a Federal Agency, I think that might be in order.

[fol. 87] Mr. McGuire: Yes.

The Commissioner: But I would not call upon the Federal Government——

Mr. McGuire: It is the Territorial Government, which is a part of the Federal Government.

As I understand, Your Honor is taking the position that this witness' testimony, as to the subsequent employment of the individuals, after leaving Alaska-Pacific, is incompetent, is based on hearsay?

The Commissioner: Most of the testimony that he has given heretofore, based upon that point, was subject to that objection which was made. If he has actual knowledge concerning any subsequent employment of a man, I would rule that that is competent.

Mr. Connor: Your Honor, it is my understanding that the Homestake and Central Eureka and Idaho Maryland—that we have an understanding with Mr. Barnes to the effect that, if we submit to him—if we supply him with a list

of our employees at least six weeks before January 26, he will endeavor to have the FBI check the accuracy of our list; is that your understanding?

The Commissioner: To the best of my recollection, it is, yes.

Mr. Connor: So that won't involve these hundreds of workers that Mr. Harrison talks about, or the Social Se- [fol. 88] curity records. We are working on those lists, and are going to have them to Mr. Barnes, so he can have the FBI check the accuracy of the lists.

The Commissioner: What is that list going to contain?

Mr. Connor: It is going to cover everybody in our employ on October 8, 1942.

The Commissioner: Just to show the number of people?

Mr. Connor: And where they went, and what they did afterwards.

Mr. Barnett: And that information, Your Honor, is secured from the business records of the Central Eureka, the Homestake and the Idaho-Maryland, verified by Social Security data, which we have, and other business records, the thought being that the FBI would spot-check that information that we have at the mine, and the other plaintiffs have at their mines, at least six weeks before the hearing set in January.

Mr. Orrick: Your Honor, please, Mr. Barnes, according to my understanding of what took place at the pre-trial conference, said that, if we furnished him information from the records, including the name of the miner, the birth-date and employment records, the previous underground experience, the dates of re-employment, and their status, as our records show it at the date Order L-208 went into effect,—that, subject to check by the FBI, a summary of those records would be admitted for what they proved.

[fol. 89] Mr. Barnett: Then the other items to be included with that—I won't burden the record with that—whether they were properly handled, and so on, but that was our understanding with Mr. Barnes.

The Commissioner: It might be possible to get an agreement out of Mr. Barnes, and let the list in, but I don't know.

Mr. Barnett: We realize that Mr. Harrison, coming into the thing, knows nothing of what occurred in the pre-trial conference.

Mr. McGuire: We have no such records in our company, indicating what became of these men, other than as shown on Exhibit 2.

Mr. Harrison: Of course, it is understood that any arrangement with Mr. Barnes is unknown to me, and of course I don't know what reasons he has had for making such agreements, or anything else. To me, such data would be —from my view of the case—immaterial, but if he takes another position, of course, that is Mr. Barnes' privilege.

Mr. Barnett: Well, I don't think the stipulation went as far as materiality; I think that was a reservation, but it merely was entered into in the spirit of saving the time of the Court and our time, to the effect that, if we were to examine the records, they would show such-and-such facts.

Mr. Orrick: And it was entered into before all the [fol. 90] parties at the pre-trial conference, when this matter was discussed.

Mr. Harrison: It is not incorporated in the pre-trial memorandum.

Mr. Orrick: No, no.

Mr. Harison: I have no knowledge of that, other than what I have heard.

The Commissioner: I recall some of the discussion. Frankly, I don't recall all of the details of the discussion, and I do remember that it was not incorporated in the pre-trial memorandum, and I don't know why we didn't incorporate it, but I think it can be worked out, but I will caution counsel to get their material together as rapidly as possible, because the job of checking it might be of some extent.

Mr. Barnett: We have ours all ready,—as soon as we get back to our correspondent in Washington, it will be ready for forwarding to Mr. Barnes.

Mr. Harison: I might ask counsel to state for the record the reason why they desire to present that evidence.

Mr. Barnett: I think we have to wait until it is offered back in Washington, at that time. We consider it a material part of the case.

Mr. McGuire: I don't mind stating for the record, as far as Alaska-Pacific Consolidated is concerned, as far as the materiality is concerned, we will offer, with a subsequent [fol. 91] witness, a letter from the War Production Board,

denying the final appeal of Alaska-Pacific on the ground, and the sole ground, that the government—the War Production Board and the War Manpower Commission, wanted our people to go into the coal mines.

That, of course, is the reason for the mentioning of the coal mining, which Mr. Harrison objected to this morning.

Mr. Barnett: If you look at page 15 of the Court's decision, counsel, there are certain items mentioned there that might help you.

Mr. Harrison: Well, of course, my feeling, without being too repetitious, is that the evidence should be directed at the WPB's factual information at the time that this order was promulgated, and that reasonably expect; was it reasonable for them to expect certain things, and the evidence, as I see it, that you are trying to get into the record, would show what, in fact, happened.

Mr. Barnett: That might be a defense mechanism, but we are trying to follow what the Court of Claims suggested that we prove.

By Mr. McGuire:

Q. Mr. Horvath, will you take Plaintiffs' Exhibit AP-2, which is the plaintiff, Alaska-Pacific Consolidated's October payroll, and state, as to every man named thereon, what employment he obtained after leaving Alaska-Pacific, [fol. 92] if you know of your own personal knowledge, or by reason of factors other than conversation with that man, or conversation with someone else?

A. By reason other than conversations?

Q. Yes.

A. Well, as I say, the first name on the list, Ruple Adams, I actually saw that man working at the North Commercial Company in Anchorage.

Q. What kind of employment was that?

A. The North Commercial Company of Anchorage is a large general agency, handling everything from Buicks to Caterpillar dozers, hardware and machinery, and everything down to food; they are one of the largest operators of that type in the Territory of Alaska.

By Mr. Harrison:

Q. When did you see him, and what was he doing?

A. When?

Q. Yes.

A. I don't know the exact date, but sometime after his discharge from our company, sometime after October, before I went to the States.

Q. Do you know when he went to work there?

A. Not exactly, no, sir.

Q. Do you know how long he stayed there?

A. He was there until 1949, or maybe 1950.

[fol. 93] Q. How do you know that?

A. Because I was there the day after he was fired from the job, for sleeping on the job. That is a fact. I was right there, and I know that.

Mr. Harrison: I think I might save counsel a lot of time——

The Witness: I think that can be proved.

Mr. Harrison: I am going to object, because I don't think what you are competent to testify to is enough, and I think we ought to have that in the record.

All you can say is, you saw him working in a certain place, at a certain time.

The Witness: He waited on me, and actually took care of me, and sold me items out of that store; so I know he was actually employed there.

By Mr. Harrison:

Q. You know he was employed there, and when he left there, but could you say that he was working there continuously from the time you first saw him until he was fired?

A. Yes.

The Commissioner: I am going to ask counsel to state the objection, if he can, but otherwise save the questions for cross-examination.

Mr. Harrison: Well, I object to the answer of the witness, and I move that his answer be stricken, because I do not think that he is competent to testify to any facts

[fol. 94] concerning the employment of Mr. Adams that is material to this case.

The Commissioner: Overruled.

By Mr. McGuire:

Q. You may proceed, Mr. Horvath.

A. I am trying to pick out these men who were actually here, and discounting what I say about talking to the men,—I am trying to pick out the men I actually saw working on different jobs; they are very few, and he happened to be one.

Mr. Harrison: Could I make the general objection that, even though they might be working on a job, there is no guaranteeing that that was the job they went to when they left the mine.

The Witness: That had to be that particular man's work.

The Commissioner: The witness will not reply, unless a question is asked of him.

The Witness: I am sorry.

Mr. Harrison: I made an objection to the question.

The Commissioner: Overruled.

The Witness: Max Bohman—he went to work in—I don't recall what restaurant it was, offhand, but one of the restaurants in town, where I saw him working.

DeJohn, Henry, I actually saw him the night he went back to his little cabin on the other side of the hill, as a prospector, and I talked to him many times, and I saw him [fol. 95] picking up ore that was deposited along the hill. He was then about 70 years old.

John Gary, who went to Anchorage and opened a private business as a sheet metal shop, in partnership with his son, and carried on the business all during the war years.

Mr. Harrison: These are all statements, but I would like to know how you know these things?

The Witness: I saw them. I saw the men, and I talked to them. I know these people.

Mr. Harrison: You talked to them—you might have talked to them, but we are trying to prove a fact, but you can't prove that fact by something they told you.

Mr. Connor: Can we reserve this for cross-examination?

The Commissioner: I think it should be, unless you have an objection.

Mr. Harrison: I object that no foundation has been laid to show this witness is competent to answer that question.

The Commissioner: Objection overruled.

The Witness: Shall I continue?

The Commissioner: Yes.

The Witness: Harry Dunn is down at Louisiana, raising tung trees.

By the Commissioner.

Q. Did you see him at Louisiana?

A. No I didn't but I have a letter stating that. He was [fol. 96] a very good personal friend of mine.

Henry Gable returned to the States, to his ranch in Merced, for retirement. He was an old man, too. I saw him once after that.

Edward James went to work in Anchorage, as janitor in various bars, and in fact, he worked for Harry O'Neal, and at different bars, and was still there the last time I saw his in 1949.

Mr. Harrison: I am going to stick to the original objection, that no foundation has been laid to show the witness is competent to answer the question.

The Commissioner: Overruled.

The Witness: Charles Janich, he went to Anchorage, went to work in a hotel there, the Fifth Avenue Hotel, and is still there. He has been there all of these years.

Oscar Johnson, after the closure, remained on at the mine as a watchman for a time, and then took up his residence in Wasilla, where he owns a home, in semi-retirement, doing odd jobs as a carpenter throughout the valley.

Robert Johnson, his brother, went to the Evans-Jones Coal Mine as a blacksmith.

Thor Johnson, he went to the coal mines, also.

Chester Liebing, he went to Palmer, and became a farmer, in addition to doing odd jobs about the countryside there.

Charles Liebing, his father, likewise went into the same [fol. 97] kind of work.

That is all that I see, that I recall directly.

By Mr. McGuire:

Q. As a part of your duties, in charge of hiring and firing, did you inquire of these men who left your employ, to determine what they were doing after leaving your employ?

A. Did I ask what they were going to do?

Q. Yes.

A. At the time of departure?

Q. Yes, that's right.

A. On occasion, yes. In fact, towards the end of the period, we were required by the particular government agency to give a termination notice and, generally, we included on that notice where they were going. I think those records still are on file in the Alaska office.

Q. And in connection with your duties, in attempting to hire new employees, did you have occasion to talk to these men, at any time subsequent to their discontinuing of employment with the company, in an effort to determine whether or not they were still available for employment?

A. Yes; I saw some of them, quite often, in fact; every time I was in town.

Q. Did you, through those efforts, acquire information from the men as to what they were doing?

A. Yes, sir.

[fol. 98] Q. And was the balance of your information, with respect to the subsequent employment of these men, gained through such conversations?

A. That is correct.

Mr. McGuire: If the Court please, I don't want to take up the time of the Court, particularly, on this subject,—I am a little bit afraid that this Social Security information will never be produced, or if it is produced, that it will be in a form that we will be able to use. Therefore, I will ask the witness to testify with reference to one of these men, and if the Court excludes the testimony, I will make an offer of proof, with reference to the balance; so we will be in position, at least, to have a record of the information.

The Commissioner: All right.

By Mr. McGuire:

Q. Now, with reference to Millard J. Gowenlock.

A. Yes.

Q. Did you have occasion to talk to him, after he had left the employ of the company, to determine what employment he had secured.

A. Yes; many times on many occasions. He was a very close personal friend.

Q. And in the course of his conversations, did you learn from him what employment he was engaged in, after leaving Alaska-Pacific?

[fol. 99] A. Yes, sir.

Q. What was that employment?

Mr. Harrison: An objection.

Mr. McGuire: I understand the same objection will be made, although the balance of the employees whose names I give—in other words, the same ruling will be made.

The Commissioner: Yes.

Mr. McGuire: Therefore, I would like to make an offer of proof with reference to this man.

The Commissioner: You can do that by question and answer, if you prefer, or by a narrative statement.

Mr. McGuire: I prefer to make a narrative statement.

The Commissioner: All right.

Mr. McGuire: If the Court please, the witness would testify, if asked and permitted to answer, as to the following—with reference to the following-named men:

Ruple Adams, went to the N. C. Company, Anchorage, Alaska, and designated as over age.

Gust Abrahamson, to smaller gold mines.

Joseph Arkus, to other camps as flunkey.

Ward Beatty, to smaller gold mines.

Max Bohman, to cooking jobs about town.

Roy Boedecker, to smaller mines, gold prospecting.

John Brink, to town, and engaged in no employment; loafing about.

[fol. 100] Hugo Brodin, went to Anchorage, and loafing about, just a floater.

Carl Carlson, to Anchorage, a floater.

Victor Crosby, to Anchorage, a floater, loafing about, no employment.

The Commissioner: Some of those names do not appear on our list.

Mr. McGuire: Yes, I believe they do; they should.

The Commissioner: The last two do not.

Mr. McGuire: Let me give the names, and we will put this list in the record.

The Commissioner: All right.

Mr. McGuire: Lester Davis, to Anchorage, a drifter, no employment.

Gust Dauoff, to Anchorage, loafing about.

Henry DeJohn, went to the hills, as a prospector, and then retired.

Edwin C. Doyle, to the coal mines.

Harry Dunn, to Anchorage, in private business.

John Dempsey, went to the States as a compensation case.

Edward Egland, to smaller mines.

William Fogg, to Anchorage, where he went into construction work.

Frank Fay, to Anchorage, kitchen and flunkey work.

Jack Fabian, to Wasilla, unemployed.

[fol. 101] Robert Frendahl, to Anchorage, general work about town.

Leo Fesl, to Anchorage, floater, unemployed.

Henry Gable, to States, over age, and retired.

Spero Gust, to Anchorage, loafing about.

Henry Hagemenn, to Anchorage, loafing about, no employment.

Olaf Holmberg, to Anchorage.

John Hovland, to the States.

Edward James, to Anchorage, worked as janitor in bars.

Charles Janich, to Anchorage, working about city hotel.

Ivar Johnson, to Anchorage.

Oscar Johnson remained at the mines as watchman.

Robert Johnson, to the coal mines.

John Johanson, to Anchorage.

Thor Johnson, to coal mines.

Mike Kossof, to Anchorage.

The witness has already testified to the Liebings, the father and son.

Roy Lynch, to Seattle.

Joseph LeGlanic, to Anchorage, unemployed.

Matt Lane, to Palmer, died shortly after leaving mine.

Tony Markel, to Anchorage, unemployed.
George Massoz, gold prospector.
Dan McDevitt, to Anchorage, construction work.
Patrick McDermott, to town, unemployed.
[fol. 102] To town, I presume, means Wasilla.
Angus McDonald, to Wasilla.
Edward McGinley, to Palmer, unemployed.
Eddie McKinney, returned to the States.
Charles McLaughiin, he went to Anchorage.
John McNeil, to Wasilla, unemployed.
Angus McPhail, to Anchorage, unemployed.
Peter McPherson, to Wasilla.
John Nelson, to the States.
Charles Nickovich, to Wasilla, unemployed.
A. Nowicki, to Anchorage, cooking jobs.
Peter O'Hare, to Anchorage, unemployed.
Sam Pavlica, to construction work in Wasilla.
Ralph Perich, to construction work, and has subsequently died.
George Pittiff, to Wasilla, unemployed.
Alfred Perry, to Wasilla.
Charles Radosevich, to Anchorage, unemployed.
William Reskwess, to Anchorage, unemployed.
Robert Shimdorf, to Anchorage, construction work.
George P. Smith, to the Armed Services, then discharged after about six months for over age, then went to prospecting.
Edgar Smither, Anchorage, unemployed.
John Stevens, to Anchorage, unemployed.
Ed Solderquist, to Anchorage, unemployed.
[fol. 103] Clyde Thorpe, to Wasilla, retired.
Mike Tomanovich, to Anchorage, construction work.
R. L. Vancil, to Anchorage, unemployed.
Rasmus Wadsten, to Anchorage, unemployed.
Ferma White, to Seattle, and since deceased.
John Saiz, to Anchorage, unemployed.

By Mr. McGuire:

Q. Now, at this point, I would like to ask you, Mr. Horvath, if the list of names that I have just read is not a list of the names of the men who were on the pay roll of the company, at the time of the closure?

A. They were on the pay roll at the time of closure.

Q. At the risk of repetition, I am going to ask the witness again on what date was the closing order effective as to the Alaska-Pacific Consolidated Mining Company?

A. August 8, 1943.

Mr. McGuire: The witness would also testify, if permitted to answer, the following-named men, who were on the pay roll as of October, 1942, but who left the employ of the company, prior to the closure date, engaged in the following employment after leaving the company:

George Bahns, to construction work.

The Commissioner: Couldn't you tie that in with the exhibit, without reading it?

Mr. McGuire: Yes; that the witness would testify, if [fol. 104] permitted to answer, that the men whose names appear on Plaintiffs' AP Exhibit No. 2, with the notation after their names as to some particular type of employment, after leaving the employ of the Alaska-Pacific Consolidated Mining Company.

The Commissioner: Very well.

By Mr. McGuire:

Q. Now, Mr. Horvath, did the company produce for sale anything other than gold?

A. Well, we produced a little sheelite ore, during the tail end of our operations.

Q. Was any concentrate shipped for copper smelting operations?

A. Yes; we produced a concentrate from the flotation process, which was shipped monthly, and bi-monthly to the Tacoma Smelting Company, by rail and by boat.

Q. And approximately what tonnage, per month, of that type of concentrate was shipped?

A. I would say between 40 and 50 tons per month.

Q. Do you know what use was made of that concentrate by the Tacoma Smelter?

A. Oh, yes; they used it as a fluxing agent.

Mr. Harrison: Would you prefer that I wait for cross-examination to ask him the basis of his knowledge of what use they made of it?

The Commissioner: No, you can ask him preliminary [fol. 105] questions.

By Mr. Harrison:

Q. I would like to know how you know what they used it for?

A. Well, that is a good question.

Q. Do you know that any of the concentrate that you sent them was used by them for any particular purpose?

A. I know, by reason of having seen letters from those people, stating what they did with our product, yes, sir.

Mr. Harrison: Objected to, as hearsay.

Mr. Montgomery: We will produce a man from the smelter, if the Court please, who will show what use they made of it.

Mr. Harrison: As to this witness, I object.

The Commissioner: All right.

Mr. McGuire: Very well.

By Mr. McGuire:

Q. Now, you referred, a moment ago, to sheelite. Will you explain for the record what sheelite is?

A. Well, sheelite is an ore generally found in a quartz base, which is used in—well, like in tungsten. Sheelite ore is used in producing tungsten.

Q. You say that, towards the period immediately prior to the closing, the company engaged in the production of sheelite ore?

A. Yes, sir, they did.

[fol. 106] Q. And did the company acquire any special equipment for that purpose?

A. Yes, sir, they did, considerable equipment, that is, in the location of the sheelite, and also in the sorting of the sheelite, in going over the sorting belts,—the ore goes over the sorting belts. In detecting sheelite, the only way it can be detected is by being put under the rays of an ultra-violet ray lamp, which shows it up, and which requires a considerable amount of time and equipment, in order to do that.

Q. Was application made to the War Production Board for priorities for the equipment necessary to trace and to separate the sheelite?

A. Yes.

Q. Were priorities granted for that purpose?

A. Yes, they were.

Q. Can you tell the Court whether or not tungsten was regarded as a critical material, at the time in question?

A. Yes, it was highly critical.

Q. Was the government making any effort to determine a source of tungsten in Alaska, at that time?

A. That, of course, is a question——

Mr. Harrison: Before you answer, I object to the witness' competency to testify what the witness—to testify what the government was trying to do, at that time.

[fol. 107] The Commissioner: He might know about it. If he knows, he may answer.

Mr. Harrison: He may not know what the government was trying to do, but he can testify what he actually knew they were doing.

The Commissioner: He may know.

The Witness: As to what the government—I know that they were limiting it to our particular operation—they were interested in what we were doing in sheelite recovery.

By The Commissioner:

Q. How did you learn that?

A. How did I learn of that?

Q. Yes.

A. By the various correspondence that we exchanged with Mr. Stewart, in the Bureau of Mines, at Juneau. Other than that, I don't know of anything else specific.

Mr. McGuire: The witness is available for cross-examination.

Cross-Examination.

By Mr. Harrison:

Q. Mr. Horvath, you gave some testimony to the effect that coal mining and gold mining were essentially different types of work. Would you say that about gold mining and copper mining?

A. I know nothing about copper mining.

[fol. 108] Q. You know nothing about copper?

A. I know nothing about copper mining, no.

Q. When you say you know nothing about copper, do you also mean that you know nothing about the equipment used in copper mining?

A. Only from hearsay, by the miners who worked in copper mining, that is, that the equipment is similar as used in gold and copper mining.

Q. It is——

A. It is similar, yes.

Q. Now, you made a statement about inventory of supplies that were on hand, at the time of the closure of the Alaska-Pacific Consolidated Mining Company's gold mine, and you made the general statement that you had a tremendous supply on hand,—enough to go ahead for a year or a year and a half, without getting any more.

Now, I want to ask you about some of these things, specifically. What type of explosives were used by Alaska-Pacific?

A. Well, we used the regular gelatin base dynamite of different strengths; in fact, generally our biggest user was what we call 40 per cent powder. We used 30 per cent, 40 per cent and 60 per cent. The strength of the powder was the use of the strength was more or less determined by the hardness and the nature of the ground.

[fol. 109] Q. Does this powder come in bales or cans, or sticks?

A. It comes in sticks, packed in wooden boxes, 56 sticks to the box.

Q. 56 sticks to the box?

A. Yes; it is generally by weight.

Q. How many sticks are used, per day?

A. How many sticks were used, per day?

Q. Yes, were used, per day, by Alaska-Pacific?

A. It varied.

Q. Well, approximately? What would be your idea? Give me some idea.

A. I would say five, six, ten cases per day.

Q. Five or six to ten cases?

A. Yes.

Q. How many cases did you have on hand when the mine was closed?

A. I would have to look at the records to tell that.

Q. You said you had enough supplies to go for a year or a year and a half.

A. Yes, that's right.

Q. Would you say that——

A. There must have been 1500 or 2,000 cases, or something like that.

Q. 1500 or 2,000 cases?

A. Yes, something like that.

[fol. 110] Q. You mentioned lubricants. What are lubricants used for in a mine?

A. Lubricants were used primarily in the power plant.

Q. The power plant?

A. Yes, for various oil needs, in the diesel transmission units, and crankcase oil, and so on, and they go underground for your various mining machinery, operating the mining machinery, and also on the rolling stock, Caterpillars, and so on.

Q. What kind of lubricants, primarily, did you use?

A. Primarily, we used what we call Shell high-duty 40, and we used it throughout all of our diesel engines in the power plant——

Q. Shell high-duty 40?

A. Shell high-duty 40.

Q. How much Shell high-duty 40 would you say you used per week?

A. I would say, a barrel, or a little less,—a 50-gallon barrel, or a little less.

Q. Haw many barrels were on hand, when the mine was closed?

A. Oh, I would say there were maybe 90 or 100 barrels of that particular number, at least, offhand, as I recall. I know there was quite a little of it on hand.

Q. Now, if you only had 90 to 100 barrels on hand, and [fol. 111] you used——

A. A barrel a week.

Q. A barrel a week of oil, it looks like you had plenty. There was plenty of oil there.

A. That is an item that we had plenty of. You see, we bought in carload shipments on the oil, in order to save money on the transportaion costs.

Q. You mentioned chemicals. What kind of chemicals did you have?

A. Well, we used, primarily, in our flotation unit, an

agent called zanthates and fine oil, and a combination of the two is the basic ingredient for floating the ores. Now, it takes very little of it to float ore, and that particular item we had in great quantity, I know.

In fact, we had several others on hand, that we had been experimenting with, too, as I recall, from—well, I can't think of the chemical company, but one of the large chemical companies.

Q. Dow Chemical Company?

A. No, not Dow. There were two other companies, and——

Q. DuPont?

A. No; American Cyanmid Company.

Q. Well now, going back to your testimony about all of these supplies that you had on hand, what did Alaska-Pacific do with all of the supplies after the mine was closed?

[fol. 112] A. Well, those items, of course, were hard items, and merely stored.

Q. Merely stored?

A. Yes. Some of them were sold. The perishable items were sold to different agencies, such as the Alaska Road Commission, the Alaska Railroad. They were sold everywhere. In some cases, some of the hard stuff was sold, also.

Q. And when these sales were made, they were made with the approval of the War Production Board weren't they?

A. I don't know whether there was a requirement there for approval. After the closure, I questioned whether the War Production had any control over the sale of merchandise; they didn't, to my knowledge.

Mr. Connor: I think if the government can tell us what control the government had, or the War Production Board had——

Mr. Harrison: Wasn't Order L-208 amended, so that the sales, which were made available by the closing of mines,—that they could be bought and sold only under certain restrictions?

Mr. McGuire: I think there was some kind of amendment like that, but I think, if you tell the witness what it was——

Mr. Harrison: We are operating in the case without the

basic order having been introduced in evidence, as far as I know.

[fol. 113] Mr. Orrick: I don't recall that the order was amended.

Mr. Harrison: Yes, I think it was, very definitely, amended two or three times.

Mr. Barnett: I think under Order 56, preference order 56, there was some invitation sent to the War Production Board; they tried to get the mines, on a voluntary basis, to sell and dispose of critical materials.

Mr. Connor: I do not think there was any requirement about getting permission.

Mr. Harrison: Off the record, please.

(Here followed discussion off the record.)

Mr. Harrison: I have no further questions.

Mr. McGuire: I have a little redirect examination.

Redirect Examination

By Mr. McGuire:

Q. Mr. Horvath, do you know of any copper mines in operation in Alaska at the time of the closure?

A. No, sir.

Q. Do you know of any other type of non-gold mining operations, other than coal?

A. No, sir.

Q. Now, you stated that you had supplies on hand sufficient for a year or a year and a half of operation.

The length of the operation would depend upon the rate of operation, would it not?

[fol. 114] A. Correct.

Q. When you said a year to a year and a half, you mean a 2-mill operation, the type of operation Alaska-Pacific had been doing?

A. As they had been, yes.

Mr. Harrison: We have not been told how they had operated.

By Mr. McGuire:

Q. Do you know how Alaska-Pacific was operating; whether on a 2-mill basis, or not?

A. On a 2-mill basis, I would say, yes.

Q. And on a one-mill basis?

A. And on a one-mill basis, perhaps a year and a half, or even longer, on a one-mill basis.

Q. Now, do you know whether or not the company was planning to go to a continuous two-mill basis, or only a one-mill basis, at or about the time of the closure?

A. Well, as a matter of fact, no decision had been made. We were thinking of going to a one-mill operation, and making it more efficient. No definite policy had been decided upon.

Q. Now, I believe you testified you returned to the mine in 1949?

A. That is correct.

Q. For how long a period?

A. 1949, I was there for a full year.

[fol. 115] Q. What was your position, at that time?

A. I was the general camp superintendent.

Q. Do you have occasion to examine the inventory of supplies, at that time?

A. Yes, I did.

Q. Could you tell whether or not the supplies on hand, at that time, were the same supplies which you had in the inventory, at the close of the mining in 1943?

A. Many of them were, yes.

Q. How about the supply of powder; was that the same powder that was stored in 1943?

A. A lot of it was, yes.

Mr. Harrison: Well now, unless the witness can show that there was some way that he could positively identify the powder as being the same powder, I want to object to that.

The Commissioner: You can go into that question on cross-examination.

The Witness: The reason that I can tell that——

The Commissioner: Wait a minute! When an objection is made, you don't have to answer until a ruling is made.

Mr. Harrison: I will withdraw my objection.

The Witness: Answer the question?

By Mr. McGuire:

Q. Yes.

A. The question was, how do I know?

[fol. 116] By Mr. Harrison:

Q. No, that wasn't the question. The question was, whether some of the same powder was there, or not?

A. Yes; it was the same powder that was left there.

By Mr. McGuire:

Q. Did you have to make any disposition of that powder?

A. Yes, we did. We had one of the agents of the Atlas Powder Company come up and set it off; it was dangerous to have it about. He set it off up in the hills.

Q. Now, can you give us a brief statement of what was necessary to be done, at the time of the closure, to put this plant in a stand-by position?

Mr. Harrison: I think that is getting into damages.

Mr. McGuire: No; just a matter of completing the record as to what condition this mine was left in, at the time of the closure.

The Commissioner: Overruled.

The Witness: Well, to bring about the closure, there were many things necessary. Taking them in order, the mine, first of all, had to be completely clean in many areas where we had cave-ins. We had to strip our pipe and rail and the equipment that was normally in the hoist, and the various draglines throughout the entire mine, and then coming on down to the blacksmith shop, and the machine shop, and so on, all of the equipment, such as the mine drilling machinery and the various pumps, both the water pumps and the air [fol. 117] pumps, and their replacements, and so forth, all had to be completely cleaned up and sealed away, and all of the other heavy equipment, and they all had to be cataloged, also, and properly, so they would be available on reopening.

Likewise, that same procedure took place throughout the entire camp, with our boilers, our machinery, which had to be torn down and put into a storage condition; and the general cleanup of the camp required a great many man hours, manpower, to shore up the large buildings, in an-

ticipation of the heavy winters, and seal off the dam, and seal off the various oil lines.

By The Commissioner:

Q. Was any maintenance done during the close-down period?

A. It was done prior to the close-down.

Q. I mean, during the close-down, were there any employees on the job for maintenance?

A. There were some, yes.

Mr. McGuire: A subsequent witness will have knowledge of that, and testify about that, and will testify that about eight men were retained at the time of closure.

The Commissioner: All right.

By Mr. McGuire:

Q. About how long did this standby or lay-up operation take?

[fol. 118] A. How long did it take to perform?

Q. Yes.

A. It took a considerable time to complete it.

We started, I would say, in July—along in there, some time—and it continued right up to the time we left there, right up to the end of the year, when we left there for that purpose, to finish up the odds and ends, right up to December.

Mr. McGuire: I believe that is all.

Recross-examination.

By Mr. Harrison:

Q. Going back to the powder—when you spoke of powder, you mean these dynamite sticks?

A. Yes, sir.

Q. You said that, when you came back in 1949, some of the same powder was there. What reason do you have for saying it was the same powder?

A. Well, the powder is all dated.

Q. And you compared the dates with the previous records, did you?

A. Yes.

Q. About how much powder did you have left, when you came back, in 1949?

A. In 1949?

[fol. 119] Q. Yes.

A. I would say there were a few hundred cases. I don't know exactly how many, but a great number of them, 300 or 400.

Q. Now, when the mine was closed, you said there were 1,500 to 2,000 cases. Have you any information as to what happened to that other powder?

A. It was sold.

Q. It was sold?

A. Yes.

Q. Do you know whether or not any of it was sold to other mines?

A. It was sold more generally to the coal mines, and the Alaska Road Commission. It had to be sold through the powder people, out of Anchorage.

Q. Now, you describe a rather elaborate procedure that was undergone, to bring about the closure of the mine.

Do you know whether or not any agent of the United States Government ordered you to take any of those procedures?

A. No, sir, I do not.

Mr. Harrison: No further questions.

Mr. McGuire: No questions.

Mr. Barnett: No questions.

Mr. Connor: No questions.

The Commissioner: The witness is excused.

(Witness excused.)

[fol. 120] The Commissioner: We will recess for five minutes.

(Thereupon, a five-minute recess was taken in the hearing.)

The Commissioner: You may proceed.

Mr. McGuire: Will you take the stand, Mr. Montgomery?

V. A. MONTGOMERY, a witness produced on behalf of the plaintiffs, having been first duly sworn by said Commissioner, was examined, and in answer to interrogatories, testified as follows:

Direct Examination.

By Mr. McGuire:

Q. Will you state your full name and address for the record, Mr. Montgomery?

A. V. A. Montgomery, and I live at 4721 Nineteenth Street, Northeast, in Seattle, and I am a lawyer.

Q. Will you state for the record what your connection has been with the plaintiff in this case, the Alaska-Pacific Consolidated Mining Company.

A. I have been its attorney since its inception, that is, since the organization of the first underlying corporation in June, 1934. I have been its attorney throughout that period, and I will say, perhaps, chief attorney, because it had other lawyers in that time that assisted me.

I had been on the board of directors, with the exception of a short period, or so, and have served in other capacities. I was a secretary part of the time, and assistant secretary, [fol. 121] and I am now president of the company.

Q. You have been continuously connected with the company, either as an officer, director, or as attorney, throughout the period from the time of its organization?

A. That is correct.

Q. What was the name of the corporation, as it was originally organized in 1934?

A. It was the Alaska-Pacific Mines, Inc.

Q. Will you state to the Court what corporate reorganization the company went through?

A. It went through a statutory merger proceeding in the early part of 1938. The merger was, testified as being effective on February 1, 1938; and out of that merger, the present corporation arose and has been continuously in that status since; and by the way, both corporations were organized under the laws of the State of Washington, and have been fully qualified as such during the initial period from 1934 to 1938, and then the present corporation from 1938 until the present time, and both were qualified to do business in the Territory of Alaska.

Q. I am not sure the record will be straight on this, but as I understand your testimony, the Alaska-Pacific mines were organized on June 15, 1938?

A. No, 1934.

Q. The Alaska-Pacific Consolidated Mining Company [fol. 122] was organized in 1938—at what month in 1938?

A. In January, 1938.

Q. And Alaska-Pacific Mines was merged into the Alaska-Pacific Consolidated Mining Company in February of 1938; is that correct?

A. That is correct. All of the property of the Alaska-Pacific Mines became the property of Alaska-Pacific Consolidated Mining Company, and the stock ownership was identical, after the merger, namely, the stock ownership of Alaska-Pacific Mines, and the Alaska-Pacific Consolidated Mining Company.

Q. Now, are you familiar with Wasilla Mining Company?

A. That was a small leasing company that was operated simply—for a short period—I think about six months, in the latter part of 1938—in the latter part of 1937, and they had certain properties which became the properties of the Consolidated Mining Company under the lease, and this Wasilla Mining Company also was absorbed in the Alaska-Pacific Consolidated Mining Company.

The Wasilla Mining Company, by the way, was an Alaska Corporation.

Q. The property of the Wasilla Mining Company was conveyed to the Alaska-Pacific Consolidated Mining Company in February, 1938?

A. Yes; principally the lease that it held the properties under, was terminated and the titles merged in one.

[fol. 123] Q. Since 1938, I take it, the Alaska-Pacific Consolidated Mining Company has been the sole operator of the property, and the sole remaining corporation?

A. That is correct.

Q. Now, have the claims of the Alaska-Pacific Consolidated Mining Company, in this proceeding, been assigned to any other person?

A. No, no; there has been a continuous ownership as to the patent claims, and——

Q. No; I am not talking about the property, I am talking about the claim against the government.

A. Oh, no. There has been no assignment. It is the property of the Alaska-Pacific Consolidated Mining Company.

Q. Has any action ever been taken on the plaintiffs' claim by Congress, or by any department of the government, or any judicial procedure?

A. No; not other than this.

Q. Now, Mr. Montgomery, in the course of your activities as attorney for the corporation, did you have occasion to examine the title documents relating to the real estate owned by the company?

A. Yes; from time to time. May I have plaintiffs' Exhibit 1. I would like to refer to that, if you are going to ask about the titles.

Mr. McGuire: Now, if the Court please, I hold in my [fol. 124] hand the title documents, evidencing the title of the Alaska-Pacific Consolidated Mining Company to all of the properties which appear on Plaintiffs' Exhibit AP-1; all of the mining properties involved in this proceeding, as a matter of fact.

These documents consist of the original patents issued by the government, and in cases where the company has acquired title by virtue of conveyance, not only the original patent to the transferor, but also the subsequent conveyances to Alaska-Pacific Consolidating Mining Company; and in one case where the company holds the property by lease arrangement, we have the original lease, the extensions, and the original patents to the lessor.

All of these documents are either originals, or certified copies; all of them are self-authenticated, in the sense that they are acknowledged before a notary public, according to the statutory procedure; and, therefore, requiring no proof.

I think we can save a lot of time, if government counsel is prepared to examine these documents, and compare them with the numbers appearing on the exhibit and to stipulate their entry into the record. Otherwise, I will have the witness, who is here, cover them all, document by document.

The Commissioner: Well, I wonder if that is the type of thing that could be considered at the close of the hearing, today, between counsel, or perhaps in the morning.

Mr. Harrison: Do these patents have numbers?

[fol. 125] Mr. McGuire: Yes.

Mr. Harrison: Couldn't the witness take this document, or these documents, and correlate them to Plantiffs' Exhibit AP-1, so as to show that the plaintiff did own title to the various plots that are shown on Exhibit AP-1, and just cite the patent number, or the particular deed, that gave them title, without putting all of these in the record, and then the defendant will accept that as ownership established, subject to whatever right—the defendant will accept that as good evidence of ownership, subject to the defendant's right, should it later desire to make some actual investigation or, shall we say, some sort of check or audit of the particular documents.

The Commissioner: All he is asking you—he wants to put these in evidence.

Mr. McGuire: No; they are the original title documents, and I would prefer not to see them go into the court's files.

Mr. Harrison: No, I am not anxious to have to do that, either, as far as that is concerned, but I certainly would like to have the man on the stand who has examined these titles, and indicate that the various holdings, as indicated on Plaintiffs' AP Exhibit 1, actually are owned by the plaintiff, and that title to the various numbered places was obtained by patent number so-and-so, and take the next item, patent number so-and-so, and then we would accept that, subject to any determination that the defendant might later make to it, and after actually checking the records. I don't [fol. 126] think that will be done, myself.

I just feel a little bit this way: That I am not counsel of record, but I am inclined to accept his testimony, and correlate it to that exhibit, and to correlate it to the serial numbers on the patents, as sufficient evidence of title.

The Commissioner: Well, I take this position: While you are here, you are counsel for the government. These documents are here, and counsel wants to establish title now.

Mr. Harrison: Yes.

The Commissioner: We ought to be able to resolve the problem now, without any further delay, or waiver on the commitment.

Mr. Harrison: If your suggestion still holds, I will be very glad to adopt it: That at the close of the proceedings today, counsel for both sides and the present witness will

get together, and check these things; so, tomorrow morning, I can come in and say that is satisfactory.

The Commissioner: I think that is all right.

Mr. McGuire: That is very satisfactory to us.

I may say that I previously furnished Mr. Barnes a copy of Plaintiffs' Exhibit 1, together with an index, or a short title abstract, indicating how we derived title to each one of these numbered parcels, indicating when the patent was issued, and what other conveyances were involved, if any; but now the documents are here, and at the close of the [fol. 127] hearing, today, we will get together on them.

We will now pass to another subject.

By Mr. McGuire:

Q. Now, Mr. Montgomery, what, specifically, was your position with the company in October of 1942?

A. I was—you said, October, 1942?

Q. Yes.

A. I was assistant secretary at that time. I was a member of the board of directors and I was attorney for the company.

Q. Now, did you have occasion to prepare an appeal to the government, to the War Production Board, from Order L-208, on behalf of the plaintiffs?

A. There was more than one appeal, I think.

Q. I am speaking with reference to October, 1942.

A. Yes; I prepared at least the first appeal, with Mr. Stoll's assistance. Mr. Stoll was, I think, then secretary of the company, and really was the moving spirit.

Q. You are speaking of W. W. Stoll?

A. Yes.

Q. Who was vice president and general manager, during this period?

A. Oh, yes. That is what he was.

Q. I hand you a document, which I will ask the reporter [fol. 128] to mark as Plaintiffs' Exhibit AP-3.

(Said document was marked for identification as Plaintiffs' Exhibit AP No. 3.)

By Mr. McGuire:

Q. This exhibit consists of seven pages, Mr. Montgomery, and I will ask you what it is?

A. Plaintiffs' Exhibit AP-3 is a carbon copy of the first appeal that was prepared with reference to this Order L-208, which is dated—and the letter of transmittal being dated October 15, 1942.

Q. It was filed with the War Production Board, by mail, on October 15, 1942?

A. It went forward at that time, yes.

OFFERED IN EVIDENCE

Mr. McGuire: I offer in evidence Plaintiffs' Exhibit AP-3 for identification, if the Court please.

Mr. Harrison: Well, the defendant's counsel has no objection, so far as showing the historic background of the case, but of course does not admit the various factual allegations made in the document.

The Commissioner: It may be received.

(Said first appeal from Order L-208, marked "Plaintiffs' Exhibit AP No. 3", admitted in evidence and made a part of this record.)

Mr. Harrison: I would like to ask—I notice there are seven pages, but the last two pages are not numbered.

[fol. 129] Mr. McGuire: No.

Mr. Harrison: I might say, so that the record will reflect it, up until the time I had left Washington, the files, the correspondence files in which these records would be contained, that were maintained by the War Production Board, and which were turned over to the Commerce Department, had not been located; so all of these documents that might be admitted, I would like to have admitted subject to verification. It is unfortunate that we had not, up to that time, located them.

Mr. McGuire: For your information, Mr. Harrison, I submitted a list of these documents to Mr. Barnes, some several months ago.

Mr. Harrison: He did give me the list, and he said that, if he got the documents in time, he would send them to me at Seattle, and I have checked the United States Attorney's Office here, and they have not arrived.

Mr. McGuire: Then I will have to proceed with secondary evidence, for obvious reasons.

By Mr. McGuire:

Q. Now, I hand you a document, Mr. Montgomery, consisting of one page, which I will ask the reporter to mark as Plaintiffs' Exhibit AP-4 for identification.

(Said document was marked for identification as Plaintiffs' Exhibit AP No. 4.)

[fol. 130] By Mr. McGuire:

Q. I will ask you whether or not that is the telegraphic order received from the War Production Board, in response to the petition, or the appeal, dated October 15, 1942?

A. Yes; that is a carbon copy of the telegraphic communication. That was among the records of the company. I looked for the original, and was unable to discover it.

The Commissioner What is the date of it?

Mr. McGuire: It is undated, if the Court please, but received in November. It is undated, but it was received either in November or October.

The Witness: November, I think.

By Mr. Connor:

Q. What is the date of the receipt?

A. October 15, 1942.

Mr. McGuire: I am not going to examine these documents, at this time, but I can give Your Honor an idea, orally, what they are about.

This particular order extended operations to December 8, providing that certain reports were made, with reference to the sheelite operations.

Did Your Honor rule it was admitted?

Mr. Harrison: Did you offer it?

Mr. McGuire: I guess I did not. I offer Plaintiffs' Exhibit AP-4 for identification.

[fol. 131] Mr. Harrison: No objection.

The Commissioner: It may be received.

(Said telegraphic order from WPB in answer to appeal, marked "Plaintiffs' Exhibit AP No. 4", admitted in evidence and made a part of this record.)

By Mr. McGuire:

Q. Now, I show you, Mr. Montgomery, a three-page document, dated November 27, 1942, which I will ask the reporter to mark as Plaintiffs' Exhibit AP-5 for identification.

(Said document was marked for identification as Plaintiffs' Exhibit AP No. 5.)

Q. I will ask you if that is not a carbon copy of a letter filed with the War Production Board, conveying the information about the sheelite operations, in response to the order contained in Plaintiffs' Exhibit AP-4?

A. That is correct. It is from the Director General of the War Production Board. It bears Mr. Stoll's signature, in fact, and is a part of the company's records.

Mr. McGuire: I now offer Plaintiffs' Exhibit AP-5 for identification.

The Witness: Walter Stoll, by the way, now is deceased.

Mr. Harrison: This Exhibit AP-5 says, "We submit this letter and the accompanying progress report," and there is no progress report attached, and then it says, "with confidence the evidence will justify the issuance to us of a [fol. 132] priority rating which will effectively suspend L-208 as it might apply to our operation at Independence."

What is the operation at Independence?

Mr. McGuire: These mines are referred to as the Independence mines.

I will ask the witness, so as to get it in the record.

By Mr. McGuire:

Q. The whole property is called the Independence mining property by the company?

A. Yes. I could very easily explain that any reference in any of these papers to the Independence mines refers to the operation which we were carrying on. Well, it mostly is within the limits of the Granite Mountain claim, but it was all, from olden times, known as the Independence mine, and we just carried that name throughout; it is still known

as the Independence mine, although owned by the Alaska-Pacific Consolidated Mining Company.

By Mr. Harrison:

Q. In connection with this document, when you made this writing, you were trying to get permission to keep only a piece of the Alaska-Pacific property; is that right?

A. No; we were attempting to carry on our operations—get permission to carry on operations, gold mining operations, yes.

[fol. 133] By Mr. McGuire:

Q. In other words, the claim—the oldest claim, bearing serial number 958-A, is called the Independence claim?

A. Yes, that is correct. That is one of the old original claims.

By Mr. Harrison:

Q. Is the Independence the only thing that was closed down? Is that the only part of the mines that was working?

A. Well, the whole operation, there, Mr. Harrison, the whole five miles of underground workings, approximately, is known as the Independence mine. That also includes the mill and, in fact, the whole little community down in the valley. Down on the lower part, it was called "Independenceville", so is carried the name of Independence, irrespective of what claim was being penetrated. It wasn't confined to any one particular spot. The whole operation was the Independence mine, and that refers to the entire operation, the gold mining operation, in fact.

The gold mining operation was certainly necessary to the production of sheelite, but it was not economical to produce sheelite, aside from gold, because the gold had to support the sheelite.

That was what we were talking about in these letters, these communications.

Mr. Harrison: I will register an objection as to material-
[fol. 134] ity.

The Commissioner: As to materiality?

Mr. Harrison: Yes, I don't see where it ties into the case, into the central issue in this case.

The Commissioner: It may be received.

(Said letter, dated 11-27-1942, plaintiff to WPB, re: sheelite, marked "Plaintiffs' Exhibit AP No. 5", admitted in evidence and made a part of this record.)

By Mr. McGuire.

Q. Now, I show you, Mr. Montgomery, a document, consisting of one page, dated November 29, 1942, which I will ask the reporter to mark as Plaintiffs' Exhibit AP-6 for identification.

(Said document, marked for identification as Plaintiffs' Exhibit AP No. 6.)

By Mr. McGuire:

Q. I will ask you whether or not this is a copy of a telegram sent to the War Production Board, with respect to the same matter, namely, the report on the sheelite operation?

A. That is correct. It originated at Anchorage and was by our general superintendent, Mr. R. C. Gebhard, and became a part of the company's records at Seattle, and that is where it was when it was found.

Mr. McGuire: If the Court please, I offer Plaintiffs' Exhibit AP-6 in evidence.

[fol. 135] Mr. Harrison: No objection.

The Commissioner: Admitted.

(Said telegram, plaintiff to WPB, marked "Plaintiffs' Exhibit AP No. 6", admitted in evidence and made a part of this record.)

By Mr. McGuire:

Q. Now, I hand you, Mr. Montgomery, a document, consisting of six pages, dated November 28, 1942, which I will ask the reporter to mark as Plaintiffs' Exhibit AP-7 for identification.

(Said document was marked for identification as Plaintiffs' Exhibit AP No. 7.)

By Mr. McGuire:

Q. Now, I will ask you if this is not the report on the sheelite operations, to which reference was made in the two previous exhibits?

A. Yes; Exhibit 7 is a report and discussion of the occurrence and discovery and development, etc. of sheelite in the Independence mine, which was prepared by Mr. R. C. Gebhard, and it was submitted in connection with one of these other exhibits. I don't remember just which one it was, but it was in connection with one of these other exhibits.

Q. In response to the order contained in Exhibit 4; isn't that correct?

A. That is correct, yes, I would say that is correct.

[fol. 136] This was also a part of the records of the company, Exhibit 7 was.

Q. It was filed with the government, was it not, along with the transmittal letter, which has been received in evidence as Plaintiffs' Exhibit AP-5?

A. Let me check that. Yes, that is correct.

Mr. McGuire: I offer Plaintiffs' Exhibit AP-7 for identification in evidence, if the Court please.

Mr. Harrison: I object to its materiality, and also call attention to the fact that it was not submitted until the latter part of November, 1942, when the limitation order under attack here was issued the previous month. I don't see how it could reflect arbitrariness in the issuance of the order.

The Commissioner: It may be admitted.

(Said report on sheelite operations, dated 11-28-1942, marked "Plaintiffs' Exhibit AP No. 7", admitted in evidence and made a part of this record.)

By Mr. McGuire:

Q. Now, I show you, Mr. Montgomery, a copy of a letter, dated December 11, 1942, from the War Production Board to the Alaska-Pacific Consolidated Mining Company, which I request the reporter to mark for identification as Plaintiffs' Exhibit AP-8.

(Said document was marked for identification as Plaintiffs' Exhibit AP No. 8.)

[fol. 137] By Mr. McGuire:

Q. Now, I ask you whether or not this is a letter suspending the effective date of Order L-208, so far as it affects Alaska-Pacific Consolidated Mining Company, until June 8, 1943?

A. Yes, that is correct. That is a communication received by the company in regular course, extending the effective date of the order.

Q. And the copy was taken from the company's files?

A. That is correct.

Mr. McGuire: I offer it.

Mr. Harrison: No objection.

The Commissioner: Admitted.

(Said letter, dated 12-11-1942, WPB to plaintiff, marked "Plaintiffs' Exhibit AP No. 8", admitted in evidence and made a part of this record.)

By Mr. McGuire:

Q. Now, I show you, Mr. Montgomery, a document, consisting of three pages, entitled "Supplementary Appeal, Alaska-Pacific Consolidated Mining Company", which I will ask the reporter to mark as Plaintiffs' Exhibit AP-9 for identification.

(Said document was marked for identification as Plaintiffs' Exhibit AP No. 9.)

[fol. 138] By Mr. McGuire:

Q. Now, I will ask you if this is not the supplementary appeal to the appeal filed on October 15, 1942?

A. Yes, that is correct.

Q. That was prepared by——

A. That instrument was prepared, to a large extent, by me.

Q. And filed with the government?

A. Filed with the government, yes.

Q. In December, 1942?

A. Yes. That is a carbon copy.

By Mr. Harrison:

Q. Mr. Montgomery, do you know the date when this appeal was filed?

A. I wouldn't know it offhand, no.

Q. Do you know whether or not this appeal was filed after the government's notification of December 11, 1942, to Alaska-Pacific?

A. I might be able to determine that from the documents, if it is important. I would have to refresh my recollection of it.

Mr. McGuire: Off the record, please.

(Here followed discussion off the record.)

The Witness: Those things all took place approximately at the same time. Without, maybe, some further examination of the correspondence, and transmittal letters, etc., I [fol. 139] would not be able to testify to the exact date of them; they may be dated at the same time, as far as I know, and received.

Mr. Harrison: Well, all right. With that qualification, for what the document is worth, I will register no objection.

Mr. McGuire: I offer Plaintiffs' Exhibit AP-9 for identification in evidence.

The Commissioner: It will be received.

(Said supplementary appeal, marked "Plaintiffs' Exhibit AP No. 9", admitted in evidence and made a part of this record.)

By Mr. McGuire:

Q. Now, Mr. Montgomery, I hand you a document, consisting of five pages, dated January 26, 1943, which I request the reporter to mark for identification as Plaintiffs' Exhibit AP-10.

(Said document was marked for identification as Plaintiffs' Exhibit AP No. 10.)

By Mr. McGuire.

Q. I ask you if this is not a further report sent to the War Production Board by the plaintiff, respecting the sheelite operations?

A. Yes, that is correct. Exhibit No. 10 is the report the company made to the War Production Board with respect to the sheelite operations.

[fol. 140] Mr. McGuire: Now, I offer Plaintiffs' Exhibit AP-10 for identification.

Mr. Harrison: No objection.

The Commissioner: Admitted

(Said report, dated 1-26-1943, plaintiff to WPB, marked "Plaintiffs' Exhibit AP. No. 10", admitted in evidence and made a part of this record.)

By Mr. McGuire:

Q. Now, Mr. Montgomery, I hand you a document, consisting of four pages, dated February 25, 1943, addressed to Mr. Ernest C. Kanszler, Director General of Operations, War Production Board, which I ask the reporter to mark for identification as Plaintiffs' Exhibit AP-11.

(Said document was marked for identification as Plaintiffs' Exhibit AP No. 11.)

By Mr. McGuire:

Q. I will ask you if this is not the report made to the War Production Board by the plaintiff, respecting the sale of concentrates for fluxing purposes to the Tacoma Smelter?

A. Yes; this is a copy of the report which was transmitted to the War Production Board, at about that time, and refers principally to our concentrates and the use of them by the Tacoma Smelter.

Mr. McGuire: If the Court please, I offer in evidence Plaintiffs' Exhibit AP-11 for identification.

[fol. 141] Mr. Harrison: The defendant does not object to having these things in evidence, to show the historic background of the claim, but these things are replete with factual statements, which of course we don't admit.

Otherwise, we have no objection.

The Commissioner: It may be received.

(Said report, dated 2-25-43, plaintiff to WPB, marked "Plaintiffs' Exhibit AP No. 11", admitted in evidence and made a part of this record.)

By Mr. McGuire:

Q. Now, Mr. Montgomery, I hand you a two-page document, dated April 14, 1943, which purports to be a letter from the War Production Board to the company, which I ask the reporter to mark as Plaintiffs' Exhibit AP-12 for identification.

(Said document was marked for identification as Plaintiffs' Exhibit No. 12.)

By Mr. McGuire:

Q. I will ask you if this is not a letter received from the War Production Board by the company, which, in effect, notified the company that the granted suspension of L-208 would expire, and not be extended further.

A. Yes, that is correct. It is dated April 14, 1943, received by the company in due course about that time.

Mr. McGuire: I offer in evidence Plaintiffs' Exhibit AP-12 for identification, if the Court please.

[fol. 142] Mr. Harrison: No objection.

The Commissioner: Admitted.

(Said letter, dated 4-14-43, WPB to plaintiff, marked "Plaintiffs' Exhibit AP No. 12", admitted in evidence and made a part of this record.)

By Mr. McGuire:

Q. Now, Mr. Montgomery, I show you a document, consisting of 44 pages, dated May 12, 1943, entitled "Case of Alaska-Pacific Consolidated Mining Company, operators of Independent mines, Wasilla, Alaska, and War Production limitation Order L-208", which I will ask the reporter to mark for identification as Plaintiffs' Exhibit AP-13.

(Said document was marked for identification as Plaintiffs' Exhibit AP No. 13.)

By Mr. McGuire:

Q. I will ask you whether or not this is a copy of the appeal filed by the company from the letter of April 14, 1943, which was received in evidence as Plaintiffs' Exhibit AP-12?

A. Yes, that is correct. It was received from the War Production Board at about that time, April, 1943.

Mr. McGuire: I offer Plaintiffs' Exhibit AP-13 for identification.

The Witness: It was received from the War Production Board about May, 1943.

[fol. 143] Mr. Harrison: Of course, I have not had a chance to examine this in detail, but apparently it consists of much argument and opinion and self-determination and self-serving statements and hearsay, and a lot of other things. I mean, if it is admitted only for the purpose of showing the historical background, okay; otherwise, I would object strenuously to this document. It has everything in it, so far as I can see, by just looking through it.

The Witness: It is a sort of summation.

Mr. Harrison: Yes, sir; it is a sort of editorial writing, put out for a technical journal, or some professional purpose. This is a case which is very significant; I don't think it should be decided on anything that is secondary evidence, and there are lots of letters written in there—I don't know what they are, but I object, anyway, because of what I have seen of it.

I am willing to have it go in for the sole purpose of showing an appeal was made, and that this is the appeal, but limited to that.

The Commissioner: Do you want to respond to that?

Mr. McGuire: Sir?

The Commissioner: Do you want to respond to that?

Mr. McGuire: I don't believe that is necessary. We filed this appeal with the government, and it is a part of the official records. It certainly is a material part of the evidence [fol. 144] in this case.

The Commissioner: It may be received.

(Said appeal, 44 pages, dated 5-12-1943, plaintiff to WPB, marked "Plaintiffs' Exhibit AP No. 13", admitted in evidence and made a part of this record.)

By Mr. McGuire:

Q. Now, I show you, Mr. Montgomery, a telegram to the company, dated June 6, 1943, purportedly from the War

Production Board, which I ask the reporter to mark for identification as Plaintiffs' Exhibit AP-14.

(Said document was marked for identification as Plaintiffs' Exhibit AP No. 14.)

By Mr. McGuire:

Q. I ask you if that is not the telegram received from the War Production Board by the company, extending the suspension of L-208, so far as it affects Alaska-Pacific, to August 2, 1943?

A. Yes, that is the final extension received by the company in due course.

Mr. McGuire: I offer Plaintiffs' Exhibit AP-14 in evidence.

Mr. Harrison: No objection.

The Commissioner: Received.

[fol. 145] (Said telegram, dated 6-6-1943, WPB to plaintiff, marked "Plaintiffs' Exhibit AP No. 14", admitted in evidence and made a part of this record.)

By Mr. McGuire:

Q. Now, I show you, Mr. Montgomery, a letter from the War Production Board to the company, dated June 21, 1943, which I will ask the reporter to mark for identification as Plaintiffs' Exhibit AP-15.

(Said document was marked for identification as Plaintiffs' Exhibit AP No. 15.)

By Mr. McGuire:

Q. I ask you if that is not a letter received by the company from the War Production Board, indicating that operations would not be permitted after August 8, 1943?

Mr. Harrison: The document will speak for itself.

The Witness: Yes, it was received in regular course.

Mr. McGuire: I offer Plaintiffs' Exhibit AP-15, if the Court please.

Mr. Harrison: No objection.

The Commissioner: Admitted.

(Said letter, dated 6-21-1943, WPB to plaintiff, marked "Plaintiffs' Exhibit AP No. 15", admitted in evidence and made a part of this record.)

By Mr. McGuire:

Q. Now, I hand you a document, dated July 29, 1943, [fol. 146] addressed to the War Production Board, which I will ask the reporter to mark as Plaintiffs' Exhibit AP-16.

(Said document was marked for identification as Plaintiffs' Exhibit AP No. 16.)

By Mr. McGuire:

Q. I ask you if that is not a letter sent by the company to the War Production Board, advising them that the mine was closed down under protest, and reserving all of its rights, and so on?

A. Yes; that is a carbon copy of our letter of protest, forwarded in regular course.

Mr. McGuire: I offer Plaintiffs' Exhibit AP-16 in evidence.

Mr. Harrison: No objection.

The Commissioner: Admitted.

(Said letter, dated 7-29-43, plaintiff to WPB, marked "Plaintiffs' Exhibit AP No. 16", admitted in evidence and made a part of this record.)

By Mr. McGuire:

Q. Now, I show you a document, Mr. Montgomery, dated August 13, 1943, from A. S. Khoizen, Administrator for L-208, War Production Board, to Mr. C. L. Harrison, President, Alaska-Pacific Consolidated Mining Company; which I will ask the reporter to mark for identification as Plaintiffs' Exhibit AP-17.

[fol. 147] (Said document was marked for identification as Plaintiffs' Exhibit AP No. 17.)

By Mr. McGuire:

Q. I will ask you if that is not a letter received by the company from the War Production Board, indicating, in

substance, that no further extension would be granted, and that the mine would have to be closed down?

A. That is correct, and received in the regular course of business.

Mr. McGuire: I offer Plaintiffs' AP-17 in evidence.

Mr. Harrison: No objection.

The Commissioner: Received.

(Said letter, dated 8-13-1943, WPB to plaintiff, marked "Plaintiffs' Exhibit AP No. 17", admitted in evidence and made a part of this record.)

By Mr. McGuire:

Q. Now, Mr. Montgomery, I show you a letter, dated August 13, 1943, from the War Production Board to the Alaska-Pacific Consolidated Mining Company, which I will ask the reporter to mark as Plaintiffs' Exhibit AP-18.

(Said document was marked for identification as Plaintiffs' Exhibit AP No. 18.)

By Mr. McGuire:

Q. I will ask you if this is not a letter from the War [fol. 148] Production Board, received by the company, denying the appeal of May 12, 1943, and stating the substance of the opinion of the government that the company's laborers were needed in coal mining operations?

A. That is correct, yes; that is a communication received in due course, about the date that it bears.

Mr. McGuire: I offer in evidence Plaintiffs' Exhibit AP-18.

Mr. Harrison: This one is not signed.

The Witness: Yes; it came to us through the mail that way.

Mr. Harrison: No objection.

The Commissioner: Admitted.

(Said letter, dated 8-13-1943, WPB to plaintiff, marked "Plaintiffs' Exhibit AP No. 18", admitted in evidence and made a part of this record.)

Mr. McGuire: If the Court please, I have here two photographs, which I wish to offer in evidence through this wit-

ness, purely for the purpose of explaining what the conditions were at the mine, and I will ask the reporter to mark the first one as Plaintiffs' Exhibit AP-19.

(Said photograph was marked for identification as Plaintiffs' Exhibit AP No. 19.)

By Mr. McGuire:

Q. I will ask you if this is not a photograph of the [fol. 149] company's mining property at the Independence mine, taken in 1941?

A. That is a reproduction from a photograph, yes. This shows the condition. I would have to examine the yearbook it is taken from. Yes, that is 1941; that is correct. That shows substantially how the property looked, at that time, down there along about that time and these are the principal buildings here (indicating).

The larger buildings—well, the buildings, for the most part, are located on this—down on this same slope, where there are Snowbird No. 2, and what is known as Homestake No. 17. This is called the staff house here (indicating).

The mill buildings down here (indicating) don't show up very well, and then there is the apartment building; and that, I think, is what they call—well, I can't tell what that is, but this is one of the warehouses along here (indicating).

Spread out in here (indicating) and not shown very much, are the cottages that the miners built for themselves on the company's property. Up here is the "Gold Cord" claim.

Up here is what we call the 900-foot entry. That was used for quite a long time as the main entrance to the workings, and then later on we constructed what is known as the lower level tunnel—we call it the water tunnel—which entered approximately the level of the millshed, and working into the mountain, down low.

[fol. 150] Mr. McGuire: I offer Plaintiffs' Exhibit AP-19 for identification, as to the photograph only, but not any typewritten material on it.

Mr. Harrison: I have no objection.

The Commissioner: Admitted.

(Said photograph of mill, marked "Plaintiffs' Exhibit AP No. 19", admitted in evidence and made a part of this record.)

By Mr. McGuire:

Q. Mr. Montgomery, I want to ask you whether or not any more of these miners' cabins were constructed along the roadway leading to the mine?

A. Yes, there are more there now than appear to be. They don't show up very plain, but there may have been others constructed later, and probably were, after that picture was taken. I would say there were others erected later.

Q. I show you a second photograph, which I will ask the reporter to mark as Plaintiff's Exhibit AP-20 for identification.

(Said photograph was marked for identification as Plaintiffs' Exhibit AP No. 20.)

By Mr. McGuire:

Q. I will ask you if that is not another photograph of the company's buildings, but taken in the wintertime?

A. Yes; that shows the mill building, and I think that [fol. 151] is the mess hall there (indicating), and this is the stuff in front there (indicating). That shows it as it is when we have snow on it.

By Mr. Harrison:

Q. Is this in 1941 or 1942?

A. I wouldn't like to identify the date it was taken. There isn't anything on it that would identify it to me.

Mr. McGuire: I offer Plaintiffs' Exhibit AP-20 for identification, if the Court please.

The Witness: That shows the buildings approximately as they were at the time of the close-down order. There was not much change-over later, Mr. Harrison.

Mr. Harrison: You stipulate that nothing but the picture shall be included in the offer?

Mr. McGuire: Just the picture.

Mr. Harrison: No objection.

The Commissioner: Admitted.

(Said photograph, marked "Plaintiffs' Exhibit AP No. 20", admitted in evidence and made a part of this record.)

By Mr. McGuire:

Q. Now, Mr. Montgomery, did the company have any forewarning as to the issuance of L-208, so far as you know?

A. No; it just came to us like a bolt out of the blue sky, so far as I know. I knew nothing of the fact that it was [fol. 152] coming, and I don't think that any of the members of the executive staff did; at least, it was not known among the offices in Seattle, at all.

Mr. Harrison: I move to strike the witness' conclusion as to what the other people knew or thought.

The Commissioner: Sustained.

By Mr. McGuire:

Q. You mentioned the offices in Seattle. You mean there was no conversation respecting this order, prior to the time it was issued?

A. No, none that I heard. I was there every day, during that period.

Q. Now, with reference to the sheelite progam, did you have any participation in the preparation of the applications for priorities?

A. From time to time, and one in particular, when we wanted some additional equipment in order to assist in the sheelite recovery. We were experimenting as to the best method of obtaining the sheelite, and we made an application for a table, as I remember, and some little fluorescent lights, and I think some additional drum hoists that were used in the stopes. There were some other items, also. The object was to make it possible to recover this sheelite in a practical way, and of course the equipment was somewhat experimental.

We were going ahead as a gold mining operation, and then we found this sheelite—or it had been known that it [fol. 153] was in there for some time, and we wanted a practical way to recover it, and that is where this equipment was going, into some additional stopes, that perhaps were not even paying for the gold mining, to get out some of the rock used for sheelite.

As I recall it, the request was granted for the purchase of the equipment.

Q. Mr. Montgomery, was the operation of the Alaska-Pacific Consolidated Mining Company's Independence mine profitable, prior to the closure?

A. Well, it had been very profitable from—well, I would say we started making a profit in about 1937. Now, it had been profitable to the stockholders. It had paid out, during that period, something slightly less than $1 million in dividends, and during the period—well now, from 1937, I think was the first time it paid out any dividends, I believe.

I don't want to be held too closely to the dates, but they were paying on until we were closed down. I think we paid a dividend in 1942, and that was during the entire period; and of course, I am quite sure we paid none since, but during that period, we paid out to the stockholders approximately that amount, and just as a demonstration of.

Mr. Harrison: Before you go into the demonstration, aren't we going into the question of damages here whether or not they had a profit?

[fol. 154] I thought we were going to be limited to liability. It seems to me that the previous statements of the witness pertain to damages, and I move they be stricken.

Mr. McGuire: If the Court please,——

The Commissioner: Overruled.

By Mr. McGuire:

Q. It is your testimony that it was a profitable operation, up to the time of closing?

A. It was a highly profitable operation during those years; not only the dividends, but also the purchase of this mining property came out of the profits. We had scarcely any capital to start with, and we had purchased these Independence claims and paid, during that period, $100,000 for them, and we paid $75,000 or $80,000 on our operation on what was known as the Free Gold claims, and we had also acquired what is known as the Jap property and the Black property, mostly by purchase, and they had been paid out of profits, too, plus taxes.

Q. Could you roughly approximate the amount of taxes paid by the company to the federal government?

A. I don't think I would undertake that, Mr. McGuire; it

would be kind of hard to do that. I think it would take an accountant to do that, but we paid substantial taxes, though.

Q. Do you have an opinion, Mr. Montgomery, as to [fol. 155] whether or not the company could have continued operations at a profitable rate, had it not been for the close-down order L-208?

Mr. Harrison: I object to his opinion, which is going into damages, and I don't think he is qualified as an expert to give an opinion.

The Commissioner: I am going to sustain the objection to that. I think he has shown that it was a profitable operation, and that is enough along that line.

Mr. McGuire: Subject to this question of establishing the title, I have completed my direct examination of Mr. Montgomery.

The Commissioner: We will recess until 10 o'clock tomorrow morning.

(Thereupon, a recess was taken in the hearing until 10 o'clock, a.m., Thursday, November 20, 1952.)

[fol. 156] IN THE UNITED STATES COURT OF CLAIMS

[Title omitted]

Transcript of Testimony—November 20, 1952

TESTIMONY FOR PLAINTIFFS (Resumed)

The hearing was resumed, at the time above indicated, pursuant to the recess previously taken.

Present: (The same appearances as previously noted.)

The Commissioner: You may proceed, Mr. McGuire.

Mr. McGuire: Mr. Montgomery, will you take the stand, again?

V. A. MONTGOMERY, a witness for the plaintiffs, resumed the witness stand, and was examined and testified as follows:

Direct examination.

By Mr. McGuire:

Q. Mr. Montgomery, I believe you have something to [fol. 157] add, this morning?

A. After we adjourned yesterday afternoon, counsel for the government, Mr. Harrison, Mr. McGuire and myself, went over this bunch of instruments, which are evidence of the ownership of the mining properties by the plaintiff, the Alaska-Pacific Consolidated Mining Company.

Generally, these instruments constitute the patents under which the mining company owned the property, notices or certificates of locations, and deeds or other instruments of conveyance, if there were conveyances involved; and these, together with the agreement of statutory merger, which is a part of the corporate records of the Alaska-Pacific Consolidated, and which would constitute a part of the chain of title, constitute our evidence of ownership of these mining claims; and I refer particularly to the mining claims which are shown on Alaska-Pacific Exhibit No. 1, and which are outlined in the heavy blue lines on this exhibit—these heavy blue lines around here (indicating).

Now, just to refer to a specific part of this, it is divided, as you will note, into five different groups; and speaking, first, of this group, which is colored yellow, I shall refer to the Independence claims.

First, there are the original claims, the Independence, the Granite Mountain, and Granite Mountain No. 1, which are referred to as 958-A. Those were owned in fee, at the [fol. 158] time of this closure order. In that time, I refer not only to the date of the order, but the date of the actual closure.

The other claims in the group were, at that time, held by location notices, which later in 1944, during the year 1944, ripened into patents; and that is what these documents show.

I have referred to the Alaska Free Gold claim——

Q. Before referring to the Free Gold claims, is it your

testimony that the Independence claims are still owned by the plaintiff?

A. They are still owned by the plaintiff, and now owned in fee by the plaintiff, all of this particular group having been purchased, as far as 958-A is concerned; they were purchased outright, that is, through royalty agreement, and the others were actually patented in the name of this plaintiff and are now owned by it.

The Alaska Free Gold claims are held under a lease and royalty agreement, which gives the company the full right to mine and possess the claims, this agreement is still in force and effect and was, at the time of this closure order, the company having now paid some $87,000 on the $150,000 agreed option price, and the agreement having been extended to 1961.

Q. Before leaving this Alaska Free Gold property, is it your testimony that the Alaska Free Gold claims, which are [fol. 159] colored blue on Exhibit 1, are held by virtue of a royalty lease agreement, coupled with a purchase option,—

A. That's correct, yes.

Q. In the amount of $150,000?

A. That is correct.

Q. The company has paid $87,000 on the $150,000 purchase price; is that correct?

A. That is correct.

Q. Upon the payment of the balance of the $150,000 the company will be entitled to a deed to the property; is that correct?

A. Under the agreement, that is correct. The actual carrying out of it—I mean the payments are suspended, or were, during the period of the closure.

Also, I might remark that the company, itself, owns 53 per cent of the stock of the holding company, which now is a dissolved Washington corporation; we own 53 per cent of that stock. I think that perhaps is all with reference to the Free Gold claim.

Then, with reference to what is referred to there as the Jap claims, those which are indicated on this Exhibit 1 in green,—they all were, at that time, held under location notices, and purchased from the locators, who were Japanese.

Those that are indicated in green later ripened or matured into patents under our procedure for patent.

[fol. 160] Q. You say, "were held at that time", and you mean

A. When I refer to that time, I refer to the time of the date of the closure order, which was October 8, 1942, and also to the date in 1943, on which we actually closed. I refer to that date and the interim date, also.

Now, as to the others, they are still held under mineral locations.

The Commissioner: You might indicate the time when patents issued.

The Witness: Referring back to the Independence claims, those that we did not own outright at the time of the closure order, they eventually ripened into title during the year 1944. I can't give you the exact date, but it was during the year 1944, that those patents were issued to the company, on those remaining claims shown in the Independence group.

Mr. Harrison: I might say, Mr. Commissioner, that last evening we did spend, I think, about an hour and a half going through all of the title instruments, and I am thoroughly in agreement with this witness that the plaintiff, the Alaska-Pacific Consolidated Mining Company, does have the title and right, such as he is now testifying to.

I have made notes of the dates when patents were issued on various properties for my own information, and in many cases, the patent did not issue until after the time of the closure.

[fol. 161] The Commissioner: The Court might be interested in that.

Mr. Harrison: That is true. Most of the patents, as I see it, did not issue until around 1944, but I feel certain that, at the time of the closure, the plaintiff did have title, either by deed or by assignment of location, which later ripened into patent, or right of purchase, or in some way did really control title to the property, and I think Mr. Montgomery can indicate the patent dates. I know I have some of them.

The Witness: I could get that out of my records, and just to tie it in, also, under Mr. Waller's testimony, the initial steps for patents were taken, according to him, and

his testimony, upon the dates which he furnished, which were, insofar,—well, they were mostly initiated—all were initiated prior to the closure order, and some patents were pending during the time of the closure order and finally—that did not mature into patents until some time subsequently, and in some instances those were considerably delayed, because matters had to be cleared up with the Land Office.

If there was any question regarding a claim, whatsoever, that was taken up with us, and that would cause a delay in the final issuance of the patent; and particularly during the war period, there was added delay in getting those final patents; so while the patents were not issued until—some of them, in the case of the Black group—were not issued until 1950, that had been pending some time, and there [fol. 162] were numerous delays in reference to that.

Then, referring to what is known as——

By Mr. Harrison:

Q. Just to check that up, the Black group patent was not issued until 1950, but isn't it true that the original locators had assigned all of their rights as of June 6, 1944, to the Alaska-Pacific Consolidated Mining Company?

A. That is correct.

Q. So they had quit-claimed any right of title that they might possibly have in the property, and the plaintiff in this case was in the process of having the patent perfected?

A. Yes, sir.

Mr. Harrison: I don't challenge the fact that, as to the Black group, the plaintiff did have full right and title and interest, such as could be demonstrated by the instruments, at that time.

The Witness: Yes; and that the survey had been made, and the initial steps taken, prior to the closure order. I think that pretty well covers the Black group; we held them, as we have stated here, by virtue of conveyances from the original locators, and they were surveyed by us, and actually matured into patents some time, and the patent issued during the year 1950; and I furnished Mr. Harrison not only with the dates of the patents, but also with the patent numbers. Each patent bears a number.

[fol. 163] By Mr. Harrison:

Q. Then I think it might be well to point out that the Black group, when you use the term "the Black group",—the derivation of the word is from a family of people named Black, who were the original locators?

A. Yes: Sidney Black, and his wife.

Q. Those people, prior to the time of the closure, did assign all of their rights to the plaintiff?

A. That is correct, and their title—I also went into their title, to see that their title was correct, at the time we purchased it. In fact, I represented the company throughout the proceeding of purchasing the Black and the Jap groups.

Q. When you speak of the Jap group, I think it might be well to point out that the Jap group is so-called, because they were people of Japanese ancestry who owned the property?

A. That is correct. Then, referring to these claims, as shown on Exhibit 1 as being claimed held by location, now there are certain of those which, for one reason or another, were excluded from the patents, possibly voluntarily by the applicant, and often by the government. Sometimes they excluded claims from a patent, because there was insufficient work performed on it, in order to obtain the benefit of a claim, in order to obtain a patent. In some instances, that had not been done, and those claims we still hold by location; and as to all claims, during the time prior to patent, and to my knowledge, the company has [fol. 164] performed work on, or for the benefit of, the claims, in order to satisfy the requirements of the code as to holding continuous possession in mine rights to those unpatented claims, and all the filings had been done, which were necessary.

I might add that, during the war, the requirements of the performance of the representative work was suspended for certain periods, and during those periods, of course, the company took what steps were necessary in order to hold possessory rights to the claims.

By The Commissioner:

Q. Was that by action of the Land Office?

A. No, that was by action of Congress. During the First World War, they suspended the requirements as to the performance of the work, largely because they did not want to force the loss of claims by holding individuals or companies, due to the fact that labor could not be obtained, or the necessary materials for the performance of the work; so, during those critical periods, Congress does customarily enact suspension laws.

By Mr. Harrison:

Q. I think, Mr. Montgomery, that you can summarize by saying that the plaintiff, the Alaska-Pacific Consolidated Mining Company, actually does now hold patent rights to the Independence claims, the Alaska Free Gold claims, the Jap claims, and the Black claims, as shown on [fol. 165] Plaintiffs' Exhibit AP-1?

A. That is correct.

Q. That the claims in the light yellow color, called "claims held by locator" represent the claims which the plaintiff holds by assignment or by actual original location by the plaintiff, itself, that is the most senior title that personally exits to those particular pieces of property?

A. That is correct.

Q. I think that I am correct in saying that, at the time of the closure, and today, and during the intervening time, no one disputes the title of the superior rights of this plaintiff to the particular plots outlined on Plaintiffs' Exhibit AP No. 1; is that correct?

A. There were no disputes as to—that were not resolved. I don't want to be on record—there may have been some conflicts that had to be resolved out in the Black group, particularly, but they were resolved ultimately, so that we were the owners of all of them. There may have been a few conflicts; I remember there were conflicts come up over some of the Black group, but those were resolved, so that the ownership of the property is as shown on this map now, which was prepared by Mr. Waller. That is the situation.

As I stated, in the course of these patent procedures,

conflicting areas came up and disputes arose, mostly over-
[fol. 166] lapping, but the overlaps were resolved in our favor, so as to show ownership as shown in this map now, and we have had continuous ownership of all of that property.

So, just to blankly state there were no disputes—there were conflicts came up in the patent procedure, or as to incidental parts of patents.

Mr. Harrison: Defendant's counsel is prepared to state that the defendant agrees with the various assertions of title made by the plaintiff, the Alaska-Pacific Consolidated Mining Company; and that agreement is predicated on an examination of the title instruments, including patents, location rights, quit-claim deeds, and other instruments of title, and examination of the corporation's books, concerning the merger of the Alaska Free Gold corporation and the Alaska-Pacific Consolidated Mining Company—that is not correct.

In other words, the merger between the Alaska-Pacific Mines, and the Alaska-Pacific Consolidated Mining Corporporation, the present corporation; so that the defendant feels that no further evidence or proof of title is necessary.

The Commissioner: So it will not be necessary to have the documents showing title introduced into evidence?

Mr. Harrison: That is correct. It will not be necessary.

Mr. McGuire: The witness is available for cross-examination.

[fol. 167] Cross-Examination

By Mr. Harrison:

Q. Now, Mr. Montgomery, is the plaintiff in this case a member of the American Mining Congress?

A. No, I do not believe that we, at this time, maintain membership.

Q. I mean, was the plaintiff a member of the American Mining Congress back in October, 1942, or within six or seven months prior to that time?

A. I can't say.

Q. Your position, at that time, was attorney and president?

A. No, no.

Q. What was your position, at that time?

A. I think, at the time that this closure order was issued, —I know I was a member of the board of directors, and I was attorney for the company, and I believe I was assistant secretary.

Q. Well, at that time,—and I mean for, say, several months prior to October, 1942, of what technical or professional or trade associations was the plaintiff a member, if any?

A. Well, there was the Alaska Miners Association, I believe it is called, that we belonged to. I don't know of any others. I am not too sure about that; I didn't take care of that. All of that was done by Mr. Walter Stoll; he took care [fol. 168] of all of that part of the business. My part of the procedure was that of attorney, and that did not involve memberships. What I would have to say would be a little too indefinite to be of much value.

Q. What was this Alaska Miners Association?

A. It was an association of Alaska Mine owners.

Q. Did they have any kind of publication?

A. I believe they did, yes, something of that sort.

Q. The plaintiffs received copies of it, or do you know?

A. Yes, I think I have seen some.

Q. Do you know whether it came out weekly or monthly?

A. No, I couldn't tell you.

Q. Did the plaintiff have any type of Washington, D. C. representation?

A. No, not at that time.

Q. You say, at that time; and you are referring to 1942?

A. That's right, yes. No, we did not.

Q. Did any of the representatives of this plaintiff have any occasion to communicate with the War Production Board during the year 1942, prior to October, 1942?

A. Oh, I take it that there were applications for priorities that were made. You are speaking prior to the actual order?

Q. Yes.

[fol. 169] A. Oh, yes, there were communications with the War Production Board, yes; I was somewhat in that.

Q. Did you actually go to Washington, D. C.?

A. No, no, I didn't. When we needed a priority to obtain

some materials that were under priorities, we made the necessary applications for them. Now, that was done.

Q. What I mean is, did you have any direct—that is, by personal contact,—representation between the plaintiff and any official or representative of the War Production Board?

A. Not in Washington. There may have some official here that we contacted, but none in Washington, no. I think the only direct contact we had with Washington—Mr. Stoll made one trip to Washington during the process of this appeal that we took; and that, insofar as my knowledge goes, is the only direct contact we had; that is, when you say me, personally, with the War Production Board, or with anyone in Washington.

Q. Do you know whether or not, in the year 1942, in the period of, approximately, June to October,—whether or not numerous representatives of the United States Senate, and the House of Representatives, and mine owners and mine operators and mine engineers, made representation to the War Production Board, relative to the closing of gold mines of the United States and its Territories?

[fol. 170] A. What representations were made?

Mr. Connor: I think the witness could hardly say yes or no to that question. Does he know? He could say yes, or no, and then we will know what we are driving at.

The Witness: Yes; I will have to answer that, that I have no direct——

Mr. McGuire: Wait!

The Commissioner: The witness is a lawyer, and——

Mr. McGuire: I know.

The Witness: I have no direct knowledge.

By Mr. Harrison:

Q. During the summer of 1942, what publications, professional, technical, or mining, or publications relating to pending legislation in the American Congress, did you read, if any?

A. Very few, that I have any direct recollection of at this time.

Q. Did you, as an attorney, subscribe to any war service annotated reports of any kind?

Mr. Connor: I don't think this a proper cross-examination. I was here when the witness testified, and he did not testify to any of this on direct examination. I don't see the relevancy of it, and I don't think it is proper cross-examination.

The Commissioner: Overruled.

[fol. 171] By Mr. Harrison:

Q. Did you?

A. You know, that is taxing my memory pretty hard. You asked if I subscribed to any publication, war publications. I think I subscribed to some of the Prentice-Hall publications, but I can't remember what, at that time.

Q. Well now, Mr. Montgomery, you testified, yesterday, that L-208 came as a complete surprise to you and to the plaintiff, did you not so state, on your direct testimony?

A. Yes.

Q. I think you even said that it came like a bolt out of the blue.

Now, the petition in this case with which we are concerned, and with which you are concerned as attorney, in paragraph 8, after making many allegations of various people, including—including Julian D. Conover, secretary of the American Mining Congress, who evidently, on behalf of his association, prepared and delivered a memorandum to the War Production Board, and other government agencies, and so on.

Then in the last sentence in this particular paragraph, the petition says:

"In addition hereto, numerous other persons, including distinguished and experienced Members of the United States Senate and the United States House of Representatives, mine owners, mine operators, and mining engineers, rendered similar reports to the said agencies prior [fol. 172] to the issuance of Order L-208."

Now, during the period when all of this activity was going on between the War Production Board and all of these representatives of the mining industry, and the United States Congress, you were the attorney, director and assistant secretary of the plaintiff in this case.

Now, do you seriously mean that, during this entire period

of 1942, prior to the issuance of L-208, you knew nothing about it, and it came as a bolt out of the blue?

A. That is correct. My function in the company—and I think I state this as attorney—Mr. Stoll took care of all of the policy part of it.

Q. Who is Mr. Stoll?

A. Mr. Walter W. Stoll. He is the father of the man who was here in court yesterday, and he really was the spark-plug of the whole organization, Walter W. Stoll.

Q. What was his title with the plaintiff?

A. I think, at that time, he was vice president and general manager.

Q. Where is he today?

A. He died in November—on November 12, 1949.

Q. Well, you are not prepared to say, are you, Mr. Montgomery, that the plaintiff in this case was completely aware of the possibility of the issuance of an order similar to L-208, [fol. 173] during the summer of 1942.

A. I don't think I could say that. At that time, there was Mr. Harrison and Mr. Stoll in the company, and I couldn't say what they may have known. At least, it didn't come to my knowledge. While I was there with them every day during that period, as I say, I didn't have much part in the policy-making.

Q. Let me ask you this question: During the summer of 1942, and up to October 8, 1942, did the board of directors of the plaintiff hold any meetings?

A. Oh, yes. I think that will show in our—I could tell you—it has been pretty much the policy to hold regular meetings of the board, and they were held at that time—meetings were held, at the time.

Q. Do you recall whether there were any discussions, at any of those meetings, as to the subject matter involved here?

A. No.

Q. Do you have the minutes of those meetings in the courtroom here?

A. Let me see! During that period—I might have.

Q. I wonder if I could look at them—if you could look at them, and refresh your recollection, if I gave them to you?

A. Yes, let me have them.

Here is a meeting held June 8, 1942.

[fol. 174] Q. We are now examining the minutes of the meeting of the board of directors which was held on June 8, 1942?

A. Yes; and we have also examined the minutes of the regular monthly meeting of July 20, 1942,—speaking of the minutes of the board of directors of the Alaska-Pacific.

The next regular meeting that was held was dated August 19, 1942. It is in the record, but at that time, at the time of this meeting of August 19, 1942, there was brought up that—a great many resoultions had been passed, and it was difficult to run through the entire minutes in order to find them; so it just appeared to be the concensus of the meeting that a book be kept, indexing the resolutions, for the convenience of the board.

Q. In any event, would the minutes of the meeting contain references by title of the particular resolution passed at that particular meeting?

A. I can't recall that that was ever complied with.

Mr. McGuire: I would like to ask this question on the record, please.

By Mr. McGuire:

Q. Isn't it true that all resolutions passed by the board are kept and entered in the company's minutes?

A. Absolutely, yes; this was only a sort of index to them, Mr. McGuire; yes, this had nothing to do with the actual effect of the resolution. It would just be convenient ac-[fol. 175] cess to them; that is all.

Q. There was no consideration given to changing the corporation's practice from entering the resolutions on the corporation's minute books?

A. Not at all. No, all resolutions have, at all times, been entered right in the minutes; and if, for a short period, we maintained this index, it was only for convenience, actually.

That takes up beyond the time that the order was issued: isn't that correct?

By Mr. Harrison:

Q. Yes.

A. We are now reading the minutes of the meeting of September 8, 1942, and the next meeting was September

21. Then we get down to the date of October 19, 1942, and at that time the order had been issued. Then, by that time we were discussing the closure order, you see.

The Commissioner: It may not be entirely clear in the record, but I think it might show that the book the witness has in his hand, or was examining, was handed to him by counsel for the government, was examined jointly between him and counsel for the government and counsel for the Homestake and Alaska-Pacific.

The Witness: Yes, sir; it is the minute book—referred to as Volume 1 of the minute book, which covers the dates from its original organization, January 22, 1938, until—[fol. 176] the last minutes that appear in it were posted on December 21, 1942,—those for December 21st, 1942. Then there are succeeding volumes from there on.

Mr. McGuire: The minute books of the Alaska-Pacific Consolidated Mining Company.

By Mr. Harrison:

Q. Mr. Montgomery, you testified that the company, the plaintiff in this case was highly profitable. Would you indicate—not with the financial statement, of course, but what do you mean by "highly profitable"? What does "highly" mean?

A. Well, it was a successful enterprise, because it paid us all a good profit, and it has paid—well, I think I stated where some of the profits went. For example, we paid dividends, we paid for those mining properties; and we also built quite an extensive plant. I don't know how much money went into the plant, and into the development of the mines. All of that was earned out of the ground, because we didn't have the money, to start with—very little.

Q. Is the plaintiff a highly profitable company, today?

A. I wouldn't say so, no.

By The Commissioner:

Q. Is it operating the mines, today?

A. Not operating, no.

[fol. 177] By Mr. Harrison:

Q. How long has it been since it has operated?

A. Well, that is a question of what we mean by operating here.

Q. Since you have mined gold?

A. Well, the last operation of any extent was closed about January, 1951. Of course, also, in the summer of—this last summer, we carried on some operations, but no milling operations.

Q. When did you open up, after the limitation order was cancelled?

Mr. McGuire: If the Court please, I object to further cross-examination along this line. There has been no direct evidence with reference to operations since the closure order, and it is immaterial, at this particular part of the case, what operations were carried on after the closure order was lifted. We will come to that in due time.

Mr. Harrison: I just thought that, inasmuch as, yesterday, we got into damages—we did allow testimony to go in about whether they made a profit, and so on, it might be pertinent to ask a couple of preliminary questions concerning whether or not they operated the mine after the closing order, and how much.

The Commissioner: Well, I don't really see that it would be very valuable, but I will overrule the objection. I don't [fol. 178] think it is particular material, but you are not going into great detail?

Mr. Harrison: No, no detail, at all. I just want to know when they started. I want some proof that they did start up again.

The Witness: If you are trying to hold me down to whether any profit was made subsequently, I would have to refer to the books again, because I don't know.

By Mr. Harrison:

Q. Let me ask you two questions.

First of all, when did the plaintiff start operations after L-208 was rescinded, if it did start?

A. Well, we maintained a few men on the property right along, but no material operations—I don't think there was

much of any material operations occurring on there until—wasn't the order lifted some time in June, 1945?

Q. I think so. I think June 30, 1945.

A. We operated some that summer.

Q. Did you operate at a profit?

The Commissioner: He said he would have to look at the books.

The Witness: I think there was some profit that year. That was 1945. I would hate to be held down to that, too.

Mr. Harrison: I have no further questions.

Mr. McGuire: No redirect.

[fol. 179] Mr. Barnett: No questions.

Mr. Connor: No questions.

The Commissioner: Step down.

(Witness excused.)

Mr. McGuire: May we have about a 15-minute recess?

The Commissioner: Yes. Off the record.

(Here followed discussion off the record.)

The Commissioner: We will recess until 2 o'clock.

(Thereupon, a recess was taken in the hearing, until 2 o'clock, p.m.)

AFTERNOON SESSION

(The hearing was resumed, pursuant to the recess previously taken.)

The Commissioner: You may proceed, Mr. McGuire.

Mr. McGuire: Will Your Honor swear Mr. Benson?

PAUL T. BENSON, a witness produced on behalf of the plaintiffs, having been first duly sworn by said Commissioner was examined, and in answer to interrogatories, testified as follows:

Direct Examination.

By Mr. McGuire:

Q. Will you state your name and address for the record, Mr. Benson?

A. Paul T. Benson. Do you want my home address?

[fol. 180] Q. Business address.

A. Tacoma Smelter, Tacoma, Washington.

Q. What is your occupation, Mr. Benson?

A. General superintendent of Tacoma Smelter.

Q. How long have you been employed by Tacoma Smelter?

A. Twenty-eight years.

Q. Continuously?

A. Yes, sir.

Q. And what was your capacity there with the Smelter, during the years 1940 through 1945?

A. Assistant general superintendent.

Q. Now, do you know whether or not Tacoma Smelter purchased any concentrates from the Alaska-Pacific Consolidated Mining Company?

A. Yes.

Q. I show you a document of two pages, Mr. Benson, which I will ask the reporter to mark for identification as Plaintiffs' Exhibit AP-21.

(Said document was marked for identification as Plaintiffs' Exhibit AP No. 21.)

By Mr. McGuire:

Q. I will ask you whether or not this document is a statement of the tonnages of concentrates purchased by Tacoma Smelter from Alaska-Pacific Consolidated Gold Mining Company, together with an analysis of those tonnages, and if the statement was not taken from the records of the [fol. 181] company?

A. This is a statement of the receipts from the Alaska-Pacific from 1938 to 1943, and shows the correct analysis of the concentrates received.

Q. Is the information shown on Exhibit 21 taken from the records of the company?

A. It was taken directly from the records of the company.

Offer in Evidence

Mr. McGuire: I offer in evidence Plaintiffs' Exhibit AP-21.

By Mr. Harrison:

Q. Mr. Benson, would you be good enough to take that exhibit marked for identification, and tell us what the

meaning is of these abbreviations along the top of the columns, starting with Au, Ag, and so on?

A. Those are not abbreviations, those are chemical symbols.

Q. Chemical symbols?

A. Yes. Au is gold, Ag is silver, Pb is lead, Cu is copper, SiO_2 is silica, Fe is iron, CaO is lime, S is sulphur.

Mr. Harrison: I am about to object on the basis of materiality, but maybe counsel can indicate for what purpose he offers this exhibit.

Mr. McGuire: Mr. Commissioner, we will, at the appropriate time, move the Court for permission to amend the petition in this case, to charge that not only Order L-208 itself was arbitrary, etc., but the action of the War Production Board in refusing to continue to grant to Alaska-Pacific the [fol. 182] right to continue in operation, despite the order, was also arbitrary and capricious. The purpose of this testimony is to show that Alaska-Pacific was producing a concentrate which was useful in the copper smelter, and that of course the action in shutting the mine down barred it from contributing to such effort; in fact, hampered it at least to the effect of cutting off its concentrates.

Mr. Harrison: I am going to object to the materiality of the proffered exhibit, and also object to its introduction at this time, without some foundation being laid to show that these particular chemicals that are listed on the exhibit were used, in fact, for copper smelting, and thus contributed to the production of copper.

Mr. McGuire: The witness will cover the subject of the use of concentrates in his testimony.

The Commissioner: Well, I think that the technical objection of the defendant is probably good.

Mr. McGuire: We will connect it up in just a moment.

The Commissioner: Then I will withhold ruling until that time.

By Mr. McGuire:

Q. Now, Mr. Benson, will you explain, for the record, what use, if any, the Tacoma Smelter made of concentrates purchased from Alaska-Pacific Consolidated Mining Company?

[fol. 183] A. The character of the receipts at the Tacoma plant indicated a deficiency of certain materials for fluxing purposes, particularly sulphur, as compared to the copper content. The concentrates are ores of very high copper content, and must have material high in sulphur added to it, in order to get the proper reaction and the proper separation in the smelting operation.

Shall I elaborate on that a little bit?

Q. I wish you would.

A. The copper analysis of this particular concentrate is in the order of one-tenth of one per cent; whereas the sulphur content is in the order of as high as 30 per cent and as low as 22 per cent. Certain other receipts at the plant would have completely opposite analysis with regard to copper and sulphur; they might be on the order of 30, 40 or 50 per cent copper, and sulphur down in the order of 10 per cent of that.

It is impossible to do a metallurgical job of smelting of high copper and low sulphur material. Therefore, we must have material very low in copper, preferably with none, that is what this amounts to, together with the high amount of sulphur, in order to get the proper metallurgical reaction to the smelting operation.

Q. So that the Tacoma Smelter, in order to smelt copper, bought copper ore, which it combined and blended with [fol. 184] these concentrates, in order to find copper; is that right?

A. That is right.

Q. And the elements you were particularly interested in, so far as Alaska-Pacific concentrate was concerned, was low copper content, combined with the high sulphur content? . . .

A. That is correct, yes.

Mr. Harrison: Let us let the witness do the testifying.

By the Commissioner:

Q. Could you have added sulphur just as well?

A. Elemental sulphur, you mean?

Q. I have seen piles of yellow sulphur, and——

A. No, you cannot use sulphur in that form. You must have it combined in the form of a mineral, preferably py-

rites, which is a combination of iron and sulphur, in order to get the reaction to take place.

By Mr. McGuire:

Q. Would you describe these concentrates produced by Alaska-Pacific as pyrites?

A. Yes, sir; the perfect type of concentrate is pyritic, and pyrite is sulfide and iron.

Q. Did the Tacoma Smelter regard the concentrates produced by Alaska-Pacific Consolidated Mining Company as desirable, or not?

By Mr. Harrison:

Q. Are you a chemist?

[fol. 185] A. I am.

Q. Do you know, of your own knowledge, when you so regarded it? Did you so regard these concentrates furnished by Alaska-Pacific?

A. As being desirable?

Q. Yes, as being desirable?

A. And necessary, absolutely. You have to have those kinds of materials. If you can't get it, you have to buy pyrites to replace it, which is a losing—financially, a losing operation to have to smelt better materials.

Mr. McGuire: Now, I re-offer Plaintiffs' Exhibit AP-21 for identification.

Mr. Harrison: I would like to ask a couple of preliminary questions.

The Commissioner: All right.

By Mr. Harrison:

Q. Mr. Benson, do you know, of your own knowledge, whether or not the actual tonnages listed on Plaintiffs' Exhibit for identification No. 21, were actually used, in fact, by the Tacoma Smelter, in the copper smelting process?

A. Yes.

Q. That applies to all of the tonnages listed on these two sheets?

A. Yes.

Mr. Harrison: My objection then will be to the ma-

[fol. 186] teriality of the exhibit.

The Commissioner: It will be received.

(Said statement of weights and assays of shipments by plaintiff, marked "Plaintiffs' Exhibit AP No. 21", admitted in evidence and made a part of this record.)

By Mr. McGuire:

Q. Now, Mr. Benson, did the company become aware, in October, 1942, of the issuance of Limitation Order L-208 of the War Production Board?

A. Yes; we were so informed by our New York purchasing department.

Q. Did the company take any action, in an effort to have the order suspended, with reference to the Alaska-Pacific Consolidated Mining Company?

A. Yes, I think we did.

Q. What did they do?

A. The general manager of the ore purchasing department in New York City was sent to Washington, D. C., to object to the application of the order to the Alaska-Pacific Consolidated Mining Company's concentrate.

Q. About what time was he sent down there?

A. He was sent down there in October of 1942.

Q. He was sent to the War Production Board?

A. Yes, I think so.

Mr. McGuire: The witness is available for cross-exami-[fol. 187] nation.

Cross-Examination.

By Mr. Harrison:

Q. Mr. Benson, considering now your complete and entire source of concentrates for use in your smeltering process, approximately what percentage of that complete need of the Tacoma Smelter was obtained from Alaska-Pacific during 1942?

A. In 1942?

Q. Yes.

A. Well, this figure here is not totalled.

Q. No, I don't mean how many tons did you get from them. Did you get any from anybody else?

A. Yes. As I understood the question, you wanted to

know the proportion what proportion of the Alaska Pacific's output was of the total needs of that material?

Q. Yes, that is right.

A. Something on the order of 10 per cent. That is a rough estimate.

Q. From what type of sources did you get your other 90 per cent?

A. From mines; from Alaska, from similar mines all over Alaska and British Columbia and the Western United States.

Q. By "similar mines", do you mean gold mines?

A. Gold mines, or lower-grade copper producers.

Q. What effect, if any, did the closure of the Alaska [fol. 188] Pacific mines have on your production?

A. We didn't let it have any effect on that production because we went out and purchased barren pyrites for use, to be used as flux.

Q. In other words, you went out and purchased it?

A. Yes.

Q. In other words, then, you made up the loss by getting another supply?

A. Yes, an unsatisfactory supply.

By the Commissioner:

Q. Unsatisfactory in what sense?

A. Well, if we had to go all the way to that class of material for fluxing purposes, we would not produce any copper, we would be out of business.

Q. You mean it was not as profitable; is that the idea?

A. This material is gold concentrate, and it was profitable. We have to smelt profitable material, or else we don't operate.

By Mr. Harrison:

Q. Well, did your company operate at a loss, at any time?

A. No; we don't operate at a loss; we shut down.

By the Commissioner:

Q. Did your operations increase in scope, during the war period?

[fols. 189-191] A. No, they did not. The main reason shall I explain why?

Q. Yes.

A. The Tacoma Plant is largely a maritime plant. We have a ship at the dock now from the Philippine Islands. We have a ship on the island of Malta, in the Mediterranean, and Newfoundland, and the west coast of South America; and during the war, much shipping was shut off, and a lot of our receipts were stopped. The Philippine Islands, who are our biggest shippers, now,—they were sizeable shipments before the war, and naturally they were out, like that:

So we did lose tonnage, did not produce as much as in normal times, due to that fact of being reduced by reason of the war conditions—due to the fact that our business was reduced by reason of the war conditions in shipping.

Q. Of course, the production of copper increased materially throughout the war years, did it not?

A. Yes.

Q. So that copper was one of the critical materials?

A. Yes; the big domestic mines, like Utah Copper, Anaconda, and Phelps-Dodge, greatly increased their production during the war.

[fol. 192] In The United States Court of Claims

[Title omitted]

Transcript of Testimony

Washington, D. C.,
Monday, January 26, 1953,
at 10 o'clock, a.m.

Testimony For Plaintiffs

The parties met, pursuant to notice of the Commissioner, at the time above stated, in Hearing Room, Court of Claims Building, Washington, D. C.

Appearances

Present: Hon. William E. Day, Commissioner; Ralph D. Pittman, Esq., Phillip Barnett, Esq., George H. Herrington, Esq., William H. Orrick, Jr., Esq., James D. Ewing, Esq.,

Edward E. Rigney, Esq., Carlton S. Connor, Esq. and Donald M. Dunn, Esq., counsel for plaintiffs; and Kendall M. Barnes, Esq., and Thomas H. McGrail, Esq., counsel for defendant.

[fol. 193] Mr. Charles C. Dudley, a reporter, was thereupon sworn by the Commissioner to well and truly take down and transcribe the questions propounded to and the answers given by the witnesses, and to do all other things required of the reporter.

Pursuant to the order of reference by the honorable the United States Court of Claims, in the above-entitled cause, testimony on behalf of the plaintiffs was taken, as follows:

COLLOQUY

The Commissioner: Are there any stipulations to be entered at this time?

Mr. Barnes: Your Honor, in connection with the allegations respecting the ownership of real estate, I have examined papers that have been submitted by the Homestake Mining Company and by Idaho Maryland Mines Corporation, and I am ready to agree, for the purposes only of the present aspect of the litigation, which relates to the question of liability, that those two concerns own approximately the quantities of land used in connection with their mining operations as alleged in the petition.

I am limiting the stipulation to the question of liability with the thought in mind that if it becomes necessary to take testimony on the question of damages, for example, there will have to be much more detailed testimony as to possible liens on that land, possible limitations on its potential use, on the fact that is is goid-bearng land, things of that type.

With respect to Central Eureka—I have just been handed an additional documet. Just a minute.

[fols. 194-200] (Here followed discussion off the record.)

Mr. Barnes: I am now prepared to make the same stipulation with respect to the Central Eureka Mining Company. I had a discussion with Mr. Pittman and Mrs. Barnett about that on Friday. There was some question as to whether the document they submitted to me had established ownership as of October 8, 1942. They now have submitted an additional document which does satisfactorily carry their

proof of title which they submitted back to that date. So I am willing to include them in that same stipulation.

With respect to the other plaintiffs who are parties to this litigation, no approach has been made to the Government whatsoever with respect to stipulation of title or any other stipulation.

There are certain other additional stipulations that we have agreed on in similar cases, when I think we reach the proper point, but with respect to Alaska-Pacific other than the stipulations we made at Seattle, with respect to Oro Fina and with respect to the various plaintiffs listed in the petition, no approach has been made to defendant whatsoever with a request for stipulation, or data to support a proposed stipulation.

Mr. Herrington: On behalf of Idaho Maryland, the stipulation with respect to our title is quite satisfactory to us, and we understand it is limited solely to the question of liability.

[fol. 201] Mr. Ewing: Up to the present, Your Honor, Order L-208, which is the basis of this controversy, is not in evidence. A copy of it is attached to Plaintiffs' Exhibit 8 for identification. I have also here a mimeographed copy, with some extraneous marking on it. I propose to offer either one or the other, as you perfer, in evidence at this time.

The Commissioner: We certainly ought to have that in evidence.

Mr. Ewing: Why don't I offer this copy.

The Commissioner: Are the exhibits which have been introduced in Court?

Mr. Herrington: It was introduced as an exhibit at the pre-trial——

The Commissioner: The question I asked is: Are the exhibits which were offered at the pre trial hearing here?

Mr. Rigney: They are here, Your Honor. We have our set.

[fol. 202] The Commissioner: I mean the Court exhibits.

Mr. Rigney: I don't know about that.

The Commissioner: I think they should be here.

Mr. Draper, will you get those?

With all these attorneys and all the papers we are going to have, we will have to exercise a little bit more care in

keeping track of the exhibits at this hearing than when fewer attorneys are present.

OFFER IN EVIDENCE

Mr. Ewing: I offer that as Plaintiffs' Exhibit next in order.

Mr. Barnes: Subject to verification, I have no objection, Your Honor.

The Commissioner: It may be admitted as Plaintiffs' Exhibit next in order.

Mr. Herrington: In Seattle, the exhibits were marked "AP-1, 2, 3, 4." I don't know whether you want to mark these "Homestake 1, 2, 3, 4," or just pick up from the pre-trial stipulation.

The Commissioner: Plaintiffs' next in order.

Mr. Rigney: 53 for identification was the last number, Your Honor, of those exhibits which were introduced at the time of the pre-trial hearing. So if we pick up there, I believe that this would be Exhibit 54.

(Said Order L-208, marked "Plaintiffs' Exhibit No. 54," admitted in evidence and made a part of this record.)

[fol. 203] The Commissioner: I want to state for the record that I have had my secretary talk to Mr. Guy Martin, who is counsel of record for the Bald Mountain Mining Company and the other plaintiffs in that case, and also Oro Fina, and he is going to send someone over immediately.

Mr. Nugent is not in his office and is unavailable, apparently.

Mr. Ewing: I will ask Dr. McLaughlin to take the witness stand.

DONALD MCLAUGHLIN, a witness produced on behalf of the plaintiffs, having been first duly sworn by said Commissioner, was examined, and in answer to interrogatories, testified as follows:

Direct Examination.

By Mr. Ewing:

Q. Dr. McLaughlin, will you give us your address?

A. My address is 100 Bush Street, San Francisco.

Q. You are President of the Homestake Mining Company?

A. Yes, I am.

Q. How long have you been connected with the company?

A. I became consulting geologist for the company in 1926, and in 1944 I was appointed President.

Q. Are you a director?

A. I am a director.

Q. Will you tell us what your duties were when you were [fol. 204] employed as consulting geologist?

A. My duties at that time were to direct the geological studies of the mine, working out the distribution of the ore bodies, everything that pertained to the nature of the ore bodies, problems of development was part of the assignment, estimation of ore reserves, and at certain times evaluations for the purposes of taxation; and other needs.

Q. Will you give us a statement with respect to your education and professional background, Doctor?

A. I was educated in the public schools of California and graduated from the University of California in 1914, from the College of Mining, with a degree of B.S.

I took graduate work at Harvard in geology, where I received the degrees of A.M. and Ph.D.

After the war, I was in Peru for about six years with Cerro de Passeo Copper Corporation.

Q. You mean the First World War?

A. After the First World War.

I left there in 1925 as Chief Geologist of the corporation. I accepted a professorship at Harvard, where I was from 1925 until 1941.

As I previously mentioned, I was consulting geologist for Homestake in 1926 until 1944, and for various other mining companies at that time.

From 1941 until 1943, I was Professor of Mining Engi- [fol. 205] neering at the University of California, and Dean of the College of Engineering. I left there in 1943 to accept the vice presidency and director of the Cerro de Passeo Copper Corporation, and in 1944 and 1945 I was General Manager of the company in Peru.

I returned at that time when I accepted the Presidency of the Homestake Mining Company.

I think that covers the major points.

Mr. Ewing: Mr. Barnes, my recollection is that your

Answer denies, or at least denies information and belief, with respect to Homestake Mining Company's existence as a corporation. Are you prepared to make any concession as to that at this time?

Mr. Barnes: Yes, sir. With respect to Homestake, Idaho Maryland and Central Eureka, I am willing to agree that they were corporations prior to October 8, 1942, and have continued their corporate status since that date.

By Mr. Ewing:

Q. Dr. McLaughlin, will you tell us where the Homestake gold mine is located?

A. It is situated in the Black Hills of South Dakota.

Q. What is the town?

A. The town of Lead.

Q. Are you familiar with the history of the Homestake mine?

[fol. 206] A. Yes.

Q. When was the Homestake lode first discovered?

A. The first claims were staked in 1876, and they were acquired by the group that developed the Homestake Mining Company the following summer; and in November, 1877, the company was incorporated.

Q. When the group that later organized the Homestake Mine Company acquired the original claim, were those claims being operated as a mine?

A. They were hardly being operated as a mine. It is the story that the three men who staked the claim took out a little gold ore the first winter and the following spring, and built a small arasstere, and extracted a few thousand dollars worth of gold.

Q. From the historical standpoint, if that is the right word, what was the situation at Lead, South Dakota, at that time, in 1876 or 1877?

Mr. Barnes: I object, Your Honor. It is very interesting, but I don't see any relevance or materiality to any issues involved in the litigation.

Mr. Ewing: I want to show, Your Honor, the general history of the mine, the nature of the operation.

The Commissioner: I will allow it.

The Witness: The question was, what was the situation at that time?

[fol. 207] By Mr. Ewing:

Q. Yes.

A. It was a very isolated part of the United States at that time. The nearest railroad was the Union Pacific, about 270 miles away across the plains. At that time, remember, it was just after the Custer massacre, and the plains were rather dangerous for traveling.

Mr. Barnes: I object and move to strike, on the grounds it is irrelevant.

The Commissioner: Overruled. Go ahead.

By Mr. Ewing:

Q. When the Homestake interests acquired the mining properties, what did they have to do to get into operation?

A. They immediately placed orders for machinery, and in a surprisingly short time had a mill erected on the property.

Mr. Barnes: May it be understood that my two objections to this entire line of examination continue?

The Commissioner: Yes.

By Mr. Ewing:

Q. What machinery, in addition to the 80-stamp mill?

A. Boilers for steam power, cars for transportation, the usual small machinery of that day, and some of the heavy machinery of that day.

Mr. Barnes: A further objection, on the ground that this is not the best evidence. If it is material, the records of [fol. 208] that date showing it was acquired would be the best evidence.

The Commissioner: Overruled.

By Mr. Ewing:

Q. How was all this equipment taken into the mine from the railroad?

A. By oxcart over the plains.

Q. When did the Homestake Company get into production?

A. It got into production when the first stamp mill was operating, which was in 1878.

Q. Now, will you tell us what effect the isolation of the mine, of which you have spoken, had on the development of the company and its facilities?

A. I think the isolation really started the policy of endeavoring to be as self-contained as possible at the mine. Throughout the history of the mine, every effort has been made to do as much of our own work as possible, having rather more extensive shops that the average mine has. They are equipped to do maintenance work, providing lumber and timber operations for the mine, developing a coal mine for our own power, and for maintaining larger inventories, also, than is, I think, customary in most mining enterprises where you are near cities.

Q. To what extent would you say the Homestake unit was self-sustaining by October, 1942?

Mr. Barnes: Your Honor, I object to this on the ground no qualification has been shown; that at that date the witness was only the consulting geologist for the company. [fol. 209] The Commissioner: I think he was in 1941.

The Witness: I was.

Mr. Ewing: He has been consulting geologist since 1924.

Mr. Barnes: That doesn't qualify him in that aspect of the company's operations.

By Mr. Ewing:

Q. You are a mining engineer, aren't you, Dr. McLaughlin?

A. Yes, I am.

The Commissioner: Overruled.

And you were then?

The Witness: I was then.

What was the question?

(The question referred to was read by the reporter.)

The Witness: It had an ample inventory of supplies at that time.

Mr. Barnes: I object and move to strike this, on the ground it is not the best evidence.

Mr. Ewing: We are going to connect it up later. I just want to get the general picture, Your Honor.

The Commissioner: Then I will overrule the objection.

with the understanding that if better evidence of inventory does not come in, it may be later stricken.

The Witness: The mine in 1942 was really in a most [fol. 210] peculiarly and unusually favorable situation. We had just completed two new deep shafts equipped with large, modern hoists. We had then a relatively new steam power plant. The mills were in excellent shape. We had scrapped practically all the old plant of the mine and had all the mining operations concentrated in one compact unit, a part of which was quite new. We had built a new lumber mill. In spite of the mine being 65 years old at that time, as far as the equipment at that time, it was a most surprisingly new plant, as it so happened.

By Mr. Ewing:

Q. I believe you testified that the company had its own coal mine.

A. Yes.

Q. From whom did the company obtain its power?

A. The company obtained its power from its own hydro-electric plant and from a steam plant which was operated with boilers fired with coal from the coal mine.

Q. Will you describe for us the nature of the ore bodies which support the Homestake mining operations?

A. The Homestake ore bodies might be called quartz stringer lodes. They are masses of mineralized rock with many short veins and irregular bodies of white quartz, with sulphides in the walls of those quartz bodies and disseminated gold throughout the rock, so that a rather broad mass of rock contains enough gold to be mined as ore. [fol. 211] These ore bodies occur as long pod-like masses that not only are inclined or have a dip, to use the technical term, but have a plunge or a rig into the earth. You have to think of them as a long pod extending down into the earth, both with an inclination and rake. On a given horizontal plane or a level, the ore bodies would vary from narrow widths up to, at a maximum, around 300 feet; and along the long axis of the ore bodies, 700 or more feet in length. The larger ones would be that way. Along the long direction of the pod, the dimensions are very much greater, sometimes running up to four or five or more thousand feet long for individual pods.

This mine really has developed a series of such pods. Some of them disappear in depth, and others pick up. These ore-bearing bodies are closely related to one particular band of rock in the district, which technically we call the Summingtonite schist, which was originally a flat layer in a great collection of muddy sediment. That was formed into most complex folds which are tilted down into the earth in this way (indicating).

The ore to a most extraordinary degree is confined to one particular layer of this rock, which as geologists we map with very great care. This rock has an unusual mineral in it called Cummingtonite, which occurs in little needles and rosettes which bind the rocks together into a most unusually strong rock, which enables us to use some [fol. 212] of the mining methods that we do.

I don't want to go on too long with geology. I might top there. That gives you some idea.

Q. You will have to be the judge of when your description is over.

Mr. Ewing: I ask that this diagram be marked Plaintiffs' Exhibit for identification next in order.

(Said document was marked for identification as Plaintiffs' Exhibit No. 55.)

By Mr. Ewing:

Q. Dr. McLaughlin, I show you this diagram, which has been marked Plaintiffs' Exhibit for identification 55, and ask you to tell us what it is?

A. This is simply a diagram to illustrate the succession of operations that take place at the Homstake mine. It is not in any sense an exact cross-section of the mine or an engineering drawing. I might say it is a diagram which you might use to instruct an elementary class.

The diagram shows the location of a shaft with the hoisting works and three levels of the mine which reach out to the ore body. The diagram really is of, I think, considerable interest in showing the mining method that is used for actually breaking the ore. That is shown on the left side of the shaft where you can see that certain layers of the ore are taken up in a type of stope that we call shrinkage stopes, leaving pillars in between. The shrinkage stopes [fol. 213] are about 60 feet wide and carry across the ore

body. If the ore body happens to be 200 feet wide, they would be 200 feet across the ore body.

They are started at the bottom of the ore body and carried through to the top. The ore is broken from overhead, and enough of the broken material is drawn off to enable the miners to have room to stand to break the ground that is over them.

After this stope has been carried up to the top of the ore in a vertical section, the broken ore is entirely pulled out and the ground is filled with sand, in the early days filled with broken rock. Then after a succession of those stopes has been mined, these stopes 60 feet wide, the intervening 40-foot pillars would be mined subsequently by a more costly and slower method, which would involve the use of timbering, the method known as square-setting. The ore then is moved to the shaft and hoisted and is transported to the mills where it goes through, in 1942, through stamps, through rod mills and ball mills, and the first portion of the gold is removed by amalgamation.

The material tailings from that operation then go to a cyanide plant, where the ore is treated by cyanidation and the remaining fraction, the last fraction, is obtained.

[fol 214] By Mr. Barnes:

Q. Would you explain what you mean by amalgamation and cyanidation?

A. Amalgamation is the process of extracting gold from ore by the use of mercury. By the use of mercury, the gold is caught by the mercury, forming a mixture called amalgam, a mixture of gold and mercury. The gold is very easily recovered from that, simply by distilling the mercury which leaves the free gold behind. That was the process used at the Homestake up until about the turn of the century. It unfortunately doesn't get as large a percentage of the gold as we would like in good practice.

The residues from that process are then treated by separating them into the sand fraction and into what we call the slime fraction. The sand fraction is just a term we apply. The slime fraction is a very fine, mud-like material. The sands are washed into large vats and then treated with dilute cyanide solution, which dissolves the gold and the silver in the ore and does not touch much else.

The slime fraction has to go to another plant, and the cyanide solution is forced through the slime in filter presses to extract the cyanide. Chemically the two plants are the same. They differ in the mechanical treatment of the ore. These solutions then become gold-bearing, carrying gold in the form of a cyanide, and they are precipitated with zinc [fol. 215] dust. The gold precipated on the zinc dust then goes to a refinery, and by a very simple operation is transformed into free gold.

We also refine the gold which we obtain by amalgamation and by cyanidation in a small refinery, and that gold is shipped to the mint.

There is one other thing that is done. The tailings, the final tailings from the sand plant go back into the mine down another shaft and are used for filling the stopes. I don't think anybody is ever going to re-mine them.

The Commissioner: The witness' explanation has called to mind something that I wanted to place on the record. When I was out on the West Coast this past fall, I was asked by the counsel for Central Eureka whether I felt it would be desirable to see a gold mine in operation, and in company with counsel for the Government I did see Central Eureka's in operation. I thought it might be helpful. I just wanted to place that statement on the record.

Mr. Barnes: I would like to have the record clear it was not the present counsel for the Government. I am completely uneducated in this field.

The Witness: I take great pleasure, after the trial, to invite you to the Homestake.

OFFERS IN EVIDENCE

Mr. Ewing: I will offer that chart in evidence.

Mr. Barnes: There is no objection.

[fol. 216] The Commissioner: It may be received.

(Said diagrammatic layout of Homestake operation, marked "Plaintiffs' Exhibit 55," admitted in evidence and made a part of this record.)

By Mr. Ewing:

Q. Dr. McLaughlin, Paragraph 11 of the petition filed on behalf of the Homestake Mining Company in this case

alleges that on October 8, 1942, the life of operations of the plaintiff's gold mining properties, based on ore bodies indicated by reserves of ore in sight and all that could be expected from development, was estimated to be 20 years at the then current rate of mining.

Did you yourself make any estimate with respect to the life of Homestake's mine as of October 8, 1942?

A. The geological department of the Homestake mine had the responsibility at all times of preparing the estimates of ore and directing the development work for additional ore, and studying all possible evidence that would bear on the problem of persistence of ore in depth or finding new ore in adjacent structures. So I was very familiar with all aspects of the problem concerning ore reserves.

Mr. Ewing: I will ask that this chart, headed "Annual Reserve and Production Comparison Chart," be marked Plaintiffs' Exhibit for identification next in order.

(Said document was marked for identification as Plaintiffs' Exhibit No. 56.)

[fol. 217] By Mr. Ewing:

Q. I now hand you Plaintiffs' Exhibit 56 for identification, the chart in question, and ask you to tell us what it shows?

First, I will ask you whether that was prepared under your direction in the geological department?

A. The actual chart was prepared very recently, so as President of the company I can't say it was prepared under my immediate direction, but much of the evidence that is on this chart was prepared by the Department of Mines, with which I have been most closely associated since 1926. The chart is simply a curve showing the ore reserves of these specific years, from 1933 to 1952.

By the ore reserves, we mean the ore at any given time, let us say at the end of the year, which we could measure in the mine from the exposures at different levels and the work that is done between the levels. As cross-cuts, which are the openings made across the ore body, go through the ore, the ground is sampled very carefully, and then the ground is also cut by numerous short diamond drill holes which are sampled. So we get a picture of the distribution

of the ore as we go down in the mine, and evidence from which we can distinguish ore in place and can make estimates of the quality and quantity of the ore.

You might say that that is the ore which at the end of [fol. 218] the year we could measure definitely in the mine. It would be highly probable, almost a certainty, that that ore exists. The risk involved with regard to that ore between those exposures is relatively small.

By the Commissioner:

Q. Is there a difference in the quality of the ore?

A. Yes, there would be a certain point at which profits would cease.

Q. How is that reflected here?

A. All ore above a certain grade would be included in this. If, let us say, we mine gold down to 50 cents a ton, there would be very much more ore than mining gold to the limits that we can mine it today.

In 1942, for the preceding—let's see, how many years is that—that would be 69 years, 65 years since the founding of the company, it has been possible to develop or to block out additional ore each year. We have mined so much, and we have gone ahead and opened up so much. So at any given time, the ore reserves simply shows the ore that we have measured, but it is in no sense a limitation on the life of the mine.

The chart I think shows the ore reserve for 1942 as 19,400,000 tons, which would give a life of that particular ore reserve of about 14 years, but we would anticipate going on with further development as we mined the ore in 1943, if we had been allowed to, and we would have added [fol. 219] more life to it. So in addition to the amount which is indicated by the measured ore, there would be the life that you would expect that you would get from future development.

We have a record of 65 years, each year finding about as much ore as we mined. There is no indication that that situation is going to change in 1942. As a matter of fact, we have gone on mining for some eight years, and you can see it happens that the last ore reserve here is still some 20 million tons of ore.

So the estimate that there are six years of ore still to be

developed in addition to the 14 years in the actual estimate was a very conservative one. In fact, in 1942, I would certainly have hesitated to put just where the limit was on the long-range future of the mine. It is based on geological inference to some extent, but we still see nothing that would lead us to say that the ore bodies are going to disappear in depth or that we are not going to find new ones as certain ones are exhausted.

So I would regard the estimate of 20 years as a minimum estimate, which I am quite sure any competent mining man would have agreed to as a very conservative estimate for the life of the mine, and with very good probability indeed that the mine would live over 20 years.

[fol. 220] By Mr. Ewing:

Q. That is, as of October, 1942?

A. Yes. I should certainly have said the expectancy of life of the mine was much better than my own expectancy.

Q. I don't think you said so directly, so I will ask you the question: It is your opinion that as of October, 1942, the mine had at least an expectancy of 20 years?

A. Yes. I regard that as a very conservative estimate.

Mr. Ewing: I offer the exhibit marked for identification in evidence.

Mr. Barnes: No objection to this document.

The Commissioner: It may be received.

(Said chart, marked "Plaintiffs' Exhibit No. 56," admitted in evidence and made a part of this record.)

By the Commissioner:

Q. Wouldn't the cost of removing the gold be included in that estimate?

A. No. That estimate is really the estimate of our supply of material. The cost of removing would come into consideration in determining where we would draw our limit. Let us say if we have an ore that is worth $20 a ton here, and it ends with a sharp boundary, that is the boundary of the ore. But if it grades off gradually down through perhaps 50 feet to lower grade material, we would set [fol. 221] the boundary at the point where the costs were such that profits disappeared.

Q. What I had in mind was, during the 20 years if the cost of labor and materials increased to the point where your cut-off would have taken place, that would have reduced the life expectancy by some amount, anyway, would it not?

A. Yes. For example, if the price of gold had stayed at $20 an ounce and the cost had gone up to our present costs in paper money, we would be shut down. That is, there would be no ore produced.

Q. By that same comparison, if your cost of operations had increased during that 20-year period that you spoke of as the estimate, that is based upon the costs in 1942?

A. Yes. It is conceivable that, let us say, if we had extreme inflation and a 5-cent dollar, and we still had $35 gold, we would be shut down along with every other gold mine in the world, probably. That is, your costs measured in depreciated money would go up.

Q. To that extent, then, the 20-year estimate that you have given is tied to the cost of operation?

A. Oh, yes, to that extent, yes.

The Commissioner: I just wanted to get that point straight.

By Mr. Ewing:

Q. Doctor, can you tell us offhand how many shares of [fol. 222] Homestake stock were issued and outstanding on October 1, 1942?

A. 2,009,280, I believe.

Mr. Barnes: I object. The witness' recollection is not the best evidence.

The Commissioner: Sustained.

Mr. Ewing: I offer in evidence the transcript of the record of the Secretary of State of California covering the Homestake corporation, commencing with the Articles of Incorporation——

The Commissioner: Can't you show that to counsel and save the trouble of introducing that?

Mr. Ewing: I shall be glad to do that.

Mr. Connor: We didn't show you anything. We asked you to read Moody's:

Mr. Barnes: I am perfectly willing to agree, Your Honor,

that the amended Articles of Incorporation of Homestake of November 5, 1877, states that the capital stock is $25,146,000 divided into 2,009,280 shares with a par value of $12.50 each.

By Mr. Ewing:

Q. As of October 1, 1942, do you know the approximate number of people who held the capital stock of Homestake?

Mr. Barnes: I object on the grounds it is not the best evidence.

[fol. 223] The Commissioner: Sustained.

Mr. Ewing: You are not going to permit him to answer if he knows?

The Commissioner: He can answer if he knows.

Mr. Ewing: I thought for the record he should at least be permitted to answer whether he knows or not.

The Commissioner: He may answer whether he knows or not. I will overrule the objection to the question: Does he know something?

Mr. Ewing: That is what I asked, as I understood.

The Commissioner: All right.

By Mr. Ewing:

Q. Will you tell us, do you know?

A. I know.

Q. How many?

Mr. Barnes: I object on the grounds it is not the best evidence.

The Commissioner: Sustained.

Mr. Ewing: Exception.

By Mr. Ewing:

Q. Do you know the number of stockholders who own from one to 99 shares, approximately?

A. We have records to that effect.

Q. Can you tell us how many?

Mr. Barnes: I object on the grounds it is not the best [fol. 224] evidence.

The Commissioner: Sustained.

Mr. Ewing: Exception.

By Mr. Ewing:

Q. Do you know the approximate number of stockholders holding from 100 to 999 shares?

A. We have a record of that.

Q. Will you tell us?

Mr. Barnes: Objection.

The Commissioner: Sustained.

Mr. Ewing: Exception.

By Mr. Ewing:

Q. Do you know the number of stockholders holding 1,000 shares or more?

A. We have a record to that effect.

Q. Will you tell us?

Mr. Barnes: I object.

The Commissioner: Sustained.

Mr. Ewing: Exception.

By Mr. Ewing:

Q. Do you remember the number of fiduciary holders of Homestake capital stock?

A. Again, we have a record to that effect.

Q. Will you tell us?

Mr. Barnes: Objection.

[fol. 225] The Commissioner: Sustained.

Mr. Ewing: Exception.

I would like to ask Your Honor if we are required to bring the transfer agent here with all the records to prove this. Is there some way——

The Commissioner: There must be some better way to do it.

Mr. Ewing: We have a certificate, not in formal shape, but in the form of a letter from the transfer agent, giving us the information.

Mr. Barnes: Who is the transfer agent?

Mr. Ewing: Irving Trust.

Mr. Barnes: Let me see the letter.

(Letter shown to Mr. Barnes.)

Mr. Barnes: Your Honor, I would be perfectly willing to agree that if Mr. McCoach, the Assistant Secretary of Irving Trust Company, were called, he would testify as set forth in this letter, but I object on the ground that it is irrelevant and immaterial and has absolutely no bearing on the issues involved in this case.

The Commissioner: He wants to go further than just to establish that the person would so testify. He wants the substance of the testimony.

Mr. Ewing: I want the substance of the testimony.

Mr. Barnes: If I stipulate he would testify as set forth [fol. 226] in the letter, that establishes the fact on the record, does it not?

The Commissioner: It does so to your satisfaction.

Mr. Barnes: I am not stipulating the fact. I am stipulating he would so testify. I have had no opportunity to audit these figures at all.

Mr. Ewing: I will accept that stipulation and, subject to that condition, suppose I offer the letter.

The Commissioner: All right.

Mr. Ewing: As Plaintiffs' Exhibit 57.

(Said document was marked for identification as Plaintiffs' Exhibit No. 57.)

Mr. Barnes: What about a ruling on my objection to relevancy and materiality, Your Honor?

The Commissioner: I overrule that.

Mr. Barnes: I fail to see how the question of the ownership of plaintiff's stock has any bearing whatsoever on the issue here, which is whether we are taking by L-208——

The Commissioner: It may not, but I feel that is the kind of testimony that I had better admit than hear argument about its admissibility.

Mr. Ewing: Also, the allegation of the petition makes it relevant.

The Commissioner: The exhibit is received in evidence. [fol. 227] (Said letter, marked "Plaintiffs' Exhibit No. 57," admitted in evidence and made a part of this record.)

The Commissioner: I will amend my statement, then, to "hear extended argument." (Laughter)

Mr. Barnes: You notice, Your Honor, that I sat down very promptly.

By Mr. Ewing:

Q. In Paragraph 3 of the petition filed by Homestake Mining Company in this case, Doctor, there is an allegation that for many years immediately prior to October 8, 1942, plaintiff had operated its gold mining properties and continuously made substantial profits therefrom. Has Homestake Company always operated at a profit?

Mr. Barnes: I object, Your Honor, on the grounds it is not the best evidence.

The Commissioner: I sustain the objection.

Mr. Ewing: I take an exception.

The Commissioner: Counsel, of course, can always make an offer of proof, as you are aware.

Mr. Ewing: I will prove it in another way.

By Mr. Ewing:

Q. Doctor, have you any opinion as to whether the Homestake Mining Company as of October 8, 1942, had a reasonable expectation of profitable operation during the years following 1942?

[fol. 228] A. I have.

Q. Will you tell us your opinion?

A. It was operating at a profit in the year 1942.

Q. And after that, do you believe it would operate at a profit?

A. It certainly could have.

Q. For its presumably expected life?

A. We saw no reason why the profits would have discontinued.

Q. Dr. McLaughlin, will you name for us the largest producers of gold in the United States in 1942 in order of output?

Mr. Barnes: I object, unless the source of the witness' knowledge is shown.

The Commissioner: Just a minute. I will have to sustain that objection, I think.

Mr. Ewing: I am going to have him give the source.

The Commissioner: Very well.

By Mr. Ewing:

Q. Will you tell us what that document is?

A. This is a photostat of a sheet from the Bureau of Mines report for the year 1942 on the production and the standing of the various mines of the country. It does not give the production, but it lists the largest gold producers in order of production, with Homestake as the largest producer [fol. 229] in the country; the Utah Copper Company as the second largest producer; the United States Smelting, Refining & Mining Company, from their Alaska dredging operations, third; the Phelps Dodge Corporation, from its mines in Ajo, Copper Mountain, Verde and Warren, as fourth; the Golden Cycle Corporation, which is to a large extent a custom mill, at that time at Colorado Springs, working on ores from Cripple Creek, as the fifth; the Yuba Consolidated Gold Company, working various dredging fields in California, as the sixth; the Alaska Juneau Gold Mining Company at Juneau, Alaska, as seventh; the Natomas Company, another California dredging company, eighth; the Empire Star Mines Company, from their mines in Grass Valley, ninth; the Idaho Maryland Mines Corporation of Grass Valley, tenth; the Howe Sound Company of Bates Metal Company, working the mine at Chelan Lake in Washington, eleventh; the Getchell Mines in Nevada, twelfth; the Nevada Consolidated Copper Corporation, mining copper ore at Robinson, Nevada, thirteenth; the Lava Cap Gold Mining Corporation, of California, at Grass Valley, fourteenth; Consolidated Coppermines, also working in Nevada, fifteenth; United States Smelting, Refining & Mining Company, near West Mountain, which is near Bingham Canyon, sixteenth; the Alaska-Pacific Consolidated Mining Company, of Willow Creek, Alaska, seventeenth; Mammoth-St. Anthony mine of Arizona, eighteenth; Manhattan Gold Dredging Company of Manhattan, Nevada, nineteenth; the [fol. 230] Talache Mines of Idaho, near Boise, twentieth; the Capital Dredging——

Mr. Barnes: I object, Your Honor, and move to strike on the grounds it has no relevance or materiality whatsoever, and also on the grounds it is going away beyond the scope of the question and ceases being responsive.

The Witness: I am simply answering the question.

Mr. Ewing: I asked him to list them in order of size.

Mr. Barnes: The first four, I believe.

The Commissioner: Overruled.

How many more do you have?

The Witness: There are 29; the first 29 mines are listed.

Mr. Barnes: Then I object on the grounds it is not the best evidence. The witness is just reading from a document issued by the Bureau of Mines. That is the best evidence.

Mr. Ewing: Do you want us to bring that? This is a photostat of it.

The Commissioner: Will you stipulate that he has a document taken from the Bureau of Mines?

Mr. Barnes: I have never seen the document.

The Commissioner: I will have to sustain the objection.

Mr. Ewing: We can bring it in.

The Commissioner: All right.

Mr. Ewing: I just don't want to have to bring documents. There isn't any doubt about the fact. Mr. Barnes knows that.

[fol. 231] The Commissioner: But his objection that it is not the best evidence is good.

Mr. Ewing: Will you take it, subject to my producing it?

The Commissioner: Surely.

Mr. Ewing: That is my point.

By Mr. Ewing:

Q. Will you finish the list?

A. The Bald Mountain Mining Company, twenty-second; Daryton Dredging Company, twenty-third; another mine of United States Smelting, Refining & Mining Company in Arizona, the San Francisco district, twenty-fourth; twenty-fifth, Golden Queen Mining Company, California; twenty-sixth, Telluride Mines, Colorado; twenty-seventh, Knob Hill Mines, Inc.; twenty-eighth, Anaconda Copper Mining Company's operations at Butte; and twenty-ninth, the Cactus Mines Company of California.

Mr. Barnett: We have been neglected.

The Commissioner: I will strike his testimony, unless the objection of counsel that it is not the best evidence is taken care of, and you can come in with the best evidence. You have his testimony.

Mr. Barnes: May I point out it is obviously unreliable if it leaves out Central Eureka.

By Mr. Ewing:

Q. Which of the companies that you have listed were lode [fol. 232] mines?

A. There are 14 of those which were lode mines.

Q. Would you give those?

Mr. Barnes: Is this something shown there?

Mr. Ewing: It is shown on the same exhibit.

Mr. Barnes: I will make the same objection.

The Witness: I think I could testify from my own experience as to which ones of these were lode mines.

The Homestake; the Golden Cycle; the Alaska Juneau; the Empire Star; the Idaho Maryland; the Getchell; Lava Cap; the Alaska-Pacific Consolidated—the gold lode mines, that was your question?

By Mr. Ewing:

Q. Yes.

A. The Talache Mines; the Bald Mountain; the mines in the San Francisco district of United States Smelting; Golden Queen; the Telluride Mines, Telluride, Colorado; Knob Hill; and the Cactus. That is 14 in all.

Mr. Barnes: I object and move to strike, on the ground the witness is merely reading from the document.

The Commissioner: All right.

Mr. Ewing: The book will be produced.

The Commissioner: I would like at this point to have the Doctor explain what is meant by the expression "lode mines."

[fol. 233] Mr. Ewing: That is just what we were coming to.

The Witness: The distinction between these mines listed here are lode mines, dredging companies, and base metal companies. The lode mines are mines that are developed in solid rock, mines like the Homestake which I have described, or mines such as the Central Eureka, which work on a quartz vein going down into the ground. The operation is sinking into the earth, hoisting the earth out.

The dredging companies are working on gold, they are working on gravel of the stream. They are simply washing the fragments of the gold out of the dust.

Then the other group of mines, the nine base metal mines that are included here, are the copper, lead and zinc

companies which operate ores that have a small amount of gold in them. Their main production is from copper, lead or zinc.

For example, by far the largest gold mine in this country, after the Homestake, is the Utah Copper Company, which is the Kennecott Copper Corporation operation, but they mine such an enormous tonnage of ore a day that the small amount of gold in that ore puts them in second place.

By Mr. Ewing:

Q. You described these dredging operations. Are they what are commonly described as placer mining operations?

A. Yes, they would be placer mining operations.

[fol. 234] Q. As between lode gold mines in different localities, are there differences in the operation?

A. Very great differences.

Q. Would you illustrate that?

A. I could illustrate that by comparing, for example, the operations of the Homestake with the operations on other lodes. At Homestake the ore bodies are very large and wide, and the rock is extremely strong, which enables us to open very large chambers without timbering and with a high degree of safety; whereas in other lode mines where the ore is crushed or where the walls are weak, it is necessary to mine with much greater care and caution, and taking out small parts of the ore body and filling carefuly and maintaining those openings with timber. It is with much greater expenditures.

There are, of course, a great variety of those mines but I don't think it is necessary to try to go into that.

Q. Just for the record, in connection with Order L-208, the Homestake Mining Company filed an appeal, did it not?

A. Yes.

Q. In connection with that appeal, there was a hearing?

A. Yes.

Q. Did you testify at the hearing, which I believe took place on November 12, 1942?

[fols. 235-236] A. Yes, I was present and testified at that hearing.

[fol. 237] Cross-examination.

By Mr. Barnes:

Q. You referred to the isolation of the Homestake Mine that existed in 1876 or 1877. What was its situation with respect to access to the outside world in 1942, Doctor?

A. In 1942 we had access with the Burlington Railroad and the Chicago & Northwestern Railroad to Lead and Denver. We had railroad communication right to the mine.

Q. Those were both through transcontinental lines?

A. No, they are branch lines and the nearest large city to the south would be Cheyenne, if you would call that a large city, about 270 miles away, and Denver some further distance to the south. In the other direction there is a town, Rapid City, that is a growing town, but the nearest large cities are the cities to the east on the Missouri and Mississippi Rivers.

Q. Is Lead what is popularly referred to sometimes as a company town?

A. There is no reason to call it a company town; it is mostly owned by the local people.

Q. Does it have any business or industrial activity other than the mine connected with it?

A. We have the water company. We sell water to the town. Of course we own quite a bit of property in the town. We rather pointedly refrain from trying to become involved in the business of the town or trying to become [fol. 238] involved even in the renting business, although we do have some—we have a couple of apartment houses which we have had to build in the last few years to relieve the shortage of housing.

Q. Where is the town located in relation to the mine itself?

A. The town is very close to the mine. It lies on the west side of the ore body. In fact, some of the old town of the early days was damaged by the subsidence of the ore body. The new town has moved up the hill a little bit farther.

Q. You referred to certain business results that have resulted from the original isolation. Does that also affect your labor relations?

A. No. It does to this extent: that I think we have a very stable community in ordinary times.

Q. Are you unionized at all?

A. No, we have no union.

Q. You say that in your opinion the Homestake Company had an expectation of profitable operations subsequent to 1942. As I recall, you arrived at this opinion because it operated profitably in 1942, is that correct?

A. I believe that is what I said. I could amend that to say that it had operated profitably for sixty-five years.

Q. But your prospects for the future depend on two things, do they not, Doctor? They depend on the price of gold, over which you have no control, is that correct?

[fol. 239] A. I am afraid that is correct.

Q. And the cost of operation, again over which you might have little or no control?

A. Oh, no. We have partial control over the cost of operation. As the dollar depreciates, naturally, costs will go up, but we have control to the extent that we can make technical improvements, as we are constantly trying to do all the time.

Q. But if there is an increase in the cost of material, you would have no control over that, except to the extent that you can substitute other materials, is that correct?

A. That is correct, yes.

Q. Incidentally, in connection with I suppose you would call it the refining operation by which you remove the gold from the ore, do you recover the mercury?

A. Yes.

Q. One hundred per cent or is there loss?

A. There is loss of mercury.

Q. What per cent is the loss?

A. I haven't the exact figures in mind.

Q. What about cyanide? Is that recovered at all?

A. No, the cyanide is consumed.

Q. Is the zinc dust consumed?

A. The zinc dust is consumed.

Q. You referred to the fact that just prior to October, [fol. 240] 1942, the company had installed certain new or additional facilities.

A. Yes.

Q. Would you mind repeating again what those were, Doctor?

A. My statement was not complete. I doubt if from memory I could describe all the new facilities, but the major ones were the sinking of two shafts to the 4100 level,

about 4100 feet deep, which were equipped with hoisting engines and were regarded as among the most modern shafts, I suppose, in the world. That put us in a very favorable condition to continue exploration in depth and also to extract the ore that was——

By the Commissioner:

Q. How much of that was new?

A. Those shafts were entirely new within the last—in 1942—within the last ten years. Over the period of subsidence, which I mentioned in answer to your other question, it had been necessary to scrap practically all the old mills of the mine and also to remove the shafts to firm the ground. You may recall the old pictures of the works, there was a most elaborate set of surface works very close to the ore bodies which had to be scrapped entirely.

By Mr. Barnes:

Q. Will you explain what you refer to when you use the [fol. 241] word "subsidence," Doctor?

A. Yes. When you remove a mass of ore or rock from the earth, even though you fill the ground, you can't fill it completely, and the pressure of the walls causes the walls to move in and the surface to go down. It happens very frequently in coal mining where you mine horizontal levels, where you drop the surface very easily. In the case of a mine going down in depth, such as the Homestake, in the superficial parts of the ore body where filling was not done with the care we use today, in the early days when that ground compacted and subsided, broke over the years, so that it went down.

Q. When you refer to a shaft that had been put down to the 4100-foot level, does that mean that you were then following at that depth or did that give you access to all intermediate?

A. That gave us access to intermediate depths. Most of the mining was above that depth at the time the shafts were put down. All the mining, I should say, was well above those depths at that time.

Q. Isn't it true that the standard operation of a mine would require periodic sinking of new shafts when you have an area as long as Homestake has?

A. Yes. As an inclined ore body runs away from your initial opening, you have to put down further shafts. It so happened that from subsidence one of our major shafts [fol. 242] before that time was in danger of becoming damaged by the subsidence, and as a matter of precaution we hurried up the sinking of these two additional shafts.

Q. Where were those located on your site, Doctor? Can you identify them, for example, by the claim names or something of that kind?

A. I am afraid I can't identify them by claim names because we pay so little attention to claim names out there, we own such a large area.

Q. I have here a plan furnished to me by counsel for the plaintiff entitled "Part of Homestake Property Showing Ore Reserves Claimed as of January 1, 1942." Would it be possible on that to indicate the location at all?

A. (Witness examining document) Yes, I think so.

Q. I think Mr. Connor may have a larger map which may help you orient that smaller one.

A. Would you show me the larger one?

Mr. Barnes: I think you would prefer to give him the larger one.

Mr. Connor: Why don't you offer this in evidence if you wish to pursue this line of questions?

Mr. Barnes: If that is satisfactory.

Will you mark this Defendant's Exhibit No. 1 for identification?

(Said document was marked for identification as Defendant's Exhibit No. 1.)

[fol. 243] By Mr. Barnes:

Q. Looking at this entitled "Map of Mineral Survey Claims Owned by Homestake Mining Company," can you indicate the location of those shafts?

A. Yes. They are not only indicated, they are marked. There is the Ross Shaft, and the Yates Shaft is there, standing on that claim.

Q. The Ross Shaft, so that we can identify it easily, is just north of the township line that goes through the area here, and the Yates Shaft is somewhat farther to the north of that, is that correct?

A. That is correct, yes.

Q. Those replace what shafts?

A. They replaced the Ellison Shaft, which was the one which was being slightly damaged by the subsidence, which there (indicating), and then there were older shafts which are not even marked on this map because they have been obsolete for many years, which stand over in this part (indicating).

Q. Farther to the north, you mean, of the Ellison Shaft?

A. Farther to the north, in the area close to the outcrop of the ore body.

Q. Where are your mills and other facilities located in relation to the general area shown on this map?

A. The mill stands about in there (indicating).

[fol. 244] Q. By that you mean just north?

A. Just north of the Yates Shaft, on the slope down the hill from the Yates Shaft.

OFFER IN EVIDENCE

Mr. Barnes: Your Honor, I would like to offer Defendant's Exhibit No. 1 in evidence.

Mr. Ewing: No objection.

The Commissioner: It may be received.

[fol. 245] Redirect examination.

By Mr. Ewing:

Q. Dr. McLaughlin, Mr. Barnes asked you as to whether the employees of Homestake were members of a union, and you answered no, as I recall. Were union elections ever held at Homestake among the Homestake employees?

A. Yes. We have had two union elections. The United Mine Workers District 50 endeavored to organize the camp, and we had an election in which the employees voted not to accept the union as their bargaining agent. We had——

Q. When was that?

A. That was about——

Q. Approximately?

A. Five years ago. We had an election with the United Steelworkers about two years ago in which again the employees voted against accepting the union as their bargaining agents.

The United Steelworkers have representatives in the district, and I believe there is a nucleus of a union there, but it has no representation.

Q. In answer to my question, a little while ago in answer to the questions by Mr. Barnes you described the new improvements that had just been put in, the two new shafts, shortly prior to October, 1942. Could you give us some idea as to the cost to the company of those improvements?

Mr. Barnes: I object on the ground it is not the best [fol. 246] evidence.

By Mr. Ewing:

Q. If you know. After all, he is president.

The Commissioner: I think the objection is sound. I sustain it.

Mr. Ewing: Exception.

By Mr. Ewing:

Q. Now I show you Plaintiff's Exhibit No. 56 in evidence, about which you testified before the recess, and direct your attention in particular to the last column which gives an estimate of the reserve in the year 1952 at 20,500,000 tons and ask you the basis for that estimate from the standpoint of cost.

Mr. Barnes: Your Honor, I object on the ground that this is immaterial and irrelevant to the issue involved in this case which relates to a claim taken in 1942.

Mr. Ewing: He went into the question of costs as affecting the gold reserves, and I think it is proper for me to go into it a little further.

The Commissioner: Overruled.

The Witness: In 1942 the cost that we would use as a cutoff in estimating the limits of the ore was about five dollars a ton; that is, anything below five dollars a ton it would have been wise to have left in the mine.

In 1952 the cutoff was about seven dollars a ton, which [fol. 247] if there had been no changes in other conditions of the mine, you would have expected to have decreased the ore reserve, but as a result of developments in that time

the ore reserve did not decrease. It was maintained about the same, slightly greater.

Mr. Ewing: And the 1952 estimate of the reserve is based on the 1952 cost?

The Witness: The 1952 estimate is based, yes, on 1952 costs.

Mr. Ewing: That is all.

Recross-examination.

By Mr. Barnes:

Q. I understood you to say you used a cost of five dollars a ton as your cutoff base. What do you mean by the cost of five dollars a ton?

A. That is the amount of money that is required to break the ore, to place the ore, to grind it, to run it through the mills, and all the proper accounting charges against that ore, and taxes.

Q. You compute that cost regardless of the amount of gold per ton, is that right?

A. Yes; the amount of gold per ton would have little bearing on that cost. It would have a great deal of bearing on the profit.

Q. Does Homestake have any company union?

[fol. 248] A. No.

Q. Any association of its employees?

A. It has a group known as the Homestake Veterans, for which if you worked for the company for twenty-one years you are eligible. I am now a member of it. It is an organization which is a semi-social organization.

Q. Basically, Doctor, what is gold? We have been talking about it at great length. Can you tell us what it is?

A. Gold is a metallic element which throughout history has been prized for its beauty and its durability, its permanence of value. It derives its great significance from being used as a monetary base.

Q. Aside from being used as monetary base, what utilitarian value does it have, if any?

A. It has enough utilitarian value to cause the consumption of gold in what is known as industrial consumption of gold in the United States to be far greater than the total production of gold in the United States.

Q. Could you give us some idea of what kind of applications it is used in?

A. It is used in jewelry, it is used in gold leaf as coverings, it is used in many scientific instruments. Dentists use gold.

Q. Gold leaf is generally used for personal adornment or decoration, is it not?

[fola249] A. It has some scientific use as gold leaf, but I suppose the covering on the State House in Boston would be regarded as utilitarian. I am not sure that it is still gold; it was at one time. There have been many administrations up there. (Laughter).

Q. Do you know of any military applications it might have?

A. I think its most important military application is preserving the soundness of the money of the country.

Q. There is quite a lot of gold at Fort Knox for that purpose, is there not?

A. We have quite a lot of gold at Fort Knox, but you also remember that in those years there were a great many people engaged in selling bonds to the American public, and I think the quantity of gold, say a million dollars worth of gold, produced at that time would have been of a lot more value to the country than a million dollars worth of additional bonds.

Mr. Barnes: That is all.

(Witness excused.)

Mr. Rigney: Plaintiff, Homestake Mining Company, will now call Mr. Shaw Livermore.

Shaw Livermore, a witness produced on behalf of the plaintiffs, having been first duly sworn by said Commis- [fol. 250] sioner, was examined, and in answer to interrogatories, testified as follows:

Direct examination.

By Mr. Rigney:

Q. Mr. Livermore, you are appearing here pursuant to subpoena, is that correct?

A. That is right.

Q. Let me ask you now whether at any time in your life you have had any interest in any mining enterprises.

A. No, I have never had any.

Q. What is your present official position, sir?

A. I am one of the assistants to the Director of Defense Mobilization, across the street here in the Executive Office Building.

Q. How long have you been in that position?

A. Since March 15 last year.

Q. By profession you are an economist, is that correct?

A. That is correct.

Q. Would you give the Court something of the background of your formal education?

A. Yes. I was born in Massachusetts, in Wellesley Hills, educated there and in Chicago, graduated from Dartmouth College in 1922 with an A.B. Degree and then from Harvard University with MBA, Master of Business Administration, in 1924. I subsequently received a Ph.D. Degree from Columbia University in 1929.

[fol. 251] Q. Following your graduation from the Harvard School of Business Administration in 1924, what did you then do?

A. I was there a year as one of the assistant deans in the administrative office of the school for the following year.

Q. And after that?

A. Then I was in two business jobs, one of them in the wholesale hardware business in the Northwest, and another one in investment research business in Boston through 1928. At that time I went to the University of Buffalo, Buffalo, New York.

Q. To join the faculty there?

A. Yes. I subsequently became Professor of Economics and Business Organization and assistant dean of the School of Business and was also on the faculty of the Liberal Arts and Sciences College up to the spring of 1941.

Q. So the period of your service at the University of Buffalo was from 1928, do I understand, until 1941?

A. Yes. It was interrupted by doing work at Columbia for my Ph.D. for about a year and a half.

Q. I see. Have you written any books or articles in your particular fields?

A. Yes. I have written a number of periodical articles in the field of business administration and economics generally, and business history; a text book on business or- [fol. 252] ganization and the control of business, which includes a discussion of various kinds of government regulations; a history of early corporations, early land companies around 1800, which was my thesis at Columbia, which was published by the Commonwealth Fund.

Q. When did you first enter government service, Mr. Livermore?

A. I came to Washington the first time early in April, 1941, with the Office of Production Management, as it was called then.

Q. Did you serve with the Office of Production Management and its successor, the WPB, for several years?

A. Yes, I served right through until July of 1945, just prior to V-J Day.

Q. Then was there a period from 1945 onward when you were again in private industry or business?

A. Yes. I went to New York in the late summer of 1945 with Dun & Bradstreet Corporation, a large credit and business research firm, and was director of research in the division of that company which does private business research projects for fees on a competitive basis for a great variety of business clients.

Q. When did you again return to government service?

A. I was brought back in Economic Cooperation Administration, ECA, in February of 1949, to go directly to the [fol. 253] Paris headquarters with American Ambassador Harriman in what was called Special Representative in Europe of the ECA. I was their deputy director and afterward director of the program division for Europe of the ECA.

Q. What was the period of service in that position, sir?

A. I was in Paris two years, then back here six months with the administrator, Mr. Foster, until September, 1951.

Q. Then did you go from that assignment to your present assignment?

A. I didn't go directly because I did some work for the United States Air Force through what is called their Research and Development Corporation, which is war planning work. That is about as much as you can say about

it. Then partly because I had been working with the Defense Mobilization Office in ECA when I was here, I shifted over there. I had served there on the National Security Council as the representative of the Defense Mobilizer on the Security Council.

Q. When you first came with the Federal Government in 1941 with OPM, could you give us a brief description of what your duties were?

A. That is a difficult period to describe. The organization through the spring and summer and even the fall of 1941 was changing rapidly. It was, of course, before Pearl Harbor, before the outbreak of war, and work was being [fol. 254] done on a defense basis rather than a war basis. But in general there was a thread through there of what was called priority action, sometimes called the Division of Priorities. It had various names through that period. In all that period I was working for what could best be described, I think, as the administration of priorities for the economy.

Q. What particular materials or subjects were you dealing with in so far as priority orders go?

A. Mr. Stettinius, who was then director of the operations in this area of priorities, had a number of assistants. I was assigned to work with one or several of those assistants to him, and in the course of the spring and summer we dealt with the electronics industry, the railroad equipment industry, I remember lift trucks, even streetcar makers—all of whom came in puzzled and uncertain as to where to go for assistance, because in that period the Army and Navy—there was not then a separate Air Force—were giving priority ratings, as they were called, to manufacturers on orders for the Army and Navy, which were being extended all through the economy, and other manufacturers were running up against these preferences, you might say, on the books of mills and other suppliers and wanted to know how they could secure some similar assistance. So they came in asking for the grant or the right to use some kind of rating so that they could secure a place on the delivery books of steel mills and other sources.

[fol. 255] Q. During this period you were concerned in your official duties with what was known as "M" orders?

A. Yes.

Q. First, if you will, please, will you tell us what an "M" order is?

A. Yes. Really in that period there were two ideas in the development of the priority concept for industries. One idea was to give to the buyer of materials the right to put on his order a certain letter or symbol which would give him a preferred position. That is generally what we mean by a priority, something that a buyer puts on his order. It may be an order for just one thing from one supplier one time, which was the original idea. Then it may be given so that the same man can use it repetitively on successive orders without having to come back for authority each time. Those were generally known as the "P" order idea. In fact, a little form that was used to get a single priority for a single item was named P-1, the "P" meaning priority.

The other concept was one of working with the manufacturers or distributors of materials and controlling their sales; that is, working at the other side of the relationship, on the seller's side, and that series took the name "M" for materials and was a series directed to the manufacturers, producers, or sellers, telling them how to manage their business, that is, how to handle incoming orders and re- [fol. 256] quiring them to get approval, usually, before they could fill orders, approval of some one of the defense or afterwards wartime agencies.

Q. Among the "M" orders which you had some familiarity with from working on them at that time would be included nickel?

A. Yes, sir. The two that were most bothersome in the spring, in that period, were the nickel and tungsten orders because we were largely experimenting with methods and were using quite a lot of questionnaires, collecting a lot of information. So there was a great deal of pioneer work being done, and I was engaged in that.

Q. Toward the end of 1941 or the first of 1942 did your job change in any respect? Did you take on new duties, in other words?

A. I was always associated with the materials priorities throughout that year, but from September of 1941 I was able to secure permission to spend a good deal of my time with the mining branch which had then been set up. From

then until the end of 1941 I spent the major portion of my time in that division or branch.

Q. Did there come a time when you became connected with the Combined Raw Materials Board?

A. Yes. Right after Pearl Harbor, the declaration of war, this country and Great Britain formed the Combined [fol. 257] Raw Materials Board.

Q. What was the purpose of that board?

A. It was one of those personal agreements between Roosevelt and Churchill, certainly, and the idea was to eliminate quarrelling or competition between the two great allies in securing materials around the world, and of amicably dividing up the scarcities, the shortages. We had a staff on our side and a staff of British people. The board itself consisted only of two men, one for each side, legally, but each one had a staff behind him.

Q. You were on that staff for the United States' representative?

A. Yes.

Q. Then do I understand that the function of the board was to reach an agreement between the United States and Great Britain with respect to the division of the world's supply of materials needed for the war?

A. Yes. We were also interested in anything that could be done to increase supplies or to cut down consumption, and that occupied most of our energies in both directions, urging the other side to increase its efforts to get more supply and reduce demands, and criticizing one another's efforts.

Q. During your service with the WPB did you serve on what was known as the Requirements Committee of the War Production Board?

[fol. 258] A. Yes. The same group of people who had begun with the materials priority problems and then were assigned to the CRMB, Combined Raw Materials Board, also stayed together as a staff unit to assist the chairman of the Requirements Committee in WPB, which came into being early in 1942, also, and lasted right through to the end.

Q. Will you tell us briefly the function or the duty of the Requirements Committee?

A. That was to divide up the pie, as was used to be said

in slang. It listened to the demands of what were called claimant agencies, beginning with the Army, the Navy, the Foreign Economic Administration, and so on down.

Q. Claimant agencies?

A. Claimants, people who wanted a portion of the supply. It then listened to the forecasts of the supply division of the War Production Board, such as the steel, alloy metals, copper, aluminum and so on, leather later on, and lumber, and it argued with them as to how much the supply was going to be in the coming quarter. Then with those two sets of informations, the chairman was charged with the duty of bringing the two into balance.

Q. Would it be a fair statement then to say its function was to bring demand and supply as closely together as possible?

A. That is right.

Q. You came directly to the Review and Analysis Staff [fol. 259] of the Requirements Committee sometime in 1944, is that correct?

A. Yes. This staff that I speak of served both the Raw Materials Board and the Requirements Committee, and came to be known as the Review and Analysis Staff. It embodied people who dealt with certain end products later on as well as materials. Edwin B. George was the director of it. I succeeded him in June, 1944 and served for a little over a year.

I was also in that same period, 1944-1945, chairman of some of the working committees that served the Program Vice Chairman of the board, the so-called "B" Products Committee, the Program Adjustment Committee, which were lower courts, so to speak, and then I was finally vice chairman of the Requirements Committee itself in the spring of 1945.

Q. When you were director of the Review and Analysis Staff, how many people did you have serving under you at that time?

A. It had grown by then to be about ten people.

Q. Mr. Livermore, I show you Plaintiff's Exhibit No. 3 for identification, which purports to be a copy of Preference Rating Order No. 23, and ask you to look at that and tell us if that is a copy of that Order No. P-23.

A. Yes.

Q. Were you familiar with the preparation of that order [fol. 260] in 1941?

A. Yes, I was active in drafting this order.

Q. You took a leading part in the preparation of it, sir?

A. Yes. The manufacturers of mining machinery were one of these groups that I mentioned earlier who came in looking for guidance, particularly guidance as to whether they should abandon the manufacture of machinery and take war contracts for the Army and Navy, because they were slowly being squeezed out of their supply of specialty steels. It was as a result of discussion of this with my superiors, particularly Mr. Whiteside, that we drew up this order and proposed it for issuance.

Q. What was the date of its issuance?

A. July 29, 1941.

OFFERS IN EVIDENCE

Mr. Rigney: Plaintiff offers this in evidence. It is Exhibit No. 3 for identification.

Mr. Barnes: Subject to verification, I have no objection.

The Commissioner: It will be received in evidence.

(Said document, marked "Plaintiff's Exhibit No. 3," admitted in evidence and made a part of this record.)

By Mr. Rigney:

Q. Mr. Livermore, so that we will understand how this [fol. 261] order operated, could you tell us a little bit on that as to whom it was directed and its purpose in that respect?

A. It was one of the "P" orders that I mentioned, and by nature they were directed to certain buyers of a certain type or group. That remained true all through the series which later grew to a very large number.

The Commissioner: Just a minute. Is that document which you last offered a different document than the one which was marked for identification at pre-trial?

Mr. Rigney: No, this was the same document which was marked Exhibit No. 3 for identification.

The Commissioner: I didn't want a couple of sets.

Mr. Barnes: Here is the document which was physically marked at pre-trial. That is the one you were referring to.

Mr. Rigney: This is a copy of the document.

The Commissioner: We are going to get into trouble if you have copies marked one time and we have an original already marked for identification.

Mr. Rigney: I am sorry, Your Honor. Whatever your custom is here with respect to handling documents, I will follow.

The Commissioner: Since it is already offered for identification, you ought to stick to the original exhibit which was so offered.

Mr. Rigney: This copy which I showed to the witness is a true photostat, I can assure you, Your Honor, of the [fol. 262] document which was marked here last fall, Exhibit No. 3 for identification. So may the record reflect that I am showing the witness now the original which was marked Exhibit No. 3 for identification and I would like to ask the witness if that is the copy of Order No. P-23 issued in July of 1942.

Would you look at that, Mr. Livermore, and tell us if that is it?

The Witness: Yes, that is the same.

The Commissioner: I would suggest that you withdraw the other paper and have the reporter mark this in evidence. That was the reason I asked whether the original exhibits were here, so that they might be used.

Mr. Rigney: Yes; I am sorry. I misunderstood, Your Honor.

By Mr. Rigney:

Q. I think I was about to ask you, sir, to whom, to what class this particular order was addressed, the manufacturers, consumers or to whom?

A. It was addressed to the manufacturers of mining machinery as a class and then each one in that class would receive a copy of this from the OPM, as it then was, which entitled him to repetitively use this rate.

Q. Will you tell us what rating it assigned?

A. I believe it was an A-3, as they were then called. A-1 to A-10 was then the sequence.

[fol. 263] Q. So an A-3 would be a relatively high rating at that time?

A. That is right.

By Mr. Barnes:

Q. The A-1 ratings were further subdivided, were they not?

A. That is right.

By Mr. Rigney:

Q. Did the order make any distinction between the types of mining machinery which were to be produced?

A. No.

By the Commissioner:

Q. Just a minute. Getting back to that question about whether it was a relatively high rating, would you further explain your answer to that question relative to what?

A. That would be a matter of very elaborate discussion, I would say.

The Commissioner: I thought if counsel was going to make a point of the fact that it was a high rating, I want an explanation in here. I was with one of the government procuring agencies during the war.

Mr. Barnes: I was with WPB. I was going to raise the question if you hadn't, sir.

Mr. Rigney: You have that advantage over us, then, Mr. Barnes.

[fol. 264] The Witness: If I may be allowed to comment on this——

By the Commissioner:

Q. I have asked you a question.

A. I think this question would be, what was the relative position of ratings on July 29, 1941, or August 1 or some date, and that would be a question it would be impossible for anybody to answer. How many dollars worth of material were rated A-1 and how much A-10 and how much A-6 no one knows.

By Mr. Rigney:

Q. I wasn't seeking to establish that. What was the lowest rating provided at that time in "P" orders, if you know?

A. Oh, the basic arrangement at that period, the summer of 1941, was A-1 through A-10. The A-1's could be given additional letters by the Army and Navy.

Q. Do you recall how long this order was——

By the Commissioner:

Q. Is that what you meant when you said in answer to the question by counsel that it was a relatively high rating? You meant it was just high in relation, that it was closer to 1 than it was to 10?

A. That is right.

The Commissioner: All right.

By Mr. Rigney:

Q. Do you recall when this order P-23 expired or went [fol. 265] out of existence?

A. I believe it was at the end of the year 1941.

Q. Sometime in December of 1941?

A. It was replaced by an order known as P-56-A, as I remember.

Mr. Rigney: Plaintiff Homestake now offers in evidence Order No. P-56-A, Your Honor, which was Exhibit No. 5 for identification.

Mr. Barnes: The Defendant raises no objection.

The Commissioner: Admitted.

(Said document, marked "Plaintiffs' Exhibit No. 5," admitted in evidence and made a part of this record.)

Mr. Rigney: May this exhibit now be marked as a new exhibit, the next in numerical order?

(Said document was marked for identification as Plaintiffs' Exhibit No. 58.)

By Mr. Rigney:

Q. Mr. Livermore, I show you Plaintiffs' Exhibit No. 58 for identification and ask you what that document is.

A. This is Order No. P-22.

Q. Do you recall when that was issued?

A. I believe it was issued—as I remember it, it was issued after P-23 in spite of the numbering.

Q. If I suggest to you it was issued on September 9, 1941, [fol. 266] would you agree that that was correct?

A. Yes. Here it is, the ninth of September.

Mr. Rigney: Plaintiff Homestake will offer this in evidence.

Mr. Barnes: No objection.

The Commissioner: Admitted.

(Said document was marked for identification as Plaintiffs' Exhibit No. 58.)

Mr. Barnes: I might state parenthetically that I fail to see the materiality or relevance, but in view of your prior indication I am not going to raise that objection.

Mr. Rigney: I take it you don't want to hear me on that, Your Honor.

By Mr. Rigney:

Q. Mr. Livermore, was Exhibit No. 58, which is Order No. P-22, known as the General Repair Order?

A. Yes, I believe that was the title of it.

Q. To whom, generally speaking, did this order apply?

A. This was the first order, and it was the subject of very lengthy discussion at the time, addressed to a very wide class of buyers of materials. It has a long list of definition of recipients, those who were entitled to use the rating. This was the first effort to develop some system of providing generally or widely through the economy for assistance to enterprises in getting what you might call [fol. 267] their normal day-to-day needs of maintenance materials, repair, necessary repairs, and operating supplies. It was in connection with this order that we first began.

I remember the talk about the famous letters MRO, which mean Maintenance Repair and Operating supplies, which became one of the standard alphabetical terms later on. This was the first effort to establish a system of granting priority assistance to a very, very large group of people on a repetitive basis throughout the economy, so that they

could have help in getting what I have called or described those MRO items.

Q. Were mine operators included in those various occupations or businesses or industries covered by that order?

Mr. Barnes: Your Honor, the document speaks for itself. I object to it.

The Commissioner: The objection is sustained.

By Mr. Rigney:

Q. How long was P-22 in effect?

A. I don't remember the exact date, but it was succeeded by perhaps the most famous "P" order of all, P-100, which I believe came out right after Pearl Harbor, somewhere in there, the end of 1941.

Q. Sometime in December of 1941?

A. Yes.

Mr. Rigney: In order that these exhibits may go in in proper chronology, Your Honor, I would like to offer at this [fol. 268] time Plaintiffs' Exhibit No. 4 for identification, a copy of Preference Rating Order No. P-56.

Mr. Barnes: Subject to verification, no objection.

The Commissioner Admitted.

(Said document, marked "Plaintiffs' Exhibit No. 4," admitted in evidence and made a part of this record.)

By Mr. Rigney:

Q. Can you tell us whether or not P-56 was issued in September, 1941, Mr. Livermore?

A. Yes, I believe that is the date.

Mr. Rigney: May this be marked the next numerical number as a new exhibit?

(Said document was marked for identification as Plaintiffs' Exhibit No. 59.)

By Mr. Rigney:

Q. Mr. Livermore, I show you Plaintiffs' Exhibit No. 59 for identification and ask you if you will look at that, please, and tell us if that is a copy of Preference Rating Order No. 100.

A. Yes, I believe it is.

Q. Did I understand you to testify a moment ago that this Order P-100 was a successor order to P-22?

A. That is correct. I notice the date is December 18, 1941.

[fol. 269] Q. Thank you.

Mr. Rigney: Plaintiff offers this exhibit is evidence, Your Honor.

Mr. Barnes: Aside from the possible objection of relevancy, I have no objection.

The Commissioner: It may be received.

(Said document, marked "Plaintiffs' Exhibit No. 59," admitted in evidence and made a part of this record.)

The Commissioner: We will recess until two o'clock.

(Thereupon, at 12:30 o'clock p.m., a recess was taken in the hearing until 2:00 o'clock p.m.)

[fol. 270] AFTERNOON SESSION

(The hearing was resumed, at the time above-mentioned, pursuant to the recess previously taken.)

SHAW LIVERMORE resumed the witness stand and was examined and testified as follows:

Direct examination (Resumed):

Mr. Rigney: With Your Honor's permission, may I read a short paragraph in Exhibit 59, Paragraph (a), on the first page, which starts, "Statement of Policy."

"It is the purpose of this order to effectuate the policy of the Supply Priorities and Allocations Board in maintaining governmental, charitable and industrial property located in the United States, its Territories and possessions, including the Philippine Islands, upon an adequate operating basis without expansion or improvement of facilities. Except where duly authorized or approved, the terms and conditions of this order are to be interpreted in conformity with this express policy."

By Mr. Rigney:

Q. Before the recess, Mr. Livermore, I had asked you about the issuance of Order P-56 in September of 1941, and I would like to ask you now if you can tell us if it is not the fact that that order, P-56, related solely and exclusively to mines?

[fol. 271] A. Yes, I believe it did.

Mr. Rigney: May this be marked in the next numerical order?

(Said document was marked for identification as Plaintiffs' Exhibit No. 60.)

Mr. Rigney: At this time, Your Honor, Plaintiff would like to offer Plaintiffs' Exhibit 60, it being the Revocation of Order FP-22, issued the 18th day of December, 1941.

Mr. Barnes: No objection.

The Commissioner: Admitted.

(Said Order FP-22, marked "Plaintiffs' Exhibit No. 60," admitted in evidence and made a part of this record.)

Mr. Barnes: The only question in my mind at the time was that I thought P-22 expired by its own terms.

No, I am sorry. It expired February 20, 1942.

Mr. Rigney: Unless sooner revoked.

Mr. Barnes: Right.

By Mr. Rigney:

Q. Mr. Livermore, I show you Plaintiffs' Exhibit 50 for identification, and ask you to look at that and tell us if that is a copy of a memorandum which you sent to Mr. E. B. George on October 20, 1941?

A. Yes, it is.

Mr. Rigney: Plaintiff offers this exhibit in evidence.

[fol. 272] (Document handed to Mr. Barnes.)

Mr. Rigney: I think we had better get straight with respect to what we are trying to do with these documents as they go in, because evidently we haven't made it clear to other counsel.

The Commissioner: We will go off the record a minute so you can get straightened out among yourselves, unless you want this on the record.

Mr. Rigney: I don't think there is any need to, no.

(Here followed discussion off the record.)

Mr. Barnes: No objection.

The Commissioner: It may be received.

(Said memorandum, dated 10-20-41, Livermore to George, marked "Plaintiffs' Exhibit No. 50," admitted in evidence and made a part of this record.)

By Mr. Rigney:

Q. Could you tell us, Mr. Livermore, what the occasion was for your writing this October 20 memo? Mr. George, I believe, was your superior, is that correct?

A. Yes, he was. He was my superior. But in addition to that, at the time this memo was written, he was the direct personal adviser to Donald Nelson on materials problems. Donald Nelson was at that time Director of the so-called SPAB, the Supply Priorities and Allocations Board, which was at that time the top policy body on matters of this nature.

[fol. 273] I wrote to him with the purpose of having it brought to the attention of Nelson. It sets out the confusion that existed——

Mr. Barnes: I object. The document is in evidence and speaks for itself.

Mr. Rigney: That is true, Your Honor. All that I sought to do was to establish by the man who wrote the document the situation out of which this document arose.

The Commissioner: I gather that the objection went to just the last couple of words.

Mr. Barnes: Yes.

The Commissioner: To what he was about to say.

Mr. Rigney: May I be permitted to ask him what his purpose was in sending this memo to Mr. George? I merely want to show what the situation was that this memo was directed toward.

The Commissioner: The best way to answer that is for you to ask the question, and we will see.

Mr. Rigney: Very well.

Will you read the question to him?

(The question referred to was read by the reporter.)

The Commissioner: Do you adopt that as your next question?

By Mr. Rigney:

Q. What was your purpose, Mr. Livermore, in sending [fol. 274] this memo to Mr. George?

Mr. Barnes: I object to that, Your Honor. The mental state of mind of the witness is in no way material, out of which the memo grew. The memorandum can have bearing only as it communicated his mental state to other people.

The Commissioner: I overrule the objection, and the question may be answered.

The Witness: I wanted Mr. George to bring before the Supply Priorities and Allocations Board the situation affecting gold mines. The picture was an entirely confused one due to the successive issuance of the orders that we have previously talked about. Machinery could be made by manufacturers using an A-3 rating. Mines, as such, were given an A-8 rating under P-56 to buy things from the other side, as distinct from the ability of manufacturers of machinery to get their materials.

Lastly, there had been the P-22 order, which gave a general A-10 rating to concerns in the United States who had no other particular rating under some other order. In other words, as far as the OPM administering its priority powers, there was quite a tangle existing.

I felt we couldn't untangle that until we had had a discussion of policy by the SPAB, the Supply Priorities and Allocations Board.

Mr. Rigney: Plaintiff now offers in evidence Exhibit 10 [fol. 275] for identification, the minutes of SPAB of November 18, 1941.

Mr. Barnes: No objection.

The Commissioner: Admitted.

(Said Minutes of SPAB of 11-18-41, marked "Plaintiffs' Exhibit No. 10," admitted in evidence and made a part of this record.)

Mr. Barnes: I would like to add a word of explanatory comment here, Your Honor.

I feel that a great many of these are possibly irrelevant and immaterial. However, in view of the nature of the

statement you made this morning on one of my objections, I am not going to raise that point each time when it seems to be in the same general category as the objection on which you ruled this morning. If I find that it becomes definitely less material in my mind, I will raise the objection.

The Commissioner: All right.

Mr. Rigney: With Your Honor's permission, I should like to read two paragraphs in this document.

Mr. Barnes: If Your Honor please, the document is in evidence. There is no need in cluttering up the record and taking time to read portions of it.

The Commissioner: I think that is generally true. I don't mind having emphasis drawn that way, if counsel wants to do that without reading too much of it.

Mr. Rigney: Yes. That is a problem that we are faced [fol. 276] with, as to how that could be handled. We thought that perhaps in some instances we could merely invite Your Honor's attention to the particular thing in the document, and there might be other occasions when we could read short excerpts from the document which were particularly pertinent.

The Commissioner: I might explain to counsel that I am going to read every word of this record at the proper time.

Mr. Rigney: I am sure you are, Your Honor.

I shall read, then, from page 6 of the document under Paragraph III, "Considerations":

"A general announcement of policy toward gold-mining is needed. Otherwise, specific administrative actions will be questioned by the mines as unfairly discriminatory. This is particularly necessary if the purchase of new machinery for gold production is to be virtually prohibited after November 30. A necessary preliminary to such a declaration would be a request to the Treasury for an immediate formal opinion on the significance of new gold production to monetary policy. It is to be emphasized that from a consumption of scarce materials standpoint, this whole issue is a minor one. Only about $7,000,000 of equipment, not including a lesser amount for repairs and maintenance, is involved annually at a maximum. Such importance as the issue possesses is largely political. It is

political from two opposing standpoints—that of popular [fol. 277] reaction to the continuation of an industry widely regarded as unnecessary (to the point of jocularity), and contrari-wise, that of the regional interests delineated in the report."

And a shorter paragraph:

"3. An alternative, and more drastic, policy would be to eliminate all domestic gold mines, whether lode or placer, from Order P-56, and also from the general repair Order, P-22. Gold mine operators would thus be forced to buy repairs and supplies without A-ratings, but could apply for special help on form PD-1. It is quite possible that only very gradual declines in output and employment would result, because of managerial ingenuity. Here again, exceptions could be made for mines producing other metals."

The Commissioner: Just one minute. At this point I am going to suggest that if counsel for the Government wants to have any other portion of any exhibit that is partially read, he may do it, and now would be the better time, it would seem to me.

Mr. Rigney: Surely.

(Mr. Barnes examining Plaintiffs' Exhibit 10.)

Mr. Barnes: I may take advantage of that at some later date, Your Honor. Certainly with respect to this document I have no intention at the moment of reading any additional portion.

[fol. 278] The Commissioner: All right.

By Mr. Rigney:

Q. Mr. Livermore, can you tell us what the significance was of Order P-100 about which you testified before lunch?

A. That was an order that was subject to a great deal of argument back and forth. On the one hand, I was interested in it, along with many other people, from the effect there would be on the supply of scarce and strategic materials. If all enterprises, all going business enterprises in the United States during the war—this was after Pearl Harbor—should be given the right to secure automatically, that is, without review, their needed maintenance, repair

and operating supplies, that concept that I mentioned this morning; there was one group of people in what was then the War Production Board by that time, who felt that this would be an unknown drain on the supply of alloy steel, alloy metals, rubber, and so forth. On the other hand, there was another group who felt that the amount needed under a strict definition of maintenance, repair and operating supplies, would be very small, and the difficulty of reviewing thousands or hundreds of thousands of pieces of paper, requests by business enterprises of all kinds, would be wasteful and unnecessary because the total, if all of them were approved, or if 5 per cent of them were rejected, would be so infinitesimal that it wouldn't be worth the burden on manpower and clerk time and on manpower [fol. 279] in all the companies scattered all through the United States making out applications, to warrant the effort. So the latter group prevailed, you might say, in terms, and subsequently in regulations under the Controlled Materials Plan later in the war whereby, with the exception of very few things, businesses in the United States during the war, during the entire period of the war, could, self-certify or automatically secure their needed maintenance, repair and operating supplies, each one of which was defined, of course, and usually a base period was specified by which they could measure the quantities.

That system operated all during the war, despite periodic concern about it.

Later in the war, when we had the Controlled Materials Plan, it was possible to find out how much steel and copper, for instance, and aluminum—those are the three big materials under the plant—how much of those went out under this automatic, self-certifying system. It was at the most slightly over 3 per cent of the ordinary steel, less than 2 per cent of the alloy steel, as I remember, and around 3 per cent or a little over of copper products, less than one-half of one per cent of brass and aluminum.

So when there were statistical returns available later on, long after this order had been first issued, P-100, it was clear that the danger to the economy was not nearly as [fol. 280] great as some people had feared that by establishing this power to self-certify a rating under the order, great damage was going to be done. There was another

factor in that order, and that is that at this time, that is, at the beginning of 1942, it was clear that for many types of metals, particularly, rubber, and some other things, the ordinary firm needing this maintenance and repair material would not be able to get anything at all without some rating, that is, whatever the lowest rating would be. It eventually turned out to be AA-5 under CMP, but I think at that time it was A-10. Anyway, whatever the lowest rating was. Everybody had to have some rating to get allotted materials, possibly because of the way our "M" orders operated. In many cases our "M" orders forbade suppliers or distributors to sell anything any part of their output, without some rating. They couldn't sell anything unrated.

So we had erected this mechanism of "M" orders which forbade people to sell unless the buyer had a rating, and therefore had to do something about legitimatizing or authorizing people to self-rate their orders so they would have some standing with the suppliers.

It was that concept of authenticity or self-rating which which lay behind this P-100, and it was to be applied to a very wide range of ordinary businesses on a sort of universal grant.

[fol. 281] Q. Was the possession of a rating, whether it be A-10 or AA-5, confining it to P-100—was the possession of a rating of A-10, which was the rating under P-100, dependent upon the business being essential to the war effort?

A. That requires careful consideration of what it is that is essential to the war effort in the country. I believe most people would agree that there was a very wide range of essentially underlying any total war.

Q. Let me ask you this? Was it limited to war industries?

A. Oh, no.

Q. The possession of this rating?

A. No. P-100 was quite definitely aimed at bringing in people who were not in the front rank of the munition industries.

Mr. Rigney: I should like to offer now, Your Honor, as the next exhibit in numerical sequence, a new exhibit, which

will be Plaintiffs' Exhibit No. 61, an Amended P-100, so that the record will be complete on that.

Mr. Barnes: Subject to verification, no objection.

(Said document was marked for identification as Plaintiffs' Exhibit No. 61.)

The Commissioner: Admitted.

(Said document, marked "Plaintiffs' Exhibit No. 61," admitted in evidence and made a part of this record.)

[fol. 282] Mr. Rigney: Plaintiff would like to offer as Exhibit No. 62, Your Honor, the revocation of Order P-100, which occurred on the 2nd day of April, 1943.

(Said document was marked for identification as Plaintiffs' Exhibit No. 62.)

Mr. Barnes: Subject to verification, no objection.

The Commissioner: Admitted.

(Said document, marked "Plaintiffs' Exhibit No. 62," admitted in evidence and made a part of this record.)

Mr. Barnes: We are in chronological order, I take it.

Mr. Rigney: Momentarily, yes.

By Mr. Rigney:

Q. You have referred, Mr. Livermore, to the Controlled Materials Plan, Regulation No. 5. When did that come into being?

A. The Controlled Materials Plan was the ultimate method of controlling the major materials of war. It came in partly in the second quarter of 1943, and was in full force in the third quarter of 1943.

Q. Was it the successor to P-100?

A. Yes. Well, if there were going to be a complete system, it required the inclusion within itself of methods by which everyone, every business operation, you might say, could obtain materials, because the plan purported to be, [fol. 283] under the direction of the Requirements Committee, the total distribution of the supply of steel, alloy steel, copper, brass, aluminum. Therefore, to fulfill that purpose it would be necessary for the plan to include regulations for all methods of obtaining steel, including this

automatic method that we were just discussing, the self-rating method.

Q. Will you tell us what the philosophy was behind CMP Regulation No. 5?

A. That was essentially the continuation of the idea that we discussed, of P-100, and I believe it replaced P-100. It was one of the major basic regulations of the Controlled Materials Plan, and it set forth how enterprises in general, of all types, would be enabled to get their maintenance, repair and operating needs of steel, alloy steel, and so on, under the CMP.

Q. Was CMP Regulation No. 5 in any way limited to essential war industries?

A. No. Hardly.

Q. Would you tell us a little bit about the scope of it in that respect?

A. By its nature, it was addressed to and intended to aid all businesses that were operating in the United States during the war. That was the intent of it, to be a blanket to cover everyone that was in business. The famous exceptions, of course, were households, if you could say that [fol. 284] a householder was a business. He was provided for in another way, and certain retailers were provided for in another regulation. But basically, it was the wholesaling, manufacturing, processing, and so forth, fields. There was a special provision for Government, as I remember it, another regulation for Government hospitals, and that sort of thing.

Q. Did this CMP No. 5 assign low priorities to many non-essential businesses and industries in so far as the war effort was concerned?

Mr. Barnes: I object unless we have a definition of essentiality, Your Honor.

Mr. Rigney: Your Honor, it seems to me that it is a rather general concept, a loose concept, and I don't know that any definition has ever been given of industries essential to the war effort as distinguished from all other industries. I think with this witness' background he could testify as to the scope of the various priority ratings that were assigned to various businesses generally.

The Commissioner: Let me hear that question again.

(The pending question was read by the reporter.)

The Commissioner: I am going to sustain the objection. You can ask him what kinds of businesses obtained priorities.

Mr. Rigney: I should like to offer at this time as our next exhibit, Plaintiffs' Exhibit 63, in evidence, this document. [fol. 285] (Said document was marked for identification as Plaintiffs' Exhibit No. 63.)

By Mr. Rigney:

Q. I show you Exhibit 63, Mr. Livermore, and ask you what that is? Is that a copy of the CMP Regulation No. 5?

A. Yes, it appears to be. It is a CCH publication.

Mr. Rigney: Your Honor, we will offer this in evidence now.

Mr. Barnes: Your Honor, the problem we face with the document Plaintiff has offered is that it contains the regulation as amended up to July 12, 1945. That, I might say, is the difficulty I have always run into. They do not retain the print of the regulation as originally issued.

The Commissioner: Are you willing to admit it subject to verification?

Mr. Barnes: It is obvious on the face of it, Your Honor, that unless Plaintiff is now talking about the regulation effective July, 1945, this has no bearing or application. It includes amendments, supplements, and everything else, issued prior to that date. It shows on its face, Your Honor, that the original regulation was issued February 9, 1943. Amendment No. 1 was issued April 6, 1943.

The Commissioner: Do you have the amendments there?

Mr. Barnes: We have the final text as of July, 1945, [fol. 286] here. We don't have the text of either the original regulation or the amended one. Revised regulation was issued May 14, 1943. Amendment No. 1 to that, June 8, 1943. Amendment No. 2, July 10, 1943. I can go on. I have only scratched the surface of the list of amendments.

Mr. Rigney: Your Honor, may I say that we would like to have this received, and we will endeavor to obtain the original and all amendments. We will make every effort to do that, and we intend to offer them.

Mr. Barnes: I point out to counsel that all the regulations and amendments are published in the Federal Regis-

ter and are available there. Under the Federal Register Act, the Court is required to take judicial notice of them.

Mr. Rigney: I would still like to put them in.

The Commissioner: It is convenient to have them in, but I have an objection with respect to the present form, unless you are willing to limit your offer to the regulation as it was in existence sometime in 1945, whenever that indicates on its face.

Mr. Rigney: I wouldn't want to be precluded by this offer from making an offer of the original and all amendments. I don't know whether I correctly understand what Your Honor just said.

The Commissioner: What I meant was, under the objection as I understood it, Mr. Barnes does not object if you [fol. 287] are offering it to show that this is the regulation, its text, at that time.

Mr. Rigney: At that time.

The Commissioner: Is that correct?

Mr. Barnes: That is right. If that is the purpose of his offer, however, I would like to point out that that is as of a date subsequent to the revocation of L-208, and therefore is immaterial.

Mr. Rigney: We wouldn't agree, of course, that because of its date it was immaterial. We would like to have it received as of the date that it carries, and we would like to ask Your Honor to take judicial notice of the original and all subsequent amendments in the Federal Register. I would like to show it to you.

The Commissioner: It may be received.

(Said document, marked "Plaintiffs' Exhibit No. 63," admitted in evidence and made a part of this record.)

By Mr. Rigney:

Q. Would you look at the exhibit, Mr. Livermore, and tell us some of the businesses that were covered, so far as priority ratings are concerned, under that regulation?

Mr. Barnes: I object, Your Honor, unless the date to which the question relates is specified.

By Mr. Rigney:

Q. I will ask you this—I will withdraw the last question. [fol. 288] I direct your attention, Mr. Livermore, to Plaintiffs' Exhibit 63, and with that to refresh your recollection, can you testify as to what businesses and industries were covered in that original CMP No. 5 when it was issued in 1943 which are generally regarded as non-essential to the war effort?

Mr. Barnes: Your Honor, we are back at the same question of a definition of essentiality or non-essentiality. I make the same objection to this question. The witness has not been shown to have any qualifications to express what is generally considered to be non-essential to the war effort.

The Commissioner: I sustain that objection.

By Mr. Rigney:

Q. Let me ask you this, Mr. Livermore: When the original CMP regulation was issued in 1943, did it grant priority ratings available to vacation resorts?

A. We would have to read this through to find it. This gives a long list of operations. Incidentally, it indicates the dates in this copy when they were added.

Q. If that will assist you to fix the time, I think His Honor will permit you to do it.

A. I don't find that particular operation mentioned here.

Q. How about flower growers? Does it have any reference [fol. 289] to places of amusement?

A. I think they are all grouped in here together. I don't recall a separate designation. There is a long list of particular makers of products, such as lawnmowers, pens and pencils, and so on. It is more a product list than the nature of the business.

Q. They are all listed in the order, is that right?

A. Yes. There were purposely several pages of description.

Q. Can you tell us what the nature of the series of "L" orders was, which were issued by the WPB?

A. We haven't yet mentioned that. I believe we mentioned the "P" and "M" orders this morning.

Q. Right. You recall there was a series of "L" orders issued?

A. Yes.

Q. Can you tell us what their purpose was?

A. That series of orders began later than the "M" and "P," and were based on the concept of a third attack on saving materials. The word "L" meant "Limitation," and the idea was that in addition to forcing buyers to have ratings and sellers to be restricted in their rights to sell, subject to review under the "M" orders, that there would be another approach which would be to stop the incorporation of scarce materials into end products by limiting the [fol. 290] output of those end products so that, as a result, the demand would be killed off before it could get to the market place or get to the seller's books. In other words, you would go out and destroy the demand or limit it under a Limitation Order so that there would be less buying pressure from the buyers.

In other words, it was a third way of getting at the problem of shortage.

As I recall, in the fall of 1941 the idea was first addressed to the automobile industry, the idea being that in each automobile there was incorporated so much copper and steel, and even aluminum and a lot of scarce alloys, if we could only—this was prior to the war—if we could only induce or force a lower level of automobile production, there would be fewer of the product made and therefore less of the scarce materials would be used up or embodied in those products.

Q. Can you give us any other illustrations besides automobiles which were affected by the series of "L" orders?

A. There was a long, long series. Of course, the order that is under discussion here was in the series. I recall at the end of the war having to go through the whole list to propose those for revocation. It was an all-night job, running through the entire range of limitation orders.

Q. I think you testified that the "L" orders sought to achieve their purpose by limiting the end product which [fol. 291] embodied critical materials, is that correct.

A. That is right. That was the concept of the limitation order, to get at the products of industries, products which by their nature or by their method of construction

embodied the scarce things that we were trying to save during the war. It began with aluminum and went on down through rubber and steel, alloy steel, and copper.

The general idea was that, especially in the first two years, if a person could make a product out of wood or out of some product that was freely available, that he could get hold of, he could go ahead and make the product without the steel in it. There was a good deal of that element in it that we were going after products where, if not checked, the production would eat up in the end products a good deal of the scarce material.

Q. Are you familiar, Mr. Livermore, with Order L-208 which was issued October 8, 1942, and which closed down the gold mines in the United States?

A. Yes, I am.

Q. Can you tell us whether or not Order L-208 conformed to the purpose of the "L" order series?

Mr. Barnes: Your Honor, first may I have that question read? I am not sure I heard it correctly.

(The pending question was read by the reporter.)

Mr. Barnes: I object, Your Honor. No qualification of [fol. 292] the witness has been shown to answer that question. He wasn't asked whether he had the responsibility to assign numbers or classifications to these orders.

The Commissioner: I am going to sustain the objection to that question. I think it is not a proper question in any event.

Mr. Rigney: Very well, Your Honor.

By Mr. Rigney:

Q. Can you tell us, Mr. Livermore, whether or not any industry other than gold mining which did not consume critical materials in the production of its end product, as distinguished from consuming maintenance, repair and operating materials in its normal daily operations, was ordered closed down by WPB order?

Mr. Barnes: I object. The orders themselves would be the best evidence.

The Commissioner: Overruled.

The Witness: Not to my recollection, no.

By Mr. Rigney:

Q. Not to your knowledge?

A. Not to my knowledge.

Mr. Rigney: Very well, you may examine.

[fol. 293] Cross-examination.

By Mr. Barnes:

Q. Mr. Livermore, you referred to several people here that you were associated with. You mentioned the name of a Mr. Whiteside. Was that Arthur Whiteside?

A. Yes.

Q. Of Dun & Bradstreet?

A. That is right.

Q. What was his position in the War Production Board?

A. He was one of the several assistants to Mr. Stettinius.

Q. When?

A. In the spring of 1941, when I first came there.

Q. Did he sever his connection with the War Production Board shortly after that?

A. This was OPM at that time, Office of Production Management. He left the following November, then came back under the War Production Board to become director of civilian supply in, I think, early 1943. He had two terms down here, separated.

Q. You also referred to Mr. George. What was his position in 1941?

A. He was under a sort of civil service title, as director of the Materials Branch under Stacy May of the Statistics Bureau, as I remember.

Q. So he was in charge of the Statistics Bureau?

[fol. 294] A. That is right.

Q. And he was related to statistics relating to materials?

A. That is right.

Q. Harvey Anderson had the Materials Bureau from the operations standpoint?

A. I don't believe so. Pardon me; I think he was a member of the legal staff. In 1942 he may have become that.

Q. Who was in charge of the Combined Raw Materials Board?

A. Bill Batt, William L. Batt.

Q. Did he continue in that position? I don't mean actually chairman; was he an American representative?

A. Yes, he stayed in all through the war.

Q. What about the Requirements Committee? There were successive chairmen there, were there not?

A. That is right. Batt was the first chairman.

Q. When was the Requirements Committee set up, incidentally?

A. Either January or February, 1942. I forget which.

Q. How long did Mr. Batt remain chairman? It was a matter of only a few months, wasn't it?

A. Until May or June.

Q. Who succeeded him?

A. Mr. Knowlson, who was president of Stewart Warner.

[fol. 295] Q. He became director of industry operations, isn't that correct?

A. Not for that job.

Q. That was another title he had?

A. He was given that special designation.

Q. Who succeeded him, if you recall?

A. Ferdinand Eberstadt.

Q. You have drawn in your testimony a very clear line between "L" and "M" orders. Was there in practice as clear a line as that actually drawn between them? I am thinking of an order such as M-9, which related to copper, did it not?

A. Yes, I think even better is the one on steel.

Q. M-126?

A. That was the one that took so much work.

Q. What did those orders do in substance? Were those the same type of "M" orders you previously described?

A. Yes. They put into one order what would have been a whole tremendous series of little "L" orders; it named whole lists of products in which copper or steel should not be used. The "M" order was used as the vehicle for publicizing that prohibition rather than issuing a whole series of orders, which would have gone up into the hundreds of "L" orders.

Q. Did you have anything to do with M-126, for example?

A. Very much so.

[fol. 296] Q. Did you recall that the Sears Roebuck catalog was used as one of the bases for the list?

A. That is right. The effort to get completeness was thought to be very important. I never thought that it was myself because I thought amendments could have been issued to cover anything that they had forgotten.

Q. Wasn't there another form of "M" order? I am thinking particularly of M-1 relating to aluminum and one of its subsequent amendments, which listed the permissive uses of aluminum and saying it could be used in no other application. Do you recall such an order as that?

A. Yes, but I think you will find that the idea there was to put upon the seller, mostly the Aluminum Company of America in that period, the primary obligation of not letting its product go out into any of the uses or to any buyers not only who didn't have the right ratings but also who might be abusing the ratings. The idea was to get a double interest in endorsing the uses of aluminum or limiting the use of aluminum by making the seller as much legally interested in it as the buyer.

Q. Under many of these orders, whether "L" or "M," certain articles could not be made or, if made, could not be used in certain types of materials, regardless of priority ratings?

A. That was the concept of the "L" order, yes, to get [fol. 297] at the actual making of the things before anybody ever tried to get a rating for it or tried to sell it.

Q. It also was M-9 and copper M-126 and steel, was it not?

A. Yes, in the sense that those were aggregations of little "L" orders which it was convenient to put under that order.

Q. Wasn't one of the basic criticisms of the priority system, particularly in the early days, the fact that a priority was sometimes called a hunting license?

Mr. Rigney: If Your Honor, please, I think that is objectionable. Basic criticisms—I don't know by whom. I think he should specify.

The Commissioner: Sustained.

By Mr. Barnes:

Q. Did you ever hear a priority described as a hunting license, Mr. Livermore?

A. Certainly. I have read it.

Q. Frequently?

A. No.

Q. Who did you ever hear describe it as a hunting license?

A. I couldn't recall anybody in particular.

Q. Did you ever describe it in those terms?

A. I never did, no.

[fol. 298] Q. Did a priority guarantee anybody materials?

A. It did, and it didn't depending upon the time and the material.

Q. And the priority?

A. Yes. You say at a certain time it was requested by the buyer, or the time that the seller proposed furnishing it. If there were enough time, I think the answer would be yes.

Q. If time were not a factor, you wouldn't need to worry about priorities because you could obtain your materials, is that correct?

Mr. Rigney: That is objectionable, as argumentative.

The Commissioner: I would like to ask a question.

By the Commissioner:

Q. How was it that this CMP program came along? What caused that?

A. It was precisely to get at the problem of the quantity of materials being given to somebody in a certain quarter, in a certain three months' period. CMP in a sense was not a priority system. In slang it was called a ticket system. I, as a buyer, would be given a ticket, so called, or form, entitling me to buy ten tons of steel in, let's say, January, February or March, the first quarter of 1953. That ticket could be cashed, as the slang term was, at the steel mill in that particular three months' period. That was the basic [fol. 299] concept of CMP, a time period, a number of tickets that was no greater than the supply that was to be available, so that all tickets would be good or cashable in the particular time period.

Q. Did it take the place or supplement what had been done with respect to priorities up to that time?

A. It took the place of priorities with respect to what was known as the three major materials, steel and alloy steel together, copper and brass together as copper, and aluminum. The suppliers of those three things really didn't have to bother about priorities after CMP came in because they knew that the number of tickets coming in would equal what they could produce, with of a course a few rough edges which the Requirements Committee didn't straighten out. Basically the supply met the demand so that everybody was the same. In other words, everybody was on a completely equal basis who had a ticket. All they needed was a ticket.

Q. Then the next question——

A. Pardon me. I want to finish. Other products than those things still utilized priorities. The grading of priorities for semi-fabricated products or products that were to be put through some manufacturing process were still necessary, because in order to arrange a delivery book and a timing and to have relative urgency, you had to have some priorities used even after CMP.

[fol. 300] Q. Even at the time CMP was proposed there must have been some shortcoming in the application of your priority system with respect to copper, steel and aluminum.

A. Yes. It was because there was no check through 1942, no statistical knowledge of the amount of material that was wanted by people who were in the buying position. There was no way to assemble statistically the knowledge of how much in quantity at certain times those people wanted. CMP was designed to cure that by forcing everybody to file ahead of time. CMP looked over the demand, then adjusted it down and issued valid tickets. It looked at the supply and used that as the basis for an adjustment of the tickets that were issued, and no more tickets were issued than could be met out of the supply after CMP was established.

Q. Then as I understand your testimony, to the extent that it applied to copper, steel, and aluminum, the CMP program took the place of the priority system that had been in effect?

A. That is essentially correct.

Q. But the priority system still applied to manufactured goods?

A. That is correct, and to many hundreds of other products that were manufactured.

By Mr. Barnes:

Q. There were throughout the period of the war inven-
[fol. 301] tory controls on all materials, were there not?

A. Inventory regulations.

Q. Limiting the size of inventory. To your knowledge do you know whether it was felt that the control under CMP of copper and brass, steel and aluminum would give indirect control of other materials?

Mr. Rigney: I think, Your Honor, that is objectionable.

The Commissioner: Yes.

By Mr. Barnes:

Q. You said you had a great deal to do with the drawing of P-23, Mr. Livermore. When was that?

A. During July of 1941.

Q. Were you working alone on that or were you working with other people?

A. I had an assistant, a young fellow. I don't recall that we had any particular person assigned to us from Mr. O'Brian, the general counsel's office.

Q. Was there any attorney who worked with you or consulted with you?

A. Not at that particular time. Later on I had contact with a great many of them, in the fall, but I couldn't say for sure. There must have been someone, of course.

Q. Was there anybody in any of the materials branches with whom you consulted?

A. Oh, yes.

[fol. 302] Q. Who?

A. The people who were concerned with nickel, particularly, nickel steel, and in the steel division.

Q. Who were they?

A. I would have to go back and sort out names by periods. I am not sure that I can do it.

I wouldn't be certain. There were many, many men in

that period that I worked with all through the following years of the war.

Q. Did you work with Harvey Anderson?

A. I don't recall.

Q. You referred to the fact that the A-3 rating that was assigned by that order was fairly high. The Army and Navy in that period of time in 1941 had the right to assign A-1 ratings to all their purchases, is that right?

A. Yes. I think I meant in terms of non-military. That was the way it came to my mind. This was an order in a group dealing with products that were not materiel as we called it, or munitions.

Q. Incidentally, there came a time, did there, when there was a shift made from the A-1 to A-10 series that you described to a different series of numbers?

A. Reform of currency, yes.

Q. When was that?

A. I don't remember. I would have to refresh my mem-
[fol. 303] ory.

Q. It was sometime in 1942?

A. Yes.

Q. After Pearl Harbor?

A. Right after Pearl Harbor, I believe.

Q. What caused that change?

A. That was to start over and keep some quantitative limit on the matter that I was just discussing with His Honor. The question of the volume of orders that were out with priorities attached could only be attacked by invalidating old sequences and then establishing a new one.

Q. Those bore double A designations and then numbers from 1 to 5, is that correct?

A. Yes. I believe that was the system that ran on through to the end, the AA-1, 2, 2X, 3, 4, and 5. I think AA-5 was substantially in the last two years of the war the lowest rating.

Q. I noticed that both P-22 and P-100 referred to an A-10 rating. That was the lowest rating?

A. I think it was intended to be the bottom.

By the Commissioner:

Q. Up until the CMP came along did you know how effective the rating system was with respect to keeping people from buying any particular material?

Before you answer it, I will tell you the reason I ask [fol. 304] the question. I wondered if you people in WPB knew whether a person with an A-10 rating was able to buy anything.

A. I see what you mean. I think I can answer it this way: The fundnamental flaw in the original priority system before CMP was the extensive privilege, the power of extending the rating back to the suppliers by a person who was given the authority to use the rating. He could extend it back with no particular check on the quantities that he applied in a given time period.

He might have in mind the idea of making so many anti-aircraft guns for the Army, and he would make a rough guess that he would be making so many during, say, the next summer. He would then make a rough calculation of how much steel he ought to have coming in to his plant. He would naturally err on the excessive side and would presumably, in order to protect his manufacturing operations, order perhaps a quarter or perhaps a third more than he really needed to have come in during that cycle of manufacture.

Then he would be placing other orders out for the number of tons he would be making in October, November and December. He was always on the safe side in terms of quantity and time on the steel mills. So you had a natural tendency of the system to inflate itself by the natural care and concern of businessmen that they wouldn't shut down on some very vital order for the Army and Navy.

[fol. 305] In other words, there was a higher volume of orders with high priorities on them flowing into the steel mills than was really needed to execute contracts. CMP substituted for that a careful contract time schedule, a careful translation of exactly how much steel, and then this ticket system which absolutely limited the amount that he could place.

Q. I wondered what was the effect of that inflation of orders that you spoke of on the person who was trying to get by with an A-10 rating.

A. It would tend, of course, to put orders on the books carrying very high ratings, A-1a's, A-1b's, and so on, so-called military ratings. Those tended to crowd up the books and make it difficult to get the lower 7, 8, 9 and 10 ratings into the delivery schedule.

Everyone recognized this difficulty, and very often what happened was that the man who put an order in with a very high rating would refuse to take it on the ground that he was violating inventory regulations. Then there would suddenly become steel available for the A-8, 9 and 10 at the last minute because the high-rated people refused to take any more deliveries, although they had the higher rating.

They would say, "No, thanks, don't send us any more because if we do accept it we will violate inventory regulations." Then would then say, "We can divert that down to the people with the lower ratings that we have been [fol. 306] holding off here and postponing month by month, pushing off into the future."

By Mr. Barnes:

Q. Incidentally, Mr. Livermore, did you have anything to do with the actual preparation of either P-22 or P-100?

A. Yes, I did, because Dave Novick was one of the chief workers in that and he happened to be an associate of mine in the same group that I spoke of. He afterwards was the Controller of the Board.

P-100—of course I think everybody had something to do with that because it was quite a basic step to be taken. The principle that it laid down never abandoned even during the whole rest of the war. Therefore it attracted a tremendous amount of interest.

Q. I take it from your description that you reported to your immediate superior in 1941, Mr. George, is that correct?

A. That is correct.

Q. Who was his superior?

A. Mr. May, Stacy May.

Q. Who was his superior?

A. I believe it is called the Bureau of Statistics or some such title. We would have to look it up. We could find it if you want to get it.

Q. Did Robert Nathan fit into that?

[fol. 307] A. Yes, Bob was there. One reason for this was that Stacy offered to provide staff at a period when we were building up very rapidly and it was impossible to get people. We were loaned—I was actually loaned, of course, to the Stettinius wing, subject to recall at any time. That was true of Dave Novick and several others.

Q. In this memorandum that you wrote to Mr. George, dated October 20, 1941, you referred to the fact that you felt that a decision as to the essential nature of gold mining operations should be made by the staff.

A. Yes, because they were obviously the body at that time.

Q. They were the top policy-making body at that time?

A. Yes.

Q. After you wrote that memorandum did you have any further contact with that particular subject?

A. Oh, yes. As I remember, I helped Mr. George prepare material for Nelson to use at the meeting.

Q. Did that include this report, Status of Gold Mining, which is Plaintiffs' Exhibit No. 10 for identification?

A. No. It dealt mostly with more detail of the situation than these orders mentioned in my memo.

Q. Have you ever seen that document before, Plaintiffs' Exhibit No. 10?

A. Yes.

[fol. 308] Q. Who prepared that, do you know?

A. No. I think it was a composite of the secretariat, a composite of a number of memos that were prepared on this at the time, as I remember.

Q. Do you know who edited it or compiled it?

A. I don't think so.

Q. When did you see it?

A. When I was reviewing the materials here, refreshing my memory.

Q. Did you see it at any time in 1941 or 1942, to your recollection?

A. I must have, because I read SPAB minutes quite regularly. I don't recall it specifically. I couldn't say absolutely. I used to read from September through Christmas. We would have these minutes of all the meetings

they dealt with materials. I remember reading the ones on nickel particularly, for instance, more than this.

Q. You said that after you wrote your original memorandum to Mr. George in October you did some more work on the question of the scope of orders, is that correct?

A. Yes, of P-23 and P-56, and P-22: that general subject of the memorandum. It was not a particularly praiseworthy situation for the orders to be in.

Q. Do you recall meeting with representatives of the Treasury Department and the Federal Reserve System, on [fol. 309] the question of gold mining in November of 1941?

A. I believe I went to one meeting with Mr. Burleigh in the State Department about foreign mining, but I don't recall particularly who was there from the Treasury.

Q. Do you recall anybody in OPM called L. A. Morrison?

A. No.

Q. Dennis Pickens?

A. Yes.

Q. What was his position?

A. Dennis worked with myself and under Dr. Wilbur Nelson in the Mining Branch beginning in September of 1941. I believe he left soon after Pearl Harbor.

Q. Do you know anybody in Treasury named Frank Coe?

A. I know him, but I don't recall his being at the meeting.

Q. Do you know anybody in the Federal Reserve named Walter Gardner?

A. I couldn't be sure.

Q. Charles Kindleberger?

A. I know Charley, yes.

Q. Did you ever attend a meeting with him?

A. I wouldn't know whether he was at that meeting or not. I have known him in subsequent years very well

Q. Did you ever receive any policy direction that came or purported to come from SPAB as to what was to be [fol. 310] done with respect to gold mining after you wrote that memorandum?

A. No.

Q. You never did?

A. Not that I ever saw.

The Commissioner: We will recess for five minutes.

(Thereupon, a five-minute recess was taken in the hearing.)

By Mr. Barnes:

Q. Mr. Livermore, would it be correct to say that in some cases "L" orders were issued requiring the cessation of the production of certain items with a view to the facilities used for the production of those items in at least equal part with the materials consumed?

Mr. Rigney: If Your Honor please, I am sorry, I didn't catch that. May I have that read back?

The Commissioner: Yes.

(The pending question was read.)

Mr. Rigney: I have an objection to the form of the question. It is ambiguous, I think, Your Honor.

The Commissioner: I don't think it is.

You may answer.

The Witness: I don't think it would be correct in a strict legal sense, because I think the specific objectives, as I recall them, under the various acts empowering the War Production Board, and so on, to do things, were for the [fol. 311] purpose of saving the scarce materials.

By Mr. Barnes:

Q. If I told you the statute said materials or facilities, would that change your opinion?

A. What is that?

Q. If I told you the statute says materials or facilities, would that change your opinion?

A. Yes. I would want to read the statute.

Q. In other words, your hesitation now comes from a doubt in your mind as to the extent to which the statutory authority applies to facilities, is that right?

A. Yes. The reason is that I recall the statute gave the power of commandeering or seizing facilities.

Mr. Rigney: Which statute is that?

By Mr. Barnes:

Q. Which statute are you talking about now?

A. This is just layman's general knowledge, the War Powers Acts, the first or second.

Mr. Barnes: The Requisitions Act is the Act of October 16, 1941, 5 Statute 741, which is the one the witness is referring to now, I take it. I can't remember all the statutes, but that is one I happen to have had some litigation about. That is the Requisitions Act. Title IX is the Selective Service Act which is a different one, Your Honor.

[fol. 312] By Mr. Barnes:

Q. Mr. Livermore, did your contact continue primarily with the mining division after 1941?

A. Because of the work I was doing on the alloy metals with the Combined Raw Materials Board and the Requirements Committee, that is, on nickel, chromium, tungsten, molybdenum, and so on—there must have been about six—I was in contact with the divisions that were responsible for the supply or were worrying about the supply of those alloys, and with the portion of the steel division particularly that had charge of tool steels and alloy steels because they were the primary consumers.

It was with those people that I was working on this problem of supply versus demand. So I kept in personal touch with all those divisions, and because they had a relationship with the mining branch I maintained my contact there. I also maintained a quite constant relationship with the mining machinery manufacturers right through until 1945 because I was often asked to attend meetings.

Q. What direct contact, if any, did you have with the discussion leading up to the issuance of L-208 after, say, December 31, 1941?

A. In the first part of that period, right after Pearl Harbor, I was still very much concerned about the problem of the status of gold mining, for the simple reason that, which [fol. 313] I think is obvious here, that, potentially there was a use of materials in that industry which would contribute to shortage. My conclusion at that time was that the correct procedure would be to leave the gold mines in the general category of industries that were entitled to

minimum assistance under the MRO philosophy or MRO concept that we discussed this morning, and that that would bring them down to the minimum level that a great many other industries were operating on it.

Q. The period of time you are referring to was sometime after you were assigned to the staff of the Combined Raw Materials Board, is that right?

A. No, just at the time, during the first month or two, during the transition, at the time P-100 was issued. That brought out the problem of what could best be done with an industry of this nature.

Q. After the issuance of P-100 what contact, if any, did you have with the discussions relating to the possibility of closing the gold mines?

A. In volume it was a great deal, particularly with Dr. Wilbur Nelson, and with Mr. George with whom I worked all through that year, 1952. I was not in any official capacity, such as member of a clearance committee or anything like that. This was one of the subjects in which everyone engaged, incidentally, as we will see later, I guess.

Q. Incidentally, you referred a minute ago to the possible [fol. 314] use by the gold mines of critical materials. Did you make any study at that time of what that was in dollar volume?

A. I tried to, particularly in connection with the SPAB meetings and subsequent discussions, I tried to get an idea of the supplies that might be used by the industries.

Q. Do you recall what source you went to for that information?

A. We had contact with the Bureau of Mines; I did on nickel and tungsten matters. I remember discussing it with one or two men over there. I talked to some of the machinery figures. I remember we used to get into that discussion when we would have general talks about mining. It was a very unsatisfactory field, I might say.

Q. Do you know that the Bureau of the Census in 1939 made a study of the mineral industries?

A. Oh, yes.

Q. Did you study that?

A. I remember that we did, yes. Anything that was available to our people.

Q. What do you mean, "your people"? Did you have people working with you there?

A. There were a number of people who had been loaned. I can't recall their names. There were people who had been loaned over from the Bureau of Mines to OPM and WPB [fol. 315] who were spotted around.

Q. On direct examination you were asked a number of questions. You were asked one specific question, whether something was essential to the war effort, and you said that would lead to a very complicated discussion as to what you mean by essentiality to the war effort. Is that something broader in your mind than military production?

A. I will tell you, I can do it and make it as brief as possible. I believe our experience during the war showed that the correct way to approach this I am engaged in, incidentally now, in my own present activities—the correct way to approach the problem of war planning and the distribution of materials is not to take the military needs first, but to take the rest of the economy, the supporting economy first, and decide what the minimum needs for that are to support a war. Once that is determined, that leaves then a certain balance for the military.

That, I believe, is accepted by most of the so-called experts on war planning, both here and in Great Britain, as a result of our experience in the second war.

Q. Was that the view taken in 1941 and 1942?

A. It was in an inchoate form. That is, we were moving toward that all the time in our group of people who were worrying about the requirements, demand and supply problem. If that is true, of course, then what is es- [fol. 316] sential is the economy as a working mechanism. The total setup of your economy is going to lie underneath your military effort.

Q. That includes, then, what we sometimes call the essential civilian?

A. Yes, various words, yes. We tend to call it now war supporting economy, and including everything in that.

Q. When Mr. Whiteside, for example, returned to the War Production Board in charge of civilian supply, I take it that his function was to act as a claimant for that supporting economy, is that correct?

A. That is right, particularly against the Armed Services. The Armed Services, I don't believe, accepted this view at all. I am quite sure that many leaders of the Army and Navy took just the reverse position, that everything belonged to the military until it could be proven otherwise, which of course I certainly and I think most of my associates fall valiently against that conception.

Q. Incidentally, along with the Requirements Committee, wasn't there a committee called the Planning Committee?

A. Yes.

Q. What was its function?

A. It was a committee reporting personally to Donald Nelson as chairman of the War Production Board, to worry about future crises before they happened.

Q. Did you have any contact with that committee?

[fol. 317] A. I was interviewed by their staff on several subjects, yes. I knew the members quite well.

Q. Who was the chairman of that committee?

A. I guess Bob Nathan was.

Q. I think he was.

A. I think he was chairman. Tom Blaisdell was a member and Fred Searls at one time. I have forgotten the others.

Q. In your consideration of these various problems relating to gold mining, did you give any consideration to the essentiality of gold mining to the war economy, or of gold?

A. Yes, I remember considering it a good deal. Of course, there were many other items that had discussion, such as that we had great discussions about soft drinks. One of the greatest arguments in the war was about bobby pins for young ladies, whether they were essential or not. It was simply one of a series of products or activities that were always being argued back and forth regarding their essentiality. I don't think we gave it any more attention in the discussion, at least I didn't, than some of those others.

Q. Do you know of any uses to which gold could have been put in the war economy or to which it was put?

A. Oh, I think if we had been engaged in a very long war, gold would have been a very important thing to have.

[fol. 318] We were running an unfavorable trade balance all during the war. In other words, we were importing more than we were exporting. If the war had gone badly for the United States and had been prolonged for another five or seven years, a long world struggle, gold would certainly have been useful to us in acquiring raw materials.

Q. Aside from that, do you know of any other possible consideration or application of it?

A. I think obviously some of its so-called uses are essential.

Q. Do you have any idea how much it is used in industry?

A. Very little, very slight. The first consideration is the only one that I remember discussing at any length, that is, the position of the country in case of a long, drawn out exhausting war, in which we would need the ability to attract raw materials, something with which to buy raw materials from third countries or from our allies.

Q. I take it that during that period the more critical materials were the ones that eventually were used as controls by CMP, steel, copper, steel alloy, rubber, and aluminum.

A. They were the best means of adjusting the economy, let us say, to demand and supply. If you control a man's steel uses, you automatically control the amount of rubber and things that he uses in his product, steel being the [fol. 319] essential or main product.

Q. Did you in all your consideration of this gold problem make every attempt to secure the best informed information you could, whether statistical or anything else?

A. Oh, yes. I was one of a group of people working on this. I think I did my share to assemble all the information. I don't think at any time I was responsible for all of it.

Mr. Barnes: That is all.

The Commissioner: Are there any other questions by any of the other attorneys? (No response.)

Redirect examination.

By Mr. Rigney:

Q. Dr. Livermore, as far as you know, was there ever an official definition or declaration by Congress or by any

policy-making branch of the Executive Department as to what an essential war industry was or what was an industry essential to the war effort?

A. I don't think so. It would have stopped a lot of battle here if there ever had been.

Q. Can you tell us, Dr. Livermore, whether or not on October 8, 1942, critical materials for defense ordinarily used to operate and maintain gold mines were subject to allocation and restriction by virtue of priority regulations duly issued by the War Production Board under the War [fol. 320] Powers Acts and said regulations and effective orders? Would you like to have the question read?

A. I didn't quite get the point of that. Would you read the first part again?

Q. Yes. I am asking whether or not on October 8, 1942, critical materials for defense which were ordinarily used in the operation and maintenance of gold mines were subject to allocation and restriction under the WPB powers. Were those critical materials which in normal operations would be used in gold mining, subject to allocation?

A. Yes.

Mr. Barnes: I object, first on the ground it is improper redirect, and second on the ground the form of the question is leading.

Mr. Rigney: I submit the question is, Can he tell us whether or not these critical materials ordinarily used in gold mining were subject to WPB allocation. I don't think that is leading.

The Commissioner: Overruled.

The Witness: Yes, there must have been at least one material or several that were. I think zinc, for instance.

By Mr. Rigney:

Q. How about steel?

A. Tool steels, yes, of course.

Q. How about copper?

[fol. 321] A. Copper was under allocation at that time.

Q. In the course of your examination by counsel for the Government, you referred to this concept of the support which the civilian economy can maintain in time of war as being the concept that must first be determined before the

military capabilities can be arrived at. I want to ask you whether or not Order L-208 was consistent with that concept.

Mr. Barnes: Could I have the question read again?

(The question was read by the reporter.)

By Mr. Rigney:

Q. Was it consistent or was it contrary to that concept?

A. I don't think it was, as a matter of opinion.

Q. You don't think it was consistent with it or you don't think it was contrary to it?

A. I don't think it was consistent with the idea of a supporting economy running at minimum level during the war. There are a lot of reasons for it.

Q. Do you know, Dr. Livermore, whether the United States exported any gold during the period of World War II?

A. Oh, yes, we did, very much so.

Q. Do you know whether or not gold was used during World War II to procure articles for import into the United States during that period?

A. In technical jargon, we were running an unfavorable [fol. 322] balance. That is, we were buying more than we were selling. The settlement for that still is and was in those days with almost every country the settling of the balance by gold shipment. Some of it was merely transferred in New York from one owner to another, but essentially it was a shipment abroad to settle our accounts with other countries.

Q. Were there instances where in some parts of the world goods needed by the United States in the course of the war could be obtained in return for any other commodity or medium of exchange?

Mr. Barnes: I object, Your Honor, both to the form of the question being leading and to the fact that no qualification of the witness has been shown on that subject.

The Commissioner: Overruled.

The Witness: I don't think I can quite answer that question in a direct sense. Was there somebody who had something who wouldn't give it up for anything except

gold? I don't think anybody could answer that. I think what was true was that——

The Commissioner: If you can't answer that question, what are you answering?

The Witness: I was going to stop at that point.

By Mr. Rigney:

Q. Do you know whether or not there were any instances when the United States used gold during World War II to [fol. 323] procure commodities or goods which couldn't have been procured by any other means?

A. I only know by secondary knowledge. I think particularly——

Mr. Barnes: I object to any statements from secondary knowledge, Your Honor. It is hearsay.

Mr. Rigney: I don't know whether his reference to secondary knowledge really is hearsay. Maybe it isn't hearsay.

The Commissioner: Let's find out what it is.

Mr. Rigney: He is an economist. I think he might well be able to testify on the basis of his knowledge, the source of his knowledge, on this point.

Mr. Barnes: I object to any further examination along this line unless the source of the witness's knowledge is first disclosed.

The Commissioner: I think that objection is valid.

By Mr. Rigney:

Q. Will you tell us, Dr. Livermore, of such knowledge as you have on this subject and the source thereof?

A. I think it is general knowledge that economists, not only me, but others, would have that in a situation where this country desires to buy more from, let's say, Afghanistan or Nigeria or some there than we are selling them, the thing we offer successfully all the time, not only during war but now and for hundreds of years, is the shipment of gold. [fol. 324] Actually, today dollars are used interchangeably with gold, so we say we will give you dollars, and traders and governments and banks abroad know that they can convert dollars into gold freely, so the promise is equivalent.

In other words, it is a general attitude that where we

were trying to get more commodities than we were shipping in return, the universal method of settling the difference has been and was in the war and is still gold shipment.

Mr. Rigney: That is all.

Recross-examination.

By Mr. Barnes:

Q. Dr. Livermore, to your knowledge, what critical materials were used in the maintenance and operation of gold mines in 1941 and 1942?

A. In the maintenance, repair and operating supply category?

Q. You were asked about maintenance and operation of gold mines by counsel. You were asked whether critical materials used in the maintenance and operation of gold mines were under priority or other WPB control.

A. I know now and I happened to know we were considering then the use of zinc dust, the use of copper wire, the use of very small quantities of mercury, the use of various grades of steel.

Q. Including alloy steel?

[fol. 325] A. Yes, including some that would qualify as alloy steel. That would be particularly in repair parts. I have no knowledge about aluminum.

Q. What about drill steel? Would that be an alloy steel?

A. It is or isn't. It depends. It can be either plain carbon steel.

Q. Wouldn't it be correct to say, Dr. Livermore, that in almost every case of the issuance of an "L" order, the critical materials involved either in the manufacture of the item or in the maintenance and repair work in the industries were under WPB control?

A. I don't want to answer that with "maintenance and repair in" because the "L" orders were not directed to that.

[fol. 326] Q. All right. But they still had the effect of cutting out any maintenance, repair, and operating supplies from those industries, did they not?

A. Not necessarily.

Q. They did for that industry if it wanted to continue in that particular line of production, unless it converted to some other line?

A. The MRO goes with the plant operation, not with the particular product.

Q. If a plant was making a bicycle, let us say.

A. Oh, yes. With that distinction drawn, that is, where the product of the industry was restricted by an "L" order, it was because there was an effort being made to reduce the use of something that was under allocation.

Q. That same material was also under allocation?

A. Yes, that is right.

Q. Why is it your position that L-208 wasn't consistent with this theory you advance on a war-supporting economy?

A. I couldn't hear the first part.

Q. I say, why is it your position that L-208 was not consistent with this theory that you have advanced of the maintenance of a war-supporting economy?

A. Because L-208 was addressed to the case where the end product of the industry, as such, did not embody any of the scarce or strategic materials that we were interested [fol. 327] in saving, so the only effect, if that is true, except for some odd sideline that some mine might have, of making machinery or something, of which I am certainly not aware—anyway the product gold, as such, contains within itself none of the materials which were the general object of "L" orders. So what was being sought for was the maintenance, repair and operating supplies that might be used. In that context, I believe that the proper approach was, and will be in any future war, incidentally, to bring down activities of the economy to minimum levels such that any further upsetting of the economy, disturbance of the supporting economy, will do more harm than would be added to the military effort. I think there is what the mathematicians call the minimum-maximum relationship there if we bring down the civilian economy to the minimum operating rates all through it, down to the point where any further cutting would do more damage than it would add strength to our military effort. That is the essential concept that we have of this essential civilian point now. This is current 1953 thinking, I might say.

Q. Let me see if I follow this. Suppose I have a factory which is designed to manufacture 1,000 bicycles a month, and you decide that 100 is all I can produce. Do you take into account the break-even point of the individual plant?

Might it not be true that I wouldn't be able to make 100 bicycles profitably?

[fol. 328] A. Shall we get into a discussion of concentration of industry? We will be at it a long time.

Q. I am leading up to that. Is that another factor taken into account?

A. Yes. That would be taken into account. Any opportunities for combining operations.

Q. In other words, if there were ten producers of bicycles in the country of equal size, you might say to nine of them "You close up completely," and the tenth, "You operate to capacity and make bicycles"; is that correct?

Mr. Rigney: I object, if Your Honor please, to the form of the question, "You might say to so-and-so." I assume counsel is speaking now of a hypothetical situation, but the form of his question wasn't correct.

Mr. Barnes: He was the Director of the office.

The Commissioner: I will overrule the objection.

The Witness: I would have to answer that with a very lengthy answer.

By Mr. Barnes:

Q. I am trying to find out what your theory involves and why this view isn't consistent with it. If it has to be a lengthy answer——

A. The shortest answer I can make to that question is that offhand, I am also opposed to concentration of that nature, because I think it does more harm than it does good [fol. 329] to the economy. It is much better not to close down the other nine plants and concentrate; but even at the risk—I would agree, not in the bicycle instance, but in other cases, that we should pay some subsidies to firms during wartime just in order to keep them running at a certain rate. There is a long series of reasons for that.

Q. Do you recall in 1941, the summer of 1941, specifically I believe in August, that one of the burning questions in the Office of Production Management was how many civilian automobiles were to be manufactured, and that the so-called Division of Civilian Supply, Office of Civilian Supply at that time, were trying to cut down to a greater extent than the Industry Division was?

A. That is right. I remember that, yes.

Q. Is that or is that not consistent with your view as to essential or supporting civilian economy?

A. Which is consistent, which side?

Q. The view expressed by Leon Henderson, Director of the Office of Civilian Supply.

A. Oh, yes, I think the ultimate result amply justified his position. It must be remembered that that argument was being conducted not in a war. It was merely a national emergency. We did not literally have war with anyone at that time. So it was quite a different atmosphere, I think.

[fol. 330] By the Commissioner:

Q. Wasn't there a further question there, that efforts were directed toward getting some of these automobile plants to convert from automobiles to something else that was more in demand by the military?

A. I might add that one of the reasons, as I think I said this morning, that this whole matter of mining machinery spirorities came up, was because those plants were being pressed by the Army and Navy to abandon their own production and stop making mine machinery, just as the automobile makers were being importuned to abandon automobile production.

By Mr. Barnes:

Q. Was there always complete unanimity within the Office of Production Management, SPAB, and WPB, with regard to the orders that were issued?

A. No. That is why we had a chairman to rule.

Q. On this question of essential war-supporting economy, isn't it still necessary to measure the impact of individual units of that economy by their requirements of materials?

A. No. I don't think that is the ultimate test, by any means.

Q. Isn't it one of the possible tests?

A. Yes, but I think it is a terribly deceptive one.

Q. Why?

[fol. 331] A. The manufacture of bobby pins, which I mentioned this morning, people often tried to ground it on the amount of steel that was used. And so forth. I think it becomes ridiculous on the small side.

Q. Suppose you have an industry that uses 17 million

dollars worth of critical materials, do you consider that inconsequential?

A. I don't think there is any particular dividing line between consequential and inconsequential.

Q. Suppose the products of that industry in no way aided the prosecution of the war, did that make any difference in the amount of critical materials it could use?

A. I don't think you could make the first conclusion about any industry, unless after a long period of analysis and discussion of what is essential to the conduct of the war. We get less and less certain of that the more we study it.

Q. One determination that was sometimes made during the last war was that race horses couldn't be transported on the railroads as I recall, because of a shortage of railroad facilities. Assuming that to be a correct policy decision, don't you take into account, then, the amounts of fuel and other things that are expended in that transportation?

A. That isn't the only thing. It is the competing demands. What were the other demands, things to be moved besides the horses? I don't think it is the amount of fuel [fol. 332] that a shipment of horses used up. I wouldn't decide it on that ground alone.

Q. Isn't it true that at various times and at various locations during the war, electrical energy was a critical material?

A. Mostly in the Southeast, down in the Georgia area, yes.

Q. Wasn't that also true in the Pacific Northwest, for example?

A. Late in the war, yes, very little. There is more difficulty out there now.

Q. Is there ever a morale factor that has to be considered in the issuance of these orders?

A. Very much so, yes, in both directions, in both ways: the morale of the people affected, as well as the rest of the community. One of the arguments I heard about that during the war was about electric light bulbs, before we had these (indicating fluorescent lights). The proposal was made by a number of people that light bulbs should be rationed by tickets, such as we had for gasoline. By hind-

sight, it was good that we didn't do it and didn't have to. That was a nip and tuck decision.

The reason I mention it is because I was against it. Krug, the Program Vice Chairman, Chairman of the Board later, felt that all things considered, the effect on morale there of disturbing people about the flow of some common [fol. 333] commodity like that, would make them think we were losing the war, that "If the country was so bad off that it had to ration electric light bulbs, I had better go over the hill and quit." He didn't put it as strongly as that. You always have to consider the closing off of the flow of something or some activity. It may have a bad effect on the will to win. That is one of the toughest parts of this whole analysis.

Q. Periodically, I recall during the war I lost my secretarial staff because they heard a rumor that clothes would be rationed tomorrow and they rushed out to buy some. So, rationing didn't always work.

A. We were using up tungsten and molybdenum, which were two of the tighest materials we had, involved in the little filament in the bulbs, but it was worth spending those scarce materials to keep a flow of bulbs on the market. What was done was simply to starve the stores a little bit so there wouldn't be quite so many on hand. People would have a little trouble getting them, but we saw to it that there was never any real shortage. Hindsight, I think, has amply proved there that maintaining the flow of that article at the expense of what could not be called essential in many ways—there are many light bulbs in your house and mine that are not essential. People were given an ample supply during the war, largely for the morale reason, in the sense that the economy is keeping itself together, that [fol.334] it is a well-knit, working whole conducting the war, and all parts of it have a share in the sustaining of a strong military effort. It gives the people a little of a lift, the feeling that when the war is over the thing is not going to be a complete mess.

Q. If I understand this theory of yours, you say to each segment of the economy, depending on its relative essentiality, "You are going to operate at 80 per cent of your prior capacity, you at 70 per cent, you at 30 per cent"?

A. You don't say what percentages. You sweat them

down to minimum levels as much as you can keep pressing and pushing them, until you get to the point where you see that they are going too far, and then ideally you would let up a little bit and let a little more flow into that area.

Q. Do you mean to start at 100 per cent and just see how far you could push each one individually?

A. A bus line running out to a munitions factory has to run at 120 per cent. You need to put on more buses there. A bus line out in the hills of Tennessee, with no munitions plants——

Q. Special buses running to race tracks?

A. Yes. You push them down more, maybe down to once or twice a week, just enough for morale reasons. You take care of school children up to a certain point. One of the toughest things in this is the continuity of youth and [fol. 335] schools and all that; for example, doing things just for morale reasons, we undoubtedly used up a lot of scarce materials in maintaining school buildings.

Q. In fact, we prohibited the construction of theaters and other places of amusement throughout 1941, did we not?

A. New one. Nothing happened to the old ones.

Q. No, but we limited the expansion of them.

A. Yes. That would be done all through the economy, no new equipment, no new construction, no new opening up of anything. That would hit very heavily all through. That is where you make your greatest gains or savings, of course. There are tremendous savings there by the stoppage of new machinery, new equipment and construction.

Mr. Barnes: That is all.

Mr. Rigney: I have nothing further.

The Commissioner: Any further questions? If not, the witness may step down.

(Witness excused.)

Mr. Rigney: Shall we start with our next witness, Your Honor, or wait until tomorrow morning?

The Commissioner: We have fifteen minutes.

Mr. Rigney: Professor Nelson, will you take the stand?

[fol. 336] WILBUR A. NELSON, a witness produced on behalf of the plaintiffs, having been first duly sworn by said Commissioner, was examined, and in answer to interrogatories, testified as follows:

Direct examination.

By Mr. Rigney:

Q. What is your full name, Professor Nelson?

A. Wilbur Armstead Nelson.

Q. Where do you live?

A. At the University of Virginia, Charlottesville, Virginia.

Q. What is your occupation, sir?

A. Geologist.

Q. What is your present professional position?

A. I am head of the Department of Geology, known as the Corcoran Rogers Department of Geology, and Corcoran Professor of Geology, at the University of Virginia.

Q. How long have you occupied that position, sir?

A. For twenty-seven years, since September 1925. At that time, when I came to Virginia, I came in the dual capacity as State Geologist and also in the position I have already enumerated, and I remained State Geologist for three years, at which time I reorganized the Virginia Survey. They became two full-time positions, and I retained the one at the University.

[fol. 337] Q. Will you tell us something about your educational background?

A. I went to the public schools and private schools and was tutored, then entered college. I received my B.A. Degree at Vanderbilt University, Nashville, Tennessee, in 1910. I received an M.A. Degree from Stanford University at Palo Alto, California, in 1915.

Q. What did you specialize in at Stanford?

A. Geology.

Q. Following the completion of your formal education, what did you then do?

A. In 1911, I started work on the Tennessee geological survey as an assistant geologist; stayed there until I received a leave of absence to go to Stanford to take graduate work. I returned to the survey, finished some uncompleted

projects, and then accepted a position with the Nashville, Chattanooga and St. Louis Railway as geologist in the office of the president.

Q. After that?

A. I resigned from that position in 1916. I, with a partner, opened a barite mine in Cartersville, Georgia. I operated that mine until 1918. At the same time, I operated numerous small manganese mines during World War I, which was part of this period.

I was appointed State Geologist of Tennessee in 1918. [fol. 338] We sold our properties in Georgia, and I accepted that position. I stayed as State Geologist of Tennessee until September, 1925, when I accepted the positions already outlined, in Virginia.

Q. In addition to these activities, have you on occasion done consulting work in your field?

A. Yes. I have done consulting work in about 25 States in the Union and in Canada, making reports on metallic and non-metallic mineral deposits and mines, and on numerous engineering geology projects.

Q. Have you written any articles for publication in scientific or professional journals?

A. I have written numerous bulletins which have been published by State surveys as well as many articles published in the scientific journals, and even in the National Geographic Magazine.

Q. Are you a member of any professional societies, Professor?

A. Yes, a considerable number of them.

Q. Would you give us those?

A. The Mining and Metallurgical Society, the Geological Society of America, the AAAS, and a number of others.

Q. Did there come a time when you entered Government service, the service of the United States?

A. I received leave of absence from the University in [fol. 339] May, 1941, when Edward Stettinius asked me to come to Washington to make a study of the ferro-alloy situation, which was very critical at that time. I thought I was coming up for three months. I stayed four and a half years.

Q. What was Mr. Stettinius' position at that time?

A. Director of Priorities, as I remember it.

Q. Was that within the Office of Production Management?

A. It was.

Q. How long did that task take that you originally came up to do?

A. I was asked to complete the ferro-alloy survey in 30 days because it was very critical. Mr. Stettinius wanted a complete report on the future needs of the ferro-alloy minerals by this country.

I did this work under Arthur Whiteside, and we called in the leaders of each ferro-alloy industry, and they responded one hundred per cent, and the report was completed in one month.

Q. What was your next assignment during this period?

A. I was then made a priorities specialist, first for one or two of the branches—they didn't have branches, but attached to men handling those particular minerals and metals.

I finally ended up by September acting as priorities specialist for about 20 different metals and minerals, all of them except iron, lead, and aluminum, as I remember. [fol. 340] Q. You speak of a priorities specialist. Could you give us a brief description of what your duties were in that connection?

A. My duties were to consult with the man in charge of a particular metal or non-metal, to find out what his priority needs were, and then with help from other specialists, to draw up a priority regulation.

Q. How long did this job last, as priorities specialist?

A. Until about the 10th of September.

Q. Then what was your next assignment?

A. Donald Nelson asked me to draw up a priority order covering the mining industry and to establish a branch to handle that priority.

Q. Did you do that?

A. I did. The first order was drawn on September 17.

Q. Is that known as Order P-56?

A. That is Order P-56.

Q. Could you tell us the distinguishing characteristic of Order P-56? I mean by that, as distinguished from the other "P" orders in the series up to that time.

A. It was the only "P" order that was issued covering an entire industry, and the only one, I believe, up to that

time that was issued without the request of the industry. We anticipated the needs.

Q. To whom did the order apply?

[fol. 341] A. It applied to metal mines, non-metallic mines, and coal mines in the United States and its territories.

Q. Its purpose was what?

A. To see that no mine in the United States essential to the war effort shut down due to lack of repair parts or supplies or to lack of new machinery when needed.

We handled the order in the following way: As soon as the order was issued, Donald Nelson wired the Governor of each State and asked him to appoint an emergency coordinator of mines, suggesting that it be the Chief Mine Inspector or State Geologist. This was done in practically all cases, except a few New England States who wired back they didn't have any mine problems, in which they were erroneously informed, because quarries came under this category.

The coordinators of mines all met in Washington a few days later, and they were addressed by Donald Nelson and were asked to go back to their States and to furnish us a list of all mines in their States which they considered essential for the war effort.

We then issued serial numbers to those mines. At a later date we established our own field men throughout the United States, and any subsequent mines or mine operators who wished their operation included in this order applied to us and we checked it with our field representative and if our field representative reported it was essential, [fol. 342] we then gave them their serial number.

Mr. Rigney: I will ask that this be marked the next exhibit number for identification.

(Said document was marked for identification as Plaintiffs' Exhibit No. 64.)

By Mr. Rigney:

Q. Do you recall the date of issuance of P-56?

A. September 17, 1941.

Q. Was that amended within a matter of a few days after that?

A. It was amended on September 22.

Q. I show you Plaintiffs' Exhibit 64 for identification, and ask you whether or not that is the amendment to Order P-56?

A. It is.

Q. That was issued on September 22, did you say?

A. Yes.

OFFER IN EVIDENCE

Mr. Rigney: I offer it in evidence.

Mr. Barnes: No objection.

The Commissioner: It is admitted.

(Said document, marked "Plaintiffs' Exhibit No. 64," admitted in evidence and made a part of this record.)

The Commissioner: We will adjourn at this point until 10 o'clock tomorrow morning.

[fol. 343] (Thereupon, at 4:30 o'clock p. m., a recess was taken in the hearing until 10:00 o'clock a.m., Tuesday, January 27, 1953.)

[fol. 344] IN THE UNITED STATES COURT OF CLAIMS

[Title omitted]

Transcript of Testimony—January 27, 1953

TESTIMONY FOR PLAINTIFFS (Resumed)

The hearing was resumed, at the time above indicated, pursuant to the recess previously taken.

Present: (The same appearances as previously noted.)

WILBUR A. NELSON, a witness for the plaintiffs, resumed the witness stand, and was examined and testified as follows:

Direct examination.

Mr. Ewing: Before Mr. Rigney resumes with Professor Nelson, I would like to cover the situation that came up

yesterday with respect to the data read into the record by Dr. McLaughlin and objected to, and admission was restricted subject to the production of the original source [fol. 345] material. As I say, it was all read into the record. It all appears at page 93 of the Minerals Yearbook for 1942, the statistics being 1942 statistics, issued by the Department of the Interior, Bureau of Mines.

The Commissioner: In order to save time, it would seem to me that if Mr. Barnes would have an opportunity to compare that page with the page which I believe you put in evidence——

Mr. Barnes: They did not put it in evidence.

Mr. Ewing: He simply read it for the record.

Mr. Barnes: At page 228 of the transcript.

The Commissioner: If you want to put that page in evidence, if that is all you want, I presume you could get a stipulation.

Mr. Ewing: I thought it would be simpler and easier to let the testimony stand without having another exhibit, since it is in the record already, if it suits Mr. Barnes.

Mr. Barnes: I haven't seen the book or compared the data that appears in the transcript or anything else.

Mr. Ewing: If the transcript isn't correct, I would be glad to correct it.

Mr. Barnett: What about Central Eureka?

Mr. Ewing: Central Eureka didn't report.

Mr. Barnett: That is for the year 1942 when we closed down. Does it also have 1940 and 1941?

Mr. Ewing: It does not. You are in for 1941. Would [fol. 346] that suit you?

Mr. Barnes: Let me have the book and during some recess I will compare.

Mr. Ewing: I will compare it with you any time and make it right.

Mr. Rigney: Your Honor, Exhibit 4, which is P-56, one of the exhibits that was marked for identification at the pre-trial, was incomplete at that time. Pages 4 and 5 were missing from that exhibit at the time it was marked for identification. It went into evidence yesterday, Exhibit No. 4, without the pages 4 and 5 being added. So in order that the exhibit is complete, the last two pages, pages 4 and 5 of P-56, should be added to the exhibit.

Mr. Barnes: I see that I covered myself by agreeing subject to verification.

The Commissioner: We will just have the reporter physically add them to Exhibit No. 4.

Mr. Rigney: Mr. Barnes, I think, was aware at the time last fall that these exhibits went in that four or five of them had a page or two missing. We have obtained the missing items.

May this be marked the next exhibit number, which is No. 65 for identification, I believe?

(Said document was marked for identification as Plaintiffs' Exhibit No. 65.)

[fol. 347] The Commissioner: I want to make another statement for the record with respect to the absence of counsel for Oro Fina and Bald Mountain. Mr. Martin of course appeared yesterday morning and during either the midmorning recess or the luncheon recess absented himself. He apparently sent an associate, a Mr. Gould, who appeared during part of the afternoon session.

Mr. Barnes: He left at the afternoon recess.

The Commissioner: He left at the afternoon recess. Before we resumed after the luncheon recess Mr. George Nugent came and spoke to me and inquired as to whether or not it was necessary for him to appear. Of course I indicated that the trial was proceeding and all of the cases, including Bald Mountain and Oro Fina, were being tried, and that it would be necessary for all the Plaintiffs to prove the necessary allegations of their petition on the question of liability. I fully expected Mr. Nugent to appear. He did not. He is not here today. I note his absence.

All right.

Mr. Rigney: At this time, Your Honor, the Plaintiff Homestake offers in evidence Plaintiffs' Exhibit No. 65 for identification which is a memorandum of October 29, 1941, from Edwin B. George to Mr. Donald M. Nelson.

Mr. Barnes (examining document): I don't object to this. I don't see the relevance or materiality to any issue involved here, Your Honor. This appears on its face to [fol. 348] be an extremely tentative memorandum written more than a year before the issuance of L-208, referring to orders to grant priorities to gold mines rather than to any order which did or might shut them down.

The Commissioner: It may be received.

(Said document, marked "Plaintiffs' Exhibit No. 65," admitted in evidence and made a part of this record.)

By Mr. Rigney:

Q. Professor Nelson, when Court recessed yesterday afternoon I think you had just testified with respect to the promulgation of Order P-56 on September 17 and its amendment five days later on September 22. You had described, I believe, the plan that was set up, the steps which you took to implement or to effectuate P-56. Would you tell us wherein the amendment to P-56 of September 22 differed from the September 17 original P-56?

A. In the original order of September 17 the was no mention of placer gold mining being excepted from P-56. In the original order there was a priority rating of A-3, repair parts, maintenance, and supplies. In the amended order the A-3 was changed to A-8 because it was felt from an over-all policy standpoint that the A-3 was out of line with other ratings being given and that we could get maintenance, repair and supplies under an A-8 rating at that [fol. 349] time without any diffculty. Also the September 22 amended order had a clause in it stating that this order does not apply to any placer gold operations.

Q. Can you tell us whether or not the original order of September 17 had actually been put into effect at the time the amendment of September 22 came out?

A. The original order of September 17 was never put into effect but was just held in the OPM until the amendments could be prepared. The first P-56 order that was used in giving any priorities was the September 22 amendment.

Mr. Rigney: May this be marked Plaintiff Homestake's Exhibit No. 66 for identification?

(Said document was marked for identification as Plaintiffs' Exhibit No. 66.)

By Mr. Rigney:

Q. I show you Plaintiffs' Exhibit No. 66 for identification, Mr. Nelson, and ask you what that document is.

A. Under the setup in the OPM Donald M. Nelson, as

Director of Priorities, was the only person who had the authority to issue priorities. With the setup of P-56 in the Mining Division and the knowledge that probably eight thousand serial numbers would have to be given, Mr. Donald M. Nelson delegated to me or authorized me to sign and issue mine serial numbers under P-56, which was the same as authorizing me to have the right to issue priorities.

[fol. 350] Q. He did it by this letter?

A. He did it by this letter of September 22.

OFFERS IN EVIDENCE

Mr. Rigney: I offer it in evidence, Your Honor.

Mr. Barnes: I have no objection.

The Commissioner: It may be received.

(Said document, marked "Plaintiffs' Exhibit No. 66," admitted in evidence and made a part of this record.)

By Mr. Rigney:

Q. Mr. Nelson, what was the priorities field service of the Office of Production Management?

A. There was no priority field service of the Office of Production Management on September 22.

Q. No; my question was more general. I was just asking you what the priorities field service was, whenever it was set up.

A. I will have to answer that in a lengthy way. The first priority field service was set up just for the Mining Division, and we appointed about fifteen or twenty field men, some covering several states, some where there were a great many mines in the state having only one state under their jurisdiction. These men were used by the Mining Division in checking on any mine with the serial number after the first batch were given under the state coordinators.

The method was that when they received a request for a serial number, which authorized blanket priorities, to [fol. 351] immediately refer that request to the field representative in whose district the mine occurred. He then made a thorough examination of the mine by visiting it and reported back to us whether he considered the mine essential

to the war effort. If he said yes, we then issued them a serial number. If he said no, we gave them the reasons for not issuing a serial number.

I suppose that the War Production Board, knowing we had this system and how it worked, felt that they should have a similar service——

Mr. Barnes: I object to that statement on the part of the witness.

Mr. Rigney: I think you have answered the question, Mr. Nelson.

May this be marked Plaintiffs' Exhibit No. 67 for identification?

(Said document was marked for identification as Plaintiffs' Exhibit No. 67.)

[fol. 352] By Mr. Rigney:

Q. I show you Plaintiffs' Exhibit 67 for identification, and ask you to tell us what that exhibit is.

A. This is a copy of an address which I gave before the training group of the priorities field service which was set up by the War Production Board for all of the divisions or branches of the War Production Board.

Q. Did you deliver that address in your capacity as Chief of the Mining Division?

A. I delivered it in that capacity. It happens that my title at that particular moment was Administrator of Mine Priorities.

Q. Very well, sir.

Mr. Rigney: Your Honor, Plaintiff will offer Exhibit 67 for identification. I might say——

The Witness: May I say something off the record?

The Commissioner: No, you are on the record.

The Witness: They have a "Ph.D." after my name, and it is not correct.

Mr. Rigney: You are not responsible for that.

The Witness: I would like to have that deleted.

Mr. Rigney: Might I say parenthetically, Your Honor, that this is a discussion of Order P-56 and the administration of it. We offer it because we think it might be helpful in that connection.

[fol. 353] The Commissioner: Very well.

Mr. Barnes: May I ask a couple of questions in regard to that?

The Commissioner: Yes.

By Mr. Barnes:

Q. Did you prepare the text of this speech, Dr. Nelson?

A. I think I did. It sounds like my language.

Q. Do you recall now whether you prepared the text before you gave the speech, or whether this was based on stenographic notes made at the time?

A. We were required in the War Production Board to prepare our speeches before they were given.

Q. Do you know whether in giving it you read it verbatim as it is shown here?

A. I doubt seriously if I read it; because I am accustomed to talking without notes.

Q. Do you know, then, whether you used exactly these words in delivering your speech?

A. I couldn't possibly have used all the exact words.

Mr. Barnes: I object on the grounds that there has been no showing of any possible competence, relevance or materiality. This is the same now as a memorandum that Dr. Nelson prepared for his own use and never communicated to anybody else.

By Mr. Rigney:

Q. Is this substantially the content of your instructions [fol. 354] and remarks to the priorities field service on the date in question?

Mr. Barnes: I object to the form of the question as being leading.

The Commissioner: Sustained.

By Mr. Rigney:

Q. Wherein did the remarks which you delivered on—what is the date of this meeting, November 10—wherein did your remarks to the priorities field service on November 10 differ in any substantial degree from this address here?

A. They did not differ at all in any of the facts given

in regard to priority ratings, the method of giving serial numbers, or any of the details relating to priorities.

Q. In preparation for your testimony in this trial, have you gone over that document carefully; have you read it carefully?

A. Yes, I have read it thoroughly, and there are no errors in it.

Q. Is it an accurate and correct discussion of the matters contained therein, namely, the administration of Order P-56?

Mr. Barnes: I object to the form of the question as being leading.

The Commissioner: Overruled.

The Witness: I consider that it is an excellent statement, [fol. 355] thoroughly correct, of how Order P-56 was administered.

Mr. Rigney: I should think it would be admissible, Your Honor.

Mr. Barnes: If that is the case, I will have to look at the document. I haven't examined the document at all. I have merely made a preliminary examination of the witness.

(Mr. Barnes examining Plaintiffs' Exhibit 67 for identification.)

(Here followed discussion off the record).

Mr. Barnes: On the record, Mr. Rigney, if you have any other documents that you intend to present here, I think it would save an awful lot of time if you presented them to me in advance of offering them, so I might have an opportunity to go over them.

Mr. Rigney: Frankly, Mr. Barnes, I though you were more familiar than we were with these documents. A great many of them were marked at pre-trial.

Mr. Barnes: The ones that we marked at pre-trial, I have no question about it. I have examined those. But you have gone through and made a selection of other documents from various sources, some of which I have seen, others of which I may not have seen. Certainly I am not able to carry the contents of them in my mind.

Mr. Rigney: We will see, Your Honor, what we can work out at the recess.

[fols. 356-376] Mr. Barnes: I am afraid they will keep on offering extensive documents of the type they have just offered, and we may run into protracted delay here.

Mr. Rigney: We will try to work out some way whereby we can resolve that problem.

The Commissioner: All right.

Mr. Rigney: May this be marked Plaintiffs' Exhibit 68 for identification?

(Said document was marked for identification as Plaintiffs' Exhibit No. 68.)

Mr. Rigney: Plaintiff offers at this time Plaintiffs' Exhibit 68 for identification, being a resolution of the Joint Economic Committee for Canada and the United States, dated November 8, 1941, with a covering letter of transmittal from Mr. Currie, the Administrative Assistant to the President, to Mr. Donald M. Nelson, November 18, 1941.

(Mr. Barnes examining Plaintiffs' Exhibit 68 for identification.)

[fol. 377] Mr. Rigney: May I say now that I will offer Plaintiffs' Exhibit No. 12 for identification, in evidence.

Mr. Barnes: This is dated December 19, 1941, Your Honor, and I make the same objection as to relevance and materiality.

The Commissioner: It may be received.

(Said document, marked "Plaintiffs' Exhibit No. 12," admitted in evidence and made a part of this record.)

Mr. Rigney: I would like to invite Your Honor's particular attention, with respect to this document, to the second full paragraph beginning on page 2 and continuing on page 3. I merely make that statement for the record for whatever assistance it may be.

May this be marked the next number in order?

(Said document was marked for identification as Plaintiffs' Exhibit No. 70.)

By Mr. Rigney:

Q. Mr. Nelson, I show you Plaintiffs' Exhibit 70 for identification, being a document of January 20, 1942, and [fol. 378] ask you what that is?

A. That is a nine-page memorandum written by me to Donald M. Nelson, Chairman of the War Production Board, discussing in rather detail the entire priority problems of the mining industry and the priority problems of the makers of mine machinery.

Mr. Rigney: Plaintiff offers it in evidence.

Mr. Barnes: There apparently has been a notation in ink placed on this photostat you secured from Archives.

Mr. Rigney: That is just the way we got it from Archives, Mr. Barnes.

Mr. Barnes: This appears to be ink that has been placed on the photostat rather than anything that has been copied.

Mr. Rigney: What page is it?

Mr. Barnes: Page 7.

Mr. Rigney: Would you take this one instead? There is a line drawn on there in pencil by me this morning just to call my attention to that paragraph. I was going to call the Commissioner's attention to it, anyway.

Mr. Barnes: That one is satisfactory to me, with the understanding that that is a notation that has been added by counsel.

Mr. Rigney: Suppose we give you one now which doesn't have anything on it except Plaintiffs' 70 at the top.

(Document handed to Mr. Barnes.)

[fol. 379] Mr. Barnes: Everybody has marked on one of these.

We are getting closer, Your Honor. This is January, 1942, and again it is a discussion largely of priorities for the mining industry generally. There is at page 7 some slight reference to gold mining.

The Commissioner: It may be received.

(Said document, marked "Plaintiffs' Exhibit No. 70," admitted in evidence and made a part of this record.)

Mr. Rigney: May I say for the record that we would like to invite Your Honor's attention to the statement appear-

ing on page 7, toward the bottom, paragraph 6 thereof, which follows: "There are other types of mining besides gold which may also have to be given harsh treatment in future months."

By Mr. Rigney:

Q. Would you tell us what your purpose was in sending this memorandum to Mr. Donald Nelson?

A. The purpose of this lengthy memorandum was to acquaint Mr. Donald Nelson, who was with Sears Roebuck before he came to the War Production Board and naturally was not entirely familiar with the mining industry—to give him an over-all picture of the mining industry and its relation to other industries, to give him facts to permit him to evaluate which of these industries should have the [fol. 380] best priority ratings.

Q. Professor Nelson, could you tell us what position Mr. C. H. Matthiessen, Jr., held in the War Production Board in February of 1942?

A. Matthiessen?

Q. Perhaps that is the pronunciation.

A. He was Deputy Director to Donald Nelson, one of them.

Q. What was Mr. John P. Gregg's job at that time with the WPB?

A. It is my recollection that he was on the Clearance Committee.

Mr. Barnes: Wasn't he Chairman of the Program Committee at that time?

The Witness: He may have been. We changed titles every month or two, and it was very hard to keep up with the titles.

Mr. Rigney: May this be marked Plaintiffs' Exhibit 71 for identification?

(Said document was marked for identification as Plaintiffs' Exhibit No. 71.)

Mr. Rigney: Plaintiff offers Exhibit 71 for identification, in evidence.

Mr. Barnes: No objection.

The Commissioner: It is admitted.

[fol. 381] (Said document, marked "Plaintiffs' Exhibit No. 71," admitted in evidence and made a part of this record.)

Mr. Rigney: If Your Honor please, at the pre-trial marking of the exhibits, Nos. 6 and 7 were reserved, and I believe that No. 6 was to be the amendment to Order P-56 of March 2, 1942. I should like to offer that exhibit now.

Mr. Barnes: Subject to verification, no objection.

The Commissioner: It may be received as Exhibit 6.

(Said amendment to Order P-56, marked "Plaintiffs' Exhibit No. 6," admitted in evidence and made a part of this record.)

By Mr. Rigney:

Q. Mr. Nelson, can you tell us in what respect the amendment of March 2, 1942, to P-56, changed the existing P-56 in effect prior to that time?

Mr. Barnes: Your Honor, it seems to me the documents would speak for themselves, and you don't need testimony on this subject.

Mr. Rigney: That is true, Your Honor, of course, but that is a nine or ten-page document. The change can be expressed in almost one sentence by Mr. Nelson, and I thought it would help the continuity to have him point out to Your Honor what that change was.

The Commissioner: In the light of that objection, I don't think I will allow him to answer that.

[fol. 382] Mr. Rigney: Very well.

The Commissioner: At the proper time you can point out those differences in memorandum to the Commissioner when you are asking for findings.

Mr. Rigney: Yes, surely, Your Honor.

By Mr. Rigney:

Q. What happened following the March 2, 1942, amendment to Order P-56 in so far as the Mining Branch was concerned?

A. The amendment of March 2 required me to notify all gold mines that their serial numbers were taken away from them; which meant their priority assistance under P-56 was denied.

Q. Do you know from your official knowledge and your official capacity when the Homestake Mining Company lost its serial number under P-56?

A. A telegram was sent to Homestake on March 2, notifying them that their serial number had been taken away, and therefore their priorities under P-56 were no longer available to them.

Q. Was Homestake Mining Company ever assigned a serial number under P-56 at any time after March 2, 1942?

A. It was not, as long as I was in charge of administering P-56.

Q. That was up to what time?

A. Around in December 1942, at which time I was made [fol. 383] assistant to one of the Deputy Directors of the War Production Board.

Q. I am sorry.

A. I said I know that it was not reinstated as long as I was in charge of the Mining Division.

Q. And that was?

A. And that in December of that year, I was moved higher up in the War Production Board as an assistant to one of the Deputy Directors.

Q. So it never had a serial number between March 2, 1942, and the issuance of L-208 on October 8, 1942?

A. I will say even longer than that, up to December.

Q. Can you tell us what the fact was with respect to serial numbers of Idaho Maryland and Central Eureka following the March 2 amendment?

A. On March 2 and the following day, the Mining Division sent telegrams to every mine operator as to which 30 per cent or more of the value of their ores were gold and silver, stating that under the new amendment to P-56 their serial number was being withdrawn. However, those mine operators who were producing any appreciable amounts of any mineral necessary to the war effort were notified that their serial number would be reinstated immediately if they would wire us to that effect or notify us in any proper way.

Q. Does your state of knowledge enable you to testify [fol. 384] at this time what the fact was with respect to Central Eureka and Idaho Maryland, so far as the serial number is concerned, after March 2, 1942?

A. I know that Idaho Maryland had its serial number taken away. I do not remember Central Eureka.

The Commissioner: We will recess for five minutes.

(Thereupon, a five-minute recess was taken in the hearing.)

[fol. 385] Mr. Barnes: There is just one brief statement I would like to add to the discussion we had this morning, and that is that frankly it has been the Defendant's position that what happened on the various "P" orders or priority orders during 1941 and the early part of 1942 was no part of its case.

We have looked at very few records pertaining to them. We have copies of very few records pertaining to that subject which has been in controversy here this morning. I don't think there is anything in our files that is going to help supply any of the deficiencies that have appeared in some of the exhibits that have been offered, parts missing or their incompleteness, and I wanted to make the explanation that we don't have documents here relating to those subjects.

Mr. Herrington: I think it might be well to recall to Your Honor's attention the language that appeared in the Idaho-Maryland decision of the Court of Claims. On page 14 of the Opinion: "It is alleged that the particular critical materials used in gold mining were, at the time the order was issued and thereafter, subject to allocation and restriction by virtue of duty issued War Production Board priority regulations."

That is part of the Opinion.

The Commissioner: Yes.

[fol. 386] Mr. Barnes: It is also an allegation.

Mr. Rigney: May this be marked as our next exhibit number?

(Said document was marked for identification as Plaintiffs' Exhibit No. 72.)

By Mr. Rigney:

Q. Mr. Nelson, I show you Plaintiffs' Exhibit No. 72 for identification and ask you what that document is.

A. This is a memorandum written by me to my superior,

Mr. A. I. Henderson, Deputy Director of the Minerals Division, under which the mining branch operated.

Q. Is this a report of meetings held at Reno, Nevada, on March 12 and at Denver, Colorado, on March 14, 1942, attended by you?

A. This is my report to Mr. Henderson of the details of what happened at these two meetings and what part I took in these two meetings. The memorandum is signed by me personally.

Mr. Rigney: Plaintiff offers this in evidence.

Mr. Barnes: May I ask the purpose of this offer, Your Honor?

Mr. Rigney: Perhaps I should ask the witness preliminarily to answering counsel's question what this meeting was about, what the purpose of these two meetings was as a matter of fact.

The Witness: After the March 2 amendment to P-56 there [fol 387] was a great furor raised in all of the western mining states due to the 30 per cent clause. So I was requested by Mr. Batt to attend this meeting in Reno and explain that we were not going through this clause to shut down any mine producing appreciable amounts of any strategic mineral, even though they produced over 30 per cent of their value in gold and silver. So I attended this meeting in Reno where there were five governors present, a number of Congressmen, and many interesting people. It was held in the Mackay Auditorium, and we had an overflow crowd.

By Mr. Rigney:

Q. Were there representatives of mining industries there?

A. Yes. At Denver the meeting was held in the chamber of the House of Representatives, and Governor Carr presided and again we had an overflow crowd.

Q. This is your report to your superior of what transpired at these two meetings?

A. At which I made that statement. Of course I was asked a great many questions, and I was extremely unpopular.

Mr. Rigney: This is a report of his discussion to Mr. Henderson of what did happen at this meeting, the discussion of Order P-56 and how it was being and would be administered at that time. I think it is admissible.

Mr. Barnes: Your Honor, we have here a document which [fol. 388] says that the witness spoke to the governors of certain states, the state geologist of New Mexico and some mining operators from California, who stated they represented the governor of California. I fail to see how communications between the witness and the governor of a state in any way affect the issues that are involved here.

The Commissioner: It may be received.

(Said document, marked "Plaintiffs' Exhibit No. 72," admitted in evidence and made a part of this record.)

Mr. Rigney: May this be marked Plaintiffs' Exhibit No. 73 for identification?

(Said document was marked for identification as Plaintiffs' Exhibit No. 73.)

Mr. Rigney: Plaintiff offers Exhibit No. 73 for identification, Your Honor, being the minutes of the meeting of the Requirements Committee of the War Production Board of April 3, 1942.

Mr. Barnes: Your Honor, this gives the appearance of being an incomplete document. We have some six pages of material, ending in the fourth or fifth line of the sixth page; the seventh page which is unnumbered starts with the heading "The Following Items are Excerpts from the Minutes of the Requirements Committee Meeting Held on April 3, 1942," and someone has pencilled in a number 6-A. [fol. 389] However, the pages following that are pencilled number 8 and pencilled number 9. There is no closing of the meeting or anything of that type noted here.

Mr. Rigney: That is just the way we got it from Archives, Your Honor. It came in in just this fashion.

Mr. Barnes: I think we should have some testimony to the extent to which it is complete, Your Honor.

The Commissioner: Your observation makes it very awkward to come up with a ruling. Is there an objection?

Mr. Barnes: Yes, sir, I have an objection. The document is incomplete.

The Commissioner: It is sustained. It may be marked for identification.

Mr. Rigney: I think we will be able to verify this later, Your Honor, so we will leave it marked for identification as No. 73.

The Commissioner: Very well.

By Mr. Rigney:

Q. Do you recall, Mr. Nelson, attending a meeting of the Requirements Committee of April 3, 1942? Perhaps this will help you to refresh your recollection on that if you do not have an independent recollection of it. I show you Plaintiffs' Exhibit No. 73 for identification and ask you whether that enables you to refresh your recollection and tell us whether or not you did attend a meeting of the [fol. 390] Requirements Committee on April 3, 1942.

A. I remember very distinctly attending the meeting; it was on mining machinery.

Q. What was your function or purpose at that meeting?

A. I was invited to attend to present to the committee the entire picture of the mining machinery industry and the difficulties which they were having in obtaining priorities for that part of their plant production which was still engaged in the making of mining machinery.

In every case, every one of the large mining machinery companies that converted 20 or 30 per cent of their plant capacity to the making of parts for battleships or parts for other things needed in the war effort, because of the priorities which they obtained for their government contracts, they never lacked all of the raw materials they needed to complete those projects.

Therefore they were able to complete promptly, as a rule ahead of time, each one of their government contracts while 70 or 80 per cent of their plant capacity still set aside for the making of mining machinery was bogged down by having incomplete undercutting machines, incomplete mining machines of all kinds, which were probably 75 per cent to 90 per cent completed. That was due to the fact that they got the highest "A" ratings for materials on their Army contracts and the highest they could get for [fol. 391] their own materials was sometimes an A-3.

The question then arose, How could we keep the mining machinery companies making mining machinery? It was a very serious proposition because some of them felt, Why worry about all these priorities? Why not reconvert entirely to government contracts?

Q. You are speaking now in the last portion of your answer of the makers of mining machinery generally?

A. The makers of mining machinery who were operating under Order P-56-A.

Q. Do I understand it was they who were expressing this sentiment that you just referred to, Why not convert completely to government contracts?

A. The representatives——

Q. I just want to be clear about that.

A. Yes. The representatives of those companies, their officials.

Mr. Rigney: May this be marked Plaintiffs' Exhibit No. 74 for identification?

(Said document was marked for identification as Plaintiffs' Exhibit No. 74.)

By Mr. Rigney:

Q. Mr. Nelson, I show you Plaintiffs' Exhibit No. 74 for identification and ask you what that paper is.

A. This was the issuance sheet which carried the signa- [fol. 392] tures of the necessary people holding the necessary positions in the War Production Board which had to be filled out whenever an amendment was made to a "P" order or to any order, and this particular cover sheet is on removing the 30 per cent clause from P-56 and amending it on May 15.

Q. Would it be a fair statement to say that this was the recommendation for the amendment of P-56 which took place on May 15?

A. This was the recommendation which had to start in the mining branch, and this recommendation carries my signature.

Mr. Rigney: Plaintiff offers it in evidence, sir.

Mr. Barnes: Mr. Nelson, can you tell us what these other names or initials on here represent and who they are, what their positions were?

The Witness: Each branch had attached to it a priorities specialist. When an amendment was requested on any order the chief of the branch first signed on the first line. Then it had to be approved by the priorities specialist assigned to that branch, in this case Mr. Alexander Falconer who was the priorities specialist assigned to sign for the mining branch. It then had to be approved by the lawyer assigned to the mining branch who in this case was James Cooley; then by the assistant general counsel, F. M.——

Mr. Barnes: Is that F. M. or M. F.?

[fol. 393] The Witness: I mean M. F.

Mr. Barnes: Was that Manly Fleischmann, probably, at that time?

The Witness: Was he on the legal staff?

Mr. Barnes: Yes.

The Witness: I suspect it was, yes. That is probably Manly Fleischmann.

You did not always have to have the Division of Statistics approve, or the Office of Procedural Consultant. Then it went to the chief deputy of the Branch of Priorities, and those initials are Mr. C. H. Matthiessen, Jr.'s, initials.

Mr. Barnes: Above your name is the name of somebody else named Nelson.

The Witness: P. H. Nelson. He came in about that time and was one of the men connected with Donald Nelson's office. I don't remember his exact title. I remember Mr. Nelson very well, however.

Mr. Barnes: Your Honor, in view of your having overruled objections to previous documents along this same line, I am not going to object here, but I do want to note that I think it is subject to the same objection as to materiality and relevance.

The Commissioner: It may be received.

(Said document, marked "Plaintiffs' Exhibit No. 74," admitted in evidence and made a part of this record.)

[fol. 394] Mr. Rigney: Now, Your Honor, I come to what was designated as Exhibit 7 for identification at the pretrial, the amendment of 15, 1942, amending P-56, and I offer that in evidence as Exhibit 7.

Mr. Barnes: My only objection again would be on relevance and materiality, and since you have let in the basic

document to which this is an amendment, Your Honor, I am not going to urge that.

The Commissioner: All right. It may be received.

(Said document, marked "Plaintiffs' Exhibit No. 7," admitted in evidence and made a part of this record.)

By Mr. Rigney:

Q. Professor Nelson, what was the effect of the May 15, 1942, amendment to P-56?

Mr. Barnes: Your Honor, the documents speak for themselves. I object to oral testimony.

The Commissioner: Sustained.

By Mr. Rigney:

Q. Will you tell us, Dr. Nelson, what the situation or position of a gold mine possessing no serial number after the May 15 amendment would be in so far as obtaining MRO supplies, maintenance, repair and operating supplies?

A. A gold mine at that time having no serial number could obtain MRO supplies under P-100 with an A-10 rating. [fol. 395] Q. Who was Mr. H. O. King in the War Production Board in July of 1942?

A. He was director of the copper branch or Copper Division.

Mr. Rigney: Plaintiff offers the next exhibit in numerical order. This document is dated July 3, 1942, memorandum from H. O. King to A. I. Henderson.

(Said document was marked for identification as Plaintiffs' Exhibit No. 75.)

Mr. Barnes: Your Honor, I fail to see a word in this document that says anything about gold mines, gold mining, priorities for gold mines, any of the other numerous subjects that we have been dealing with. This is from the director of the Copper Division to the director of the Materials Division on the subject of Copper. I object on the grounds of irrelevancy and immateriality.

Mr. Rigney: If your Honor please, I would like to invite Your Honor's attention to the last paragraph of this memorandum which says: "All of the copper producers antici-

pate increased difficulty in the future. We have heard reports of labor scouts working all through the West employed by the airplane and shipbuilding plants of the West, working through the mountain states, offering higher wages and inducing men to leave the mines and go to the west coast. This is a very serious situation and the indications are that it will be much more serious in the months to come. Any- [fol. 396] thing that can be done to keep the men where they are and in fact bring other men into these mining camps will help production."

There is going to be very much more proof along that line dealing with the so-called shortage of copper miners. There is going to be proof here that the purpose, and our petition alleges, that the purpose of Order L-208, its true purpose, was to force or compel the gold miners to leave the gold mines and go into the copper mines. We want to show that that situation was and what caused the alleged shortage.

Mr. Barnes: Your Honor, the situation during the war, however, was that everybody was short of manpower. Every industry was trying to get more men and to keep the men that it had. It doesn't seem to me that the fact that there are listed here three mines that are allegedly having difficulty with respect to personnel proves anything, that the mining industry or copper mines are any different from any other industry during the war. The airplane plants needed more men, the aluminum plants and the shipyards needed more men, the scrapyards needed more men.

The Commissioner: I am going to let it in.

(Said document, marked "Plaintiffs' Exhibit No. 75," admitted in evidence and made a part of this record.)

By Mr. Rigney:

Q. Professor Nelson, could you give us the distinction [fol. 397] or the difference between the function of the division headed, whether it be called division or branch at a given time, Mining Division or the Mining Branch, the distinction or difference between that and a division such as the Copper Division or any other one of the named mineral divisions within the WPB?

A. The Mining Division gave priorities to metallic mines,

non-metallic mines, and coal mines; in the case of metallic mines irrespective of what metal they produced, in the case of non-metallic mines, irrespective of what they produced, in the case of coal mines irrespective of what kind of coal they produced.

The other sections under Mr. Henderson handled the priorities on the distributions of the finished products coming from the mines, such as metallic copper or alloys of copper, such as brass and bronze. The lead and zinc divisions handled the finished products there.

By the Commissioner:

Q. You call them all divisions. Were they in fact divisions?

A. They started out as branches, Your Honor, and then they were changed to divisions. I don't know the exact date at which the change was made. The functions did not change, the name changed.

Q. I gathered from some of your earlier testimony that there was a mining division and then these other groups, whatever they were, came underneath it, is that it?

[Vol. 398] A. No, sir. The mining branch or mining division reported directly to Mr. Henderson. The copper branch or copper division reported direct to Mr. Henderson. The lead and zinc branch reported to Mr. Henderson. The miscellaneous minerals branch reported to him.

We had branches which covered every metallic mineral. Some handled only one product, as the copper branch. Others carried several products. The miscellaneous minerals branch was the catch-all for all of the small minerals or metals that were not handled by any of the large branches.

Q. Then Mr. Henderson had all the minerals, is that it?

A. Yes, and the mining branch under his direction. I am sorry I was not clear on that.

By Mr. Rigney:

Q. What were some of the minerals which were in the miscellaneous division that you speak of?

A. They had mica, feldspar, graphite, mercury, non-metallic and metallic minerals of that type.

Mr. Rigney: Thank you, sir.

May this be marked Plaintiffs' Exhibit No. 76 for identification?

(Said document was marked for identification as Plaintiffs' Exhibit No. 76.)

Mr. Rigney: Plaintiff offers in evidence now Plaintiffs' [fol. 399] Exhibit No. 76 for identification, being a document dated July 8, 1942, which says across the top, "Submitted By Services of Supply, War Department," and entitled "Committee Program for Increasing Production in the Copper Mining Industry."

Your Honor, would it be helpful—we have another pile of these exhibits and I could hand you a copy at the same time that I am handing counsel one. I am sorry, sir, that we didn't think to do that.

The Commissioner: Yes, that would be helpful.

Mr. Rigney: We will try to do that after lunch, if possible.

Mr. Barnes: Your Honor, I object to this on the basis of the inadequacy of the identification. It is called a committee report. We don't know who the committee was, who the members were, who appointed them, whom they were responsible to. We know nothing about it. It says, "Submitted by Services of Supply, War Department.". We don't know to whom it was submitted or anything else.

Mr. Rigney: Again, Your Honor, it comes from Archives. A great many millions, I suppose, have documents there and it is very difficult sometimes to find the documents that you want.

The Commissioner: That is enough. I am going to admit it. It came from Archives—

[fol. 400] Mr. Barnes: We can find a kitchen sink in Archives, but that doesn't make it admissible here.

The Commissioner: You can state any further objection you want to. I am going to admit it.

Mr. Barnes: I have stated my objection, Your Honor. Do I take it you are making a ruling now that any document that comes from Archives can be received in evidence in this case?

The Commissioner: I am making a ruling that the document which was offered is admissible.

Mr. Barnes: I took it you made it on the basis it took from Archives.

The Commissioner: That is correct.

Mr. Barnes: Regardless of any identification?

The Commissioner: On the basis of the exhibit which was offered, having in mind that it came from Archives, I have ruled and I still rule that it is admissible.

(Said document, marked "Plaintiffs' Exhibit No. 76," admitted in evidence and made a part of this record.)

The Commissioner: If counsel will recall, there are some documents which came from Archives as to which I sustained the objection of the Defendant.

Mr. Rigney: I should like for the record to invite Your Honor's attention particularly to the fifth full paragraph on page 1 of this document as well as to the document in its entirety.

[fol. 401] By Mr. Rigney:

Q. Professor Nelson, did there come a time when you became aware in the summer of 1942 of proposals advanced from sources within the WPB to order the complete close-down of gold mining in the United States.

A. Yes.

Q. Do you recall now who advanced such proposals and at what time?

A. The Labor Division of the War Production Board. I think the man's name was Lester; and also they were advanced by Mr. King, head of the Copper Division.

Q. Do you recall approximately when you learned of such proposals or when you had any discussion about them?

A. It was during August, 1942, to the best of my recollection.

By the Commissioner:

Q. Will you further identify the labor individual you spoke of?

A. He was the chief of the Labor Division of the War Production Board.

The Commissioner: All right.

By Mr. Rigney:

Q. Is that Mr. Richard Lester?

A. Mr. Richard Lester.

Mr. Rigney: Our next offer, Your Honor, will be Exhibit [fol. 402] No. 16 for identification, and while we are looking for the original document I will hand Your Honor that copy of it.

Plaintiff now offers Exhibit No. 16 for identification in evidence.

Mr. Barnes: No objection.

The Commissioner: It is admitted.

(Said document, marked "Plaintiffs' Exhibit No. 16," admitted in evidence and made a part of this record.)

By Mr. Rigney:

Q. Mr. Nelson, will you look at Exhibit No. 16, which has just been admitted in evidence, and tell us if you have seen the original of that document before?

A. I wrote this document to Mr. King, and I remember distinctly writing it, because we were very much alarmed because of the fact that the idea of closing the gold mines was gaining so much momentum on the top side of the War Production Board.

As the closing of the gold mines was primarily tied in to getting men for the copper mines, I wrote to Mr. King to see if something could be done to make certain that such men would be channeled into the copper mines, protesting that unless this was done we would lose or dissipate our last small reserve of miners.

Mr. Rigney: May this be marked the next numerical number for identification?

[fol. 403] (Said document was marked for identification as Plaintiffs' Exhibit No. 77.)

By Mr. Rigney:

Q. I show you Plaintiffs' Exhibit No. 77 for identification, Mr. Nelson, and ask you to look at that and tell us if you recall the formation in the WPB of what was known as the Inter-departmental Committee on Non-Ferrous Metals.

A. Yes. I remember this rather distinctly. This committee, the Inter-departmental Committee on Non-Ferrous Metals, was formed by Mr. H. O. King, in charge of the Copper Division. He acted as chairman of this committee, and it was a committee partially within the War Department where the members of the different metals branches or divisions as well as War Manpower men and the Services of Supply, U. S. Army, and the War Labor Board, and the Selective Service had representation. It was primarily dealing with manpower shortages. This first meeting was held on August 18. At the second meeting the committee was enlarged.

Q. Can you tell us if it was the regular practice—How often did this committee meet, by the way?

A. Once a week or more often.

Q. Was it the regular practice at these meetings for minutes to be kept of the proceedings of the committee?

A. It was the regular practice to keep minutes of the proceedings of all committees in the War Production Board [fol. 404] and also of this committee.

Mr. Rigney: Plaintiff offers Exhibit No. 77 for identification in evidence, Your Honor, purporting to be the minutes of the meeting of August 18, 1942, of the Inter-departmental Committee.

By Mr. Barnes:

Q. Professor Nelson, on page 3 of this document there is reference to the distribution by Mr. King to the members of the Committee of a statement to be prepared on the question of the issuance of a gold curtailment order. Do you know what memorandum or document that refers to?

A. It was one of the first memorandums that I presented to Mr. King. I think it was probably the exhibit preceding this, the memorandum that I have just discussed.

Q. You don't know, though?

A. I am rather certain it is.

Q. Were you at that meeting?

A. I was not a member of that committee until the second meeting.

Mr. Barnes: I think my objection goes to the weight, Your Honor. I have no objection.

The Commissioner: The exhibit will be received.

(Said document, marked "Plaintiffs' Exhibit No. 77," admitted in evidence and made a part of this record.)

[fol. 405] Mr. Rigney: Plaintiff next offers in evidence, Your Honor, Plaintiffs' Exhibit No. 45 for identification, and I hand Your Honor a copy of that.

Mr. Barnes: May I ask the purpose of this offer, Your Honor?

Mr. Rigney: The purpose, Your Honor, is to show that the statements contained therein were brought to the attention of the War Production Board and to Mr. Donald Nelson as chairman of the War Production Board on or about August 26, 1942. We expect to offer in a little while Mr. Donald Nelson's reply to this letter.

Mr. Barnes: I am still uncertain from the statement made by counsel as to whether this is being offered as proof of the statements made by Senator McCarran in his letter or not.

Mr. Rigney: No, we do not offer it as proof of the statements contained therein, but only that the statements contained in this document were made and that the document itself came to the attention of Mr. Donald Nelson.

Mr. Barnes: On that basis, I have no objection.

The Commissioner: It may be received.

(Said document, marked "Plaintiffs' Exhibit No. 45," admitted in evidence and made a part of this record.)

Mr. Rigney: May this exhibit be marked the next number in order?

[fol. 406] (Said document was marked for identification as Plaintiffs' Exhibit No. 78.)

Mr. Rigney: Plaintiff offers in evidence now Plaintiffs' Exhibit No. 78 for identification, Your Honor, a telegram from Senator Burton K. Wheeler to President Roosevelt discussing the copper situation so far as labor was concerned.

Mr. Barnes: Again, Your Honor, I fail to see the relevance or materiality of this document. Certainly there is no question of notice to the War Production Board of any of the statements contained here.

Mr. Rigney: The covering sheet shows that it was evi-

dently sent by the White House to Mr. Paul V. McNutt, who I think we all know was War Manpower Commissioner, at least there will be *rp*oof that he was at this time, and there will be proof at the appropriate time of Mr. McNutt's participation in connection with the issuance of L-209; the conferences immediately preceeding its issuance, which certainly brings knowledge home to many of the conditions in the copper mines and the cause of the shortage of labor in the copper mines.

Again, we offer this not for the truth of the contents of it but to show that the statements contained therein came to the attention of Mr. McNutt in his official capacity in the War Manpower Commission.

Mr. Barnes: There is no showing that they came to Mr. McNutt's personal attention whatsoever. It is addressed to [fol. 407] him, but that doesn't mean it came to his personal attention.

Mr. Rigney: Here is a telegram to the President of the United States and a covering sheet, "Memorandum for Honorable Paul V. McNutt," with the initials of the President of the United States at the bottom. We got it out of Archives. That would seem to be sufficient to make it admissible, Your Honor.

The Commissioner: I think that you are going to have to tie up the substance of the communication with other evidence before it is admissible. I think at this point it is not admissible.

Mr. Rigney: We will leave it, then, as carrying the identification number, Plaintiffs' Exhibit No. 78.

The Commissioner: Yes. It may be offered later on, if you are able to tie it up.

Mr. Rigney: Very well.

Plaintiff offers at this time Exhibit No. 33 for identification on the pre-trial, which is the reply of Mr. Donald Nelson to Senator McCarran's letter received a little while earlier.

Mr. Barnes: No objection.

The Commissioner: It may be received.

(Said document, marked "Plaintiffs' Exhibit No. 33," admitted in evidence and made a part of this record.)

Mr. Rigney: I would like to invite Your Honor's atten- [fol. 408] tion to paragraph four of this letter reading:

"We quite agree that no legal power exists today by which workers may be forced to transfer to other mines. This accentuates the mine labor problem which faces us today."

May this be marked as the next Plaintiffs' Exhibit number in order?

(Said document was marked for identification as Plaintiffs' Exhibit No. 79.)

Mr. Rigney: I offer in evidence now Plaintiffs' Exhibit No. 79 for identification, being a copy of the minutes of the War Production Board meeting of September 1, 1942. We have the minutes here from which they were photostated.

Mr. Barnes: We have them, too.

No objection.

The Commissioner: Admitted.

(Said document, marked "Plaintiffs' Exhibit No. 79," admitted in evidence and made a part of this record.)

Mr. Rigney: The particular significance of this document is found in Section I, headed "Labor Supply for Copper, Lead, and Zinc Industries," Your Honor.

Plaintiff offers at this time Exhibit No. 17 for identification, being a letter of September 1, 1942, from H. O. King to Wilbur A. Nelson.

Mr. Barnes: No objection.

[fol. 409] The Commissioner: Admitted.

(Said document, marked "Plaintiffs' Exhibit No. 17," admitted in evidence and made a part of this record.)

By Mr. Rigney:

Q. Mr. Nelson, will you look, please, at Plaintiffs' Exhibit No. 17 and tell us if you recall having seen the original of that document?

A. Yes, I remember this memorandum because the statement which Mr. King made called for an answer, and an answer was given.

Mr. Rigney: May this be given the next numerical number?

(Said document was marked for identification as Plaintiffs' Exhibit No. 80.)

By Mr. Rigney:

Q. Would you look, please, at Plaintiffs' Exhibit No. 80 for identification and tell us if that is a copy of your reply to the previous exhibit, which is No. 17, the September 1 memo from King to you?

A. This is a copy of my reply in which I stated——

Mr. Barnes: I object to that, Your Honor. The document speaks for itself.

By Mr. Rigney:

Q. That is a copy of your reply?

A. Yes.

[fol. 410] Mr. Rigney: I offer it in evidence, Your Honor.

Mr. Barnes: No objection.

The Commissioner: Admitted.

(Said document, marked "Plaintiffs' Exhibit No. 80," admitted in evidence and made a part of this record.)

The Commissioner: We will recess until two o'clock.

(Thereupon, at 12:30 o'clock p.m., a recess was taken in the hearing until 2:00 o'clock p.m.)

[fol. 411] AFTERNOON SESSION

(The hearing was resumed at the time above mentioned, pursuant to the recess previously taken.)

(The reporter was duly sworn by the Commissioner.)

Mr. Rigney: May we have an informal word?

The Commissioner: Surely. You do not want this on the record, do you?

Mr. Rigney: I do not think it needs to be.

(Here followed discussion off the record.)

Mr. Barnes: On the record.

Your Honor, during the recess, I have examined plaintiffs' Exhibit 67, and other than the objection that was stated this morning, which I believe you overruled, I have no other objections to the receipt of that document.

The Commissioner: All right, then it may be received in evidence.

(Said document, copy of address by Wilbur A. Nelson, dated November 10, 1941, marked Plaintiffs' Exhibit No. 67, admitted in evidence and made a part of this record.)

Mr. Barnes: Also, I would like to state that Mr. Ewing has given me a document entitled "Minerals Yearbook, 1942" published by the Department of the Interior, Bureau of Mines, and I find on page 93 of that book the table from which Dr. McLaughlin was reading yesterday. I have com-
[fol. 412] pared it with the testimony and actually checked with the reporter and found the reporter had used a photostatic copy that Dr. McLaughlin had read from in preparing the transcript, so the testimony accurately reflects what is set forth in this book. I therefore withdraw the objection based on the best evidence rule.

The Commissioner: Very well.

Mr. Herrington: Could I ask which exhibits were just admitted?

The Commissioner: 67 only.

Wilbur A. Nelson, resumed the witness stand and was examined and testified as follows:

Direct examination (resumed).

By Mr. Rigney:

Q. Professor Nelson, would you look at Plaintiffs' Exhibit 17, which is the memo to you from Mr. King of September 1st, and you will note that in that memo he states that "It appears from this list—" referring to a list of mines "that a number of mines that produce practically nothing but gold have serial numbers, and I wonder if the definition in the gold curtailment order tying this to mines with serial numbers would be effective." Then your reply of September 3, of which this is a copy. Would you be able to state how many gold mines in the United States whose production of gold exceeded 75% of their total volume possessed serial numbers at this time?

[fol. 413] A. I can only think of one gold mine that the total value of its ore in gold is probably 90%. The remainder was arsenic. That was the Getchell Mine at Winne-

mucca, Nevada. And the Chemical Warfare Service required us to keep this mine open so that the arsenic dust could be shipped to the Garfield smelter for the recovery of arsenic for use by the Chemical Warfare Service. There may have been others.

There were a great many so-called gold mines that were given back their serial numbers, but only when the branch of the War Production Board requested us to do so, because they produced appreciable amounts of strategic minerals, or because they were necessary as fluxing ore in one of the western smelters. And in that case we received the entire list of mines supplying fluxing ores to the smelters from the different smelter companies, and we went over their list, and whenever they asked us to return a certain serial number to a certain mine as essential in the operation, we would check the tonnage they had gotten from that mine the previous month. If they had gotten 300 or 400 tons we reinstated the serial number; if they had gotten 5 or 10 tons we did not feel that that was proper procedure, and so we asked the smelter company if they could not increase their production from the 300-ton mine, and in most cases that was done.

Q. Would you explain to us what you mean by a fluxing ore?

[fol. 414] A. In all smelters they need a certain amount of silicious ore if they have too much sulphur in the ores smelted, and sometimes the reverse is true, they have to get pyritic ores to balance the smelter charge. And it is natural that a smelting company like the American Smelting & Refining Company has built up as their source of silicious ore, or fluxing ore I should say, to quartz containing small gold values, and that adds some value to their output, where quartz containing no gold might make it impossible to smelt some low grade ores.

Mr. Rigney: May we have this marked as the next exhibit in order?

(Said document was marked for identification as Plaintiffs' Exhibit No. 81.)

Mr. Rigney: I should like to offer in evidence Plaintiffs' Exhibit 81, being the minutes of the Interdepartmental Com-

mittee on Non-ferrous Metals, the meeting of September 3, 1942.

By Mr. Barnes:

Q. Were you present at this meeting, Mr. Nelson?

A. I was not.

Q. You were at this time a member of the Committee, were you not?

A. I became a member of the Committee on the second meeting, which was before September 3rd, as I recollect. For some reason, I had another commitment at that time and could not attend the meeting.

[fol. 415] Mr. Barnes: I have no objection.

The Commissioner: That will be received.

(Said document, minutes of meeting of September 3, 1942 of Interdepartmental Committee on Nonferrous Metals, marked Plaintiffs' Exhibit No. 81, admitted in evidence and made a part of this record.)

The Commissioner: In view of the statement that is in one of your exhibits, a question suggests itself to me of this witness, and that is: you were in charge of the Mining Branch, were you not?

The Witness: I was.

The Commissioner: And these minutes make a statement that "The mining branch which is responsible for the drafting of the proposed gold order" at the top of page 3.

The Witness: At that particular time in the War Production Board we had been told to draft an order. Then later on we were told not to draft an order, and then later on we drafted an order.

The Commissioner: All right. That seemed inconsistent with something I saw earlier in an earlier exhibit.

Mr. Rigney: May I read, briefly, your Honor, from near the bottom of page 2 of these minutes?

By Mr. Rigney:

Q. By the way, Mr. Nelson, did you know a man during your service with WPB by the name of Samuel Lipkowitz?

[fol. 416] A. I did.

Q. What branch was he in?

A. The labor division.

Q. That is the division that was under Mr. Lester that you testified about?

A. That is the division that was under Mr. Lester at that time.

Mr. Rigney: Reading now from the exhibit:

> "Mr. Lipkowitz reported that a fairly large number of mines whose gold production by volume exceeded 75% had received serial numbers entitling them to the use of mining equipment. These mines employed some 2,000 men. He pointed out that since the purpose of the order curtailing the gold mining industry was primarily to free manpower, continuation of this practice would defeat the purpose of the proposed order."

I offer now, if your Honor please, Exhibit No. 22 for identification, which are the minutes of the Interdepartmental Committee on Nonferrous Metals of September 8, 1942.

Mr. Barnes: Your Honor, I would like to point out that this is a document which, at the time of the pre-trial conference, was incomplete. The document was marked at the pre-trial conference consisting of pages 1, 3 and 5.

The Commissioner: Are the additional pages with it now?

Mr. Barnes: They are not.

[fol. 417] Mr. Rigney: We have them here, your Honor. Would you accept them now, subject to check, Mr. Barnes? (Handing).

Mr. Barnes: No objection.

The Commissioner: It is admitted.

(Said minutes of September 8, 1942 of Interdepartmental Committee, marked Plaintiffs' Exhibit No. 22, admitted in evidence and made a part of this record.)

Mr. Rigney: I would like to read a portion from the top of page 4 of this document:

> "In a discussion of the proposed gold order it was the firm belief of the members of the Committee that gold mining was now an unessential industry and that even if the manpower released by the gold order was

not directly transferred to copper, lead or zinc mining, it still might help relieve the shortage of labor in other war industries, such as aircraft and shipbuilding. There was impatience among some members on the Committee with the length of time which was being taken to promulgate a gold order." May this be marked as the next exhibit?

(Said document was marked for identification as Plaintiffs' Exhibit No. 82.)

Mr. Rigney: Plaintiffs offer at this time, your Honor, Plaintiffs' Exhibit No. 82 for identification, being the Inter-
[fol. 418] departmental Committee minutes of September 15, 1942.

Mr. Barnes: There is no objection.

The Commissioner: It is admitted.

(Said minutes of meeting of September 15, 1942 of Interdepartmental Committee, marked Plaintiffs' Exhibit No. 82, admitted in evidence and made a part of this record.)

By Mr. Rigney:

Q. Mr. Nelson, did you know a man in the WPB in 1942 by the name of Allen Buchanan?

A. I did.

Q. Do you recall what his position was, what division he was connected with?

A. He was in the Labor Division under Mr. Lester.

Q. Do you know if he and Mr. Lipkowitz were serving simultaneously at about that time in 1942?

A. They worked together very often.

Q. Do you remember a gentleman in the WPB by the name of M. Creditor?

A. Morris Creditor was a special assistant to Donald Nelson.

Q. And do you know how long he was there?

A. For a considerable length of time.

Mr. Rigney: Plaintiffs offer now, your Honor, Exhibit 21 for identification.

Mr. Barnes: No objection.

[fol. 419] The Commissioner: It is admitted.

(Said memorandum, dated September 15, 1942, from Mr. Creditor to Mr. Nelson, marked Plaintiffs' Exhibit 21, admitted in evidence and made a part of this record.)

Mr. Rigney: Your Honor, this is a one-and-one-half page document which we regarded as very important. May I read this document?

The Commissioner: Into the record?

Mr. Rigney: Yes.

The Commissioner: It is just a duplication because I am going to read it. It is just as much in the record in the form that you put it in as it would be in the transcript.

Mr. Rigney: I was anxious to have your Honor get the flavor of this particular document because it is a document close to the date on which the order was issued and deals, as it says, with a proposed draft of the gold closing order.

May this be marked as the next exhibit?

(Said document was marked for identification as Plaintiffs' exhibit No. 83.)

By Mr. Rigney:

Q. Who was Dr. M. H. Stow, Mr. Nelson?

A. Dr. Stow was my deputy director in the Mining Division, on leave of absence from Washington-Lee University, where he was head of the School of Geology. Washington-[fol. 420] Lee University is located at Lexington, Virginia.

Mr. Rigney: Plaintiffs offer Exhibit 83 for identification in evidence.

By Mr. Barnes:

Q. Who is J. M. Scribner?

A. He came in at that time—I do not know where he came from—as special assistant to Henderson.

Q. Alec Henderson?

A. Yes. I think he took Mr. Henderson's place when he was going to leave.

Mr. Barnes: I have no objection to that.

The Commissioner: That will be admitted.

(Said memorandum, dated September 17, 1942, from Mr. Scribner to Dr. Stow, marked Plaintiffs' Exhibit 83, admitted in evidence and made a part of this record.)

The Commissioner: Was Dr. Stow a subordinate of yours?

The Witness: Yes sir, he was my deputy director of the Mining Branch. He was next to me.

By Mr. Rigney:

Q. Do you remember a Mr. L. R. Boulware in the WPB in those days?

A. Yes, he appeared on the scene. I cannot tell you where he came from, but he came in as assistant to Mr. W. L. Batt.

[fol. 421] Q. Mr. Batt was vice-chairman, was he, of WPB at that time?

A. Yes.

Mr. Rigney: May this be marked the next plaintiffs' exhibit?

(Said document was marked for identification as Plaintiffs' Exhibit No. 84.)

Mr. Rigney: Plaintiff offers in evidence Plaintiffs' Exhibit No. 84 for identification.

Mr. Barnes: No objection.

The Commissioner: It is admitted.

(Said memorandum, dated September 19, 1942 from Mr. Boulware to Dr. Nelson, marked Plaintiffs' Exhibit No. 84, admitted in evidence and made a part of this record.)

By Mr. Barnes:

Q. I understand Mr. Kanzler, to whom a copy of this was sent, was then the Director of Industry Operations; is that correct?

A. I think so. That was changing rapidly at that time.

Mr. Rigney: May this be marked Plaintiffs' Exhibit 85 for identification?

(Said document was marked for identification as Plaintiffs' Exhibit No. 85.)

By Mr. Rigney:

[fol. 422] Q. Mr. Nelson, do you recall the formation of a committee in the WPB called the Interdepartmental Group on Mineral Production?

A. I do.

Q. Now, would you tell us what that committee was? Describe it generally.

A. Well, it dealt with priorities as against the Nonferrous Alloy Committee which dealt with labor problems. This new committee met in the conference room adjoining my office and was composed of Mr. DeWitt Smith, representing Metals Reserve, which was the buying agency for strategic metals for the RFC. Also, I think there was a representative of ECA, the Bureau of Mines and the offices of Services and Supply, as well as two members from the War Production Board. It was our duty to each month set up the order in which priorities should be given due to the critical position of the different metals. And I remember very distinctly that we always put at the head of the list those items which the Services of Supply requested us to, because for many months the Manhattan Project headed that list without us knowing what it was.

Q. In the membership of the committee I believe you said was a representative of ECA. What agency was that?

A. Well, they were the agency that looked after economic buying in Europe and other countries.

Q. Oh, the Board of Economic Warfare?

[fol. 423] A. The Board of Economic Warfare. I remember Mr. William Wrather represented them at the meetings.

Mr. Rigney: Plaintiff offers Exhibit No. 85 for identification in evidence.

By Mr. Barnes:

Q. Who organized this group?

A. This group was organized after I left the position as Director of the Mining Division, and when I was assistant to one of the numerous deputy directors, particularly Mr. Howard Young, who was deputy director for an over-all picture of minerals.

Q. You left the Mining Division in December of 1942?

A. Yes sir.

Q. This group was organized after that?

A. That was to my recollection, but I would like to refresh my memory by looking at the date of the first meeting.

(Exhibit handed to the witness.)

The Witness: Well, I am entirely wrong. It was organized at the request of the top side of the War Producetion Board.

By Mr. Barnes:

Q. What do you mean by the top side? Who asked you to do it?

A. I suppose Mr. Batt or Mr. Boulware. They were in charge of it.

Q. Or Mr. Henderson?

[fol. 424] A. Well, if Mr. Henderson was there at that time it came down through Mr. Henderson to us.

Now, it continued on and then it later became under the direct control of Mr. Howard Young and myself.

Q. To your knowledge, was this the first meeting? Are these the minutes of the first meeting of that committee?

A. I cannot say. I thing they are.

Mr. Barnes: No objection.

The Commissioner: It is admitted.

(Said minutes of meeting of September 23, 1942 of Interdepartmental Group on Mineral Production, marked Plaintiffs' Exhibit No. 85, admitted in evidence and made a part of this record.)

By Mr. Rigney:

Q. You spoke, Mr. Nelson, of a time when you left the Mining Division. When was that, as near as you can recall?

A. Some time in December of '42.

Q. And where were you? What was your official position?

A. I was assistant to the deputy director that looked after the coordination of all mineral activities, who was Mr. Howard Young.

Q. How long did you hold that position?

A. I held that position until I resigned from the War

Production Board, but the title changed at various times [fol. 425] although the work remained the same.

Q. That was about the end of 1944?

A. I resigned on December 2, 1944, as soon as they lifted the ban on permitting you to resign.

Mr. Rigney: May this be marked the next number of identification, 86, I believe?

(Said document was marked for identification as Plaintiffs' Exhibit No. 86.)

By Mr. Rigney:

Q. I show you Plaintiffs' Exhibit 86 for identification, Mr. Nelson, and ask you if you recall sending that memorandum to Mr. W. L. Batt?

A. I remember sending this memorandum to Mr. Batt and it bears my signature.

Q. And this pertains to limitation order L-208?

A. There was a resolution passed by this committee composed of all of the branches dealing with mineral production requesting that L-208 not be issued until proper steps had been taken to funnel the labor to copper mines.

Mr. Rigney: Plaintiff offers Exhibit 86 for identification in evidence.

By Mr. Barnes:

Q. Mr. Nelson, I notice that in this document you are described as being the special assistant to the Deupty Director General for Industry Operations.

[fol. 426] A. Yes sir. I occupied that position for about two weeks. I was requested by Mr. Henderson to have Dr. Stow act as Acting Director of the Mining Division while I was assigned some special problems that they felt I could handle which needed handling. I came back to the Mining Division several weeks later.

Mr. Barnes: No objection.

The Commissioner: It is admitted.

(Said memorandum, dated September 25, 1942, from Dr. Nelson to Mr. Batt, marked Plaintiffs' Exhibit No. 86, admitted in evidence and made a part of this record.)

Mr. Rigney: May this be marked as the next plaintiffs' exhibit?

(Said document was marked for identification as Plaintiffs' Exhibit No. 87.)

Mr. Rigney: Plaintiff offers in evidence Exhibit No. 87; being a memorandum of September 25, 1942, from W. L. Batt to A. I. Henderson.

Mr. Barnes: No objection.

The Commissioner: It is admitted.

(Said memorandum, dated September 25, 1942, from Mr. Batt to Mr. Henderson, marked Plaintiffs' Exhibit No. 87, admitted in evidence and made a part of this record.)

[fol. 427] Mr. Rigney: May I call your Honor's attention to paragraph 2 of this exhibit, in which Mr. Batt directs Mr. Henderson to be certain that when the press release pertaining to L-208 is issued that they be careful to specify the purpose for which Order L-208 is being issued, namely, that of releasing less essential labor for more essential requirements.

At this time we offer Plaintiffs' Exhibit 37 for identification in evidence, being one of the pre-trial exhibits, and that was lacking a second page at the time that it was originally marked, and we have obtained that missing page now.

Mr. Barnes: No objection.

The Commissioner: It is admitted.

(Said minutes of meeting of September 25, 1942 of branches concerned with mineral production, marked Plaintiffs' Exhibit 37, admitted in evidence and made a part of this record.)

Mr. Rigney: I would like to call your Honor's attention to the paragraph in this document on page 2 which is headed "Gold Mining Limitation Order".

Mr. Barnes: And particularly the last sentence of that paragraph, your Honor.

Mr. Rigney: Yes.

By Mr. Rigney:

Q. This document, Mr. Nelson, Exhibit 37 for identification, which is now received in evidence, refers to a Mr.

[fol. 428] Henderson at this meeting. It says "Mr. Henderson replied that the conserving of materials rather than labor, was the main purpose of the order."

Would that be Mr. Alec Henderson that that refers to?

A. The only person it could refer to would be a Mr. A. I. Henderson.

Q. In the War Production Board?

A. Yes sir.

Q. Was he a lawyer, Mr. Nelson?

A. He was, but not acting in that capacity at that time.

Mr. Rigney: May this be marked the next exhibit?

(Said document was marked for identification as Plaintiffs' Exhibit No. 88.)

By the Commissioner:

Q. Who was the secretary at this meeting of September 25 at which, I believe, you presided, according to the exhibit?

A. Yes sir. When I was presiding over these meetings I either had a secretary of the Mining Division, which was a young man that handled the minutes of all our meetings in the Mining Division, or, if requested, I asked to have the stenographic service report the meeting. I think this meeting was handled by the secretary of the Mining Division.

Q. Does this exhibit reflect substantially what took place at the meeting?

A. It does to the best of my knowledge and belief.

[fol. 429] Q. Was there any resolution of the discussion here under this paragraph that was called to my attention? It seems that Mr. Hayes said that the issuance of the order had one purpose and that Mr. Henderson said there was another purpose.

A. Mr. Henderson was told by Mr. Batt to be very careful about how the release was to be given out, and he, I think, was following Mr. Batt's instructions.

Q. I did not ask you what was behind the statement here, I asked you about the discussion that took place at the meeting. Was there any resolution of what apparently was a head-on conflict?

A. There was no resolution, because Mr. Henderson had the final say.

The Commissioner: All right.

By Mr. Barnes:

Q. Mr. Henderson was Mr. Hayes' superior?

A. Yes sir.

Mr. Rigney: Plaintiff offers now Exhibit 88 for identification, being the minutes of the inter-branch meeting of September 28, 1942.

Mr. Barnes: No objection.

The Commisssioner: It is admitted.

(Said minutes of the inter-branch meeting of September 28, 1942, marked Plaintiffs' Exhibit No. 88, admitted in evidence and made a part of this record.)

[fol. 430] Mr. Rigney: I would like to call your Honor's attention to the first paragraph on page 2 of these minutes.

Plaintiff offers now, your Honor, Exhibit No. 49 for identification.

Mr. Barnes: Am I correct in assuming that this is offered for the same purpose as the previous letter?

Mr. Rigney: That is correct.

Mr. Barnes: Not as proof of the facts stated in the letter but merely notice of those facts, if they are proved to be facts?

Mr. Rigney: Notice of the facts contained in the letter to Mr. Donald Nelson as Chairman of the WPB.

Mr. Barnes: No objection.

The Commissioner: Very well, it may be received.

(Said telegram, dated September 29, 1942, from Senator McCarran to Mr. Donald Nelson, marked Plaintiffs' Exhibit 49, admitted in evidence and made a part of this record.)

Mr. Rigney: Now, your Honor, plaintiff offers Exhibit No. 23 for identification, being a memorandum from Mr. W. L. Batt to Mr. Donald Nelson.

Mr. Barnes: No objection.

The Commissioner: Is Mr. Batt going to be called as a witness?

Mr. Rigney: I don't know.

The Commissioner: By the plaintiff?

[fol. 431] Mr. Rigney: Not by the plaintiff.

The Commissioner: Do the plaintiffs know where he is?

Mr. Rigney: I understand that he is in Mexico, or at

least the information that I had as of the first of January was that he would be spending the winter in Mexico, put it that way. I do not know whether he is actually there now or not, but his plans were to be there for the winter until some time in March.

The Commissioner: All right.

Mr. Rigney: This is very short. I would like to read it to you.

"Memorandum for Mr. Nelson.

"The more I study the gold mining situation, the more uncertain I am as to the form which a restriction of operations should take. Complete closing without exceptions will produce very serious economic dislocations, and the total possible gain in men is a small figure. If the question comes up in your press conference, I would suggest that you refer to the need for miners and the lack of need for gold, and say that the matter is being studied from all angles."

And it carries the notation in handwriting "Noted by DMN, 10/1/42 before press conference."

By Mr. Rigney:

Q. Were Mr. Donald Nelson's initials DMN?

[fol. 432] A. Yes.

Mr. Barnes: I will so agree.

The Commissioner: I am not so sure that was admitted.

Mr. Rigney: I am not sure.

The Commissioner: Do you offer it?

Mr. Rigney: Yes.

Mr. Barnes: I say no objection.

The Commissioner: All right, it is received.

(Said memorandum from Mr. Batt to Mr. Nelson, marked Plaintiff's Exhibit 23, admitted in evidence and made a part of this record.)

Mr. Rigney: May this be given the next number in numerical sequence?

(Said document was marked for identification as Plaintiffs' Exhibit No. 89.)

Mr. Rigney: Plaintiff offers in evidence Exhibit No. 89 for identification, your Honor, the minutes of the inter-branch meeting of WPB of October 2, 1942.

[for. 433] Mr. Barnes: No objection.

The Commissioner: Admitted.

(Said document, marked "Plaintiffs' Exhibit No. 89," admitted in evidence and made a part of this record.)

Mr. Rigney: Plaintiff now offers Exhibit 25 for identification, Your Honor.

Mr. Barnes: No objection.

The Commissioner: Admitted.

(Said document, marked "Plaintiffs' Exhibit No. 25," admitted in evidence and made a part of this record.)

Mr. Rigney: May I call Your Honor's attention to the fact that in this letter of Under Secretary Patterson to Mr. Batt of October 2, he stresses the need for miners in the non-ferrous mines and makes no mention of critical materials as being a reason for closing down gold mines.

By Mr. Rigney:

Q. Mr. Nelson, would you look at Plaintiffs' Exhibit No. 88 in evidence, in the first paragraph of which reference is made to a resolution which was offered at this meeting of September 25 referred to there?

A. Yes.

Q. Can you tell us what the facts were with respect to this proposal that had been advanced, that a meeting be held with representatives of the gold mining industry before [fol. 434] the issuance of L-208?

A. That is a unanimous opinion of the inter-branch meeting, and I was authorized by the members of that meeting to present their petition to Mr. Batt.

Q. Did you do so?

A. I did.

Q. What did Mr. Batt say or do?

A. He said it could not be done; that there was no reason to bring the gold mining executives to Washington.

Q. Then what happened after that?

A. We held another meeting the next day, I think, or two days after that, and re-passed the same resolution.

I went with Mr. Eaton to Mr. Batt, and he changed his mind and agreed to let us have the meeting.

Q. Is that Mr. Frederick Eaton that you mentioned?

A. Mr. Frederick Eaton.

Q. Was he in the General Counsel's office of WPB?

A. He was in the General Counsel's office, and I think very close to John Lord O'Brian.

Mr. Barnes: He was one of the three Assistant General Counsel. I so stipulate.

By Mr. Rigney:

Q. What happened after you and Mr. Eaton talked to Mr. Batt?

A. He said to get in touch with the owners or operators [fol. 435] of the major gold mines and to bring them to Washington for a meeting on October 1st.

Q. What did you then do?

A. The time was so short, I contacted four or five of them on the long distance phone. They said they would be glad to come if I would get them travel priorities. So I got them travel priorities and they all arrived in Washington on the morning of October 1.

Q. Will you tell us specifically whom you contacted or called?

A. I called Mr. Guy Bjorge.

Q. Of Homestake?

A. Of Homestake. Mr. Merril Shoup, of the Golden Cycle, which is a Cripple Creek operation.

Q. Colorado?

A. Colorado. Searles, who owned Newmont. There were two or three of the brothers present. Mr. McCormick, I believe, who is a big dredge operator, and I think Errol McBoyle was either called or was present in Washington and was told.

Q. What company was Mr. McBoyle connected with?

A. Idaho Maryland.

Q. Was Mr. McCormick from California?

A. My recollection is that he was a dredge operator from California.

[fol. 436] Q. Can you tell us from your recollection, or if there are any papers that will assist you in refreshing your

recollection, when you called Mr. Bjorge of Homestake in connection with this meeting?

A. I think I called him on the 29th.

Q. That would be on or about September 29?

A. Yes. I called him—as soon as I left the meeting with Mr. Batt, I immediately got on the long distance telephone.

Q. That was at the direction of Mr. Batt?

A. At Mr. Batt's' personal direction.

Q. Do you recall what you said to Mr. Bjorge in connection with this proposed meeting?

A. I told him there was a meeting in Washington of the major gold operators at which Mr. Batt wished to discuss the pros and cons of the gold situation, and that he probably would like to develop some figures. Mr. Bjorge said he had another appointment and he couldn't come without air priorities. I told him I thought the meeting was of sufficient importance for him to make that his first order of business.

Q. He was in Lead, South Dakota?

A. He was in Lead, So h Dakota.

Q. Do you recall that ..e meeting did take place on October 1?

A. The meeting did take place on the afternoon of [fol. 437] October 1st.

Q. Do you recall who was there?

A. Mr. Batt presided until somewhere around 5 o'clock.

Q. What time did the meeting start?

A. I believe around 2:00 or 3:00 o'clock, early in the afternoon. General Clay was there, General McSherry was there. I think Allen Buchanan and Sam Lipkowitz were both there. The representatives, in most cases the director of each one of the mining branches was present. We had representatives of the Mining Branch. Several Senators and Representatives were there.

Q. Do you recall if Senator Gurney was there?

A. Senator Gurney was there, and Representative Case, who is now Senator Case. They were both present. I believe Senator McCarran was there, too.

Q. Do you recall whether or not another meeting occurred a day or two before this October 1st meeting, at which this subject was under discussion and which meeting was attended by you?

A. A very small meeting occurred in Mr. Batt's office

on September 30, at which I thing General McSherry was present, Senator McCarran, Senator Gurney, Representative Engelbright of California, who represented the Mother Lode District, and Representative Case of South Dakota, and Mr. Lipkowitz. It was a very stormy meeting.

[fol. 438] Mr. Barnes: I object to his characterization.

The Commissioner: The last phrase, that it was a stormy meeting, is stricken.

By Mr. Rigney:

Q. Who presided at this meeting of September 30, that you are speaking about?

A. Mr. Batt. It was in his office.

Q. Did you tell us whether or not I don't remember whether you said—Mr. McNutt was there or not?

A. No, I don't remember Mr. McNutt's being present.

Q. Was this gold closing order under discussion? Was that the subject matter of the meeting?

A. There was the reason for the meeting being called.

Q. Can you tell us what was said, as well as you recall, by the participants at this meeting of September 30?

A. The Senators and Representatives emphasized the hardships that would be imposed on the inhabitants of the gold mining towns and the dislocation that would affect the war effort by the lowering of morale of the people, and just the general bad condition. They emphasized that. Mr. Lipkowitz emphasized the release of labor and the need of labor by the copper mines, and made a statement at that meeting that there would be approxiately 20,000 people released.

[fol. 439] Q. Would be released by the closing of the gold mines, you mean?

A. By the closing of the gold mines.

Q. Did Mr. Batt have anything to say, so far as you recall?

A. Mr. Batt presided and adjourned the meeting without making any decision.

Mr. Barnes: Did he participate in the discussion at all? I think that was the question.

The Witness: I do not remember.

By Mr. Rigney:

Q. You don't remember anything in particular that Mr. Batt said, if he did say anything at this meeting other than preside?

A. I do not.

By the Commissioner:

Q. Do you remember anything that anybody said at that meeting besides the Senators and Congressmen?

A. Mr. Case and Mr. Engelbright——

Q. I said excepting the Senators and Representatives.

A. And Mr. Lipkowitz.

By Mr. Rigney:

Q. Was Mr. Lipkowitz the man you testified earlier was the representative of the Labor Division of WPB?

A. Yes.

[fol. 440] Q. I think it would be appropriate for you to tell us everything you recall that he said.

A. His whole thesis was that approximately 20,000 men would be released by the closing of the gold mines, and that they would increase copper production tremendously, and that gold was unessential in the war effort.

By the Commissioner:

Q. Who called that meeting?

A. Senator Gurney, it is my recollection, requested Mr. Batt to have this informal meeting.

By Mr. Barnes:

Q. Did you say anything at the meeting?

A. I challenged Mr. Lipkowitz's figures and said I didn't think they were correct, that they were too high, and Mr. Case and Mr. Engelbright had tentative figures and agreed that the figures were much too high.

By Mr. Rigney:

Q. That the figures of Mr. Lipkowitz were too high?

A. Yes.

By the Commissioner:

Q. Do you have any further answer to the question I asked you? Do you remember what anybody else said except the two Congressmen? You have mentioned something that you said and something that Lipkowitz said.

A. I know Senator McCarran talked a lot, and I know [fol. 441] that Senator Gurney talked, and they talked about the dislocation that would be brought about by closing down the gold mines in the communities.

By Mr. Rigney:

Q. Let us be sure we know how many representatives of WPB were at that meeting of September 30. There was Mr. Batt, who presided.

A. And I was there, and Mr. Lipkowitz was there. If you call General McSherry a part of the War Production Board, he was there.

By Mr. Barnes:

Q. Was he part of the War Production Board?

A. He was War Manpower. I don't know the exact relationship. They all had offices in the same building.

By Mr. Rigney:

Q. Is there anything else which occurred at this meeting of September 30 that you recall that you haven't testified to?

A. Nothing more.

Mr. Rigney: Would this be an appropriate time, Your Honor, to recess now? We have exhaused the documents that we have been able to confer about, and if Your Honor would be agreeable to recessing now, we can do what we told you we would do.

The Commissioner: Very well. The hearing is recessed [fol. 442] until 10:00 o'clock tomorrow.

Thereupon, at 3:20 o'clock p.m., a recess was taken in the hearing until 10:00 o'clock a.m., Wednesday, January 28, 1953.)

[fol. 443]

IN THE UNITED STATES COURT OF CLAIMS

[Title omitted]

Transcript of Testimony—January 28, 1953

TESTIMONY FOR PLAINTIFFS—Resumed

The hearing was resumed, at the time above indicated, pursuant to the recess previously taken.

WILBUR A. NELSON, a witness for the plaintiffs, resumed the witness stand, and was examined and testified further as follows:

Direct Examination.

By Mr. Rigney:

Q. Professor Nelson, I think just before the recess yesterday, you had told us of the persons in attendance at this meeting October 1st at which Mr. Batt presided, and to which several leaders of the gold mining industry were invited.

[fol. 444] Could you tell us now, to the best of your recollection, what was said at that meeting by the various people in attendance?

A. Might I say first that I did not expect it to be considered that the list I gave you was a complete list; it was just those that I remembered.

Q. I see. Well, it might be helpful, and it will only take a moment, to have you tell us now whom you recall as having been in attendance.

Take the government people first.

A. Mr. Batt, General McSherry, Mr. Lipkowitz with him, and Mr. Vogelsang.

Q. What was his position?

A. Tin and lead, sir.

Q. Head of the——

A. Head of the tin and lead division.

Mr. King, head of the copper division, a gentleman who was head of the ferro alloy division, whose name has escaped me; Mr. Lund of the miscellaneous minerals division.

Q. Was that R. J. Lund, because there were two?

A. Yes, not Wendell Lund, but R. J. Lund.

Senator Johnson, Senator McCarran, and Senator Gurney from three of the gold-producing states, Representative Englebright of the Mother Lode District of California, Representative Case of South Dakota, who is now Senator [fol. 445] Case, and I think I gave you the other time the complete list of representatives of gold mining companies.

Q. Yes, and I think you said yesterday that General Clay was there, and I don't remember if you mentioned him this morning.

A. General Clay was there, because I remember very distinctly a statement he made.

Q. All right.

Now, would you go ahead, if you have told us as many of the people in attendance as you remember, and tell us what was said?

A. I think I gave the opening remarks of Mr. Batt, that the War Production Board had brought them there to tell the gold operators that they were intended to close down the gold mines, but he felt it was proper they should be told at a personal meeting.

Immediately following that, it is my recollection that one of the Senators immediately received permission to talk, and each one of the Senators was given permission by the chairman in order to talk, and they insisted that it was discriminatory, it would dislocate communities, and serve an undue hardship on the people of these western states where gold mining towns occur.

That took some time.

[fol. 446] They were followed by the Representatives, who made similar statements. And I think it was about that time that General Clay made the statement: "Well, you can't shoot gold bullets," which was received in silence.

Somewhere in the morning session General McSherry stated that he felt he had set up the proper procedure to channel the men from the mines to the copper mines, which was challenged by some of the mine operators.

In the morning session, Mr. Lipkowitz made the statement that the number of workers in gold mines was between ten thousand and twelve thousand men, and this was challenged by the gold operators present.

Q. By the way, what time did this meeting start?

A. Somewhere between two and three o'clock.

Q. That was, as I recall, your testimony yesterday, I think you inadvertently referred to the morning session.

A. That was in error. It started in the early afternoon.

Q. And lasted until about what time?

A. The first half of the meeting lasted until five o'clock, at which time Mr. Batt stated that he had to leave, and he suggested that the meeting take a recess and that I preside over the meeting, due to the fact that just before the meeting closed it had been agreed that we would work up with the mine operators a set of figures as to how many mine [fol. 447] workers, miners and muckers, were actually in each one of the gold mines represented at the meeting, plus an estimate of how many people were employed in the other small mines throughout the west, with which someone in the meeting was rather familiar.

Q. Now, do you remember anything that anyone else had to say, for instance, Mr. Vogelsang? You said he was there.

A. Mr. Vogelsang brought up the question that it had been stated that there was a large tin deposit, I think, in the Black Hills, and that it might have been a possibility of transferring the entire Homestake miners to work in this tin deposit.

There was some tin in the Black Hills, but it was scattered, pockety and to date it has never been worked.

Q. Was any comment made by anybody there about that suggestion of Mr. Vogelsang's?

A. It is my recollection that Mr. Guy Bjorge made some remarks, but I would rather have him report for himself.

Q. Do you recall any other comments that were made there? Was Mr. Lipkowitz conversation limited to a discussion of the labor situation?

A. His discussions were always limited to the amount of men available, and how they could be transferred to the copper mines, and that there would be no difficulty in doing so.

[fol. 448] In the evening meeting, over which I presided,

I called upon each one of the operators in turn to present figures which they had with them; or their memory of the number of people working, and in each case we had a thorough discussion.

In each case Mr. Lipkowitz made a statement somewhat as follows: that he did not believe that the mine operators wished to deceive the government; but he thought that they thought the figures they were giving were correct, but that he also was very positive that they had been misinformed by their personnel who had given them those figures.

As a result of the meeting, which I think lasted until about seven-thirty or eight o'clock, we arrived at a rather complete set of figures for all of the miners and muckers employed at that time in the gold mining industry of the United States.

The Commissioner: Were minutes of the meeting kept?

The Witness: It is my recollection that the only minutes of that meeting that were kept were the figures that were worked up during the second half of the meeting.

OFFERS IN EVIDENCE

Mr. Rigney: Plaintiffs now offer in evidence, your Honor, Plaintiff's Exhibit No. 24 for identification.

I might show it to the witness.

[fol. 449] By Mr. Rigney:

Q. Mr. Nelson, would you look at Plaintiff's Exhibit 24 for identification and tell us if you prepared that memorandum on or about October 3, 1942?

A. I prepared this memorandum on October 3, after waiting one day in order to have the mine operators check by long distance phone with their mines the figures they had given us. These figures are figures that were slightly modified and are considered correct as to the exact number of miners and muckers working in the mines and an estimate of the number of men working in dredge operations in other states outside of California.

As we had the main California operator of dredges, he knew the California figures, and he was thoroughly familiar with the entire dredging industry, and so he, in discussion with the other mine operators, reached a figure of 225. That

is the only estimated figure, except the estimated number of men available from other lode mines, which was arrived at by discussion of the lode mine operators which was five hundred.

So we have two estimates of five hundred men from all the small lode mines and two hundred twenty-five men as the men from all of the small dredge operators.

The rest of the figures are considered accurate.

The total was 3,270, which was a long way from ten thousand or twelve thousand.

[fol. 450] And in addition to that, if I might make the statement, of those miners and muckers, they are only a part of the figures given on the first page.

So the total miners and muckers was slightly under nine hundred. They were the men that they really needed to be transferred.

It takes a certain percentage of this roughly nine hundred men to be kept by the mines shut down to keep them in standby condition, and so when you get through with all of those deductions you would probably get somewhere between three hundred and six hundred men available for transfer who are in the miners and muckers class.

By Mr. Rigney:

Q. What is a mucker?

A. A mucker is a fellow that shovels up the ore that the miners mine.

Q. And you spoke of this gentleman from California a moment ago who furnished the estimate with respect to those employed in dredging operations. Is that Mr. McCormack?

A. That is Mr. McCormack.

Q. Do you know whether or not he is living now?

A. I do not.

Mr. Rigney: We will offer this now, your Honor.

Mr. Barnes: We have no objection.

[fol. 451] The Commissioner: It is admitted.

(Plaintiff's Exhibit No. 24 was marked for identification and received in evidence and made a part of this record.)

By Mr. Rigney:

Q. You sent that memorandum, which is Plaintiff's Exhibit 24, to Mr. Batt; is that right?

A. I took it up to him personally and discussed it with him.

By the Commissioner:

Q. What did he say?

A. He was surprised.

Q. What did he say?

A. He said that he was surprised that the figure was so low.

Q. That is a conclusion. I want to know what he said, if he said anything.

By Mr. Rigney:

Q. In other words, can you recall whatever words he used? If you recall?

A. I think he said, "Well, I will present the figures to the War Production Board at the meeting on the sixth, and thank you very much for them."

Mr. Rigney: Plaintiff now offers in evidence, your Honor, Exhibit No. 26 for identification, being a memoran- [fol. 452] dum of October 5, 1942, to Mr. Donald M. Nelson, from Mr. Robert P. Patterson, Under Secretary of War, and James V. Forrestal, Under Secretary of the Navy.

Mr. Barnes: No objection.

The Commissioner: It is admitted.

(Plaintiff's Exhibit No. 26 was marked for identification and received in evidence and made a part of this record.)

Mr. Rigney: I call your Honor's attention to the entire document, particularly to the last pargraph that:

> "The matter has hung fire for some time. We deem it of the utmost importance that prompt action be taken and that half measures be avoided."

By Mr. Rigney:

Q. Mr. Nelson, do you recall in connection with any statements made by the representatives of the gold mining industry at this October 1 meeting, any reasons which they advanced at that time in their arguments against why the order should not be issued?

A. Well, they thought that the disruption of the Communities, and the lowering of morale, making ghost towns of certain communities in the West, would hurt the overall war effort more than the few hundred muckers and miners that would be available to the copper and other nonferrous metal mines.

[fol. 453] Q. Is there any reason, or were there any other reasons advanced by them, as to why, in their judgment, the order would not be effective?

A. Well, they felt it was an illegal order.

Q. Was anything said about housing conditions in this meeting?

A. No, I do not remember that.

Q. Do you recall whether there was any discussion on the part of the operators with respect to the age of men then employed by them in the lode mines?

A. That statement was brought up by, I think, all of the operators who stated that on the order in October of that year they had already lost all of their most active men who had left the mines and moved, mostly to the West Coast in the shipbuilding yards, and airplane factories, and that the men left were settled and they doubted if very many of them would move, that it was common practice when a mine was shut down in the West that if there was any chance of that mine reopening within a few years the miners continued to live in their houses and eked out an existence in some way, waiting for the mine to reopen, that they did not like to move away.

Q. Do you remember any discussion of a comparison or contrast of the working conditions as between the Homestake Mine at Lead, South Dakota and the Anaconda Copper Mine at Butte?

[fol. 454] The Anaconda Copper Mine is a very high temperature mine; the Homestake Mine——

Mr. Barnes: I object and move to strike that as not being responsive to the question.

The Commissioner: Yes, it is stricken. The question was: What discussion did you hear concerning this thing.

The Witness: The discussion was that the miners in the mine at Homestake, where conditions were most excellent, if they had to move, would not stop——

Mr. Barnes: I again object, unless we have identification of the person speaking and the statements they made.

The Commissioner: That will be sustained.

By Mr. Rigney:

Q. Let me ask you this, Mr. Nelson: Are you familiar with the temperatures prevailing in the Anaconda Copper Mine at Butte?

A. Yes, sir; I have been there.

Q. And are you familiar with the temperatures prevailing in the Homestake Mine at Lead, South Dakota?

A. Yes, I have been in their mine.

Q. Now, will you tell us what the fact is with respect to comparable temperatures between those two mines or working conditions?

Mr. Barnes: I object to this unless it is shown that it [fol. 455] in some way was brought to the attention of Mr. Batt or other WPB representatives present at this meeting.

Mr. Rigney: This is preliminary to my next question, your Honor.

The Commissioner: Overruled. You may answer.

The Witness: These statements were presented to Mr. Batt at——

The Commissioner: I think the question——

Mr. Rigney: You are not answering the question. Let the reporter read the question back, if he may, and you listen to the question, now, and give us your best answer.

The Reporter (Reading): Question: "Now, will you tell us what the fact is with respect to comparable temperatures between those two mines or working conditions?"

The Witness: The Homestake Mine is a mine with excellent temperatures, assisted by excellent ventilation. The

Butte mines are classified as high temperature mines, working sulphide ores with acid water.

The Homestake Mine has fresh water.

By Mr. Rigney:

Q. Now, can you recall whether or not anyone in attendance at this meeting of October 1 mentioned this fact to which you have just testified, that is, in the course of the discussion of October 1 in the presence of WPB officials?

[fol. 456] A. The matter was definitely mentioned.

Q. By whom?

A. By the representatives of the Homestake Mining Company.

Q. Can you tell us whether or not there was any discussion at this meeting of October 1 about the necessity of issuing this order in order to save critical materials?

A. I have no recollection of critcial materials being mentioned anywhere during the meeting.

Mr. Rigney: May this be marked as our next new exhibit, please?

(Plaintiff's Exhibit No. 90 was marked for identification)

Mr. Rigney: Plaintiff offers Exhibit No. 90 for identification, being the interbranch minutes of October 5, 1942.

Mr. Barnes: No objection.

The Commissioner: It is admitted.

(Plaintiff's Exhibit No. 90 was received in evidence and made a part of this record)

By Mr. Mr. Rigney:

Q. Mr. Nelson, do you recall a man in the WPB in 1942 by the name of T. W. Wilson, Jr.?

A. No, I do not.

[fol. 457] Mr. Rigney: May I have this marked as Exhibit No. 91 for identification?

(Plaintiff's Exhibit No. 91 was marked for identification)

Mr. Rigney: Plaintiff offers in evidence now, your Honor, Exhibit No. 91 for identification, it being a memorandum

of October 6, 1942 from James R. Newman to T. W. Wilson, Jr.

Mr. Barnes: Do you intend to offer proof as to who the addressee or the addressor are?

Mr. Rigney: Yes, we will, if you insist upon it. Can you not stipulate that——

Mr. Barnes: Frankly, I saw this document before the first time when you submitted it to me this morning. I have been searching my memory for some idea as to who these people are. I have no more recollection than Dr. Nelson has.

Mr. Rigney: I see. We will furnish evidence on that.

I might say in connection with Mr. Barnes' statement, that we had the exhibits ready for Mr. Barnes last evening, your Honor, and I called him at his office late in the afternoon and asked him if he wanted them last evening and he said he would rather have them this morning at the office.

So that is what we did.

Mr. Barnes. I object until there is some connection shown as to who these people are, your Honor; what their official [fol. 458] functions or capacities may have been.

Mr. Rigney: Would your Honor take it on my representation to the Court that we will establish the official positions of both of these men within the WPB at this time?

The Commissioner: Yes.

Mr. Barnes: Subject to a motion to strike if that is not satisfactorily established.

The Commissioner: Yes, it will be received.

(Plaintiff's Exhibit No. 91 was received in evidence and made a part of this record)

By Mr. Rigney:

Q. Mr. Nelson, do you recall what next happened after you delivery of this October 3 memo that you took to Mr. Batt? What next happened in so far as this proposition of closing the gold mines was concerned, as far as you know?

A. The next thing of any importance that happened was the meeting of the board, the full board of the War Production Board, which, I think, was on October 6.

Q. Were you in attendance at that meeting?

A. I was invited to attend and did attend.

Q. And do you remember some discussion there of the proposed gold order?

A. Yes, I did.

Q. Do you recall approximately how long the discussion [fol. 459] lasted?

A. Somewhere between fifteen and thirty minutes.

Q. And who do you recall now as having spoken at that meeting in connection with the gold order?

A. I recall Mr. Batt reading the figures from the memorandum which I furnished him on the third.

I recall General Somerville stating that unless this order was issued immediately they could not furlough any soldiers to the copper mines.

I recall assistant Secretary Patterson making the same statement, but a little more vehemently.

I recall Leon Henderson making a long talk on what the Canadians were doing in the gold mines, and those are the highlights of the meeting as I remember them.

Q. Were you called upon for any observations at all?

A. I was not.

Mr. Rigney: May this be marked Plaintiff's Exhibit 92 for identification?

(Plaintiff's Exhibit No. 92 was marked for identification)

Mr. Rigney: Plaintiff offers in evidence, your Honor, Exhibit No. 92 for identification, being the minutes of the War Production Board of October 6, 1942.

By Mr. Barnes:

Q. Have you examined these minutes?

[fol. 460] A. Have I?

Q. Yes.

A. I have read them over a number of times.

Q. Do they correctly represent the people who were in attendance at that meeting, as far as you can recall?

A. To the best of my knowledge.

Mr. Barnes: I have no objection.

The Commissioner: It is admitted.

(Plaintiff's Exhibit No. 92 was received in evidence and made a part of this record)

By the Commissioner:

Q. What have you to say with respect to the statement in here that General Somerville stated that the Army had already furloughed four thousand soldiers?

A. He said they would not continue it.

Q. Were there to be more furloughs, or what?

A. Yes. That was the idea that we understood, that if the gold order was issued immediately that he would continue to furlough soldiers.

In other words, metal miners who were still in the Army would be furloughed.

Q. There wasn't any question about these four thousand?

A. No, he had furloughed soldiers before the order was issued.

[fol. 461] The Commissioner: All right.

By Mr. Rigney:

Q. Do you know when this first furloughing of soldiers occurred for work in the copper mines?

A. It started in September.

Mr. Barnes: May it please the Court, with respect to the preceding exhibit, Plaintiff's Exhibit 91, Mr. McGrail has called my attention to the fact that in the concluding paragraph there is a reference to an attachment, and there is reference to that at the end of the memorandum, too.

I now object to the document in that it is not complete.

The Commissioner: It is a little late for objection after it is in.

Mr. Barnes: I move to strike it, your Honor.

The Commissioner: I think that it should be stricken now, unless you are going to put in a complete exhibit.

Mr. Rigney: Well, your Honor, this exhibit which I have offered is just the way we got in from Archives. I see that it refers to an attachment there which was not attached to the exhibit in Archives, and again I say that we have tried to be meticulous in the preparation of these exhibits, but we can only offer what we can get from Archives, and in several instances, there just wasn't the attachment there which was referred to in the basic document.

The Commissioner: I feel compelled to sustain the mo-
[fol. 462] tion to strike, and it will be stricken.

(Plaintiff's Exhibit No. 91, previously admitted in evidence, was stricken.)

Mr. Rigney: Shall we let the exhibit carry the number 91 for identification?

The Commissioner: Yes, we will do that, anyway.

Mr. Rigney: Will you mark this as the next exhibit?

(Plaintiff's Exhibit No. 93 was marked for identification.)

The Commissioner: Is this meeting of the 6th of October in Exhibit 92 the meeting in which they issued the order?

Mr. Rigney: At which the order was adopted, yes.

Mr. Barnes: There is a slight distinction there. The decision was made to issue the order. The order was not actually issued until two days later.

The Commissioner: That is what I wondered about. All right.

The Witness: May I say something?

The Commissioner: If you have something to add.

The Witness: Yes.

The resolution was made by one member of the War Production Board and passed directing Donald Nelson to issue the order immediately. That was legally what happened.

The Commissioner: All right. Go ahead.

[fol. 463] Mr. Rigney: Your Honor, of course, the significant portion of this exhibit 92 is section 1, gold mining, but I thought that the entire minutes of that day should be reproduced in order that the exhibit would be complete, and I believe this has now been received in evidence; is that correct?

The Commissioner: Yes.

Mr. Rigney: Plaintiff now offers in evidence the minutes of the Interdepartmental group on mineral production of October 7, 1942, as Plaintiff's Exhibit 93.

Mr. Barnes: No objection.

The Commissioner: It is admitted.

(Plaintiff's Exhibit No. 93 was received in evidence and made a part of this record.)

By Mr. Rigney:

Q. Professor Nelson, what next occurred, as far as you know, with respect to the gold curtailment order following this meeting of the War Production Board of October 6?

A. The L-208 which was drawn under the direction of Dr. Macellus Stow—at the time I was acting as temporary assistant to Mr. Henderson—was taken by me up to Mr. Fred Eaton's office. I left it there.

It was my understanding that he made slight revisions in it. The next thing I knew was the order as signed by [fol. 464] Donald Nelson appeared. That was the following day.

Q. That would be October 8?

A. Yes, sir.

Mr. Rigney: May this be marked Plaintiff's Exhibit No. 94 for identification?

(Plaintiff's Exhibit No. 94 was marked for identification.)

Mr. Rigney: Plaintiff offers in evidence now, your Honor, Plaintiff's Exhibit No. 94 for identification, being the minutes of the Interbranch meeting of October 9, 1942.

Mr. Barnes: Your Honor, we now seem to be going in the other direction. Previously I have objected on the grounds of relevancy and materiality to exhibits in 1941 prior to the outbreak of the war.

We are now faced with this situation: We have L-208 issued; we have the resolution for its adoption by the full War Production Board, consisting of the Vice-President of the United States, representatives of the Secretary of War, the Secretary of the Navy, the Secretary of Commerce, the Director of production of the War Department, and a representative of Mr. Hopkins, who was special assistant to the President, and the Price Administrator, those were the members of the Board.

Now, we are going to a date after that; we are going to a discussion among subordinate members of the staff dealing with whether or not the order should have been issued. [fol. 465] It seems to me that the decision had been made by that group of individuals, the order had been issued, and these documents have no relevancy or materiality whatsoever, and I object on that basis.

The Commissioner: On your theory, then, the only evidence we should take is evidence that took place on the day that the order was issued.

Mr. Barnes: Your Honor, it seems to me that we have an order issued, a decision made by the group of individuals whose names I have mentioned.

But what we have to decide in this case, or the issue in this case is, whether they acted within the scope of their powers, and whether they acted in good faith at the time they acted.

They were the group who acted. They were the people who made the decision.

There has been an awful lot of documentation put in here. There has been little or no connection to that group of individuals showing knowledge conveyed to them.

Certainly various members of the staff of the War Production Board might have had different views. That is not at all unusual. As a matter of fact, that is why they had clearance committees, and things of that kind there to resolve conflicts of views.

But the decision was made by this group of individuals. [fol. 466] Now, the fact that somebody later on second-guessed them and thought they did something that was erroneous seems to me to have no bearing whatsoever on any issue involved in this case.

The Commissioner: It will be received.

(Plaintiff's Exhibit No. 94 was marked for identification and received in evidence and made a part of this record.)

Mr. Rigney: I invite your Honor's attention, with respect to Exhibit 94, particularly to what appears on the upper half of page 2 where reference is made to the remarks of a Mr. Theodore E. Peck.

Plaintiff now offers in evidence Exhibit No. 34 for identification, being a jointly signed statement of Paul V. McNutt, Chairman of the War Manpower Commission, and Donald M. Nelson, Chairman of the War Production Board.

Mr. Barnes: No objection.

The Commissioner: It is admitted.

(Plaintiff's Exhibit No. 34 was received in evidence and made a part of this record.)

By Mr. Rigney:

Q. Mr. Nelson, I show you Plaintiff's Exhibit No. 8 for identification, being a letter, or purporting to be a letter [fol. 467] of the War Production Board dated October 13 to Idaho-Maryland Mines Corporation, and ask you if that letter was issued by your office?

A. This letter was issued by my office, on instructions to Mr. E. H. Rott whom I had set up as administrator of order L-208, and it was similar to letters sent to anyone who requested an appeal under L-208.

Q. Are those Mr. Rott's initials at the bottom?

A. Correct.

Q. And he was your assistant, was he, or deputy, at that time? What title did he have?

A. The title that he was given was Deputy Administrator of Order L-208. I still had to keep the title of administrator, but he was made deputy and he did all the work.

Mr. Rigney: Plaintiff offers Exhibit No. 8 for identification.

Mr. Barnes: No objection.

The Commissioner: It is admitted.

(Plaintiff's Exhibit No. 8 was received in evidence and made a part of this record.)

By Mr. Rigney:

Q. Do you know how long Mr. Rott continued as administrator of order L-208, Mr. Nelson?

A. Well, I made a slight error in my testimony yesterday. [fol. 468] I said that I left the mining division on the first of December. I left it temporarily. I came back about a week later and stayed there until about the first of January, at which time I left permanently. And when I left permanently on the first of January, Mr. Rott was still deputy administrator of order L-208.

Q. The first of January 1943?

A. Correct.

Q. You then thereafter had another position and other duties?

A. Then I was assistant to Howard Young in a new division that had been set up.

Mr. Rigney: May this be marked Plaintiff's Exhibit No. 95 for identification?

(Plaintiff's Exhibit No. 95 was marked for identification.)

Mr. Rigney: Plaintiff offers in evidence, your Honor, Exhibit No. 95 for identification, being the interbranch minutes of October 16, 1942.

Mr. Barnes: Your Honor, I object to that on the grounds previously stated with respect to Plaintiff's Exhibit No. 94, except that we are getting even more remote from the date of issuance.

I have not found in this document any reference to gold mining or gold miners, either, I might point out, as a further [fol. 469] basis of objection.

Mr. Rigney: There is a discussion of the problem of miners in the nonferrous metal mines, Your Honor, and in connection with counsel's earlier objection as to time, I might call your Honor's attention to the fact that our petition contains the allegation that as early as the spring of 1943, the War Production Board learned that order L-208 was not achieving the purpose for which it was issued, namely, the transfer of hard rock miners and helpers from gold mines to copper and other nonferrous mines, and any reasonable consideration of the facts above set forth by the War Production Board prior to the issuance of said order L-208 would reveal that said order could not achieve its purpose.

The Commissioner: It may be received.

(Plaintiff's Exhibit No. 95 was received in evidence and made a part of this record.)

Mr. Barnes: In connection with counsel's statement I would like to point out, however, that order L-208, by its very terms, gave the mines a period of sixty days for a complete closing, so that if they are offering some that occurred eight days after the issuance of the order to show that it has not been fully effective, I don't think it has any relevancy and materiality on that basis, either.

The Commissioner: All right.

[fol. 470] Mr. Rigney: You do not want to hear me, do you?

The Commissioner: No.

Mr. Rigney: May this be marked Plaintiff's Exhibit 96 for identification?

(Plaintiff's Exhibit No. 96 was marked for identification.)

Mr. Rigney: Plaintiff now offers in evidence Exhibit No. 96 for identification, being the interbranch minutes of October 19, 1942.

Mr. Barnes: We object on the same basis that we did with respect to Plaintiff's Exhibit 94, your Honor.

The Commissioner: I had to read that other one pretty closely to see just how it might tie in. I would like a statement from counsel on how this ties in with the problem.

Mr. Rigney: Your Honor, there is a discussion here of Mexican labor. We expect to offer some testimony at a later time along that line. There is a consideration of obtaining Mexican labor for use in the mines.

There is a discussion at the bottom of page 1 and the top of page 2 concerning gold mines that were producing fluxing ores, and then a discussion of what the Employment Service was doing in connection with this whole proposition of transferring labor from one place to another.

The Commissioner: It will be received.

(Plaintiff's Exhibit No. 96 was received in evidence and [fols. 471-475] made a part of this record.)

[fol. 476] Mr. Rigney: Plaintiff offers in evidence Exhibit No. 97 for identification, being the minutes of the interdepartmental committee of October 20, 1942.

And I should like to invite your Honor's particular attention to the second paragraph on page 4, a short paragraph reading:

> "Reports verified on the results of recruiting gold miners for work in other mines. Some gold miners seem to have been transferred to Butte, but it is not known how many were involved. Mr. King requested [fol. 477] more definite information at subsequent meetings."

Mr. Barnes: I am perfectly willing to concede that this is a copy of the minutes of the meeting. I don't think that it is competent evidence to prove facts of the type that

counsel has just read as to reports verified on the results of the order, attributing generalized statements to unspecified individuals.

It is not competent proof of the facts stated therein any way, and if it is being offered as proof of those facts, I very definitely object to it.

Mr. Rigney: Your Honor, here is a meeting of representatives of the War Production Board and the Services of Supply and the War Manpower Commission, and other agencies, but those particularly that I have mentioned, who were closest to this whole proposition.

And here are their official minutes, and they reflect a statement that I read to you, which I think it is reasonable conclude, was the consensus of the meeting of these people who attended, these high officials of these various departments.

I don't know how you could get any better evidence of it at this late date than this document right here.

The Commissioner: You are offering that as proof of the facts?

[fol. 478] Mr. Rigney: Of that paragraph and anything else that is in it.

The Commissioner: Well, I don't think it proves the facts, but I am going to admit it as an exhibit which reflects the minutes of the meeting. It proves what may have taken place before the Board, but——

Mr. Dunn: And a state of mind.

Mr. Rigney: And a state of mind, my superior, Mr. Dunn, calls my attention to.

The Commissioner: Yes.

(Said minutes of interdepartmental committee meeting of October 20, 1942, marked Plaintiff's Exhibit No. 97, admitted in evidence and made a part of this record.)

Mr. Rigney: Plaintiff asks that this document of October 16, 1942, the minutes of the interbranch meeting, be marked Plaintiff's Exhibit 98 for identification.

(Said document was marked for identification as Plaintiff's Exhibit No. 98.)

By Mr. Rigney:

Q. Professor Nelson, you are familiar with the facts with respect to the construction of the U. S. Army Ski-tow at [fol. 479] Pando, Colorado in 1942?

A. Yes.

Q. Did you make a trip out there in your official capacity at about that time?

A. I made a trip to Pando accompanied by Mr. Fred Eaton, under the statement that the camp would not be closed for two weeks.

Q. First, supposing you tell us what there was out there. What was it?

A. When we arrived there we found that the construction had been completed on a skiway running up from Tennessee Pass, which was near Pando, to the top of the Rockies, a skiway modified and designed to train Alpine troops.

Q. Under the Army program?

A. The Army program of training.

Q. And do you know when the construction went on, when it was being built?

A. Well, at the time we arrived the construction was completed and over eight thousand men had already left the property.

We were told they would not leave until after we got there. We found——

Mr. Barnes: Your Honor, I object and move to strike this as being hearsay, the statement as to what he was told by an unidentified individual or individuals.

[fol. 480] The Commissioner: It may be stricken.

The Witness: There were only a few of the workers on the project when we arrived. The setup was designed so that it would almost have been impossible for a person who wanted to be referred by the USES——

Mr. Barnes: I object to this as being beyond the scope of the question and not being responsive.

The Commissioner: Sustained.

By Mr. Rigney:

Q. Let me ask you this, Mr. Nelson: Do you know when the completion of this ski-tow was about to be accomplished?

Mr. Barnes: I object further——

The Witness: At the time——

The Commissioner: When there is an objection, don't answer.

Mr. Barnes: I object further to any further examination on this subject on the ground that it is completely irrelevant and immaterial to any issues involved.

The Commissioner: What is the relevancy, Mr. Rigney?

Mr. Rigney: The fact that we want to show, your Honor, is that there was this project out there. We expect to offer proof that many of the men recruited for this very Army project came from mining endeavors in that vicinity.

The Commissioner: Let us get to that point then.

[fol. 481] Mr. Rigney: All right, sir. I would have to preliminarily establish what the situation was out there, that is all.

By Mr. Rigney:

Q. Do you know, Mr. Nelson, whether or not some of the employees engaged on this ski-tow at Pando were recruited from nonferrous metal mines?

Mr. Barnes: I object to that question, unless the source of the witness' knowledge is first developed.

Mr. Rigney: My co-counsel calls my attention to the fact that perhaps the witness should be permitted to answer the question as to whether he knows. Does he know? That was the question that I asked him, I think, does he know.

The Commissioner: Let us have the question read.

(The pending question, as above recorded, was read by the reporter.)

The Witness: They were——

The Commissioner: Yes, he can answer the question: Does he know.

Mr. Barnes: No.

By Mr. Rigney:

Q. The question is not whether or not they were recruited, but whether or not you know the facts. Do you know the fact in that regard, or not?

A. May I ask for a little information? The general [fol. 482] manager of the company told me that.

The Commissioner: That is not what the question is. The question is: Do you have knowledge with respect to a certain event, whatever the event?

The Witness: I was not there at that time, and, therefore, I have no knowledge of it.

Mr. Rigney: Plaintiff will now offer in evidence Exhibit 98 for identification, your Honor.

Mr. Barnes: Your Honor, I object to this on a series of grounds, the first being that we are getting more and more remote from the date of the issuance of the order. We are now at a meeting of a group of subsidiary individuals on October 26, 1942.

So far as I can see from examination of this document, its only possible relationship to this controversy is on the matter now presented with respect to Pando, as to which there has been no showing of any relevancy or materiality as yet.

The Commissioner: Are you finished?

Mr. Barnes: Yes.

The Commissioner: It may be received.

(Said minutes of interbranch meeting of October 26, 1942, marked Plaintiff's Exhibit No. 98, admitted in evidence and made a part of this record)

[fol. 483] Mr. Barnes: I should also like to point out in this connection that Pando was in Colorado. There has been no showing that any of the plaintiffs who are now before the court were engaged in gold mining activities in the State of Colorado.

The Commissioner: All right.

By Mr. Rigney:

Q. Mr. Nelson, where is the Climax Molybdenum Mine?
A. About twelve miles from Pando.
Q. In Colorado?
A. Yes, sir.

Mr. Rigney: May I say for the record that we invite your Honor's attention to what is contained in this Exhibit 98 at the bottom half of page 2, and the following page; in other words, references to Pando.

The Commissioner: Yes, all right.

Mr. Rigney: May this be marked Plaintiff's Exhibit No. 99 for identification?

(Said document was marked for identification as Plaintiff's Exhibit No. 99.)

By Mr. Rigney:

Q. Did you know, in the course of your service with WPB, a Mr. John J. Corson, who was in the government service at that time?

[fol. 484] A. I knew him before he went into government service, and after he went into government service.

Q. And what position did he occupy, or what department was he connected with?

A. I think at one time he was in housing, and then——

Q. Specifically with reference to November 1942, if you can tell us.

A. I couldn't tell you his title there; I know he dealt a great deal with labor and associated problems.

Q. Let me show you Plaintiff's Exhibit 99 for identification, and I ask you to look at that to see if that refreshes your recollection with respect to the position that Mr. Corson held at that time. (Handing document to the witness)

A. It does.

Q. What was it?

A. U. S. Employment Service.

Q. He was with the U. S. Employment Service at that time?

A. Right.

Mr. Rigney: Plaintiff offers in evidence, your Honor, Exhibit 99 for identification, being a memorandum from Mr. John J. Corson, Director of the U. S. Employment Service, to Mr. Donald M. Nelson.

Mr. Barnes: Could I see that? The one you sent me was [fol. 485] incomplete.

I think, your Honor, that the objection, if any, to this, goes to the weight to be attached to it, which, I think, is perfectly apparent from a reading of the document, that it is extremely preliminary, and aside from that objection I have no objection to this.

The Commissioner: All right, it will be received.

(Said memorandum from Mr. Corson to Mr. Donald Nelson, marked Plaintiff's Exhibit No. 99, admitted in evidence and made a part of this record.)

Mr. Rigney: I had intended to ask your Honor to bear with me while I read the complimentary references to Homestake, but I think your Honor has read them now.

The Commissioner: We will recess for five minutes.

(Thereupon, a five-minute recess was taken in the hearing.)

Mr. Rigney: Plaintiff now offers in evidence Exhibit 39 for identification, marked at pretrial, a memorandum of November 16, 1942, from Mr. Corson to General McSherry.

Mr. Barnes: No objection.

The Commissioner: It is admitted.

[fol. 486] (Said memorandum, dated November 16, 1942 from Mr. Corson to General McSherry, marked Plaintiff's Exhibit No. 39, admitted in evidence and made a part of this record.)

Mr. Rigney: May I invite your Honor's attention to the statement contained in the attachment to this November 16 memorandum, the attachment of November 11 of Mr. A. W. Motley:

> "The closing of the gold mines has certainly not solved the labor shortage"——

The Commissioner: Wait a minute, I do not see the attachment here.

Mr. Rigney: That is it, sir (indicating).

The last paragraph, toward the middle of that last paragraph, reads:

> "The closing of the gold mine has certainly not solved the labor shortage in the nonferrous metals industries."

Mr. Barnes: May I also point out, your Honor, in that connection, that this is based on reports received through November 10, a period of thirty days after the effective date of the order, which gave the mines a period of sixty days.

Mr. Rigney: I might say the order of October 8 gave the gold mines only seven days in which to close down from

[fol. 487] subject to any appeal that might be granted in a given situation.

Order L-208 gave them just seven days to close down their operations, subject to their appeal rights.

May this be marked Plaintiff's Exhibit No. 100 for identification.

(Said document was marked for identification as Plaintiff's Exhibit No. 100)

Mr. Rigney: Plaintiff offers in evidence Exhibit 100 for identification, being the minutes of November 23, of the interdivision meeting.

By Mr. Rigney:

Q. I notice this is the first time, Mr. Nelson, that we have had a reference to the interdivision meeting. Would you tell us what that was?

A. Well, at that particular time in the War Production Board, in one of the numerous shake-ups of the divisions, all of the branches had their names changed to divisions, so this is the same as if it were an interbranch meeting.

Mr. Barnes: Your Honor, could I ask counsel for a statement as to the relevance of this document to the issues involved here?

Mr. Rigney: The document has further reference to the situation at Pando, your Honor, and it discusses the efforts [fol. 488] of the U. S. Employment Service to obtain miners for the nonferrous metal mines.

And I think in that connection it is relevant and material.

Mr. Barnes: I fail to see how it can be relevant and material. We are talking about an order, which as I previously pointed out, was submitted to the full War Production Board on October 6, determined at that time to be issued by it, and issued on October 8.

Of course, what the United States Employment Service may have done at some subsequent date has no relevancy and materiality, and I object to receipt of this on that basis.

The Commissioner: It will be received.

(Said minutes of interdivision meeting of November 23, marked Plaintiff's Exhibit No. 100, admitted in evidence and made a part of this record.)

Mr. Rigney: May this be marked Exhibit No. 101 for identification.

(Said document was marked for identification as Plaintiff's Exhibit No. 101.)

By Mr. Rigney:

Q. Who was Mr. H. W. Dodge in the War Production [fol. 489] Board in November of 1942?

A. Mr. Dodge was one of the high officials. I think his title about that time was deputy——

Q. Perhaps this will help you, Exhibit 101 for identification, and I show you that to refresh your recollection with respect to Mr. Dodge's official title.

A. He was the Deputy Director General for Staff.

Q. And was he in some sense your superior at that time?

A. He was my superior, and I wrote memorandums to him.

Q. Did he have anything to do with this trip which you made out to Colorado in connection with this Pando project?

A. He was one of the top officials responsible for sending me out there.

Q. Will you look at Plaintiff's Exhibit 101 for identification, and tell his Honor if that is a copy of the report which you made to Mr. Dodge on November 24, following your visit out to Pando?

A. It is.

Mr. Rigney: Plaintiff offers in evidence, your Honor, Exhibit 101.

Mr. Barnes: I object, your Honor, on the ground that what the United States Employment Service may or may not have done at Pando in November of 1942, can have no [fol. 490] relevancy or materiality to the issues involved here with relation to the issuance of L-208 in October 8, 1942.

The Commissioner: It may be received.

(Said memorandum dated November 24, 1942, from Dr. Nelson to Mr. Dodge, marked Plaintiff's Exhibit No. 101, admitted in evidence and made a part of this record.)

The Commissioner: That does not go to the question of issuance, but the continued application of the order.

Mr. Barnes: There is no showing any of these matters were brought to the War Production Board itself, which was the body that directed the issuance of the order.

Mr. Rigney: May this be marked Exhibit No. 102 for identification.

(Said document was marked for identification as Plaintiff's Exhibit No. 102)

Mr. Rigney: Plaintiff offers in evidence Exhibit No. 102 for identification, being a memorandum of November 25, 1942 from Paul H. Norgren to Mr. Wendell Lund, subject: Report on Displacement and Reemployment of Gold Miners.

Mr. Barnes: Can the witness identify either of those individuals?

[fol. 491] By Mr. Rigney:

Q. Do you know who Mr. Wendell Lund was and what his position was in WPB?

A. Yes, he was Director of the Labor Division.

Q. At this particular time?

A. At this particular time. I knew him very well.

Q. And do you know what Mr. Paul H. Norgren's official capacity was?

A. Mr. Norgren was, as I understand it——

Mr. Barnes: I object to a statement of the witness' understanding. If he knows, that is one thing.

The Witness: Mr. Norgren had been at several meetings I attended, and I knew him.

By Mr. Rigney:

Q. And was he an official of the War Production Board or employee of the War Production Board?

A. He was an employee of the War Production Board or official, whichever you wish to call him.

Q. Do you know what particular phase of the Board's work he was concerned with?

A. Labor problems.

Mr. Rigney: I offer Exhibit 102 in evidence, your Honor.

Mr. Barnes: Again, your Honor, I think that the objection, if any, to this, goes to the question of weight.

[fol. 492] The Commissioner: It will be received.

(Said memorandum, dated 11-25-42, from Mr. Norgren to Mr. Lund, marked Plaintiff's Exhibit No. 102, admitted in evidence and made a part of this record.)

By Mr. Rigney:

Q. Mr. Nelson, I am not sure whether you told us. My recollection is that you have already testified that after January 1943 you became a deputy or an assistant to Mr. Howard I. Young; is that correct?

A. I have made that statement.

Q. And your service, then, through 1943 and until you left the War Production Board in December of 1944, was that under Mr. Young most of that time?

A. Practically all the time it was under Mr. Young.

Q. Did you know a man who was with the War Production Board in 1943 by the name of Mr. A. S. Knoizen, or N-o-i-zen; I have heard it pronounced both ways.

A. I knew him extremely well.

Q. Do you know which is the correct pronunciation?

A. Knoizen. He was vice-president of Joy Manufacturing Company, and on leave of absence from the Joy Manufacturing Company as a dollar-a-year man working for the [fol. 493] War Production Board. He took my place as Director of the Mining Division.

Q. And about when would that be that he took that position?

A. It was around the first of January.

Q. Of 1943, about the time you left. Was he your immediate successor?

A. When he left he immediately succeeded me.

Q. Do you know whether Mr. Knoizen is living or deceased now?

A. He is deceased now.

Mr. Rigney: This is one of the original exhibits, your Honor, being No. 53 for identification, and at the time they were marked at pretrial there was a chart which was missing from this exhibit, and we have obtained it, and I should like now to offer the complete exhibit No. 53 for identification in evidence.

Mr. Barnes: I object on the grounds of irrelevancy and immateriality to any issue involved in this case.

The Commissioner: It may be received.

(Said memorandum of 3-30-43 from Mr. Knoizen to Mr. Batt, marked Plaintiff's Exhibit No. 53, admitted in evidence and made a part of this record.)

[fol. 494] Mr. Barnes: Might that be on the understanding also, your Honor, that it is subject to verification as to the fact that this is the chart that is referred to?

The Commissioner: Yes.

Mr. Rigney: May this be marked as Plaintiff's Exhibit 103 for identification.

(Said document was marked for identification as Plaintiff's Exhibit No. 103.)

Mr. Rigney: Plaintiff now offers in evidence, your Honor, Exhibit 103 for identification, being a memorandum from Mr. Heacock to Mr. Howard Young, of April 16, 1943.

Mr. Barnes: I object on the grounds that it is irrelevant and immaterial to any issue involved in this case.

Mr. Rigney: Could I call your Honor's attention to the end of the paragraph:

> "I understand that study of the effects of order L-208 as administered are now underway by direction of Vice-Chairman Batt. Doubtless the authorities who would be responsible for an eventual amendment to this order will be duly advised concerning the results of these studies."

The Commissioner: It will be received.

(Said memorandum, dated 4-16-43 from Mr. Heacock to Mr. Young (marked Plaintiff's Exhibit No. 103, admitted [fol. 495] in evidence and made a part of this record.)

By Mr. Rigney:

Q. Mr. Nelson, from your service with the War Production Board and your knowledge of its work, can you tell us whether or not any industry other than goldmining which did not consume critical materials in the production of its end product as distinguished from maintenance, re-

pair and operating materials in its normal daily operations, was closed down by WPB order?

A. No other industry was.

Mr. Rigney: You may inquire.

Mr. Herrington: May I ask whether it would be appropriate at this time to introduce the appeal files of Idaho-Maryland Mills before Mr. Barnes commences cross-examination?

The Commissioner: If you would like to, I think it would be all right.

Is that satisfactory with you Mr. Barnes?

Mr. Barnes: Yes.

Mr. Herrington: Your Honor, may I make this statement for the record, that the appeal files of the Idaho-Maryland Mines were derived primarily from the files in the Attorney General's office which Mr. Kendall Barnes made available to me, and I would like to have my appreciation of his [fol. 496] cooperation extended on the record. I am sure that without that courtesy we would not have been able to obtain these documents.

At the pretrial document No. 32 was introduced for identification, being a letter from Idaho-Maryland Mines Corporation to the Mining Branch of the War Production Board, dated May 5, 1942.

I would like to introduce this in evidence now. It would be the next number, Plaintiff's Exhibit—

The Commissioner: That would take the same number.

Mr. Herrington: This will take the same number?

Mr. Barnes: No objection.

The Commissioner: It is received.

(Said letter, dated 5-5-42, from Idaho-Maryland to the WPB, marked Plaintiff's Exhibit No. 32, admitted in evidence and made a part of this record.)

Mr. Herrington: Next is a letter from Idaho-Maryland Mines Corporation to Wilbur A. Nelson, Mining Branch, dated at Grass Valley, November 12, 1942, which is a document which Mr. Barnes kindly furnished to me.

Mr. Barnes: No objection.

Mr. Herrington: This will be No. 104.

The Commissioner: It is admitted.

[fol. 497] (Said letter, dated 11-12-42, from Idaho-Maryland to Wilbur A. Nelson was marked Plaintiff's Exhibit No. 104 and admitted in evidence and made a part of this record).

Mr. Herrington: Next is a telegram dated December 8, 1942, from Edward H. Rott, Deputy Administrator, to Idaho-Maryland Mines Corporation, next in order to be introduced in evidence.

Mr, Barnes: No objection.

The Commissioner: It is admitted.

(Said telegram, dated 12-8-42, Mr. Rott to Idaho-Maryland, was marked Plaintiff's Exhibit 105, admitted in evidence and made a part of this record)

The Commissioner: I would suggest that you mention the number because it helps in reviewing the record.

Mr. Herrington: Plaintiff's Exhibit No. 106 is a letter dated December 8, 1942, addressed to Idaho-Maryland Mines Corporation by Edward H. Rott, Deputy Administrator.

Mr. Barnes: No objection.

The Commissioner: It is admitted.

[fol. 498] (Said letter, dated 12-8-42, from Mr. Rott to Idaho-Maryland, was marked Plaintiff's Exhibit No. 106, admitted in evidence and made a part of this record)

The Commissioner: Have the reporter mark the whole bunch of them and then you can go right along. You can go right on through.

Mr. Herrington: I think I can run right through them.

The Commissioner: All right.

Mr. Herrington: Plaintiff's Exhibit No. 107 is a letter from Idaho-Maryland Mines Corporation dated January 5, 1943 to Edward H. Rott, Deputy Administrator.

Mr. Orick: That has been marked as Exhibit No. 29.

Mr. Herrington: That is corect. That has been marked Exhibit 29. It was introduced at pretrial.

Mr. Barnes: No objection.

The Commissioner: It is admitted.

(Said letter dated 1-5-43 from Idaho-Maryland to Edward H. Rott, marked Plaintiff's Exhibit No. 29, admitted in evidence and made a part of this record)

Mr. Herrington: Exhibit No. 107 is an analyst's summary of the application of Idaho-Maryland Mines Corporation by the War Production Board.

[fol. 499] Mr. Barnes: No objection.

The Commissioner: It is admitted.

(Said analyst's summary was marked Plaintiff's Exhibit 107 admitted in evidence and made a part of this record)

Mr. Herrington: Plaintiff's Exhibit 108, a letter dated January 28, 1943, from A. K. Holcombe, Chairman of the Appeals Board, to the Idaho-Maryland Mines Corporation.

Mr. Barnes: No objection.

The Commissioner: It is admitted.

(Said letter dated 1-28-43 from Holcombe to Idaho-Maryland was marked Plaintiff's Exhibit 108 admitted in evidence and made a part of this record)

Mr. Herrington: Exhibit No. 109 is a telegram from Edward H. Rott to Idaho-Maryland Mines Corporation, dated February 5, 1943.

Mr. Barnes: No objection.

The Commissioner: It is admitted.

(Said telegram dated 2-5-43 from Rott to Idaho-Maryland, was marked Plaintiff's Exhibit 109, admitted, and made a part of this record).

[fol. 500] Mr. Herrington: Exhibit No. 110 is a letter from Idaho-Maryland Mines Corporation to the War Production Board, dated March 22, 1943.

Mr. Barnes: No objection.

The Commissioner: It is admitted.

(Said letter dated 3-22-43 from Idaho-Maryland to WPB was marked Plaintiff's Exhibit 110, and admitted in evidence and made a part of this record)

Mr. Herrington: Plaintiff's Exhibit No. 111 is a letter from Edward H. Rott, dated March 30, 1943, to Idaho-Maryland Mines Corporation.

Mr. Barnes: No objection.

The Commissioner: It is admitted.

(Said letter, dated 3-30-43 from Mr. Rott to Idaho-Maryland, was marked Plaintiff's Exhibit 111, admitted in evidence, and made a part of this record)

Mr. Herrington: Plaintiff's Exhibit No. 112 is a letter from Idaho-Maryland Mines Corporation dated December 13, 1943, to Howard I. Young, Director of the Mineral Resources Coordinating Division of the War Production Board.

I am not sure that that letter came from your office, Mr. [fol. 501] Barnes. That looks like a letter from our file.

Mr. Barnes: Let me check that one moment.

Subject to verification of this one, we have no objection.

The Commissioner: It is admitted.

(Said letter, dated 12-13-43 from Idaho-Maryland to Mr. Young was marked Plaintiff's Exhibit 112, admitted in evidence and made a part of this record)

Mr. Herrington: Pretrial Plaintiff's Exhibit 30 is a letter dated December 20, 1943, from Howard I. Young to Albert Crase.

Mr. Barnes: No objection.

The Commissioner: It is admitted.

(Said letter dated 12-20-43, from Mr. Young to Mr. Crase, was marked Plaintiff's Exhibit No. 30, admitted in evidence and made a part of this record)

Mr. Herrington: Pretrial Exhibit 30-B is a letter dated December 20, 1943, from Mr. Knoizen to Mr. Crase.

Mr. Barnes: No objection.

The Commissioner: It is admitted.

[fol. 502] (Said letter, dated 12-20-43, from Mr. Knoizen to Mr. Crase, marked Plaintiff's Exhibit 30-B, admitted in evidence and made a part of this record)

Mr. Barnes: Was that marked at pretrial?

Mr. Herrington: That was 30-B.

Mr. Barnes: I have it in the pretrial memorandum as 30.

The Commissioner: It is the letter of December 20.

Mr. Herrington: It is given as 30 and 30-B. I think they were clipped together.

The Commissioner: There were two letters here in the pretrial memorandum, one dated December 20 from Young to Crase, and another one December 20 from Knoizen to Crase.

Mr. Herrington: Next we will introduce pretrial Exhibit No. 31, a letter dated January 31, 1944, from Idaho-Maryland Mines to Knoizen, transmitting the appeal of Idaho-Maryland Mines Corporation.

Mr. Barnes: No objection.

The Commissioner: It is admitted.

Mr. Herrington: As pretrial Exhibit 31 we will introduce in evidence the appeal of Idaho-Maryland Mines Corporation referred to in the preceding exhibit.

The Commissioner: I thought those were marked 31 at pretrial.

[fol. 503] Mr. Barnes: They were both marked 31.

Mr. Herrington: They were both marked 31. I introduced them separately.

The Commissioner: Since they already have the same number before, we had better leave it that way.

Mr. Herrington: I will introduce the letter and the copy of appeal as Plaintiff's Exhibit 31.

The Commissioner: Admitted.

(Said letter, dated 1-31-44 from Idaho-Maryland to Mr. Knoizen, marked Plaintiff's Exhibit 31, admitted in evidence and made a part of this record)

Mr. Herrington: I next introduce as Plaintiff's Exhibit 113 a letter from Henry W. Erickson to E. L. Oliver, President, Idaho-Maryland Mines Corporation, dated February 7, 1944.

Mr. Barnes: Subject to verification, no objection.

The Commissioner: It is admitted.

(Said letter dated 2-7-44 from Mr. Erickson to Mr. Oliver, was marked Plaintiff's Exhibit 113, admitted in evidence and made a part of this record)

Mr. Herrington: Next is Plaintiff's Exhibit 114, a telegram dated March 1, 1944, from Idaho-Maryland Mines [fol. 504] Corporation, to Henry W. Erickson.

Mr. Barnes: Subject to verification, no objection.

The Commissioner: It is admitted.

(Said telegram dated 3-1-44 from Idaho-Maryland to Mr. Erickson, was marked Plaintiff's Exhibit 114, admitted in evidence, and made a part of this record)

Mr. Herrington: Plaintiff's Exhibit 115 is introduced in evidence, a letter dated March 3, 1944, from A. W. Motley to Henry W. Erickson.

Mr. Barnes: No objection.

The Commissioner: It is admitted.

(Said letter, dated 3-3-44, from Mr. Motley to Mr. Erickson, was marked Plaintiff's Exhibit No. 115, admitted in evidence and made a part of this record)

Mr. Herrington: I next introduce in evidence Plaintiff's Exhibit No. 116, which appears to be an appeals work and clearance form of the War Production Board acting upon the appeal of Idaho-Maryland Mines Corporation.

Mr. Barnes: Yes.

The Commissioner: Without objection it may be received.

(Said appeals work and clearance form was marked [fol. 505] Plaintiff's Exhibit No. 116, admitted in evidence, and made a part of this record)

Mr. Barnes: Your Honor, in that connection, there is one point I would like to emphasize here, that I made available to plaintiff's counsel the entire appeal file of the War Production Board which includes certain interoffice communications, one or two of which have already been received, and the basic working papers, and that is what is included in the documents the plaintiffs here offer.

Some of them are not documents that passed between the parties, but include the recommendations and the action taken within the Board on these appeals.

The Commissioner: Yes.

Mr. Herrington: I next introduce in evidence Plaintiff's Exhibit No. 117, a letter dated March 10, 1944, to Idaho-Maryland Mines Corporation, from the War Production Board, apparently signed by J. Joseph Whelan.

Mr. Barnes: Subject to verification, I have no objection.

The Commissioner: It is admitted.

(Said letter dated 3-10-44 from WPB to Idaho-Maryland, was marked Plaintiff's Exhibit 117, admitted in evidence, and made a part of this record).

[fol. 506] Mr. Herrington: Plaintiff will next offer in evidence a letter dated March 24, 1944, addressed to the Mining Division of the War Production Board by E. L. Oliver, president of the Idaho-Maryland Mines Corporation as Exhibit No. 118.

The Commissioner: Do you have any question about this?

Mr. Barnes: Just one moment.

The Commissioner: I thought you were objecting to something.

Mr. Barnes: Your Honor, there is on the bottom of this copy a note addressed to a Mr. Keating, otherwise unidentified, that does not appear on the original letter that was sent to the War Production Board.

Mr. Herrington: This is apparently a copy, and I would suggest for the purpose of the record the note be deemed deleted.

The Commissioner: All right, it may be received.

(Said letter dated 3-24-44 from Idaho-Maryland to WPB Mining Division, was marked Plaintiff's Exhibit No. 118, admitted in evidence and made a part of this record)

Mr. Herrington: I next introduce in evidence Plaintiff's Exhibit No. 119, a letter dated March 31, 1944, from Mr. [fol. 507] Knoizen to Mr. Oliver, president of Idaho-Maryland Mines Corporation.

Mr. Barnes: No objection.

The Commissioner: It is admitted.

(Said letter dated 3-31-44 from Mr. Knoizen to Mr. Oliver, was marked Plaintiff's Exhibit 119, admitted in evidence and made a part of this record)

Mr. Herrington: Plaintiff will next introduce in evidence Plaintiff's Exhibit No. 120, a letter dated March 24, 1944, addressed to S. W. Christianson, Deputy Administrator, War Production Board, from Idaho-Maryland Mines Corporation.

Mr. Barnes: No objection.

The Commissioner: It is admitted.

(Said letter dated 3-24-44 from Idaho-Maryland to Mr. Christianson, was marked Plaintiff's Exhibit 120, admitted in evidence and made a part of this record)

Mr. Herrington: Plaintiff next introduces in evidence Plaintiff's Exhibit No. 121, a letter dated November 30, 1944, from S. W. Christianson to Neil O'Donnell, general manager of Idaho-Maryland Mines Corporation.

Mr. Barnes: No objection.

[fol. 508] The Commissioner: It is admitted.

(Said letter dated 11-30-44 from Mr. Christianson to Mr. O'Donnell, was marked Plaintiff's Exhibit 121, admitted in evidence, and made a part of this record)

Mr. Herrington: Plaintiff will next introduce in evidence Plaintiff's Exhibit 122, a letter dated December 12, 1944, from Neil O'Donnell, general manager of Idaho-Maryland Mines Corporation, to S. W. Christianson of the War Production Board.

Mr. Barnes: No objection.

The Commissioner: It is admitted.

(Said letter dated 12-12-44 from Mr. O'Donnell to Mr. Christianson, was marked Plaintiff's Exhibit 122, admitted in evidence, and made a part of this record)

Mr. Herrington: I next introduce Plaintiff's Exhibit No. 123, a letter dated December 12, 1944, addressed to S. W. Christianson by Neil O'Donnell, general manager of the Idaho-Maryland Mines Corporation.

Mr. Barnes: No objection.

The Commissioner: It is admitted.

(Said letter dated 12-12-44 from Mr. O'Donnell to Mr. [fol. 509] Christianson, was marked Plaintiff's Exhibit 123, admitted in evidence and made a part of this record)

Mr. Herrington: Off the record.

(Here followed discussion off the record)

Mr. Herrington: Perhaps, your Honor, for the purposes of identification, rather than as evidence at this time, there should be introduced in evidence, or introduced as exhibits on behalf of Idaho-Maryland Mines Corporation, and appropriately marked for identification, some photographs

that were taken some time after order L-208 went into effect, and which show the effects of the lack of maintenance and the inability of the company to maintain its mine, and the effect upon the underground workings.

Those may become important at a later date, but I think for identification I would like to introduce them all at this time and have them so marked.

The Commissioner: That is a little confusing. Do you merely want them marked for identification or are you offering them in evidence?

Mr. Herrington: I have no way of identifying them at the present time until I have a witness here from Idaho-Maryland, your Honor. They were furnished to me by the courtesy of Mr. Barnes. They are marked on the back as Idaho-Maryland and there are certain dates put on there [fol. 510] in pen.

These are the only identifications that appear on the documents themselves.

Mr. Barnes: Your Honor, there is a collateral problem here in the file that came to me. My recollection is that there were two different letters that file—you may recall this, too, Mr. Herrington—that refer to the transmittal of photographs. It is impossible, from examining the documents, to know which group was transmitted at which time, and which ones are referred to at any time.

And there will have to be, as far as I am concerned, some further identification of them.

I have no objection to having them marked at this time for identification as the documents that came from the War Production Board appeal file, but there will have to be some further testimony with respect to what they portray, and when they were taken, and things of that type.

The Commissioner: Well, of course, you can ask the reporter to mark them, but if you are offering them in evidence, of course——

Mr. Herrington: I think Mr. Barnes would be entitled to know exactly when they arrived and how they are referred to, but possibly through testimony of a witness from Idaho-Maryland, they can be identified.

The Commissioner: The reporter will mark them.

[fol. 511] Mr. Herrington: I would like to introduce all of the photographs——

The Commissioner: If you are introducing them, you are offering them in evidence.

Mr. Herrington: I am offering them for identification.

The Commissioner: All right.

Mr. Herrington: There is an identifying number on the back of each one of these. It may be that through those numbers we can identify them. I don't know who put the numbers on.

The Commissioner: As long as they have numbers so that there are no duplications, we do not need to further number them.

Mr. Barnes: In that case the record should probably indicate what those numbers are, sir.

Mr. Herrington: Off the record.

(Here followed discussion off the record)

(Said photographs were marked for identification as Plaintiff's Exhibits Nos. 124-A through 124-S).

Mr. Barnes: In the haste in which those documents were introduced, I have not been able to check against the WPB appeals file there. If it should develop that there are additional documents in the WPB appeals file which are pertinent, do you have objection to my offering them without [fol. 512] further identification?

Mr. Herrington: No, I would be delighted if you would, Mr. Barnes. It would be very helpful.

Mr. Rigney: I have discovered that I would like to put in two additional exhibits which I intended to offer.

By Mr. Rigney:

Q. Mr. Nelson, I show you Plaintiff's Exhibit 52 for identification, and ask you if you prepared this memorandum of April 30, 1943 and transmitted it to Mr. Howard I. Young?

A. I did.

Mr. Rigney: Plaintiff offers Exhibit No. 52 for identification in evidence, your Honor.

Mr. Barnes: Your Honor, that is set up as a comment or commentary on another document referred to in it. Do you intend to offer that?

Mr. Rigney: I am going to offer that also.

In other words, it refers to this next document. If this document is received, I then propose to offer this, or I will make a simultaneous offer if you have no objection.

Mr. Barnes: With that understanding, I have no objection.

The Commissioner: All right, it will be received.

(Said memorandum, dated 4-30-43, from Mr. Young to Dr. Wilbur Nelson, marked Plaintiff's Exhibit 52; admit-
[fol. 513] ted in evidence and made a part of this record)

Mr. Rigney: May this be marked now as the next numerical number, 125?

(Said document was marked for identification as Plaintiff's Exhibit No. 125)

By Mr. Rigney:

Q. Would you look at Plaintiff's Exhibit No. 125, Mr. Nelson, and tell us if this report of April 22, 1943, from Edward T. Dickinson, Jr., to William L. Batt, is the report to which your memorandum of April 30 refers?

A. It is.

Q. What was Mr. Dickinson's position with the War Production Board at that time?

A. He was executive director of the planning committee.

Q. Do you know, Mr. Nelson, whether or not Mr. Samuel Lipkowitz who has been referred to in the testimony here, is employed here in Washington now?

A. About a year ago I had occasion to call on a committee of Senator Johnson's——

Q. How about now, if you could tell us whether he is here at or about this time?

[fol. 514] A. He left their committee and went with the International Bank.

Q. Here in Washington?

A. Yes, but whether he is in Washington or in Iran, I do not know.

Mr. Barnes: He is in Washington.

The Commissioner: The record may be unclear on that exhibit 125. Was it offered?

Mr. Rigney: I think I should offer it now, your Honor, Plaintiff's Exhibit No. 125 for identification, being the report of April 22, 1943 from Edward T. Dickinson, Jr., to William L. Batt.

Mr. Barnes: I have no objection.

The Commissioner: It is admitted.

(Said memorandum dated 4-22-43 from Mr. Dickinson to Mr. Batt, marked Plaintiff's Exhibit 125, admitted in evidence, and made a part of this record)

By Mr. Barnes:

Q. Do you know whether or not Mr. Dickinson is working here in Washington?

A. I do not. I haven't seen him since I left the War Production Board.

The Commissioner: Is there any further direct?

[fol. 515] Mr. Rigney: No, your Honor.

Mr. Barnes: May I ask whether counsel for Central Eureka intends to offer an appeal file at this time?

Mr. Pittman: Not at this time. We have some documents and exhibits we will offer in evidence at a later time.

Mr. Barnes: We would like to find them for you.

Mr. Pittman: On the appeal, yes.

Mr. Herrington: May I ask Dr. Nelson a couple of questions?

Mr. Barnes: Certainly.

Cross-examination.

By Mr. Herrington:

Q. Did you know Errol MacBoyle?

A. I did.

Q. He was president of the Idaho-Maryland Mines Corporation in 1942?

A. He was.

Q. Was he in Washington, do you recall, on or about October 1, 1942?

A. As I recall it, Mr. MacBoyle was here at that time, and had an appointment at the Raleigh Hotel and spent several months here continuously.

Q. Did you have any discussion with him at that time?

A. I had numerous discussions with him.

Q. Do you recall the subject of those discussions?

[fol. 516] A. They all dealt with the Idaho-Maryland and the effect of a gold order closing it down.

Q. Was there any discussion at all with respect to the development of tungsten in the Idaho-Maryland Mine?

A. There was. I was shown samples of tungsten ore.

Q. Do you recall any of those discussions?

A. Just facts that on certain levels and at certain places you had found that you had considerable tungsten ore and that you would like to have had the opportunity of seeing if you could mine it.

Q. What, in your official capacity, had you to do with the development of tungsten at that time?

A. Nothing.

Q. Do you know whether or not the War Production Board was encouraging the production of tungsten?

A. Very definitely.

Q. Did Mr. MacBoyle have any discussion with you with respect to the development of tungsten in connection with the operation of the gold mine?

A. He did.

Q. What was the substance of those discussions, if you recall?

A. That he wanted to know what division of the War Production Board he should get in touch with to see if he could go forward in this matter. That was the Ferro Alloy [fol. 517] Division.

Q. Did you introduce him?

A. I did. And that was the man's name that I couldn't remember, it was Miles Smith.

Q. Were you present at any of the discussions?

A. I don't remember.

Q. Was Mr. MacBoyle present at the meeting that was held on October 1 when the mine operators were called to Washington?

A. It is my recollection he was.

Q. Do you recall any discussion that he may have had at the meeting?

A. No, except that he, as all the other operators, protested.

Q. Vehemently?

A. Vehemently.

Mr. Barnes: I object and move to strike that as being a conclusion on the part of the witness.

The Commissioner: It may be stricken.

By Mr. Herrington:

Q. Dr. Nelson, do you recall the letter of October 13, 1942, which was written by you to Idaho-Maryland Mines Corporation, and was introduced in evidence as Plaintiff's Exhibit No. 8, wherein you stated generally that a preference rating could not be recommended on the application [fol. 518] and that limitation order L-208 prohibited the further production of gold mining?

A. If I could refresh my memory with the document.

Q. Yes. (handing document to witness)

A. This is the same document that I saw earlier in the day.

Q. Yes.

A. Yes, I remember it.

Q. Was this more or less of a form letter, Dr. Nelson?

A. It was more or less a form letter.

Q. It was sent substantially in the same form to all other gold miners?

Mr. Barnes: I object as calling for a conclusion on the part of the witness.

The Commissioner: Overruled.

The Witness: I might say that I was very familiar with the preparation of that letter and with very minor modifications I know it was sent to the gold miners.

Mr. Herrington: Thank you.

The Commissioner: Are there any further questions from this side of the room?

(No response)

Cross-examination

By Mr. Barnes:

Q. Over what period of time was it that you said that [fol. 519] Mr. MacBoyle was in Washington?

A. He was here for several months prior to the closing of the gold mines in October.

Q. When did you first talk with him on the subject of his mine during that period?

A. I could not give you that date without refreshing my memory by looking at my diary, but I know that as soon as he arrived in Washington he called on me, and he saw me at least several times every week, from that date until L-208 was issued.

Q. It was in that period of time, was it, that the question of tungsten first came up?

A. It came up, I would say, at least a month before L-208 was issued.

Q. Now, at this meeting on October 1, that Mr. MacBoyle attended, do you recall his saying anything about tungsten at that time?

A. I do not.

Q. What did he tell you about tungsten in the mine when he discussed it with you? Did he tell you anything about the quantities of tungsten or whether it was commercially recoverable?

A. He said he thought it was commercially recoverable, and he wished to have the privilege of doing further exploration to prove whether or not it was. I saw numerous [fol. 520] samples of the gold ore containing tungsten mineral sheelite, which is a mineral that is very hard to recognize, except under flourescent light in the dark. It is very easy to overlook.

Q. Had Idaho-Maryland, to your knowledge, ever recovered any tungsten prior to that time?

A. They had not.

Q. If tungsten were available and in commercially recoverable quantities, would it normally be a valuable by-product?

A. It would.

Q. And after you introduced Mr. MacBoyle to Mr. Smith, did you have any further discussions with him on the tungsten question?

A. I have no recollection of anything further—with Mr. Smith, I meant.

Q. Yes. Did you talk to Mr. MacBoyle about the tungsten after that date?

A. Every time he saw me he generally brought it up.

Q. But you had no authority over it?

A. I had no authority.

Q. Now, you referred to the fact that you had done over the years consulting work in a number of states of the union.

A. Had done what?

Q. Consulting work.

[fol. 521] A. Yes, I have done consulting work in, I said, approximately twenty-five different states in the union.

Q. Has any of that ever been for gold mines?

A. Yes, I have made two private reports on gold mines, and several reports for the War Production people of additional gold mines.

Q. Now, your private reports, what was the nature of those reports on gold mines?

A. Well, they were, in one case, a detailed report on what additional development work should be done; how many faces should be worked so that the mine could operate profitably.

Q. What mine was that?

A. Jardine Mine, Jardine, Montana, six miles from Gardiner.

Q. What was the nature of your other report?

A. My other report was a report on the Surf Inlet Gold Mine on the Princess Royal Island, about seventy-five miles from Alaska in British Columbia. It was an abandoned mine and the new owner of the mine asked me to visit the property with them and make recommendations for additional drilling to see if the Mine could be reopened.

It was a purely geological report.

Q. Approxiately when were those two reports made?

A. Those two reports were made in the year 1945, after [fol. 522] I left the War Production Board and before I resumed my teaching duties at the University of Virginia.

Q. Had you done any work, consulting work, with respect to gold mines prior to your employment with the War Production Board?

A. Well, I don't know whether you would call it much work, but I had an attorney in Washington who called me up and asked me to examine a gold mine for his clients in Virginia that was reported to have eight hundred dollars worth of gold to the ton.

I made an examination. It wasn't a mine; there was just-

trenches about eight feet deep, and the best I could get was eighty cents to the ton.

I have done a considerable amount of work of that type, if you would call that examination of gold mines.

Q. Now, I take it that, going back to the initial issuance of P-56, that applied to all mines; is that correct?

A. The September 17 order which was never administered did, but the first order that was administered was the September 22 amendment.

Q. What mines were not covered by it?

A. All placer gold mines.

Q. Did it cover all other metallic and nonmetallic mines?

A. And coal.

[fol. 523] Q. And coal?

A. Yes, sir.

By the Commissioner:

Q. Was there any reason for deletion of the placer gold mines, as such, from that?

A. It already seemed to be the policy of the planners and——

Mr. Barnes: Your Honor, I object to this type of statement on the part of the witness.

The Witness: All right, I will say it was the policy of Mr. Batt, and Mr. Donald Nelson's assistants, Mr. A. C. Hill, whom I talked to, that resulted in this clause being put in.

By Mr. Barnes:

Q. Did Mr. Batt speak to you at sometime during that period between September 17 and September 22, 1941, on that subject?

A. I don't think he did, but Mr. Hill did. Mr. Hill was one of Donald Nelson's assistants.

Q. Do you know whether Mr. Batt was even employed in the Office of Production Management at that time?

A. I am very certain he was. I remember very distinctly Mr. Hill called me in and said that I had drawn the order with too high ratings, and that the placer gold clause should be placed in.

[fol. 524] And then I went in to see Donald Nelson and he said that Mr. Hill had stated the position correctly.

Q. Did you talk to anybody else about it at that time?

A. I do not remember.

Q. So that P-56 applied to all mines other than placer gold mines; is that correct?

A. When it was amended on September 22.

Q. How long after that was it that you had the meeting of these so-called coordinators of mines, state coordinators?

Mr. Rigney: I am sorry, I did not get that question. Could I have it read?

(The pending question, as above recorded, was read by the reporter)

The Witness: As soon as P-56 was turned over to the Mining Division to administer, and approval was received from Donald Nelson to send wires out to the governors of all of the states and territories, wires were sent out immediately and replies received, and a meeting was requested in Washington, I believe in either forty-eight or seventy-two hours.

By Mr. Barnes:

Q. Well, how long was that after the date of the issuance of the order, now, September 22?

A. I would say somewhere of the magnitude of about a week. I think the records of the War Production Board will show it accurately, the date of that meeting.

[fol. 525] Q. When was it that you began issuing serial numbers to the mines?

A. As soon as we were given the names of mines which we knew deserved serial numbers. We did not have to wait to have the coordinator from Utah to come in to give Bingham Canyon a serial number. We had men in the Mining Division in charge of the metal mines that immediately gave us a number, probably of one hundred or more mines, that were active in the war effort.

Q. Did you issue those serial numbers without application on the part of the mines concerned?

A. Where the Mineral Branch handling the product requested immediate issuance, we issued it; otherwise we

waited for the application to come from the mine operator.

Q. What do you mean by the mineral branch handling the product? By that do you mean the copper division or the copper branch?

A. The copper branch, for instance, said, "You issue Bingham Canyon a serial number. You issue the five big copper mines in Arizona and issue Anaconda at Butte."

All of them were well known and many others were well known.

I might say the first people that came in to get a serial number were the representatives of the salt industry.

Q. Were they included within the scope of P-56?

[fol. 526] A. Yes. Every mine in the United States, metallic, nonmetallic, or coal, that entered into the war effort was included.

Q. Incidentally, I noticed in some of these documents that you identified, Mr. Nelson, the name of John Gregg. Who was he, do you recall?

A. John Gregg was the chairman of the committee through which all P orders and M orders had to clear, and you appeared before him with your order as you had drawn it and then he and his committee criticized you for anything they could find in the order they did not like, and also told you the ratings were too high, and then they had a meeting after you left and made recommendations to Mr. Matthison.

Q. Was that the committee that subsequently became known more formally as the Clearance Committee?

A. I think that was the name it finally received.

Q. At a later date the chairmanship changed, and I think Mr. Phraner was chairman, wasn't he?

A. There were at least four people that were chairmen of that committee that I can remember. I cannot remember them by name, but I could recognize them if I saw them.

Q. Do you know who appointed that committee, or to whom it was responsible?

A. I have no knowledge of that. I knew its functions.

Q. There was also reference here to the appeals board. [fol. 527] What was its function as you knew it?

A. What?

Q. The appeals board.

A. The appeals board of the War Production Board?

Q. That is right.

A. The Appeals Board of the War Production Board was a board to which people appealed from orders where they felt the order was harmful to them or to their company, I should say.

Q. Did the administrators of the orders have any authority to grant appeals?

A. Are you referring to L-208?

Q. Did you have any personal contact with any other orders?

A. No, sir.

Q. I will limit it to L-208.

Did the administrator of the order have any authority to grant appeals?

A. At the time L-208 was issued and assigned to the Mining Branch, the War Production Board set up a special appeals board to handle all appeals, because I suppose they felt the general appeals board did not have the mining background.

That appeals board was composed of an attorney, myself, and a labor man, Allen Buchanan.

[fol. 528] Q. Who set that committee up, do you recall?

A. Fred Eaton had a great deal to do with it, but where the authority came from, I do not know. The lawyer was Munny Boyd.

Q. T. Munford Boyd?

A. We always called him Munny Boyd.

The Commissioner: We will recess now until two o'clock.

(Thereupon, at 12:30 o'clock p. m., a recess was taken in the hearing until two o'clock p. m., same day.)

[fol. 529] AFTERNOON SESSION

(The hearing was resumed, at the time above-mentioned, pursuant to the recess previously taken.)

Mr. Harold B. Alderson, a reporter, was thereupon sworn by the Commissioner to well and truly take down and transcribe the questions propounded to and the answers given by the witnesses, and to do all other things required of the reporter.

The Commissioner: You may proceed.

WILBUR A. NELSON, resumed the witness stand and was examined and testified as follows:

Cross-examination, (resumed)

By Mr. Barnes:

Q. When we recessed, I believe we were talking about the appeal procedure under L-208, and you were referring to this special Appeal Board or Panel which was established under that order.

A. That special panel was established as soon as L-208 was issued.

Q. Did you receive a memorandum of any type from any of your superiors directing you to establish that panel or authorizing you to act?

A. I have nothing that I remember in writing, but we had authorization and we were told to meet in Judge Boyd's office.

[fol. 530] Q. Who authorized you?

A. I think it was Mr. Eaton.

Q. Now, there has been some reference here, for example, to a hearing which was held on the Homestake appeal. Was that held before that group?

A. It was not. Our group was only in existence for a few weeks, and it soon became evident that it was taking up about 75 per cent of the time of each one of us, so that we were unable to perform the duties that we had regularly assigned to us. So all of the appeals were turned over then to the General Appeals Board to handle.

Q. Were they first processed by the administrator of the order in any way?

A. Not after they were turned over to the General Appeals Board.

Q. At any time while you were connected with the Mining Division after L-208 went into effect, did the administrator of the order have any authority to act on appeals other than this Appeals Panel?

A. He never had any authority. I was called on by the Chairman of the General Appeals Board very often to appear before them to present pertinent facts.

Q. Now, there has been reference here and you have identified minutes of the Interdepartmental Committee on

Non-Ferrous Metals, for example. Who organized that committee, do you know?

[fol. 531] A. As far as I know, Mr. H. O. King was responsible for the organization of that group.

Q. And Mr. King was then head of the Copper Branch or Copper Division, is that correct?

A. As far as I remember, that was the only position he ever occupied. The meetings were held in his conference room, next to his office.

Q. And as head of the Copper Branch, he was on a parity with you?

A. Yes.

Q. And then there was also an Inter-branch, subsequently the Inter-division Committee. Was that non-ferrous metals?

A. No, that was just a committee made up of the chief or head of each one of the branches, later divisions, which reported to A. I. Henderson. We all met together about once a week to discuss interrelated problems.

Q. Who organized that committee, do you know?

A. I think Mr. Henderson organized it at my request.

Q. And to whom did that committee report? Did it report through any normal channels?

A. The minutes were drawn up and as a rule were forwarded first to Mr. Henderson. At certain times when that committee was meeting, the members of the commit-
[fol. 532] tee passed resolutions and authorized me specifically to present them to certain persons.

Q. And you did that if they so authorized you?

A. I did.

Q. Now, turning to a period, let us say, a period about January 1, 1942, to take a starting point, what was the situation with respect to priorities for gold mines on that date?

A. The last amendment to P-56 before January was, I think, made on December 30 or somewhere close to that, and it only added a few items to the list which was attached to the P-56 order. After January 1? Is that what you wish me to tell you?

Q. Yes, or just about January 1.

A. That was the situation on January 1.

Q. So that everybody except the placer mine got an A-8

under P-56 for maintenance and repair parts, is that correct?

A. That is correct.

Q. What about the placer mines, what was their situation?

A. They worked under the General Maintenance Order, which was at that time either P-22 or 100, I don't remember whether they swapped places, which carried an A-10 rating.

Q. As of that date, approximately January 1, 1942, do [fol. 533] you recall how an A-8 or A-10 rated in the general procurement of alloy steels?

A. Well, an A-8, at the 1st of January, 1942, still was a fair rating for repair parts. Of course, alloy steel was the toughest of all items to get, and sometimes people had to be given special treatment if they couldn't apply the general rating.

Q. Well, now, let us suppose that a mine operator——

By the Commissioner:

Q. Let me ask this question: When you say "it didn't apply," do you mean that they weren't able to secure the delivery under such a rating?

A. Under A-8, you mean?

Q. Yes.

A. Yes.

Q. That is why the special treatment was required?

A. Yes.

Q. All right.

By Mr. Barnes:

Q. How would they go about getting special treatment?

A. Well, we had the PD-1 forms that could be used.

Q. And it was PD-1-A, wasn't it?

A. It varied so often that you would have to give me a document to let me refresh my memory.

Q. But in any event, they would come in with an appli- [fols. 534-535] cation for a special rating for a special part, is that correct?

A. Correct.

Q. How would that be processed if it were a mine which was making the application?

A. Well, I had a division in the Mining Branch that was set up just to handle those particular ratings, and I paid very little attention to how they were handled because it was turned over to that section chief.

Q. But in any event, if a mine came in on a PD-1 or a PD-1-A for a special priority, he would go to the Mining Branch?

A. Yes, sir.

Q. And go to this Priority Section?

A. Yes.

Q. What happened on the processing after that, you are not sure about?

A. We had an expediter who attempted to expedite items, and if it was a steel item he went over to the Steel Section and got with the steel expediter. But the details of it, as head of the branch, I did not worry about.

Q. Had you ever heard of this organization, the Joint Economic Committee of Canada and the United States, during this period 1941-1942?

A. Yes, sir, I had heard of it a number of times.

[fol. 536] Q. In what connection?

A. In connection with the export of mining machinery for gold.

Q. Was that handled—or wasn't there a so-called Canadian Branch in the War Production Board?

A. Not that I know of. My recollection is that everything relating to foreign mines was specifically the function of Mr. Batt. When anything relating to foreign mines came up, we would contact Mr. Batt, who was Vice Chairman, and he was the person who handled all such matters.

Q. And it is your recollection that that was the way—did you hear of this organization through Mr. Batt, then?

A. No. It was general knowledge all throughout the War Production Board, of this Joint Committee of Canada and the United States.

Q. Now, you identified here, Professor Nelson, a memorandum you wrote to Donald Nelson on January 20, 1942, which related to problems in the mining industry.

A. Related to what?

Q. Problems of the mining industry.

A. Is that the 9-page memorandum?

Q. I think it is 9 pages, yes.

A. Yes, sir.

Q. Was that a report that he had requested of you, or was that something that you were volunteering?

[fol. 537] A. I had seen Mr. Nelson a few days before that, and asked him if I could prepare such a report for him, as he said he would like to familiarize himself with all of the needs. I was seeing him because we were having trouble in priorities, and so this memorandum was written to, first, show from my viewpoint how mining fitted into agriculture and transportation and other war efforts——

Q. In other words, to show the relative importance of mining?

A. The relative importance of mining, and then to go into details in regard to mining problems.

Q. Incidentally, this memorandum was written within a matter of just a few days after the organization of the War Production Board and Mr. Nelson's appointment as Chairman?

A. Very shortly after that, and one of the first times that I had the pleasure of having an appointment with him.

Q. Prior to that time, Mr. Nelson had been the Director of Priorities of OPM?

A. Yes. I met him very often in the former position, but I had not had an opportunity to meet him in his new position.

Q. The document we are referring to is Plaintiffs' Exhibit 70.

A. Yes.

Q. On page 7 of this memorandum, the sentence appears:

[fol. 538] "There are other types of mining besides gold which may also have to be given harsh treatment in future months."

To what were you referring when you made that statement?

The Commissioner: Do you want to see the memo?

The Witness: I would like to.

The Commissioner: You may see it.

(Plaintiffs' Exhibit No. 70 handed to the witness.)

The Witness: That was page 7, was it?

By Mr. Barnes:

Q. Yes, on page 7.

A. I don't see it on page 7, sir.

Mr. Rigney: It is on the bottom of the page.

The Witness: Well, that was the last paragraph in connection with a discussion of what should be the policy which we should have towards foreign gold mines. I classified domestic gold mines as a different mining group from foreign gold mines, but in addition to that there may have been some non-metallic mines that could have been readily curtailed.

By Mr. Barnes:

Q. What type of non-metallic mines do you have in mind there?

A. Limestone quarries, sandstone quarries, and similar things.

Q. Although the products of those would be used largely [fol. 539] in construction, is that correct?

A. That is right.

Q. Metallurgically speaking, what were the uses of gold during this particular period as of the date you were writing this memorandum, for example?

A. You say metallurgically speaking?

Q. I am trying to avoid getting into the possible economic uses of gold. Physically, what were its uses? That might be a better way of phrasing it.

A. I wouldn't know how to answer the metallurgical question.

Q. Physically, what were the uses of gold?

A. Well, there are uses commonly known. It is used in a great many laboratories for special laboratory purposes, where no other metal has the qualities that gold has.

Q. Can you name some of those?

A. Well, I know the physicists use gold wire for certain purposes, and I am not enough of a physicist to know what these purposes are. I know that it is used in dentistry; and I know it is used in jewelry of all types; and it is very desirable sometimes to have watches that have nothing in them that will magnetize, and gold can be used as one of the elements in such watches, for the cases.

The most spectacular use of gold during World War II that I know of was when General Mark Clark carried a lot [fol. 540] of Canadian gold coins to North Africa to use in making the way easy for our troops to invade Africa.

Q. As far as this country was concerned, gold could not be used for coinage at that time?

A. No. So we had to go to Canada. But I think that that had a very definite and remarkably good war use.

All of our aviators flying in North Africa were always given several gold coins to be used if their plane went down and they had to get back to civilization.

Q. Do you have any idea what the total quantity of gold used for that purpose was during the war?

A. Naturally, I do not.

Q. Do you have any idea what the total requirement of gold in laboratories was at any time?

A. I do not.

Q. Do you know what the total requirement for gold in dentures was at any time?

A. I do not.

Q. Incidentally, there is quite a bit of gold produced, I take it, in mines which are not predominantly gold mines, is that correct?

A. It is.

Q. Were those mines, to your knowledge, ever shut down during the war?

A. None of the large mines, generally copper mines that [fol. 541] had gold as a by-product, were shut down. There were also many other mines carrying gold as a by-product.

Q. Does that mean that gold is generaly present in the ores extracted by those mines, when you speak of it as a by-product?

A. It depends a great deal upon what metagonetic mining province the mine is located as to the assemblage of metals in a particular ore.

Q. But frequently, you will find more than one metal in an ore, is that right?

A. Frequently you will.

Q. Is it always economically feasible to extract all of the metals from an ore that are present in it?

A. I am not a metallurgist and I can't answer that question.

Q. That has never come within the province of any of your consulting work?

A. It has not.

Q. Referring to the amendment to P-56 of March 2, 1942, how did that affect the priority situation with respect to gold mines that you have described as existing on about January 1st?

A. The March 2 amendment had as a first clause, under mining enterprise, any plant actually engaged in extractio. by surface, open pit or underground methods or in the [fol. 542] beneficiation, concentration or preparation for shipment of the products of mining activity but not including any plant more that 30 percent of the production of which, in dollar value, consists of gold and or silver. The 30 percent clause was the amendment made on March 2.

Q. And with respect to a mine which was producing ore which produced or had more than 30 percent of its output consist of gold, let me put it that way, what was its situation with respect to priorities immediately following the issuance of P-56?

A. We notified them that their serial number was withdrawn, but as this clause was drawn by a non-mining man, it affected mines such as Bingham Canyon and other of our greatest copper producers in the United States. So at the time that we withdrew their serial number, we notified them we were reinstating it, due to the importance of the war minerals that they were producing.

Q. Did you do that on representation from the Mineral Divisions involved?

A. We did it on representation from the Mineral Divisions involved. In some cases when we revoked the order, we said, "If you are producing appreciable amounts of strategic minerals, notify us, giving proof, and your number will be reinstated."

[fol. 543] Q. Now, do you have any recollection as to how many serial numbers were revoked under that provision, regardless of the number subsequently reinstated?

A. I have no definite remembrance except that there was an extremely large number, as most of them should never have been revoked.

Q. Well, now, what proportion of them were reinstated?

A. Practically all of them.

Q. Well, let us take Homestake as an illustration. Was the Homestake serial number reinstated?

A. It was taken away on March 2 and was never reinstated.

Q. What about Idaho-Maryland? Do you know about that?

A. The same thing applied to Idaho-Maryland.

Q. What about Central Eureka? What do you know about it?

A. For some reason I have no recollection of Central Eureka.

Q. What about Bald Mountain? Do you know about it?

A. Bald Mountain is just a name to me.

Q. Does Oro Fina mean anything to you?

A. I have heard the name.

Q. Do you know whether the serial number was revoked or not?

A. No, I do not, but it had to be revoked because it [fol. 544] was a gold producer.

Q. Do you know whether it was reinstated or not?

A. If it was revoked, and I said it was, it was not reinstated.

Q. Well, you said that most of them were reinstated, so now which ones were reinstated then?

A. Well, it would be easier to say which were not reinstated.

Q. All right, which were not reinstated?

A. May I answer it that way?

Q. Yes.

A. The large gold mining companies that it was common knowledge and nothing else, such as Homestake, Cripple Creek, Idaho-Maryland, and the other Grass Valley mines that I can't think of the names right now, and all of the mines on the mother lode in California—their serial numbers were taken away.

Q. And the same being true with respect to the Alaska mines that were not placer mines?

A. The Alaska mine numbers were taken away. We then called on the mineral branches to tell us if they wanted any of these numbers reinstated due to the fact that they produced needed amounts of strategic minerals. Those strategic minerals in one case was arsenic, and in most cases

it was copper, lead or zinc, or maybe some molybdenum. [fol. 545] Furthermore, we were then contacted—and we didn't go to them but we were contacted by representatives of the large smelter companies operating in the West—and they said, "How are we going to continue to operate our smelters when you have shut down the mines from which we get our silicious ore, our fluxing ore, and our diluents?" We asked them to furnish us complete lists of the mines from which they received these two types of fluxing materials, the tonnage received each month, and a complete analysis of that tonnage.

We went over those lists with the smelting companies' representatives and where those mines produced several hundred tons a month we reinstated their numbers; and where they produced five, ten or fifteen tons a month, which was the case of a few of them, we said, "Just increase the output from the other mine and we will not give those numbers back."

Q. Now, these smelters were engaged in recovering just gold?

A. No, they were the great copper smelters and the lead smelters of the West. The added fluxing material they needed to balance their charge—of which I know only the general terms because I said I am not a metallurgist; I know what goes in but I don't know the details—was such that if they could get a fluxing ore, a quartz ore, containing a dollar's worth of gold, they would buy that in preference to a fluxing ore containing fifty cents worth of gold because it permitted [fol. 546] them to probably smelt larger amounts of ores not having quite as high an average or content than otherwise.

In other words, the more gold they could get out of the fluxing ore, the lower the grade of the copper and lead ore was that they could smelt.

Q. But in their smelting process they did recover the gold along with the copper and lead?

A. That is why they wanted it; they definitely recovered it.

Q. Now, that 30 per cent clause which was removed from P-56 by the amendment of May 15, 1942, was it not?

A. It was.

Q. What happened with respect to the serial numbers of the gold mines then?

A. They were not given back to them.

Q. Did any of them make reapplication for serial numbers?

A. I do not remember. The statement was made that there would be no charge in the operation of P-56 when the 30 per cent clause was taken out.

Q. Who made that statement?

A. I was told to make that statement by Mr. Knowlson, in conference with either Mr. Batt or Mr. Nelson.

Q. Where and when did you make the statement?

A. I made the statement the day of the last meeting [fol. 547] with Senator McCarran's committee in the Capitol at which time they were going to demand that the clause be withdrawn, I think, by Congressional action if they had the authority, but Donald Nelson told me to please open the meeting by telling them that we would withdraw the clause.

Q. You withdrew the clause but didn't change the administration of the order?

A. And we told them that at that meeting.

Q. And that made Senator McCarran happy, did it?

A. He said that the psychological effect of this 30 per cent clause was extremely harmful throughout the West and it would help them a great deal to have it taken out. I can't answer as to whether or not it made him happy.

Q. You told him you were not going to reinstate any serial numbers to gold mines?

A. Definitely.

Q. And you did it?

A. We did it at the meeting in the presence of the senators and Mr. Knowlson.

Q. Now, after the institution or after the 30 per cent clause had first been put in P-56, you had these meetings you refer to in Reno and Denver, did you not?

A. That was after the clause was put in?

Q. That is right.

A. There was such a furor in the West that Mr. Batt, [fol. 548] I think it was, told me, well he handed me airplane reservation and said, "Go out there and talk to the people."

Q. Were you present at the hearings or any of the pre-

liminary hearings of Senator McCarran's committee prior to the issuance of the amendment of May 15?

A. You mean the meeting in which I made the statement, the last day of the meeting?

Q. Prior to that day, prior to the last day of the hearings, had you been present?

A. I was at every meeting that committee held, and it lasted for a number of days.

Q. Did any of the governors of the western states to whom you had spoken in either Reno or Denver appear before Senator McCarran's committee?

A. I would have to refresh my memory with the minutes of those meetings.

Q. You don't have any independent recollection now?

A. I don't have any recollection now, but I would have to refresh my memory.

Mr. Rigney: These are the hearings of May, 1942?

Mr. Barnes: Right.

By Mr. Barnes:

Q. In your testimony you described these two meetings in Reno and Denver as being very large public meetings, is that correct?

[fol. 549] A. It is. The meeting at Reno was a meeting called by the Secretary of the Interior, Ickes, on some of his large progams, and we were asked to attach our program on to his, and so it was an extremely large meeting.

Q. Well, now, in your memorandum to Mr. A. I. Henderson, on March 16, Plaintiffs' Exhibit No. 72, you list only five governors and one state geologist as having been present at that meeting.

A. Well, I would like to see that exhibit, if I may.

(The document was handed to the witness.)

The Witness: I also mentioned that Mr. Kelly represented the governor of New Mexico, and the large group of mine operators from California stated they represented the governor of California.

By Mr. Barnes:

Q. How large a group of mine operators was that?

A. I think there were between five and ten.

Q. So that makes a total of fifteen or sixteen people?

A. They were the people that were on the platform and talked and the audience was as many people as could jam the McKay Auditorium.

Q. Did you make your speech then to the ten or fifteen people on the platform or did you make your speech to the audience who were there?

A. Well, I have always talked to my audiences.

[fol. 550] Q. Did you indicate to Mr. Nelson that this had been a public speech rather than a discussion with the small group that you named?

A. This was definitely a public meeting open to anyone who wished to attend.

Q. Did you indicate that in that memorandum?

A. Whether I had indicated it in a memorandum or not, Mr. Henderson knew that it was that type of a meeting.

Q. How did he know that?

A. Well, I had personal visits with him on my return—and this is just for the record.

Q. Professor Nelson, showing you Plaintiffs' Exhibit No. 74, was it customary to sign some document of this general type, perhaps differing in form from time to time with respect to the issuance of each order with which you had any contact in the War Production Board?

A. Yes, sir. This is the SEC-4 form used at that particular time which was required to be filled in when any order was being promulgated, or whether any amendment to an order was being promulgated, and such a promulgation had to be started by the person in charge of the branch or division which would enforce or handle that order. It is customary for the chief of the branch to place his signature and the date on which he placed it on this order, and to be followed by the signature of his priority specialist.

[fol. 551] Q. Is this your signature appearing on this document here?

A. It is not.

Q. Whose signature is that, do you know?

A. I never worte that; that is not my signature. You can compare it, too. It is nothing like my signature.

Q. Do you recognize the handwriting at all?

A. Well, I am not a handwriting expert.

Q. I know.

Mr. Rigney: May the record indicate what the document is?

Mr. Barnes: I will have it marked.

By Mr. Barnes:

Q. Have you ever seen handwriting similar to that on any of your staff in the War Production Board?

A. Well, it is something that looks like handwriting that I have seen, but I am not going to testify as to what it is. It is definitely not my signature. I didn't know that that document existed while I was with the War Production Board.

Mr. Barnes: Your Honor, I would like to have the document I have just shown the witness marked as Defendant's Exhibit No. 2 for identification. This is the form that was used on the issuance of L-208. It has no heading on the top of the form at all. It says, "Subject of Order—Gold [fol. 552] Mining, No. L-208, Branch Mining," and then opposite the word "New" there is an "X," and under "See brief summary of action recommended," the statement is inserted that attached order be issued by the Director General for Operations, and it bears the signature Wilbur A. Nelson and the signature Frederick M. Eaton, the signature J. H. Holland, and the signature J. A. Krug.

Mr. Rigney: I think the record should reflect that it bears the name Wilbur A. Nelson, but the witness has denied that he signed it.

The Commissioner: That is in the record.

Do you intend to offer that document?

Mr. Barnes: I am not offering it at the moment. It will be offered later on.

The Commissioner: All right.

(Said document was marked for identification as Defendant's Exhibit No. 2).

By Mr. Barnes:

Q. Let me show you this document which has been marked as Defendant's Exhibit No. 3 for identification and ask you whether that is your signature that appears on there.

A. This is my signature, made on the 13th of November, 1942.

Q. And what does that relate to?

A. Gold mining, L-208.

Q. Did that become known as Amendment No. 1 to that order?

[fol. 553] A. It says amendment, and I see nothing to show that it is the Amendment No. 1.

Q. Do you recall how many amendments there were to L-208?

A. I do not.

Q. Do you see references made also to see attached memorandum under the heading "C", and do you recognize the material digested there as being the substance of an amendment to L-208?

A. I remember this freezing provision that is in this amendment.

OFFERS IN EVIDENCE

Mr. Barnes: I would like to offer this in evidence, Your Honor, as Exhibit No. 3.

Mr. Rigney: I don't suppose you recall at this time, Professor Nelson, whether the summary here was the paper attached to this document at the time you signed it in 1942.

The Witness: The only thing I remember is that there was an amendment at some time added to L-208, freezing the selling of machinery from shutdown mines.

Mr. Rigney: I have no objection.

The Commissioner: Without objection, it may be received.

(Said document, marked "Defendant's Exhibit No. 3," admitted in evidence and made a part of this record.)

The Witness: Might I ask the date of that?

[fol. 554] (The document was handed to the witness.)

The Witness: It seems to have been issued on the ninth.

By Mr. Barnes:

Q. When did it first come to your attention that the War Production Board files contained a form purporting to bear your signature relating to the issuance of L-208 that I showed you and has been marked as Defendant's Exhibit No. 2 for identification?

A. Within the last week.

Q. Who showed it to you?

A. The attorney for Homestake.

Q. Do you recall when?

A. Not definitely.

Q. When?

A. Either Friday or Saturday night in their apartment at the Shoreham.

Q. And they showed you what? A photostatic copy of a document?

A. Yes, it is my recollection it was a photostatic copy.

Q. Did you have a secretary whose initials were M. H. S. at that time?

A. My secretary all of the time I was chief of the mining branch was Miss Meta Baker.

Q. Did you have an assistant with those initials?

[fol. 555] A. I don't remember.

Q. Let me show you this document which appears to have your initials affixed to it, and underneath it the initials which I decipher as being M. H. S.

A. Well, that is Marcellus Stow who was the deputy director of the Mining Division and he signed my initials and then showed that he had signed it by putting his initials under it.

Q. Is the same thing true with respect to this document that I am showing you?

A. The same thing is true. That was signed by Marcellus Stow, with his initials to show that he signed it.

Mr. Barnes: I would like to offer these two documents as Exhibits Nos. 4 and 5.

The Witness: May I see the dates of those, please?

(The documents were handed to the witness.)

Mr. Rigney: What is the purpose of the offer here, Mr. Barnes? That might help us in coming to an answer.

Mr. Barnes: Among other things, to get some additional samples of Mr. Stow's handwriting here on the signature of Dr. Nelson's name.

Mr. Rigney: If it is offered only as a specimen of handwriting, we have no objection to either of these two documents if that is the limited purpose of the offer.

Mr. Barnes: That was not what I stated; I said among

[fol. 556] other things. I am offering the document generally.

Mr. Herrington: If Your Honor please, if this document is offered by the Attorney General for any purpose other

---

Mr. Barnes: I am not an attorney general, I appreciate your promotion, but I am not sure Mr. Brownell would.

Mr. Herrington: Potential Attorney General, for any purpose other than to prove the handwriting of Dr. Wilbur Nelson, we will enter an objection to it upon the ground that it is purely a private confidential communication which was never communicated to any of these plaintiffs or to any one else.

Mr. Barnes: That is a particularly fascinating objection to come from Mr. Herrington, because I made available to Mr. Herrington and Mr. Herrington offered in evidence this morning a whole series of inter-office communications with respect to the processing of appeals by the Idaho-Maryland Mines Corporation. I originally demurred from tendering them to him but then felt that in fairness and because we wanted to defend all of the facts in this case, we should make the whole file available. Now Mr. Herrington has the temerity to object because there were some inter-office communications included here or offered by the Government.

Mr. Herrington: I think that there is a difference, Mr. Barnes, on an application of a plaintiff for an appeal there with certain actions taken by the War Production Board. [fol. 557] We have no way of knowing how that action was taken other than the communication that came to us, but it is important to find out from the files of the War Production Board exactly what action was taken within the War Production Board.

Now, Mr. Barnes is offering what purports to be an order preliminary to an amendment of L-208. The fact is that the amendment was made and everyone knew the amendment was made, and it was published in the Federal Register but the reasons behind that amendment do not seem to be material so far as these plaintiffs are concerned.

We are bound by the amendment, and we have no way of knowing how or why the War Production Board reached the conclusion that the amendments should be made.

The Commissioner: How can you reasonably take that position when you take a different position with respect to the issuance of the order itself?

Mr. Herrington: I don't think we do take a different position, Your Honor, as far as the order itself is concerned.

The Commissioner: Well, for the last couple of days there has been much evidence put in that led up to the issuance of the order over the strenuous objection of the defendant.

Mr. Herrington: Yes, because that was for an eintirely different purpose. This is a technical amendment to Order 208 after the order was in effect.

The Commissioner: It may be received. I will be glad [fol. 558] to hear any objection of any other counsel to get them on the record.

Mr. Herrington: Your Honor, there is an Amendment No. 1 which is very definitely in our opinion at least different from the language of this particular inter-office communication.

The Commissioner: Very well.

(Said documents, marked Defendant's Exhibits Nos. 4 and 5," admitted in evidence and made a part of this record.)

By Mr. Barnes:

Q. Professor Nelson, let me show you this document which has been marked as Plaintiffs' Exhibit No. 76 and which is headed "Committee Program for Increasing Production of the Copper Mining Industry." Did you ever see that document in 1941 or 1942?

A. It is my recollection that either this program or one somewhat similar to it was produced by Mr. King at one of his meetings.

Q. Do you have any knowledge whatsoever as to what committee is referred to in that document?

A. Well, it comes from the Services of Supply, and naturally it would have to be some committee formed with the Services of Supply.

Q. Do you know that?

[fol. 559] A. That is just my inference only.

Q. Do you have any knowledge of who the members of the committee were?

A. None whatsoever.

Q. You don't know whether this particular report was one that was submitted at one of your interbranch meetings or interagency meetings or not, do you?

A. I would have to look over all of the minutes of those meetings to refresh my memory.

Mr. Barnes: Your Honor, again I move to strike this exhibit, on the ground there has been no showing whatsoever as to what committee this represents, the personnel, its authority, the appointing authority, anything of that type.

The Commissioner: It that Exhibit No. 91?

Mr. Barnes: No, that is Exhibit No. 76. Would it help any if you saw the transcript where that was originally introduced?

The Commissioner: No, I remember it. Overruled.

Is there any question that this came from the files of the War Production Board?

Mr. Barnes: I have no knowledge, Your Honor, except for the stamp that appears at the bottom if it.

The Commissioner: Wouldn't that be pretty conclusive?

Mr. Barnes: I don't know when it was put in the files, whether this was something put in the files in 1941, 1942, [fol. 560] or 1945.

The Commissioner: All right.

By Mr. Barnes:

Q. Do you know whether that document was ever brought to the attention of any member of the War Production Board?

Mr. Rigney: I think we might be able to save time. Apparently there was a letter of transmittal which accompanied this document from General Somervell, dated July 15, 1942, which became detached from it sometime prior to its offer here yesterday or the day before. We will be able to find that among the paper, because here is General Somervell's letter to Mr. Davis, the chairman of the War Labor Board, and he refers in the second paragraph, General Somervell does, "We have participated with an informal committee of experts representing the War Production Board."

The Comissioner: That isn't in evidence yet.

Mr. Rigney: We will offer the letter and attach it as part of this document.

The Commissioner: All right.

Mr. Rigney: I think there will be no question, then, about it.

By Mr. Barnes:

Q. Dr. Nelson, is there any difference between mining machinery used in a copper mine and mining machinery used in a molybdenum mine, for example, or is it basically [fol. 561] the same type of machine?

A. The question is too all-inclusive. Certain machinery can be used in practically every different type of mine.

Q. What type of machinery is that?

A. Pumps. Any mine that has to pump water uses pumps, and that is mining machinery.

Q. What about blowers?

A. Blowers, there is a variation but in general the type is the same.

Q. What about hoists?

A. Hoists vary a great deal. You have high speed hoists and low speed hoists.

Q. Does the type of hoist depend on the nature of the material mined, or on the depth of the shaft, or other factors?

A. It depends more on the depth of the shaft.

Q. Regardless of the type of material mined?

A. I would think so.

Q. What other types of machinery are used in the mining industry?

A. Well, there is a list attached to the mining machinery order that has been put in evidence which is a much better answer to that question than any I can give, and it is attached to Order P-56-A.

Q. I hand you Plaintiffs' Exhibit No. 5. There is a [fol. 562] one-page list attached to that, is that correct?

A. That was correct, at that time. This was amended from time to time.

Q. Will you look at that list and tell me whether you see listed there any types of machinery that are used only in gold mining and in no other type of mining?

A. I am not qualified to answer that question.

Q. What did you have to do with the issuance of P-56?

A. I issued it as an executive with the technical assistance of the makers of mining machinery. The mining branch was set up with the mining machinery branch and in charge of that branch was a mining machinery man.

Q. Who was that?

A. It was originally Mr. Hildreth.

Q. From what company does he come?

A. I don't remember what company he came from, but he was familiar with mining machinery and he was acceptable to the makers of mining machinery.

Q. Was that your aim in the mining branch, to be acceptable to the companies with whom you were dealing?

A. Pardon me; I didn't hear you.

Q. Would you read the question?

(The question was read by the reporter.)

Mr. Rigney: I think that it is objectionable, Your Honor.

[fol. 563] The Commissioner: Overruled.

(The pending question was read by the reporter.)

The Witness: The aim in the Mining Branch was to have people administering each division not connected with any individual mining machinery company or mine so that impartial service could be given to everyone.

By Mr. Barnes:

Q. I am afraid you still haven't answered my question, and I think it can be answered with a yes or no answer. Would you repeat the question again, please?

(The question was reread by the reporter.)

The Witness: I consider impartial service at its peak should be satisfactory to everyone.

The Commissioner: I don't think that it calls for a yes or no answer.

By Mr. Barnes:

Q. How long did this gentleman continue as head of your mining machinery section?

A. He was replaced before I left the Mining Machinery Division and another man put in because he resigned.

Q. Do you recall who was put in in his place?

A. I would have to refresh my memory. I think it was Mr. Egolf, but I would have to check that with my records.

Q. How do you spell that name?

A. E-g-o-l-f.

[fol. 564] Q. When was it that you first heard mention of an order that might close the gold mines, do you recall?

A. I didn't hear the beginning of the question.

Q. When was it that you first heard mention of an order that might close the gold mines?

A. The communications of Mr. Lester and statements made by Mr. King, I think, in August or in the midsummer of 1942.

Q. And what form were the communications from Mr. Lester?

A. I would like the exhibit in which he made those statements presented to me for pursual.

Q. You have made the statement there about communications from him and I am trying to get the sufficient identification that I can show them to you, and I don't recall any such documents having been offered in evidence.

Mr. Rigney: I don't think that there is any such document offered in evidence.

The Witness: There is a statement about Mr. Lester.

Mr. Barnes: Well, I have here all of the exhibits which I think have been offered in chronological order, starting with Plaintiffs' Exhibit No. 16 which is dated August 14, 1942. Will you see if you can find the statement to which you were referring to?

The Commissioner: We will recess for five minutes and [fol. 565] he can look for it during the recess.

(Thereupon, a five-minute recess was taken in the hearing.)

[fol. 566] The Commissioner: We will proceed.

By Mr. Barnes:

Q. Dr. Nelson, have you been able to locate among those exhibits the two documents to which you referred?

A. I have located two documents in which Mr. King makes statements about curtailing the gold mining.

Q. And those are?

A. September 1 and August 18.

Q. And the one of August 18 is Plaintiffs' Exhibit No. 77, which is a statement made at a meeting at which you were not present, is that correct?

A. That is correct.

Q. So that that——

A. But this is addressed to me.

Q. The memo of September 1, Plaintiffs' Exhibit 17, is a document addressed to you?

A. That is right.

I have found in the minutes of the King meeting of September 15, a statement by Mr. Lester asking that his organization be kept informed of which miners would be affected by the directive, and the directive as to the curtailing of the gold order, as explained in the previous paragraph.

Q. Which is a statement by a Mr. Harbison. Who is he?

A. Mr. Harbison attended a number of these meetings, [fol. 567] and was in the Services of Supply of the United States Army.

Q. So that what you have found is a statement by Mr. Lester that he wanted to have the labor division kept advised of what happened on a proposed gold order, is that correct?

A. That is what I found. But I am certain that I have seen a letter written by Mr. Lester in which he states that there should be a general curtailment of gold mining. It has not been offered in evidence.

Q. When do you mean you have seen it?

A. In the last week. I thought it was in evidence.

May I volunteer some information——

Q. While we are on this, incidentally, the second meeting to which you referred at which Mr. Lester's statement appears, is Plaintiffs' Exhibit 82. You were not present at that meeting, either, were you?

A. No, sir, I was not.

Q. I think your statement relates to identification of Mr. Newman, is that correct?

A. Yes, sir.

Q. You have located something on that?

A. I find a memorandum here at one of the Interdepartmental Committee meetings in which Mr. Newman is a member of the Planning Commission of the War Production Board.

[fol. 568] Q. The Planning Commission or the Planning Committee?

A. The Planning Committee. James Newman, Planning Committee, War Production Board. And this is the one that I said this morning I had heard nothing about either man.

Q. His name appears on Plaintiffs' Exhibit 91?

A. Yes, sir.

Q. Incidentally, what contact, if any, did you have with the Planning Committee during this period of time?

A. Only when they attended these interdepartmental meetings on non-ferrous metals.

Q. Do you know who any of the members of that committee were?

A. Well, by hearsay, I understood that Mr. Nathan was at one time, and later on Mr. Gulick, and I had considerable contact with Mr. Luther Gulick when he was on the planning Commission.

Q. At a later date, wasn't Mr. Lincoln Gordon chairman of that?

A. Well, at one particular time, Mr. Gulick was.

Q. Well, you referred to Mr. Newman as a member of the committee. Do you know whether he was a member of the Planning Committee or a part of the staff?

A. I do not.

Q. Dr. Nelson, I would like to direct your attention to a memorandum which you wrote to Mr. King under date of [fol. 569] August 14, 1942, Plaintiffs' Exhibit 16, and direct your attention to what I think is a numbered paragraph 2 at the bottom of the first page, in which you make the suggestion that there be a closing of certain non-essential industries in critical labor areas, particularly the Pacific Northwest, I believe you referred to. Is that correct?

A. That is correct.

Q. Do you recall that at or shortly after that date, the

War Production Board issued an order which, among other things, prohibited the operation of pulp mills in areas of critical labor supply, including the Pacific Northwest?

A. I think they did, but I would want to see documents to be positive of it.

Q. You referred in that memorandum to the fact that the gold miners were the last reservior and I may be paraphrasing you incorrectly—of skilled miners in the country.

A. I did.

Q. What do you mean or what did you mean when you referred to that?

A. I meant that if all of the gold mines were closed down, you would have available a reservoir probably of 600 skilled miners in metals. If they were dissipated, you had no other mining industry that could be classified or that you could afford or that could be closed down to give you [fol. 570] any other additional miners.

Q. Incidentally, in that particular memorandum, you didn't give any number of miners that were included.

A. No, I did not.

Q. Did you in any memorandum that you wrote prior to your memorandum of October 3, 1942, give an estimate of the number of miners available in the gold mines?

A. I did not give a detailed memorandum, but I did make statements that the figures given out by Mr. Lipkowitz were much too high.

Q. To whom did you make those statements?

A. I made them to Mr. Batt on the 30th of September, in a meeting in his room; and in numerous meetings when Mr. Lipkowitz made those statements, I contradicted him.

Q. And can you recall when those other meetings took place or who was present?

A. Well, he made those statements in some of the non-ferrous committee meetings. Whether they are part of the record or not, he made them.

Q. The minutes that have been introduced here do not show either his estimates or your contradiction of them; would that be your recollection?

A. I would have to check all of the minutes to be certain of that.

Q. You have been looking at them as they have been [fol. 571] introduced here, though, haven't you?

A. For only one purpose.

Q. What purpose is that?

A. To find statements made by Mr. Lester and Mr. King, I mean during the recess.

Q. But previously as they were introduced, you were examining them.

A. I have read them, but I have read hundreds and hundreds of documents, and it is impossible to keep all of the details without refreshing your memory.

Q. Will you just assume for the purpose of this question that the minutes which have been introduced in evidence do not show any statements by Mr. Lipkowitz as to the number of miners available in the gold mines, or any statements by you contradicting him, and assuming that fact, did you at any time take up with the persons charged with the responsibility for preparing minutes of these meetings, the omission of that data from the minutes?

Mr. Rigney: I think it is improper to set up a hypothetical question in that fashion.

The Commissioner: Objection sustained.

Mr. Barnes: I thought we might be able, Your Honor, to shorten this a little bit by that means.

By the Commissioner:

Q. Do you know of any important document that has [fol. 572] not been called to your attention here at the trial, having a bearing upon the close-down of the gold mines?

A. I know of this Lester memorandum or letter, in which he in August advocates closing all of the gold mines.

Q. That is the reason I asked the question. Do you know of any others?

A. I do not.

By Mr. Barnes:

Q. Professor Nelson, I am handing you Plaintiffs' Exhibits 77, 82, 97, 81, 22, 85, 37, 88, 89, 90, and 93, which are the minutes of all of the Interdepartmental or Interbranch meetings that have been offered in evidence bearing a date

prior to October 8, 1942, and I will ask you whether you find in any of those minutes, reference to estimates made by Mr. Lipkowitz as to the number of miners who will be released by the order, or references to a refutation or contradiction of that statement by you?

(Documents handed to the witness.)

The Witness: The minutes do not show any such statement.

By Mr. Barnes:

Q. Let me ask you this: With respect to the minutes of the interbranch meetings, you were the chairman of that committee, were you not?

A. Yes.

Q. Were the minutes normally submitted to you for [fol. 573] approval before they were distributed?

A. They were.

Q. Do you recall calling to the attention of the secretary of that committee the omission of any reference to estimates made by Mr. Lipkowitz or refutation made by you?

A. The committee meeting presided over by Mr. King——

Q. I am limiting myself to the interbranch meetings where you were chairman.

A. I thought you had gone to the interdepartmental meetings.

Q. I asked you first about the interbranch meetings.

A. I said that the minutes were presented to me for my approval.

Q. And my next question was whether you at any time called to the attention of the secretary of that committee, or any other person preparing the minutes, the omission of references in the minutes to estimates made by Mr. Lipkowitz or refutation of those estimates made by you?

A. You mean Mr. King's committee?

Q. I mean your committee.

A. Mr. Lipkowitz didn't attend any of my committee's meetings, as far as I can find out.

Q. So that it must have occurred at some of the interdepartmental meetings?

A. It occurred at Mr. King's meetings.

[fol. 574] Q. Did you at any time call to the attention of the secretary of that committee, or to the attention of the committee as a whole, the omission from the minutes of any reference to such statements made by Mr. Lipkowitz or by you?

A. I have no control over the minutes of that meeting, and they were prepared by Mr. King and mimeographed and sent out to us.

Q. Well, let me call your attention to Plaintiffs' Exhibit 100 for a minute, and particularly on the second page of that exhibit. That happens to be the minutes of the meeting under your direction, the interbranch meeting, is that correct?

A. No, this is another different meeting.

Q. It is the inter-division meeting of divisions concerned with mineral production?

A. It is the inter-division meeting of divisions concerned with mineral production.

Q. November 23, 1942. And you were the presiding officer, is that correct?

A. I was.

Q. The minutes of that meeting, and of other meetings of that group, were prepared under your supervision, and were mimeographed and sent out, is that correct?

A. When I presided over them.

[fol. 575] Q. Now, may I call your attention to the second pages of that document, under the heading "Elucidation."

A. Yes.

Q. Did a person who had been present at a prior meeting of that group raise a question as to the accuracy of the minutes of that prior meeting, and ask to have them corrected?

A. Mrs. Ethel Fuller did that.

Q. Did you ever take any similar action with respect to minutes of the King committee?

A. I did not. This is a meeting, a committee meeting entirely different from the other two you have presented.

Q. Going back to your memorandum of August 14, in which you referred to the gold miners as being the last reservoir of mining labor in the country, did you contemplate the necessity of what we might call tapping that reservoir at some undefined time in the future?

A. Not unless I was satisfied that proper arrangements were definitely completed for channeling those men to non-ferrous metal mines.

Q. In other words, it was your feeling that it would be better to have them continue working throughout the war, regardless of its duration, in gold mines, rather than to run the risk of their not getting into some other non-ferrous metal mine?

[fol. 576] A. I was looking at the over-all effect on the war effort of every action that was taken, and it was my firm belief that the harm that would be done by shutting down a few mines to get a few hundred men, which would hurt the morale of a large part of our western section, was much greater than the good that could be done through the few men going into copper, lead, or zinc mines.

Q. Was it your belief that the members of the War Production Board who took action on October 6 as shown by Plaintiffs' Exhibit 92, were not looking at the over-all interest of the war effort?

Mr. Rigney: Objection, if Your Honor please. I don't think it is proper to ask him to characterize the action of the Board.

The Commissioner: Sustained.

By the Commissioner:

Q. Did you ever make a written recommendation against the issuance of the order?

A. No, I did not, but I was credited by everyone, by holding them up for several weeks, hoping that they would put into effect machinery that would channel them properly.

By Mr. Barnes:

Q. Do I understand——

The Commissioner: Just a moment, please.

Mr. Barnes: Pardon me, sir.

[fol. 577] By the Commissioner:

Q. What was it you were driving at, from your own standpoint?

A. I did not want any order issued releasing these miners until I was thoroughly satisfied, and those men

around me, in the mining divisions, that the men could be channeled to the copper, lead and zinc mines, and we never reached a conclusion that that was true.

By Mr. Barnes:

Q. Do I understand, then, that if such machinery had existed, you would have been in favor of the issuance of this order?

A. I could not have opposed it.

Q. Is that the same as being in favor of it, or not?

A. Not necessarily, because I had never seen anything done at that time that would have made me thoroughly satisfied that they could be channeled properly.

Q. But I am asking you to assume that such machinery had existed.

A. You are asking me to assume something that wasn't in existence.

Q. I know, but aren't you able to make assumptions?

A. I don't think it is in order.

Q. Do you ever have to make assumptions in connection with work in geology?

[fol. 578] A. That is entirely——

The Commissioner: I don't think the question is proper.

Mr. Barnes: Your Honor, it seems to me in the absence of objections from counsel, I am entitled to ask any question I want to.

The Commissioner: You can ask it, but you might not be permitted an answer.

By Mr. Barnes:

Q. What information, if any, did you have as to the number of gold mines in the United States in 1941 or 1942?

A. I had general information throughout that entire time from numerous discussions with the gold operators, that the figures of all people in the gold mines was decreasing rapidly, and each month was getting much lower; and in August, the figures certainly that I had showed less than five thousand people in the gold mines.

Q. My question, I think, was directed to the number of mines rather than the number of miners.

A. Well; will you repeat the question?

Q. What information did you have as to the number of gold mines in the United States in 1941 or 1942?

A. We had our serial numbers that had been listed originally, issued originally, to all of the gold mines in the United States, in our files.

Q. Is it possible there were gold mines that had never [fol. 579] received serial numbers, and they were operating under P-22?

A. I know there were a number of small mines that did not bother to write in and ask for serial numbers, and they were getting along nicely under P-22.

Q. As an approximation, I am sure you wouldn't carry the exact figure, do you know how many serial numbers had been issued to gold mines, approximately?

A. No.

Q. Would it be over 500?

A. I can't answer. The only division I can answer on is the number of serial numbers to metal mines and nonmetal mines and coal mines, and that was as far as we classified them.

Q. Well, a minute ago you referred to the fact that employment had been dropping in the gold mines during 1942 prior to October, is that correct?

A. Yes.

Q. Had that resulted in the closing of any mines, to your knowledge?

A. It seems to me that Congressman Engelbright told me that one mine had closed down on the Mother Lode.

Q. That is the only information that you had?

A. That is all I can recollect at the present time, ten years later.

Q. What was the source of your information as to the [fol. 580] number of miners in the mines?

A. Those were figures——

Q. I am talking about prior to the meeting of October 1.

A. I know, but I have already answered that question, that from information given me by the different miners, it was less than 5,000.

Q. Where did you secure that information?

A. From our field offices and from individual talks.

Q. Did your field offices make regular reports to you with respect to the number of miners?

A. No.

Q. In what form did that information come to you from the field offices?

A. From my field offices reporting in to Washington about once a month, and we had informal discussions.

Q. You mean the men actually came in to Washington?

A. They did, or I met them in the field on my trips throughout the West.

Q. They told you about the number of employees in the gold mines?

A. We discussed everything that was going on, priorities, the mine situation; the gold mining problem was uppermost with everyone that summer, and naturally we discussed it.

Q. Copper mining wasn't uppermost?

A. Copper mining was uppermost, too, and the two were [fol. 581] very closely related.

Q. As a matter of fact, weren't all mines having manpower difficulties during the summer of 1942?

A. Everything connected with the mining division that was essential to the war effort was discussed, and they were all, you might say, they were all uppermost because they were all important.

Q. My question was, weren't all branches of mining, in the mining industry, having manpower difficulties during the summer of 1942?

A. Everybody in the United States was having manpower difficulties, as well as the mining industry.

Q. Was the mining industry aggravated in any way by factors peculiar to it, to your knowledge?

A. Yes, it was.

Q. Those factors were what? Wages?

A. Higher wages in the airplane and shipbuilding plants on the West Coast.

Q. Incidentally, in connection with or with respect to the number of employees that they would normally have, how would the gold mines rank among the metallic mines of the United States? Would they be large, small, or average, or are you in a position to tell that?

Mr. Rigney: I object only to the form of the question. I think it is ambiguous as phrased.

[fol. 582] The Commissioner: Let me hear it.

(The pending question was read by the reporter.)

The Commissioner: Overruled.

The Witness: We all know that gold mining in the United States is one of the smaller mining activities. It does not play the big part in the national economy that it does in Canada.

By Mr. Barnes:

Q. Would iron ore be larger, for example?

A. Very definitely.

Q. What about copper, would that be larger in the number of employees?

A. Very much so.

Q. And lead?

A. Well, in order to answer all of these questions, I would have to refresh my memory.

Q. Well, lead and zinc are the only other two I was going to ask you. Can you answer with respect to them?

A. Yes, there are more miners in those two industries.

Q. What other non-ferrous metallic products are mined, other than the group I have named and gold and silver, in any appreciable volume in this country?

A. Molybdenum. We produce about 80 per cent of the world's supply of molybdenum, but it is a ferrous alloy mineral, so that doesn't fall into the category of your ques-
[fol. 583] tion. We produce some vanadium, and you mean metallic minerals, I suppose.

Q. Yes. I said non-ferrous metallic minerals.

A. During the war, we produced considerable mercury, due to the high price we paid for it, and you have mentioned lead and zinc. There is no tin produced in this country.

Q. Well, I don't think——

A. Titanium, we produced some, and it can be considered either a ferro-alloy, depending upon its use; and we produced considerable tungsten due to the war effort. If I had sufficient time, I could go over the entire list.

Q. Incidentally, do you know what Homestake did after the passage of L-208?

A. They appealed.

Q. And they were granted some time extension, I take it?

A. I remember very distinctly that they were the one

company that had so much broken ore in their stopes that they appealed from the provisions of the order to permit them to remove that broken ore; that otherwise it would freeze in the stopes and would be a very bad situation to reopen.

Q. Do you know of an operation that is called the Sublett Division of Homestake?

A. I do not.

Q. You never heard of that?

[fol. 584] A. I never heard of that.

Q. You don't know, then, whether or not Homestake transferred employees and equipment to the Sublett Division for mining activities there?

A. I have no recollection of it.

Q. Did you ever hear of a company called Victoria Mines, in Sheridan, Montana?

A. I have heard the name, but I know nothing about the company.

Q. You don't know what that company did after the passage of L-208?

A. I do not.

Q. You don't know that company went into the business of the production of copper?

A. I said I don't remember anything about the company.

Q. Do you know whether any of the gold mining companies made any attempt to continue mining operations in the recovery of metals other than gold?

A. The Homestake Mining Company opened a manganese mine in Lower California. The Golden Cycle converted their mill into a custom mill, and I don't know how successful either one of those operations were, but I know that a start was made in each one of them.

Q. Do you know of any other gold mining companies that took action similar to that?

[fol. 585] A. I know that Grass Valley Company represented here they wanted to get time to prospect for tungsten, which was denied them. The Telache Gold Mine, at Atlanta, Idaho, I visited, at the request of the War Production Board, to see if they should be given an extension to see if they could find additional tungsten, and we gave them a 30-day extension, but they were unsuccessful and had to close down.

Q. Do you know whether any of them went into operations involving the mining of copper, lead or zinc?

A. Those are the only ones I remember.

Q. Were you still getting reports from your field force subsequent to October 8, 1942, and down to the end of December of 1942?

A. Yes, they were all handled by my deputy Director, Dr. Stow. He was in charge of the field division.

Q. When did he take that over?

A. He took it over some time before that.

Q. How long before that?

A. The records would have to show that.

Q. Well, you stated that during the summer you were in contact with the field division, during the summer of 1942?

A. When they came in to Washington, I met with them, and Dr. Stow met with them.

Q. Do you recall when it was, whether it was before or [fol. 586] after October 8 that he took them over?

A. I have no recollection. I know that he looked after all of the details, and I know that when the field men came in to the office we naturally had a conference with them, and as Director of the division, I naturally sat in on those conferences, and I ran my division by delegating authority to every man to handle his own branch, and only to come to me if he was in trouble.

Q. Do you know where Dr. Stow is now?

A. He is Professor of Geology at Washington and Lee University, Lexington, Virginia.

Q. Do you know whether or not any of the gold mining companies were able to use what, as a layman, I would call their processing equipment for processing of ores mined by other companies after October 8, 1942?

A. The only statement that I can make, answering that, I have already made in regard to the Golden Cycle mill converting. If the others could have converted, I am certain that they would have.

Q. At the meeting of the War Production Board on October 6, 1942, Mr. Batt read to the Board the statistics which you had given him with respect to your estimate of the number of miners who would be released by an order closing the gold mines?

A. That is an incorrect question.

[fol. 587] Q. What did he say?

A. He read the figures that had been prepared by the gold operators at the end of the meeting of October 1, and verified by additional information the morning of October 2, I prepared a memorandum on the basis of the information furnished me by the gold industry.

Q. He did read, however, your memorandum of October 3?

A. Yes, sir.

Q. Which gave the information you had secured from the gold industry?

A. That is correct.

Q. So that that information was submitted to the War Production Board before it reached its decision, is that correct?

A. The minutes show it to be correct.

Q. You were there, weren't you?

A. Yes.

Q. Did that take place?

A. I heard Mr. Batt read the figures.

Q. Do you recall whether or not Mr. Batt made any comment on those figures?

A. I do not recall.

Q. How many times were you at meetings of the War Production Board?

A. I know I was at that meeting, and I have a recol-

[fol. 588] lection that I was either at one other meeting, or a meeting rather similar to it.

By The Commissioner:

Q. Do you remember anything that took place at that meeting that wasn't in the minutes that we read?

A. I don't know whether they mentioned what Leon Henderson said or not, in the minutes, but I remember that distinctly.

By Mr. Barnes:

Q. The statement appears in Plaintiffs' Exhibit 92: "Mr. Leon Henderson reported the Canadian gold mining as being curtailed very sharply."

A. I have no recollection of what Vice President Wallace said at all.

Mr. Barnes: These is reference to a statement by the Vice President, Your Honor.

By Mr. Barnes:

Q. Do you remember whether any person spoke on the subject of the gold order, other than the persons whose names are given in the minutes?

A. I would have to refresh my memory on that.

Q. Well, let me hand you the minutes, Plaintiffs' Exhibit 92, and ask you whether you can recall whether any other person present at that meeting spoke on the subject of that order?

[fol. 589] A. I can't find what Leon Henderson said in here, and it must be in here.

Q. If you will look at the bottom of the second column of the first page, six lines from the bottom.

A. That is correct; I see it now.

A great deal of these minutes, I have no recollection of.

Q. I am limiting it now to the so-called Section 1 on gold mining, and I am asking you whether you recall whether any person present at that meeting, other than the persons whose names are listed in the minutes, spoke with respect to the gold mining order.

A. No, and I can't even remember what all of them listed in the minutes spoke about.

Q. Well, the minutes—I am referring now to the section marked "1, Gold Mining," and it refers to statements by Mr. Batt, Mr. Leon Henderson, the Vice President, Mr. Batt, and General Somervell. Do you recall whether anybody else participated in the discussion with respect to the gold mining order?

A. I do not, and I don't recall Mr. Batt's remarks, and I don't recall the Vice President's remarks.

Q. Do you recall who put the resolution that was adopted at that time?

A. We were requested to leave after the discussion on gold was completed, and I do not know whether any action [fol. 590] was taken while I was present.

Q. Specifically, Mr. A. I. Henderson was there. Do you recall whether he said anything?

A. I don't know.

Q. Lieutenant General Knudsen; do you recall whether he said anything?

A. I don't.

Q. Judge Patterson was there from the War Department. Do you recall whether he said something?

A. You mean the Assistant Secretary of War?

Q. That is right.

A. Yes, I remember what he said.

Q. What did he say?

A. I have already stated in the minutes.

Q. Will you state that again, your recollection of what he said at that meeting?

A. Can't that be checked so that there would be no variation?

Q. I would like to have your recollection on it, Professor.

A. Is that required?

The Commissioner: Yes.

The Witness: He backed up General Somervell in stating that if the gold mines were not closed, that the war effort could not go on as it should. As far as I can find out, [fol. 591] Secretary of War Patterson took the lead in this entire matter, and he probably talked before Somervell did.

By Mr. Barnes:

Q. Mr. Eberstadt was there. Do you recall whether he said anything?

A. I do not recall anything Mr. Eberstadt said at that meeting.

Q. Both John Lord O'Brian and Milton Katz were there. Do you recall whether any of them said anything?

A. I don't remember what they said.

Q. Mr. Charles Wilson; do you recall whether he said anything?

A. No.

Q. Mr. Kanzler, do you recall anything he said?

A. I didn't know he was there. It was a large room, and it was filled with a great many invited visitors.

Q. Mr. A. I. Henderson was there. Do you recall whether he said anything or not?

A. I do not.

Q. Mr. Nathan was there. Do you recall whether he said anything?

A. Well, according to these minutes here, I think we left the meeting before he said anything, but I don't recall him saying anything, because according to these minutes he came on after the gold order discussion was closed.

[fol. 592] Q. You said there was one other time when you either attended a meeting of the War Production Board or some similar meeting. When was that, do you recall?

A. When I presented the question of gold mining to one of the committees, or of mining machinery to one of the committees made up of a number of the leading men in the War Production Board. Whether that was—I am pretty certain that that was just a top policy committee and not the Board. That was the only other large meeting I attended, and Donald Nelson, I think, was present.

[fol. 593] Q. Let me show you Plaintiffs' Exhibit No. 73, minutes of a meeting of the Requirements Committee.

A. That was something; I had never attended any other meeting of the War Production Board. This was the other large meeting I attended.

Q. During your entire period of service in the War Production Board, is that correct?

A. Yes, sir.

Q. Now, in this meeting that was held in Mr. Batt's office on September 3, you have previously testified that Mr. Lipkowitz at that meeting gave certain estimates of the number of mining employees who would be released from the gold mines if the mines were shut down and that you stated that you felt his estimates were in error.

Mr. Rigney: I think that you meant to say the first.

By Mr. Barnes:

Q. September 3, the first meeting. Do you recall making any statements other than that at that meeting prior to the time Mr. Batt left, when I think you said you took over?

A. Oh, no, that meeting adjourned and Mr. Batt said he couldn't reach any decision and we all left.

Q. Did you say anything else other than refuting or attempting to refute Mr. Lipkowitz's estimates on manpower?

A. Well, it is my recollection that I backed up the state-[fol. 594] ments made by the senators and representatives on the dislocation and the hardship that would accrue to mining communities throughout the West, and I think I took a rather active part in the meeting on insisting that the overall economy of the country would not be improved by closing the gold mines.

Q. Why was that your position?

A. Because as the director of the Mining Division, it was my business to try to handle the entire mining situation of the United States for the best benefit of the war effort.

Q. But you stated that you would not have opposed the issuance of the order if you could have been assured that the miners would be channeled to the non-ferrous mines, is that correct?

A. But that condition never arose.

Q. Did you at any time give any consideration to the quantities of material used by the gold mines?

A. The quantities were so negligible that they couldn't have affected the war effort in any way.

Q. What was the source of your information on that?

A. Statements I received from gold operators, from mining machinery company representatives.

Q. Well, now, mining machinery company representatives would be largely concerned with expansion or new machines.

A. Not under the existing P-100.

[fol. 595] Q. Under P-100 could they sell new machines?

A. No.

Q. They would be concerned only with what?

A. Just repairs, supplies, and operating things.

Q. Did you have any idea of the magnitude either in dollars or tons or any other unit of measure, of the materials purchased and used by the gold mines?

A. When they were working at full capacity, figures were gotten up in my division, I think, showing the total was about fifteen million; but the capacity at which they were running before the gold mine order was put into effect,

I think some of my reports, whether they are in evidence or not, show the figure to be about $7,000,000.

Q. And the source of that was information you got from mining equipment or mining machinery concerns?

A. Mining machinery concerns, and the gold miners, and data that was worked up in the mining branch.

Q. From what source was that data in the mining branch worked up?

A. From the same sources, the sources where you can get source information for any statistics.

Q. Did the mining machinery companies give you any reports as to the volume of their sales to gold mines?

A. Well, I don't see how Mr. Rott could have gotten up his statistical——

[fol. 596] Q. You just answer my question.

A. The report gotten up in the mining branch was based on statistical data furnished the mining branch by the makers of mining machinery.

Q. Did you ever see any of that prior to October 8, 1942?

A. I saw that at the time I read Mr. Rott's report.

Q. That was in 1943 sometime, was it?

A. I would like to see the report.

Mr. Barnes: Was that put in evidence?

Mr. Rigney: Not yet, Mr. Barnes, no.

Mr. Barnes: It has been marked for identification, I guess.

By Mr. Barnes:

Q. I show you this document identified as Plaintiffs' Exhibit No. 13 for identification marked at the pre-trial conference, and I will ask you if that is the report to which you have reference.

A. I haven't been able to find the $15,000,000 in this report, and so I don't know whether it is the report I had reference to or not. I know Mr. Rott made me such a report that it was about $15,000,000, and I know that in consultation with the gold miners they said they thought $12,000,000 was nearer the correct figure than $15,000,000. But I don't see that figure in this report.

[fol. 597] Q. Have you during the past few weeks seen some other report of his that you may be recalling now?

A. Well, I have seen a report of Mr. Rott in which he estimated $15,000,000.

Q. Do you know when he prepared that report?

A. I can't say unless I could refresh my memory by looking at it.

Q. When did Mr. Rott come with the Mining Division?

A. The history of the Mining Division of which I have a copy tells the date at which each person joined the Mining Division.

Q. Do you have any independent recollection now when he came in to the Mining Division?

A. I know he came before L-208 was issued.

Q. How long before, do you know?

A. He came, I think, in the summer of 1942.

Q. Do you recall whether he had had anything to do with gold mines or gold mining prior to the issuance of L-208?

A. Yes, he had been interested in gold mining in South America and he is now back in South America in gold mining.

Q. Do you know whether or not in the Mining Division he had had anything to do with gold mines or gold mining prior to the issuance of L-208?

A. I would have to look up my organization chart.

Q. Do you have a copy of that here in the courtroom?

[fol. 598] A. No.

Q. Do you have a copy of the history of the Mining Division to which you just referred in the courtroom?

A. Yes.

Q. Can you refresh your recollection from that as to the date when Mr. Rott came with the Mining Division?

A. Do you wish me to?

Q. Yes, would you please?

A. All right. By the middle of March, 1942, Mr. Rott was a member of the Mining Division.

Q. In stating it that way, do you mean he came some time prior to the middle of March?

A. Some time prior to the middle of March, and he was Technical Consultant on Foreign Mines. That was his title as he came with the Board.

Q. Do you know whether or not prior to the issuance of L-208 when you testified you made him deputy adminis-

trator of that order, he had done anything with respect to domestic gold mines in the Mining Division?

A. No, he had been looking after material that was being sent to foreign gold mines.

Q. And other foreign mines?

A. Many foreign gold mines.

Q. And mines other than gold mines abroad, too?

A. I didn't understand.

[fol. 599] Q. And mines other than gold mines?

A. No, gold mines.

Q. Only gold mines?

A. No, he looked after the others, too.

Q. He looked after the others, too?

A. Yes, sir.

Q. To what other types of mines or mining industries in foreign countries were you sending equipment and machinery?

A. To the large copper mines in Chile and Peru.

Q. Any nickel mines or were you exporting material for nickel?

A. I don't know how much the Canadian nickel mines received in supplies from the United States, but I would say whatever they wished in the way of supplies would have been given to them very promptly.

Q. What about the tin mines in Bolivia?

A. The same thing would apply to that.

Q. And that was a practically new operation that was instituted during the war, bringing Bolivian tin ore out in large quantities and bringing it to this country for smelting.

A. We built a smelter.

Q. In Texas City?

A. That is right.

Q. And we also largely built the Bolovian mines, did we not?

[fol. 600] A. Well, I don't think I can say that, because Bolivia has been a source of tin, a major source of tin, in the world for many years.

Q. But their production was greatly increased during the war period, was it not?

A. I have not looked at those production figures.

Q. What was your responsibility with respect to that as head of the Mining Division?

A. To see that they got the necessary equipment.

Q. But you have no recollection now of whether or not their requirements for equipment increased during that period?

A. I would have to look at my records.

Q. Do you have any of those records here?

A. No.

Q. What about the tin mines in Africa, do you know whether or not we were shipping any equipment or material to them?

A. I would like to have you tell me where the tin mines are in Africa.

Q. West Africa.

A. You mean for merely the German mines?

Q. The Belgian Congo.

A. There are some placet tin deposits there that we got the output of.

Q. Did we send machinery?

[fol. 601] A. We had a Belgian Congo purchasing commissioner and we assisted them.

Q. And we gave them machinery and equipment and supplies that they required?

A. How much we gave them, I don't know, but I know we gave them some.

Q. Do you recall whether or not we shipped any mining machinery to Portugal?

A. That was not the responsibility of my division.

Q. What was the responsibility of your division?

A. The Board of Economic Warfare looked after much of that.

Q. Looked after what, now? Where was the line between their responsibility and yours on foreign mines?

A. I have never been able to know just where the line of division came on many of the things that happened during the war.

Q. You must have had some working arrangement with them as to where the line fell, did you not?

A. In many of the exports we had nothing whatsoever to do with them.

Q. You still had to authorize their manufacture in this country, did you not?

A. Yes, we were told to.

Q. You had to—who told you?

[fol. 602] A. Either the State Department or Lend-Lease or the Board of Economic Warfare.

Q. Did they have authority to direct a division of the War Production Board as to what it was to do?

A. They must have.

Q. You acted on their instructions without getting them confirmed. Did you take them up with Mr. Henderson?

A. Mr. Henderson and Mr. Batt and all of them realized that situation.

Q. Did you take any of those matters up with them at any time?

A. I took everything relating to foreign mines up with Mr. Batt, and I received my final instructions from Mr. Batt in regard to all foreign mines.

The Commissioner: We will adjourn until ten o'clock tomorrow morning.

Thereupon, at 4:35 o'clock p.m., a recess was taken in the hearing until 10:00 o'clock a.m., Thursday, January 29, 1953.)

[fol. 603] In the United States Court of Claims

[Title Omitted]

Transcript of Testimony—January 29, 1953

Colloquy

The hearing was resumed, at the time above indicated, pursuant to the recess previously taken.

Present: (The same appearances as previously noted.)

Mr. Connor: Your Honor, this case has progressed so rapidly that Homestake's case will be completed very quickly and we will not be able to go on this afternoon if we finish with Professor Nelson and Mr. Gurney. Therefore, I would like to request that we adjourn at whatever time of day we finish with Mr. Gurney and Professor Nelson. I assure you that beginning tomorrow morning with Senator Case, Homestake's case will then proceed to a conclusion.

Mr. Barnes: This is a very fortuitous request on Mr.

Connor's part because I have been trying since we dis- [fol. 604] covered how much more rapidly we have been moving to get in touch with my own witnesses to see if I could get them here, for example, to start the 9th instead of the 16th, as I originally had intended. But the hour that is available in the morning and the hour available in the afternoon after the hearings have been insufficient to allow me to be very successful in those attempts. I was intending to come here this morning with a request either today or tomorrow that we recess at lunch so I would have a full afternoon available so that I would be able to do my absolute best to have my proof ready to proceed, say, on the 9th rather than the 16th, and avoid what now looked like a possible gap of a week in these hearings.

The Commissioner: Do the other plaintiffs have any objection to Homestake's request?

Mr. Herrington: No, your Honor, we also are in the same situation. We have arranged to have our witness here Monday morning. Our testimony should not be very long, we should conclude in a couple of hours, I believe.

Mr. Barnett: No objection as far as we are concerned.

The Commissioner: All right.

Mr. Rigney: I spoke to Mr. Barnes yesterday afternoon, and he told me it would be agreeable to allow us to put former Senator Gurney on this morning for some rather brief testimony and withdraw Mr. Nelson temporarily.

The Commissioner: All right.

[fol. 605] TESTIMONY FOR PLAINTIFFS—RESUMED

Mr. Rigney: Senator Gurney, will you take the stand, please?

This is the Honorable Chan Gurney.

HONORABLE CHAN GURNEY, a witness produced on behalf of the plaintiffs, having been first duly sworn by said Commissioner, was examined, and in answer to interrogatories, testified as follows:

Direct Examination

By Mr. Rigney:

Q. Senator Gurney, you are presently a member of Civil Aeronautics Board, is that correct?

A. That is correct.

Q. That is a board of five members who are presidential appointees?

A. With one vacancy at the present time. There are five in the number.

Q. And prior to becoming a member of that board you were, for a number of years, one of the United States Senators from the State of South Dakota, is that correct?

A. That is right, from 1939 through 1950.

Q. During your service in the Senate, sir, what were some of the committees on which you served?

A. Well, prior to the reorganization act I was on a number of committees. I think the assignment was to six committees. After the Reorganization Act of 1946 I was a [fol. 606] member of the Armed Services Committee and the Appropriations Committee. Prior to that time I was on the Military Affairs Committee, Public Land, Interstate and Foreign Commerce, and Foreign Affairs.

Q. I think that is sufficient.

A. That is all I can remember.

Q. You recall, do you not, that in the autumn of 1942 an order was issued by the War Production Board closing down domestic gold mines in the United States?

A. I don't remember the exact date.

Q. But you recall the issuance of the order?

A. Oh, yes, very well.

Q. Do you recall any meetings which you had with any officials of the War Production Board in which you discussed this proposed order prior to its issuance?

A. We had many meetings with the War Production Board officials. I don't mean hundreds, but I mean other Senators and myself, and I myself alone met with different War Production Board officials, and officials of other departments on the subject.

Q. And there were several of such meetings?

A. Oh, yes.

Q. Can you tell us specifically what members of the War

Production Board you recall discussing this proposed order with?

[fol. 607] A. Well, I am sure Mr. William Batt and Mr. Eberstaet were there, and then there was an engineer with them by the name of Fred Searls, as well as Mr. Nelson, who was in the picture there some place, I don't know.

Q. Mr. Donald Nelson, the head of the War Production Board?

A. That is right. I do not remember how many times I talked with him personally.

Q. But you do recall that on one or more occasions you did talk with Donald Nelson about this?

A. Yes, I am sure we talked across the table on it, and then I knew that I phoned him a number of times.

Q. In these conferences or conversations that you refer to now, what position were you taking with respect to the proposed order?

A. I was presenting the picture from the South Dakota side, the necessity for keeping the mines open.

Q. And you were advancing arguments as to why the order should not be issued?

A. That is right.

Q. Now, were you on some occasions at Mr. Batt's office in the WPB offices, for your meetings with him?

A. That is right, in their offices, wherever they asked us to meet with them. I believe it was over on Independence Avenue by the Census Bureau.

[fol. 608] Q. Can you recall, sir, substantially the reasons why you urged upon these WPB officials that you have mentioned against the issuance of the proposed order, and what arguments you gave them?

A. I can, I believe, remember the main reasons.

Q. Yes sir.

A. First, the proposed order, as soon as we learned of it, was based on the necessity for saving strategic minerals that would have to go into the making of drills and other machinery that Homestake used in their mining, and our plea was that Homestake was well supplied with that kind of needed tools, and had sufficient on hand that they could run quite a while without ordering new materials.

Then, I don't know that that was No. 1, maybe the No. 1 reason would be that it was our contention that the

miners were older men and would not like to go into the copper mines, for that is rather hot working in the copper mines, and we were convinced—and when I say we I mean the legislative group from South Dakota—that the Government would not get a transfer of these hard rock miners out of Homestake into the copper mines in sufficient numbers to warrant the order.

Q. Was anything said in these discussions by Mr. Batt or anybody else from WPB about any plan or thought on the part of WPB to effect a transfer of the miners? In other words, was the labor or manpower proposition discussed? [fol. 609] A. Oh, yes; it was going to be on a voluntary basis. They would tell them where they were needed in the war effort, but there was no legislation, as I remember it, to compel them to move. In other words, there was no selective service act except for war service. They couldn't transfer them by order.

Q. Can you tell us whether or not the manpower aspect of it was stressed by Mr. Batt or any other WPB officials as the reason for the order?

A. Yes. They felt they would get out of all the gold mines quite a few hard rock miners into the copper mines.

Q. Now, do you recall any other arguments which you advanced, as the Senator for South Dakota, with respect to Homestake's situation in relation to the State of South Dakota?

A. Yes, I do. There was an ore severance tax, and there still is, I believe, on the law books in the State of South Dakota. When the Homestake mine was in full operation South Dakota received a little over a million dollars per year in income. And without question that money was needed in supporting the State government, and that was proven by the fact that the sales tax had to be raised one penny in South Dakota when they lost that million dollars of ore severance tax.

One penny brought in about the same amount in the year as did the ore severance tax when Homestake was operating. It meant that much.

Another thing was that the only employment in the [fol. 610] towns of Lead and Deadwood, South Dakota, was the Homestake mine. The Homestake mine supports that whole area there. There is nothing else for them to do,

and they would all have to move, and the people had lived there for some years. I think it affected directly 12,000 or 16,000 people. Consequently, we were very much interested in keeping the mine opened if at all possible.

The Commissioner: I think it would be well, in developing the discussions that the Senator had, to distinguish between the people with whom these discussions were had. At least draw the line between the members of the board and subordinates to the members of the War Production Board.

Mr. Rigney: Yes, your Honor.

The Witness: I am glad of the interrpuption, your Honor, because I was under the impression that I was stating facts as I presented them to members of the War Production Board. I do not in any way want to state an opinion. I would like to have the record show, if possible, that I have no financial interest, nor does my family have any financial interest,—uncles, aunts or anybody that I know of—in the Homestake Mining Company.

By Mr. Rigney:

Q. You own no stock in the Homestake mine?

A. I never have.

The Commissioner: The only question I have is that you [fol. 611] suggested earlier your conferences with other people besides the members, and I thought that since the testimony was related to the general discussions, I wanted a line drawn between the members as distinguished from staff members.

Mr. Rigney: I will try to clear that up, your Honor, in just a moment.

By Mr. Rigney:

Q. You speak of the ore severance tax paid to the State of South Dakota by the Homestake mine. Would you be able to tell us in round figures approximately how much that annual tax amounted to at that time, 1942, in relation to the total annual budget, or the total annual revenues raised from taxes by the State of South Dakota?

A. My memory isn't good enough on that to tell you

how much the general tax totaled in South Dakota, but I do know that it was around a million dollars, or a little above, most every year that Homestake paid on their ore severance tax. I wouldn't want to test my memory as to what it is, but it has been above a million dollars almost constantly for a number of years.

Q. If I suggested that the total annual revenues of the State of South Dakota in 1942 were approximately $10,000,000 or $11,000,000 would that be in accord with your recollection?

A. It would be about right.

Q. So that Homestake's contribution by way of tax would [fol. 612] be somewhere in the neighborhood of nine or ten percent of the total budget of the State of South Dakota?

A. That would follow, yes.

Q. In order to clarify just a little bit these conversations that you had, you have testified that you had conversations or discussions with Mr. William L. Batt, the Vice-chairman of the War Production Board, and with Mr. Ferdinand Eberstaet, who was, I believe at one time, a Vice-chairman of the War Production Board.

A. I remember very clearly we talked to those two top men. Donald Nelson assigned them to this problem.

Q. And you have also spoken of having conversations with a Mr. Fred Searls. Do you recall what his position was in the War Production Board?

A. I am sure he was an engineer-advisor to Mr. Batt.

Q. Were there, aside from these four men now that we have mentioned, that is, Donald Nelson, Mr. Batt, Mr. Eberstaet and Mr. Searls, do you recall——

A. I wouldn't recall any others.

Q. You don't recall any conversations with anybody other than that?

A. There were others always around, but I don't remember any names.

Q. Incidentally, Senator Gurney, when you left the Senate, what became of your files that you had accumulated [fol. 613] over the years as a Senator?

A. I only kept personal files; all the rest were destroyed.

Q. Were they rather voluminous?

A. There was a few truckloads. They were thrown

into boxes and they went to the incinerator in the Senate Office Building.

Q. Do you recall whether or not you ever sent a letter to Mr. Donald Nelson expressing your views and arguments in connection with this proposed gold closing order?

A. I am sure I did. I don't remember exactly what the letter was, because we were writing everyone that had anything to do with the gold mine closing order.

Q. You would not remember, of course, now the date of such a letter, would you?

A. No sir.

Q. Let me show you Plaintiffs' Exhibit 21 in evidence, being a memorandum of September 15, 1942 from M. Creditor to Mr. Donald M. Nelson, and I draw your attention to the second paragraph of this letter which says: "You will recall that we received a letter from Senator Gurney on August 31 in which he set forth the harmful effects that such an order would have on the economy of the State of South Dakota. In your reply you stated in effect that we were confronted with a manpower problem," and so forth.

[fol. 614] Do you recall now, and does that refresh your recollection with respect to the approximate date of your letter to Donald Nelson?

A. Well, it would have been just prior to the issuance of the order, and I don't know how many months, but certainly I wrote him along those lines, as previously testified.

Q. Now, do you recall a meeting attended not only by you but by other Senators and Representatives, and certain representatives of the gold mining industry, with Mr. Batt and other WPB officials on or about October 2, 1942, or about a week before the order was issued? It was a rather large meeting.

A. Yes, there was a large meeting, but the exact date I wouldn't remember. Senators and gold mine officials called on the War Production Board officials. It was quite a meeting. It looked like a town meeting.

Q. You were in attendance there?

A. Yes, at every meeting, I believe.

Q. And without unduly belaboring the record with a recitation of the arguments that were advanced at that

meeting, would it be fair to say that these same arguments that you have testified about here this morning previously were the same arguments against the closing order that were advanced then by you or by others in the meeting in your presence, and in the presence of Mr. Batt and the [fol. 615] WPB officials at this large meeting that we speak of?

A. There was a general belief in and about the same story. I could say the same story or the same pleading was made by the members of Congress from States that had gold mines. It was their belief that the miners would not gravitate in sufficent numbers to the copper mines to warrant the closing of the gold mines. They were very vehement in their charges—all the legislators were—that the United States gold mines should not be closed when the United States was at the same time supplying these mining tools to gold mining firms in many other countries. I am sure that the record will show that these tools were continued to be sent to other countries that did not close their gold mines, and we did not want to receive poorer treatment than the allies—you might say—the allies of ours were giving to their gold mining people in their own countries, Africa, Canada, Mexico, and so forth.

Q. Do you recall a few of the people who were in attendance at this October 1st meeting.

A. Well, I don't know about the October 1st date, but—

Q. At this large meeting.

A. Senator McCarran, I know he was the chairman, he was the senior member that called the meeting together, and after the order was put out the members of Congress, or members of the Senate who attended that meeting sent [fol. 616] a letter of protest to the President. So the signatures on that letter of protest would about tell you who was at the meeting.

Q. I am speaking now of the meeting at which Mr. Batt presided, and at which the representatives of the gold mining industry were in attendance. Do you remember Mr. Bjorge being at that meeting?

A. Yes, he was there.

Q. At that meeting that Mr. Batt presided over?

A. Yes.

Q. Do you remember whether General Clay was there?

A. No, I do not.

Q. But anyway, the various arguments were advanced then and there in your presence to the WPB officials against the close-down order at this meeting that Mr. Bjorge attended?

A. General Clay runs through my mind. There was always a representative from the military on the manpower question. I couldn't remember if it was General Clay or not.

Mr. Rigney: May this be marked our next number, please?

(Said document was marked for identification as Plaintiff's Exhibit No. 126.)

By Mr. Rigney:

Q. I show you Plaintiffs' Exhibit 126 for identification and ask you if you will look at that and tell his Honor if that is a copy of a letter which was sent to President Roosevelt by you and several other Senators on or about [fol. 617] the date that it bears, October 10th?

A. Looking at it quickly——

Q. Take your time, sir.

A. Certainly it rings a bell.

The Commissioner: Is that different from the letter that has already been marked as an exhibit in pre-trial?

Mr. Rigney: Yes sir, I believe it is.

Mr. Barnes: That is addressed to the President, and the other is addressed to the War Production Board.

The Commissioner: All right.

The Witness: This is the letter that the group of senators sent after the closing order was issued by the War Production Board. There is no question about it, it is a copy, and it does set forth the names of the senators from the gold mining states, of which I am one of the ones signing. There are quite a few senators here, about twenty-one I would say in a hurried count. I think, twenty-one.

Yes, this is the letter.

Mr. Rigney: Plaintiff offers Exhibit 126 for identification in evidence.

Mr. Barnes: Mr. Rigney, from what source did this copy come?

Mr. Rigney: This was a copy which Senator Gurney sent to Homestake under a letter of transmittal of October 13, 1942.

Mr. Barnes: I have no objection, your Honor.

[fol. 618] The Commissioner: It may be received.

(Said letter, dated October 10, from Senator McCarran et al to the President, marked "Plaintiffs' Exhibit No. 126", admitted in evidence and made a part of this record.)

Mr. Rigney: Co-counsel has inquired of me if I could indicate through the witness the States that the Senators came from. Would your Honor permit me to do that?

The Commissioner: You may proceed.

By Mr. Rigney:

Q. Senator McCarran would be from Nevada?

A. Right.

Q. Senator Millikin from Colorado?

A. Right.

Q. Senator Langer, North Dakota; Senator Chavez, New Mexico; Senator Murray, Montana; Senator Hatch, New Mexico; Senator McNary, Oregon; Senator Nye, North Dakota; Senator Downey, California; Senator Gurney, of course, South Dakota; Senator Thomas of Utah; Senator Johnson of Colorado; and Senator Johnson of California; Senator Thomas of Idaho; Senator Hayden of New Mexico; ——

A. Arizona.

Q. Senator Wallgren of the State of Washington.

A. Yes.

Q. And Senator Bone, Washington; Senator Murdock [fol. 619] was Utah, was it?

A. Right.

Q. And Senator Holman——

A. Oregon.

Q. Senator McFarland was Arizona?

A. Yes.

Q. Senator Bulow, South Dakota.

A. That is right.

Mr. Rigney: May this be marked Plaintiffs' Exhibit 127 for identification?

(Said document was marked for identification as Plaintiffs' Exhibit No. 127.)

By Mr. Rigney:

Q. Do you recall about the time Order L-208 was issued that you wrote a letter to General Somervell, who was Commanding General of the Army Service Forces at that time?

A. I wouldn't remember exactly. You would have to identify it further. Most anyone that had any authority over it——

Q. Let me show you Plaintiffs' Exhibit 127 for identification, and ask you to look at that and tell his Honor if this document is a reply which you received from General Somervell in response to a letter that you sent to him?

A. The War Department has the habit of sending two copies, an original and one copy, with their reply. I mean [fol. 620] their reply is an original and one copy. This is without a question a copy of a letter from the Pentagon. I have seen so many of them I know it is right.

Q. And specifically from General Somervell?

A. Yes.

Q. It is from General Somervell, isn't it?

A. Yes. I can identify it from my letter of transmittal.

Q. You sent this copy of General Somervell's letter to you to Mr. Chambers Kellar of Lead, South Dakota, is that right?

A. That is right.

Q. Under a letter of transmittal from you of October 12, 1942?

A. That is right. I say "that is right" because you do have my letter here with my signature.

Q. And Mr. Chambers Kellar was for many years attorney for Homestake at Lead, South Dakota?

A. That is right.

Mr. Rigney: Plaintiff offers in evidence Plaintiffs' Exhibit No. 127 for identification.

Mr. Barnes: No objection.

The Commissioner: It is admitted.

(Said letter, dated October 11, 1942 from General Somervell to Senator Gurney, marked "Plaintiffs' Exhibit No. 127", admitted in evidence and made a part of this record.)

[fol. 621] Mr. Rigney: May I call your Honor's attention to the fact that General Somervell's letter of October 11 to Senator Gurney, Plaintiffs' Exhibit 127, discusses in detail the need for labor in the copper mines and makes no mention of critical material being the reason why Order L-208 was issued.

The Commissioner: He was not a member of the War Production Board, though, was he?

Mr. Rigney: No sir, he was not.

The Witness: He was overall commander of the Services of Supply.

The Commissioner: Yes.

The Witness: For the military establishment at that time.

By Mr. Rigney:

Q. Do you know, Senator Gurney, whether or not the problem of production, military production, production for war, came within the purview of the Services of Supply at that time?

A. Yes, he was the top man, Somervell was over production of all things needed in the military.

Mr. Rigney: Your Honor will recall that the minutes of the October 6 meeting of the War Production Board recite that Geneal Somervell was at the meeting.

The Commissioner: Yes.

Mr. Rigney: Let me have this marked Plaintiffs' Exhibit No. 128 for identification, please.

(Said document was marked for identification as Plaintiffs' Exhibit No. 128.)

[fol. 622] By Mr. Rigney:

Q. I show you Plaintiffs' Exhibit 128 for identification and ask you to look at that and tell the Court if that refreshes your recollection as to whether or not you addressed a letter to General George C. Marshall, who was at that

time Chief of Staff of the United States Army, and received a reply from him?

Mr. Barnes: I object to the form of the question. There has been no showing that Senator Gurney's recollection needs to be refreshed.

The Commissioner: Sustained.

By Mr. Rigney:

Q. Senator, do you recall whether or not about the same time that you wrote to General Somervell you also wrote to General Marshall, Chief of Staff, about this subject?

A. I think I testified that I was writing to everyone in authority in the military, and anyone that had anything to do with the production of war materials, trying to put the gold closing order in South Dakota in front of them, in other words, South Dakota's plea.

Q. Are you able to recall from an independent recollection now whether or not you wrote specifically to General Marshall?

A. Well, not without some letter that I might have written to Homestake about my correspondence with this or that [fol. 623] man to refresh my memory.

Mr. Rigney: May I now submit to the Senator Plaintiffs' Exhibit 128?

The Commissioner: Yes.

By Mr. Rigney:

Q. I show you Plaintiffs' Exhibit 128, Senator Gurney, and also your letter of October 14, 1942, and ask you to look at them and tell us whether or not they refresh your recollection with respect to writing General Marshall?

A. This is my letter of October 14, it is my signature, to Kellar & Kellar in Lead. It says:

"For your information, I attach a copy of letter received from General George C. Marshall, Chief of Staff, in reference to the gold mine suspension."

Q. Will you look, please, at this Exhibit 128 and read it and tell us if that is a copy of the letter which you received from General Marshall in response to your letter to him?

A. Yes, without a question, this came from General

Marshall, and it is a form we used in our office in making copies of official letters.

Q. Was that copy made in your office at your direction from the original that you received from General Marshall?

A. Oh, yes, I am sure.

Q. Is the original of this letter among the files that you testified earlier were destroyed when you left the Senate? [fol. 624] A. I presume so.

Mr. Rigney: Plaintiff offers Exhibit 128 in evidence.

Mr. Barnes: No objection.

The Commissioner: It is admitted.

(Said letter, dated October 12, 1942, from General Marshall to Senator Gurney, marked "Plaintiffs' Exhibit No. 128", admitted in evidence and made a part of this record.)

Mr. Rigney: I again invite your Honor's attention to the fact that this letter from General Marshall discusses the labor and manpower problem and makes no reference to critical materials in connection with this order.

By Mr. Rigney:

Q. Directing your attention now to a time several months prior to the issuance of this order in October, 1942, specifically to the Spring of 1942, do you recall whether or not at that time you had some discussions with the War Production Board with regard to priorities, or priority ratings, under existing priority orders for supplies or materials needed in gold mining on behalf of Homestake?

A. Are you asking me as to whether or not I asked them for priority for——

Q. No, I am just asking the general question as to whether or not you recall conversations about the general subject of priorities for supplies and materials for gold [fol. 625] mines back in the Spring of 1942.

A. Well, I do remember saying that Homestake's needs should be considered along with other gold mine company needs in the United States, as compared with the priorities given the gold mining companies of other countries. As to whether it was in the Spring or any other time, I don't know. I don't remember.

Q. Can you say whether or not it was a time prior to the discussion of the general close-down order?

A. Oh, yes.

Q. In other words, at a time somewhat prior to the general close-down order——

A. Somewhat prior to the time when the Senators got together to call on the War Production Board in connection with their proposed closing order.

Q. And those discussions which you had at that time were not concerned with a complete shut-down order, were they? They related to priorities under existing priority regulations?

A. That is right. But I don't want to be quoted here as saying when that happened. That is eleven years ago, I think.

Q. No, I understand. I think that is good enough. It was several months, or at least some time prior to this discussion of the close-down order?

A. Yes, some time in advance of the close-down order. [fol. 626] Mr. Rigney: You may inquire.

Mr. Herrington: May I ask the Senator a couple of questions?

By Mr. Herrington:

Q. Senator Gurney, did you know Representative Harry Englebright from California?

A. Well, he was one of the men that came to the meetings I had in my office, and also came to the meetings in Senator McCarran's office. Whenever we met on the gold mine question I am sure he attended. He was very much interester in it.

Q. Did you also know Representative Clair Engle from California?

A. Yes.

Q. Were both of these men generally present at these meetings?

A. Well, didn't one follow the other in Congress?

Q. Yes.

A. I am sure that is so.

Q. Do you recall whether they were present at the meeting on or about October 1st?

A. One of those men, I can't tell which it was, but they were always in attendance because that area in northern

California, as I remember it, has quite a few gold mines, and they always attended those meetings.

[fol. 627] Q. Do you recall what representation they may have made to the War Production Board with respect to the closing order?

A. We were all focusing on the same general arguments, that is, we all had the same ideas, that they wouldn't get enough men going into the copper mines to warrant the impact on our economy that the closing of the mines would give us.

Q. The group that you represented, Senator, including the representatives of the other senators, more or less acted as a group on behalf of all the gold mines?

Mr. Barnes: I object to the form of the question as being leading.

The Commissioner: Overruled.

The Witness: We kept common counsel and talked among ourselves all the time.

Mr. Herrington: Thank you.

By The Commissioner:

Q. Senator, do you know of any Senate or House bill introduced to forestall the issuance of the order closing down the gold mines?

A. No sir, I don't remember. I presume there were some. I don't know if I introduced a bill. I don't remember that, but that could be ascertained. I don't remember whether there were bills introduced in the Senate or the House.

Q. I just wondered whether there was any formal legis-

[fol. 628] lative action other than this group action protesting before the War Production Board. I wondered if the House or Senate took any legislative action as such on the problem?

A. Well, there was no legislation that was passed and became a bill preventing the closing.

Q. I know that.

A. The only group action——

Q. I was wondering if any got started that may not have been passed.

A. That is too long ago for me to remember. I know it was war time and we, finally as a group, the senators, ap-

pealed to the President. That was our final effort, and we got turned down there. That letter was introduced in the record this morning.

Mr. Rigney: May I ask just one question?

The Commissioner: Yes.

By Mr. Rigney:

Q. Do you recall, Senator, whether any bills were offered in the Congress, or introduced in the Congress, during the period of World War II, to authorize the Government to draft labor?

A. Oh yes, those bills came before the committee of which I was a member, and they were never successful.

Q. And no such bill ever was passed by the Congress, is that right?

[fol. 629] A. That is right.

Q. And do you recall if the name of one of those bills was the Austin-Wadsworth Bill?

A. Very well.

Q. And Congress never passed any such legislation during the whole period of World War II?

A. That is right.

Cross-examination.

By Mr. Barnes:

Q. Are you appearing here pursuant to subpoena, Senator?

A. That is right.

Q. You referred to the fact that prior to the issuance of this gold mine order you not only talked to officials on the War Production Board but you talked to officials of other departments. Who were those officials of other departments; do you recall?

A. The military.

Q. Under-Secretary Patterson?

A. I presume I did.

Q. Do you have any recollection now?

A. Most of my talks would be with men like General Somervell, who was in charge of that particular effort for the military. I cannot remember whether I talked with Sec-

retary Patterson. My only means of saying that I did [fol. 630] confer with General Somervell or General Marshall was when I find here a copy of a letter that I have sent to Homestake, because they were South Dakotans and I was presenting South Dakota's argument.

Q. I was just interested in trying to define, so far as possible, the best you can recall now, who the people were in the military with whom you discussed this prior to the issuance of the order. Can you tell now whether you went as high as the Secretary of the Army and Secretary of the Navy, for example, Mr. Stimson and Mr. Knox? Did you discuss it with them at any time that you can recall?

A. I wouldn't remember.

Q. Do you recall whether you went to Mr. Patterson and Mr. Forrestall, for example, the next lower echelon?

A. No. I couldn't say that I did. By the same token, I couldn't say that I didn't.

Q. You used to phrase "members of the War Production Board". I was wondering, Senator Gurney, whether you were using that in its technical sense, and I will explain what I mean: by Executive Order the President established a War Production Board as a board and named certain members to that board. Those members were the Chairman, who was appointed by the President; the Secretary of War; the Secretary of the Navy; the Secretary of Commerce; the Chairman of the Board of Economic Warfare, who was at that time Vice President Wallace; the Director of Pro- [fol. 631] duction for the War Department, who at that time was Lt. General Knudsen; Mr. Harry Hopkins, who had various titles during that period; and the Administrator of the Office of Price Administration, Mr. Leon Henderson. Those were the members of the Board as appointed by the President: Is that what you meant when you said members of the War Production Board?

A. No, that is not right. As I remember it, Mr. Nelson was the Executive Director. Is that right?

Q. Chairman was his title.

A. Chairman, all right. A senator has a habit of going to the top man, and then we would be funnelled by the Chairman of that particular agency to the men that handled the problem, the top men that handled that particular problem. So when I say we talked to the War Production Board of-

ficals I mean the top officials in the War Production Board who were assigned the problem of minerals or manpower, and I remember vividly that we talked with Mr. Batt and Mr. Eberstaet and Mr. Searls, and those people who were there.

Q. When did you see Mr. Searls? Did you see him alone or in company with some of these others?

A. He was just there as an advisor to Mr. Batt.

Q. Had you known Mr. Searls before?

A. No, I had never seen him before. I am sure that is his name.

[fol. 632] Q. That is right, Fred Searls, Jr.

Incidentally, this letter of protest you sent to the President, did you receive any reply to that?

A. I do not know.

Q. Do you have any recollection now?

A. I know we were not successful. That is the only recollection I am sure of on my part. If the reply came in it probably would not have come to me, it would have come to the senior member who signed the letter, who was Senator McCarran.

By The Commissioner:

Q. Did this group of senators meet together down at the Senate?

A. Yes. There were quite a few meetings of western State senators who have like mineral problems; and that group still meets or it did as long as I was in the Senate.

Q. At any of these meetings was there any discussion of a proposal for legislative action to keep the mines open?

A. I couldn't say, but I know that that did not eventually happen, to single it out and pass it, but whether or not we introduced a bill, I do not remember. But I do know that it didn't go through.

Q. Beyond the introduction of the bill, I ask you whether or not there was any discussion among the group with respect to possible introduction of a bill.

[fol. 633] A. Yes, that was probably discussed. I am sure we went at every angle of it.

Q. But you don't remember the discussion, if there was any?

A. No, I do not. It is too long back, too much water has gone under the bridge.

By Mr. Barnes:

Q. Incidentally, Senator, what was your general background prior to your election to the Senate?

A. I grew up with a family business in South Dakota.

Q. What type of business was that?

A. Seed and nursery business, radio and gasoline distribution.

Q. What part of the State?

A. Yankton, South Dakota, in the southeast corner.

Q. What industrial activities are there in the State of South Dakota, generally, that are of substantial size?

A. Well, there is hardly any industry in South Dakota, outside of meat packing and flour mills, and they are small, fertilizer works, mostly concerns that distribute products that are made elsewhere.

Q. Are there any mining activities in South Dakota other than gold mines?

A. Yes; not of large size. Mica is found there and bentonite and a few other minerals. I lived about 400 [fol. 634] miles east of the Black Hills, so I am not too well acquainted with the mining, and that is where all the mining is done, in the extreme western part of South Dakota.

Q. During your discussions of this order with officials of the War Production Board prior to its issuance, do you recall hearing any of them make any estimates as to the number of men who were employed in gold mines?

A. All over the United States?

Q. Yes.

A. No, I do not. I remember, of course, about how many were employed in Homestake in South Dakota mines, in gold mining.

Q. In round number that was around 2,000?

A. A little more than that.

Q. You made the statement that 12 to 16 thousand people in South Dakota would be directly affected by the order. What did you mean by that? What group did you include there?

A. The population of the towns of Deadwood and Lead,

as these folks that live there were entirely supported by the men who worked in the gold mines. There was no other industry there, maybe a little logging, but that was minor.

Q. Did I understand you correctly to say that at some point you requested special consideration for Homestake because of the large inventory of materials and supplies which it had?

A. I don't know if it was large or not, but I was given [fol. 635] to understand that—and I remember that vividly—that they had enough materials so that they would not have to call on critical material stockpiles, shall we say, for new tools with which to continue operations.

Q. But didn't you testify that just a few months before you had been consulting the War Production Board about the level of priorities granted to gold mines?

A. Yes.

Q. If Homestake had an adequate supply of materials and supplies to keep going, why would they be concerned about the level of priority ratings? Did you ever inquire into that?

Mr. Rigney: Objection, if your Honor please. The question is argumentative in form.

The Commissioner: Sustained.

Mr. Barnes: Your Honor, I think that when I ask him if he ever inquired into that it is not argumentative.

The Commissioner: I permitted an answer as to the question did he inquire.

Mr. Barnes: You sustained an objection to that question.

The Commissioner: I sustained the objection to the question as to whether—well, let us read the question.

Mr. Barnes: Can the question be read, please, Mr. Reporter?

(The pending question was read by the reporter.)

The Commissioner: The objection, of course, is as to [fol. 636] why Homestake was concerned about something.

Mr. Rigney: Yes, he could not testify to that.

By Mr. Barnes:

Q. Did you have these discussions some time in the early part of 1942 with respect to priority ratings about which you testified at the request or instigation of Homestake Mining Company?

A. I wouldn't remember definitely when it was, but——

Q. Whenever it was, was it at the request or instigation of Homestake?

A. They probably needed some special tool, and I made the approach on the basis of the United States should get No. 1 priority, and gold mines in other countries should get No. 2 place.

Q. Do you recall whether or not in any of your discussions with officials of the War Production Board, when you mentioned the amount of materials that were held by Homestake, did they mention the possibility of redistribution of those materials to other mining activities other than gold?

A. No, I don't remember anything about it. I am quite sure that that matter never came up.

Mr. Barnes: That is all.

Redirect Examination

By Mr. Rigney:

Q. Senator Gurney, I would like to have you look at this [fol. 637] memorandum which I hand you and ask you to read it, if you will. Take a moment and then I will ask you a question. (Handing).

A. All right.

Q. Are you able to testify, Senator Gurney, fixing the time by month and year as near as you can, when you had any discussions with anyone in the WPB with respect to the priority situation as it affected the Homestake or other gold mines? That is, your first discussions with anybody in WPB regarding the general priority situation insofar as Homestake or other gold mines were concerned?

A. Well, a senator gets the problems of all the people in his State. If there was a problem I am sure they would have brought it to me, I do remember the order on priorities of course, of all the critical materials.

Q. And do you remember whether or not, when such priority orders were in effect, and at a time prior to any discussion of the close-down order L-208, whether or not you had discussions with anyone in the WPB regarding the priority situation as far as gold mines are concerned?

A. Well, that is asking me to remember and place it at a particular time. I am sure I handled——

Q. I realize it is a long time ago, and I don't expect you to detail any such conversation or even to identify the people. But I would just like to find out whether or not [fol. 638] you can say whether you had any discussions about the priorities situation so far as gold mines are concerned under existing priorities, at a time before any discussion was had about L-208.

Mr. Barnes: I think the witness has stated repeatedly he cannot remember. I think the counsel is merely arguing with him.

The Commissioner: I think he is trying to test his recollection of it.

Mr. Barnes: Is that proper on direct examination?

The Commissioner: I do not mean test, I mean aid.

By Mr. Rigney:

Q. Would you like to have that question read back to you? It is fairly long and cumbersome.

A. If is not necessary. The question was whether I talked with War Production Board about needs for priorities, where they had certain set-ups in certain industries that had priorities, and there is no question in my mind, and my memory is pretty good on that, that I did talk to the War Production Board about the need for tools for Homestake Mining Company. Whether it came before the gold mine closing order or not I couldn't remember, but I wouldn't imagine they would ask for a priority after the closing order.

Mr. Rigney: Very well, sir, thank you.

The Commissioner: Now, Senator, you have testified [fol. 639] concerning statements made on behalf of the gold miners at this meeting at which Mr. Batt presided, at which all of the senators and congressmen were present.

What was said in answer to those statements that were made on behalf of the gold miners?

The Witness: The need for manpower in the copper mines.

The Commissioner: Was that all?

The Witness: Yes. And, of course, as a secondary proposition, the shortage of critical materials that they would be using in the gold mine, but the main thing was manpower.

The Commissioner: All right. Is there anything further?

Mr. Barnes: Could I see the memorandum that was shown to Senator Gurney on his redirect?

(Document handed to Mr. Barnes.)

Mr. Barnes: No further questions.

Mr. Rigney: That is all.

The Commissioner: Thank you, Senator.

(Witness excused.)

The Commissioner: We will recess for five minutes.

(Whereupon, a short recess was taken.)

(The reporter, Willette Harkins, was duly sworn by the Commissioner.)

[fol. 640] Wilbur A. Nelson, a witness for the plaintiffs, was recalled to the witness stand, and was examined and testified further as follows:

Cross-examination.

By Mr. Barnes:

Q. Professor Nelson, isn't it a fact that at some date the title of the Mining Division was changed to Mining Equipment Division?

A. Yes.

Q. Do you recall when that was?

A. It is my recollection that that was about the time that Knoizen succeeded me.

Q. Which would be about the first of January, 1943?

A. Somewhere about that time.

Q. Do you recall whether in connection with that change of title there was any change in the functions of the division?

A. I left the division at that time and had no intimate contact with it, but, as far as my general knowledge is concerned, I noticed no change.

Q. Now, it would appear that the Mining Division and the other materials divisions made some kind of a concurrent jurisdiction with respect to the production of the raw materials. Would that be correct?

A. Mining Division had absolutely nothing to do with [fol. 641] production of raw materials except to see that each mine got all of the equipment, supplies, that it needed to keep up to maximum production on a basis of manpower.

Q. On that basis then, the title Mining Equipment Division might be a more accurate designation of the functions of the division, is that correct?

A. Well, it just depends on your psychology. As a geologist, I preferred the title Mining Division. Mr. Knoizen who is vice president of the Joy Manufacturing Company was not qualified as a miner so he wanted the title to fit his qualifications.

Q. Let me take a situation. Let us take the case of lead, for example. That was produced domestically in this country, was it not?

A. It large amounts.

Q. And the branch which was primarily responsible for lead production was the Tin and Lead Division headed by Mr. Vogelsang?

A. That is correct,

Q. Now, with respect to a lead mine, would it be correct to say that at all times that you were in the Mining Division your only function was to see that the lead mine had the mining equipment and machinery that it needed to operate?

A. And supplies.

[fol. 642] Q. And supplies.

A. And spare parts

Q. The determination, for example, as to the rate at which a group of mines would operate would be in the hands of the Tin and Lead Division?

A. No, I think that would be in the hands of the operators themselves.

Q. Well, except to the extent that, as a policy matter, it might be determined that some particular mineral be mined at 80 percent of pre-war production rate and some other at 150 percent of pre-war production rate?

A. I never heard of any mineral being requested to be mined at less than 100 percent

Q. Well, some had percentages aimed at goals higher than others, did they not?

A. Exceedingly higher. During the summer of '41 when I was making the study of the ferro-alloys we had meetings of all the different mine operators mining the different ferro-alloy minerals, and we had charts showing what the need for those minerals would be in 1942 and 1943, and we asked them if they could increase their capacity to meet those needs. So I would say that charts were drawn outside of those divisions or by an economist attached to the division where they had one, to anticipate the future need and try to build up to them.

[fol. 643] Q. Incidentally, in going over the transcript of the testimony, I notice that at various points you have referred, and in one point you refer to Mr. Lester being head of the Labor Division, and at one point to Mr. Lund.

A. Mr. Wengell Lund, I think, succeeded Mr. Lester.

Q. Do you recall when that change took place?

A. I do not.

Q. Do you recall whether Mr. Lester was present during all of the period up to the issuance of E.208 and participating in those discussions?

A. All I can recall is that during the summer of '42 he was the head of that division.

The Commissioner: What was their function?

The Witness: The Labor Division was to look after labor problems, I would say, as a liaison with probably Mr. McNutt.

By Mr. Barnes:

Q. Mr. McNutt was chairman of the War Manpower Commission, is that correct?

A. Yes.

Q. Actually, isn't it correct that the Labor Division of

the War Production Board was established prior to the War Manpower Commission? Do you recall?

A. I do not recall.

The Commissioner: You do not know any of the further details with respect to their function?

[fol. 644] The Witness: The only details I know were the personal contacts I had with them relating to the goals, manpower, and in relation to that.

By Mr. Barnes:

Q. Yesterday, Mr. Nelson, I showed you a group of minutes of the Interdepartmental Committee on Non-Ferrous Metals and of the Inter Branch Committee and asked you to examine those for any evidence in them of statements by Mr. Lipkowitz that 20,000 men would be released from the mines, I think was the statement you said he made?

A. Yes, I am still certain he made it.

Q. And for any rebuttal by you of that statement, and you were unable to find anything in those minutes?

A. In those minutes. But I am certain that he made the statement.

Q. Let me show you Plaintiffs' Exhibit 81, minutes of the Interdepartmental Committee on Non-Ferrous Metals, on September 3, 1942, and direct your attention to the last paragraph starting on the second page of those minutes. Does that paragraph indicate a statement made by Mr. Lipkowitz as to the number of miners employed in gold mines?

A. That is not the statement that I was referring to.

Q. What statement did Mr. Lipkowitz make at that meeting?

A. At this meeting he said that the gold mines which [fol. 645] had received serial numbers were large, a fairly large number of mines, whose gold production by volume exceeded 75 percent. They had received serial numbers entitling them to the use of mining equipment, and that there were some 2,000 men employed in these mines. That is the statement in these minutes.

Q. That does not say 20,000, does it?

A. That is not the statement I am referring to. This is a statement referring to a few mines which I consider an

erroneous statement. I know of only one mine whose gold output exceeded 75 percent, that was given a serial number. That was the Getchell mine in Nevada, which contained the largest amount of arsenic of any mine in the United States, and which the Chemical Warfare Service told us to keep open.

Q. Mr. Nelson, in response to a question by the Commissioner yesterday a page 576 of the transcript, you say that you had never made a written recommendation against the issuance of Order L-208. Do you consider that still to be a correct statement?

A. That I had never made a written recommendation against the issuance of Order L-208. I certainly opposed the issuance of a gold-closing order.

Q. Did you do it in writing?

A. I would have to be shown any such writing to refresh my memory.

Q. Do you have any recollection of one?

[fol. 646] A. I wrote letters to that effect, but I don't know where they are.

Q. Have you, during the last few weeks, in reveiwing documents in connection with this case, seen any such letters?

A. No.

Q. Did you make oral recommendations against the issuance of an order closing the gold mines?

A. Before it was issued?

Q. Before it was issued.

A. I did.

Q. To whom?

A. Well, I remember having talked with Mr. Donald Nelson, at which time I suggested to him that it was such a problem that I thought it should be handled by the Board much better than having him take the onus of issuing the order himself.

Q. When was that discussion? Do you recall approximately?

A. It was within a week previous to the issuance of the order.

Q. And that recommendation was accepted?

A. It would seem it was accepted because that matter was handled by the Board.

Q. Did you, during the course of that discussion with Mr.

Donald Nelson, tell him that you disapproved of an order [fol. 647] closing the gold mines?

A. I am certain I did.

Q. Did you state your reasons?

A. I did.

Q. What were those reasons? As you recall them now?

A. That the over-all economy of the war would be better served by not closing the mines because there would be so few men released that it would not compensate for the dislocation of industry in the West, and the psychological effect.

Q. Did you tell him at that time what in substance you repeated yesterday, that if machinery were established to channel these miners to the non-ferrous mines, your view would be different.

A. No, I think I told him I didn't believe such machinery should be channeled to mines in the United States.

Q. Do you recall any other official in the War Production Board to whom you made a similar oral statement?

A. I am very certain I made similar statements to Mr. Batt.

Q. When?

A. In the ten days preceding the order issuance?

Q. How many times did you see Mr. Batt during that period on this subject?

A. Well, I reported a resolution of the Committee I pre- [fol. 648] sided over to him asking him not to close the mines until the gold operators could come to Washington. He turned that down. We met again the next day, presented the same resolution. I went back to see him the second time and he reversed his decision. I saw him on the 30th in the meeting that he had in his own office which I have already testified on.

Q. Did you, in the course of that meeting, make statements to the effect that you did not believe the gold mines should be closed, the meeting of September 3?

A. I cannot at this length of time remember exactly what I said, but I certainly was opposed to the closing of the gold mines.

Q. I am trying to find out the degree of your communication of this opposition, Dr. Nelson.

A. I opposed the closing of the mines in every way I knew how.

Q. What I am trying to find out is to what officials did you communicate your opposition, and over what period of time?

A. Well, the record speaks for itself on that.

Q. Well, you stated that that was not done in writing, so I am trying to find out what your oral communications were. The record will not speak for that.

A. I have just given you my oral speakings and I will refer now to the position taken in the Inter Branch Meeting, [fol. 649] and whatever I said in any of Mr. King's meetings.

Q. I am particularly interested, however, in communications to your superiors, rather than communications to people on a parity with you, which is what we decided yesterday those two committees represented largely.

A. Well, Mr. Henderson very definitely knew that I was opposing the order, and about that time I was taken from the Mining Branch and given special assignments by Mr. Henderson.

Q. Just a minute. You say Mr. Henderson knew you were opposing the order. How did he know it?

A. General knowledge among everyone under Mr. Henderson.

Mr. Barnes: Your Honor, I object and move to strike the statement that Mr. Henderson knew it. It is surmise on the part of the witness.

The Commissioner: It may be stricken.

By Mr. Barnes:

Q. What experience of yours led you to the conclusion that the closing of the gold mines would be unwise, Dr. Nelson?

A. All of the accumulation of data which I had received, my knowledge of the way the channeling of labor had been handled in the past, and I might say my knowledge that there would be so few men available due to the closing of the mines.

Q. All right. Now, beginning on those three factors, that you have mentioned, what data had you received?

[fol. 650] A. Well, Mr. Lipkowitz in the summer of '42, had made statements that around 20,000 men would be dis-

placed and could be used by the mining industry. That figure we knew to be incorrect.

Q. Well, that is the point that you have also given as your first point, the knowledge of the man available. I noted from your comment three points, data which you had received, information and channeling of labor, and knowledge of the men available in the gold mines.

The Commissioner: Just a minute. There was a question being presented here.

Mr. Barnes: That is right, sir.

By Mr. Barnes:

Q. Limiting ourselves for the moment to the first of those three factors, the data which you had received, what type of data was that? Other than the manpower data? Was there any data other than the manpower data that you had received that led you to that conclusion?

A. Well, data that was available, that the amount of critical materials used by the gold mines was very small, that most of the critical material used by the gold mining industry was in the placer mines and they had been closed down, that over 50 percent of all your mining machinery in connection with gold was in the placer mines.

The Commissioner: What closed them down?

[fol. 651] The Witness: The paragraph on Order P-56 of September 22, the first amendment of P-56 which said these serial numbers cannot be given to placer gold mines.

The Commissioner: When you said they had closed down, did you mean they could not get additional materials?

The Witness: They could only get material on A-10 ratings.

By Mr. Barnes:

Q. They could operate under P-22 or P-100, which ever the order was at that time?

A. In a limited way.

Q. Instead of A-8 they got A-10?

A. As they needed steel alloy teeth for their buckets, they didn't get very far.

Q. How far did you get on getting steel alloy material on A-8?

A. I can't answer that right now.

Q. Now, in what form was that data on the use of critical materials by gold mines in 1942?

A. I would have to refresh my memory on when the March 2 amendment to P-56 came. That was in '42, wasn't it?

Q. Yes.

A. They took serial numbers away from all gold mines, and the ones that produced nothing but gold not used in smelter practice, did not have their numbers returned and so [fol. 652] they could only get maintenance and operating supplies and repair parts under P-100 which gave an A-10 rating. They couldn't possibly get very large supplies.

Q. I am interested in knowing in what form the data on the use of critical materials was available in the Mining Division or in the War Production Board in the summer of 1942?

A. Well, I would have to say that that was in most cases due to talks with the gold mine operators, and statements they made.

Q. To your recollection, there had been no formal study made?

A. No.

Q. Dr. Nelson, you referred yesterday to certain testimony that you gave at hearings held on the Hill in May, 1942, which led to the amendment of P-56?

A. I did.

Mr. Rigney: If Your Honor please, I think I should enter an objection to the form of the question, that the hearings led to the amendment. The hearings occurred just a few days before the amendment, but I do not think there was anything in the record to support the conclusion that the hearings caused the amendment.

By Mr. Barnes:

Q. I will modify the question to say that at the last day of those hearings, were you instructed by Donald Nelson [fol. 653] to instruct the committee that the P-56 had been amended?

A. That is correct.

Q. Do you recall stating in those hearings the following: "I have a list here of items bought by a number of gold

mines in the West before their numbers were taken away, and practically everything they bought is of a most critical nature today. For instance, there are machine bolts, chains, key stocks, files, pipe dies, fuse links, fuse plugs, a large amount of wire, bushings, lock nuts, cable and lead, things of that type are very critical." Do you recall making that statement?

A. I would have to see the minutes of the meetings.

Q. Do you have any independent recollection of having made that statement?

A. I said I would have to see the minutes of the meetings to refresh my memory.

Q. You have no independent recollection of that?

A. I have answered you.

By the Commissioner:

Q. No, you have not. He is entitled to an answer to that question. Apart from the minutes, do you remember the statement?

A. I do not.

By Mr. Barnes:

Q. Have you, in preparing to testify here, refreshed your [fol. 654] recollection by reading the minutes of those hearings in which you testified?

A. I have not.

Q. You did testify in several hearings on the Hill, did you not?

A. I did.

Q. And you have not gone back and refreshed your recollection by re-examining those?

A. I have not. I have reread the minutes of the Engel Committee report which took place in '45, I think, '46.

Q. I will show you a copy of the minutes of that hearing which has been furnished to me by counsel for the plaintiff, and direct your attention to page 531 where a check mark appears in the margin. Does that refresh your recollection, Mr. Nelson?

A. It does.

Q. Did you make such a statement?

A. The record shows that I made such a statement, but

I think the whole statement should be read and not just one paragraph of it.

Q. Well, that can be brought out in redirect examination by counsel for the plaintiff, if they desire to do so. The question now is this: You referred in that excerpt I read to a list of items. Do you know where that list is at the present time?

[fol. 655] A. I do not.

Q. Do you know from what source it was compiled?

A. I do not know from what source it was compiled.

Q. Do you know whether it sets forth any quantities, or just item descriptions?

A. There are no quantities set forth in my statement.

By the Commissioner:

Q. That was not the question. Read the question back.

(The pending question was read by the reporter.)

A. It sets forth just item descriptions.

By Mr. Barnes:

Q. Your testimony did?

A. Yes.

Q. Do you know whether the list did or not?

A. The only recollection I have is what has been refreshed in my memory by reading this testimony.

Q. Did you know Mr. Robert S. Palmer?

A. Robert S. Palmer?

Q. That is right, P-a-l-m-e-r?

A. Of Denver?

Q. Secretary of the Colorado Mining Association?

A. I did.

Q. Did you secure any information from Mr. Palmer as to the use of critical materials by gold mines?

A. Mr. Palmer was sending me information continually [fol. 656] from Colorado. I do not remember at this time what it was.

Q. Did you hear Mr. Palmer testify at the same hearing on the Hill in May, 1942?

A. I was at the hearings every day and, if he testified, I undoubtedly heard him.

Q. Well, will you look at page 623 of the transcript of

those hearings which is before you. Does that set forth a list of materials submitted by Mr. Palmer that were required by the Colorad. gold mines?

A. May I read this?

Q. Certainly.

A. I have read the statement.

Q. You heard that testimony given?

A. I must have heard it given.

Q. Would that have been one of the sources of your knowledge in August of 1942 as to the requirements of the gold mines for materials?

Mr. Rigney: Objection to the form. I think he should ask whether it was or not the source, not whether it would have been.

The Commissioner: Will you read the question?

(The pending question was read by the reporter.)

Mr. Rigney: My point is that I think he should phrase the question "was that one of the sources?"

The Commissioner: Will you read the question again?

[fol. 657] (The pending question was read by the reporter.)

Mr. Rigney: The question is "Would that have been" and I think that is speculative.

The Commissioner: Sustained.

By Mr. Barnes:

Q. Was that one of the sources of your knowledge of the requirements of gold mines for materials?

A. At this late date, I cannot answer that positively, but I would feel that it probably was.

Q. Did that list of materials which is set forth there for the Colorado gold mines show something over 600 tons of drill steel?

A. The statement by Mr. Palmer states that this is a clear picture of 79 percent of the production of the state. He doesn't say whether it is gold or total production. He goes on to say "It shows how small our needs are but how important our production is to the welfare of Colorado."

Q. Did that hearing relate to any matters other than gold mines?

A. It related to the 30-percent clause.

Q. Which related to gold mines, did it not?

A. Yes, but in that 30-percent clause were tied in production of copper, lead and zinc and other metals.

Q. When they amounted to less than 30 percent?

A. No, if a mine produced more than 30 percent gold, [fol. 658] and produced copper, lead and zinc, they were in that order.

Q. Was that in dollar amounts, do you recall?

A. In dollar amounts, as I recall.

Q. That would not be a quantitative measure of the production of the mine, would it?

A. Well, it doesn't seem that it would.

Q. The price of copper at that time was 12 cents a pound, was it not?

A. I think either 12 or 12½ cents was the ceiling price, but then they had bonuses that they gave to certain mines.

Q. Do you recall whether that bonus plan was in existence in the early part of 1942?

A. I know the plan was put in existence. The date that it was put in, I do not know.

Q. But what was the price of gold, comparable to copper?

A. Gold was $35 an ounce.

Q. Do you remember what the price of zinc was at that time?

A. No.

Q. Do you remember what the price of molybdenum was?

A. No.

Q. Did you read only the portion of Mr. Palmer's statement that appears on page 623?

[fol. 659] A. I started at the beginning of his testimony on 622 and read down to the table on 623.

Q. His testimony actually starts on page 621?

A. Yes.

Q. I would like you to go back to page 621 and see whether that clarifies that reference to 79 percent?

A. On my reading of Mr. Palmer's testimony, it does not change my opinion that the 79 percent refers to the total production of all mines of the State.

By the Commissioner:

Q. Do you mean mines not necessarily limited to gold?

A. No, the entire metal mining industry of the state, including, copper, lead, zinc and molybdenum.

By Mr. Barnes:

Q. Going back, Dr. Nelson, what information was available to you in the summer of 1942 as to prior experience in channeling labor from one project to another?

A. The statement made by Donald Nelson, one of the exhibits, that there were no laws in the United States that permitted you to move labor from one place to another except voluntarily; the knowledge that people had been leaving the mines all during that summer to go to the West Coast for higher prices and not stopping at copper mines where they were considered to be more necessary than on the West Coast.

Q. Considered to be more necessary by whom? By you? [fol. 660] A. By our mining industry.

Q. Did you know whether or not any of the people who had left the mines had gone to copper or other non-ferrous mines?

A. I can't answer the question.

Mr. Rigney: I think the time should be fixed.

By Mr. Barnes:

Q. The same time that he was just talking about, during the summer of 1942?

A. All I have are the statements given me by the gold mine operators, that the men that left their mines went to the West Coast.

Q. There were on the West Coast certain mines that were producing, other than gold mines, were there not?

A. I didn't hear you.

Q. There were on the West Coast certain mines that were producing, other than gold mines, were there not?

A. There were a series of mercury mines rather close to the West Coast that might be considered in the West Coast area.

Q. There are materials other than gold that are mined in close proximity to the Mother Lode, are there not?

A. Magnesite used in the Las Vegas magnesium plant.

Q. Isn't there a mine in New Idria, California?

A. New Idria is separated from the Mother Lode by the [fol. 661] San Joaquin Valley.

Q. But they are in close proximity?

A. Oh, I thought you said they were close to the Mother Lode. They are definitely on the West Coast.

Q. Now, when you presented your objections to this order to Mr. Donald Nelson, for example, as you say you did within a week or ten days prior to the issuance of L-208, what comment, if any, did he make to you?

A. Mr. Donald Nelson as a rule always said he would take it under advisement, what you had told him.

Q. Is that your recollection of what he said at that time?

A. It is.

Q. When you presented your views on this order to Mr. Batt, what statements, if any, did he make?

A. Mr. Batt said the order had to be produced or issued.

Q. Did he give any reason that you recall now?

A. He just said it had to be issued.

Q. Now, do you recall any other official of the War Production Board to whom you submitted an oral objection to the order, an official who was your superior?

A. I talked the matter over a number of times with Mr. Fred Eaton who is one of the assistants to John O'Brien.

Q. Did Mr. Eaton express any opinion, that you recall? [fol. 662] A. He expressed some opinions but I think they are opinions that I would not care to repeat?

Q. Why not?

A. Well, I think they were more or less privileged opinions that he gave me.

Q. Privileged in what sense? Was he your personal attorney?

A. Well, what was the question?

Q. I asked you privileged in what sense? Was Mr. Eaton your personal attorney?

A. No, he wasn't, but the facts we discussed I think would be harmful if brought out.

Q. Harmful in what respect?

A. To thoughts that he and I had at that time.

Q. I am afraid I do not follow you. How could his opinions be harmful to thoughts that you had then?

Mr. Rigney: If your Honor please, I think counsel should ask him directly unless the witness answer what these considerations were.

The Commissioner: Sustained.

Mr. Barnes: I have asked directly and the witness says he does not think he should answer, your Honor. I am trying to find whether there is a valid reason for the statement that the witness has made.

The Commissioner: Well, over the objection, I am going [fol. 663] to instruct the witness that he should answer the direct questioning at this time, and I will at this time tell you to ask the question again.

By Mr. Barnes:

Q. What did Mr. Eaton tell you when you put this matter to him?

A. He felt that there might be a group of people that were doing this in order to make money on the stock exchange.

Q. Did he indicate who that group were?

A. No, but he checked all of the transactions for several months and could find no such activity taking place.

Q. When was that that you discussed that with Mr. Eaton? Do you recall?

A. In the 30 days preceding the issuance of Order L-208.

Q. Now, do you recall anybody else, any other superior or official of the War Production Board to whom you presented your views?

A. At this length of time, I do not.

Q. I think you made the statement yesterday, Dr. Nelson, that preparatory to testifying here you had examined several hundred documents, is that correct?

A. It certainly is.

Q. And you also answered a question put to you by the Commissioner by saying other than Mr. Lester's memoran- [fol. 664] dum which was referred to you did not recall any other documents that had not been produced here as exhibits which were material to this matter. Is that a correct statement?

The Commissioner: "Important" is the word I used.

By Mr. Barnes:

Q. Important.

A. I am still of the opinion that somewhere there is a statement of Mr. Lipkowitz made in the summer of '42.

Q. In memorandum form?

A. In either attending one of the meetings that you didn't show me the other day, or in memorandum form.

Q. Have you seen that during the last two or three weeks in your review of the documents, do you think?

A. Yes, I have seen it.

Q. Now, when you used the word "important", or when you answered the Commissioner's question that you could recall no other documents not introduced, what meanings did you ascribe to the word "important"?

A. The meaning, the way in which I used that word was that the document had some bearing on this particular case, some important bearing.

Q. Now, on what aspect of the case?

A. Well, on what Homestake is trying to prove.

Mr. Barnes: That is all.

[fol. 665] Redirect examination.

By Mr. Rigney:

Q. Professor Nelson, you recall that yesterday Government counsel asked you concerning your consulting work with regard to mines and, as I recall your testimony, you said that you had made two reports on gold mines specifically?

A. Yes.

Q. Now, in the course of your consulting work, have you made reports on other metallic mines?

A. I have made numerous reports on metallic mines of different metals.

Q. And does the science of geology embrace a study of all kinds of mines?

A. The phase of geology known as Economic Geology deals with all of the mineral deposits divided into two

classes, the non-metallic and metallic, in Economic Geology for 27 years.

Q. I wonder if you would define or describe briefly to us what you mean by Economic Geology?

A. Economic Geology is that branch of the general science of geology that deals with the origin, location, and size of ore deposits. That is a very general statement.

Q. Does your knowledge of mining generally comprehend a knowledge of gold mines as they fit into the general field of metallic mines?

[fol. 666] A. That is one of the branches of metallics in Economic Geology.

Q. And through the course of the years, since you have been in that field, has your reading and your study included mining textbooks, and journals, and other scientific writings in the field?

A. It has, and it also included visiting as many of the important mining districts in the United States as possible so as to have first hand information on those.

Q. That is all types of metallic mines, is that right?

A. All types of metallic as well as all types of non-metallic mines.

Q. Now, I think you were asked yesterday about the Appeals Board which was set up following the issuance of Order L-208. There was a provision in L-208 permitting appeals under certain circumstances?

A. Yes.

Q. And I think that you said that you were a part or a member of that first Appeals Board, is that correct?

A. I was.

Q. And who were the other members

A. T. Munford Boyd, and Allen Buchanan representing labor.

Q. Do you recall at this time how that Board was set up? Who issued the order? How did it come about?

[fol. 667] A. I think it came from Professor Eaton.

Q. He was then the assistant general counsel?

A. He was.

Q. Do you know whether or not he was the number two man; in other words, Mr. John Lord O'Brien's first assistant or chief assistant, if you can determine that?

A. I know he was close to the top, but I don't know whether John Lord O'Brien's first assistant.

Mr. Barnes: As the Solicitor of the War Production Board, the number two man is Milton Katz whose name appears in the October 6, 1942, meeting as being the Solicitor. There were under him some half-dozen assistant general counsel of which Mr. Eaton was one.

By Mr. Rigney:

Q. Did Mr. Eaton become general counsel at a later time when Mr. O'Brien left?

A. I don't know.

Mr. Barnes: I will so stipulate.

Mr. Rigney: And Mr. Katz was never general counsel?

Mr. Barnes: Mr. Katz by that time was in Europe.

By Mr. Rigney:

Q. How soon after October 8, the date of the issuance of the order, did appeals begin to come in from the order?

A. To my recollection, they came in as quickly as the mails could bring them in.

[fol. 668] Q. Well, can you fix a time? I am not talking about a precise date, but I would like to have an idea.

A. I would say within less than a week.

Q. Do you recall in approximate figures how many appeals came in, say, in the first month after the order was issued?

A. All that I know is that we met each afternoon right after lunch and that, if we could process three appeals in an afternoon, we felt we were doing a big job. Very often there were two.

Q. When you say, "we", you can mean the Appeals Board?

A. The Appeals Board. They piled up on us and, after a few weeks, arrangement were made to transfer all appeals to the General Appeals Board.

Mr. Barnes: Was the process of appealing those appeals in any way delayed by Mr. Boyd's infirmity?

The Witness: Certainly not.

Mr. Barnes: Mr. Boyd is blind. Wasn't it necessary to read papers to him?

The Witness: I have never known any work that Mr. Boyd has done to be impeded by his blindness and I have known him for 30 years.

By Mr. Rigney:

Q. So that while you were sitting on this Appeals Board, I believe you testified yesterday you were also carrying on your regular duties otherwise in the Mining Division?

[fol. 669] A. I was.

Q. And can you fix the time as near as possible when you ceased to sit on this Appeals Board?

A. I don't think the Appeals Board lasted much over a month, somewhere a little less or more than a month.

Q. And then you ceased to have anything to do with appeals, is that correct?

A. Yes.

Q. Now, was a new Appeals Board established at that time?

A. No, it was turned over to the existing Appeals Board.

Q. It was turned over to the regular Appeals Board for the War Production Board?

A. For appeals on all orders issued by the War Production Board.

Q. I see. Was that the board headed by Dr. Holcomb? Was he the chairman?

A. Mr. Holcomb was chairman at that time.

Q. And do you know the number of members on that Appeals Board?

A. It seems to me there were five. I am not certain. We were called before them occasionally to answer questions on certain appeals that came up.

Q. So that you think it was a month, I believe you said?

A. Somewhere of the magnitude of one month.

[fol. 670] Q. The early part of November, perhaps, of 1942 that your Appeals Board stopped functioning and the other board took over?

A. It had to be before the first of December.

Q. Now, there is testimony here, I believe, to the effect that Homestake took an appeal. I wanted to ask you

whether or not you sat on the appeals board at which the Homestake appeal was considered?

A. The Homestake appeal did not come before the board that T. Munford Boyd was chairman of.

Q. So you had nothing to do with the Homestake appeal?

A. Nothing.

Q. You testified a few minutes ago, as I recall, that you had looked over numerous documents in connection with the preparation for your testimony in this case?

A. I did.

Q. What is the fact with respect to that? Is it the fact that following the pre-trial you received copies of the exhibits which were marked for identification?

A. I did.

Q. To look over, Then, some time in December, did I submit to you certain additional documents that you had not seen, so far as any preparation in this case is concerned, before?

A. It was around somewhere between the first and tenth [fol. 671] of December that you met me in Charlottesville and spent a day and a half with me and turned over to me a number of additional documents which I had not seen heretofore.

Mr. Rigney: May this be marked Plaintiff's Exhibit No. 129?

(Said document was marked for identification as Plaintiff's Exhibit No. 29.)

By Mr. Rigney:

Q. Now, Professor Nelson, I show you Plaintiff's Exhibit No. 129 for identification, being the minutes of the Interdepartmental Committee on Non-Ferrous Metals, dated August 25, 1942, and I ask you to look at that. I particularly direct your attention to the paragraph at the bottom of page 3 beginning, "The gold curtailment order," and ask you to read through from the bottom of page 3 and down through page 4. I am going to put a question to you.

A. "Gold curtailment."

Mr. Barnes: Your Honor, I think the witness misunderstood about reading aloud.

Mr. Rigney: I did not mean to read it aloud, sir. I meant to have you read it to yourself.

By Mr. Rigney:

Q. Have you finished, sir?

A. Yes, sir.

OFFERS IN EVIDENCE

Mr. Rigney: Plaintiff now offers in evidence Exhibit [fol. 672] No. 129 for identification.

Mr. Barnes: I have no objection.

The Commissioner: Admitted.

(Said minutes, of Interdepartmental Committee on Non-Ferrous Metals, dated August 25, 1942, marked "Plaintiff's Exhibit No. 129", admitted in evidence and made a part of this record.)

By Mr. Rigney:

Q. Now, Professor Nelson, you see this reference on page 4 of these minutes. The middle of the page refers to a Mr. Raushenbush, and the covering sheet listing those present, state that he was a representative of the Bureau of Mines. Do you remember him?

A. Yes, I do.

Q. Do you see the reference here on page 4 of these minutes of the statement: "Data from the Bureau of Employment Security as of March 31, 1942, indicated that there were some 12,000 workers employed in lode gold mines and probably an additional 6,000 in placer operations but these totals have to be revised because there has been a heavy withdrawal of workers from the gold mine industry since then." I ask you if that is the reference in these minutes to which you referred yesterday in the course of your examination? Is this the set of minutes?

A. This is the set of minutes which I had read and from [fol. 673] which I got the information which prompted me to state "20,000 men." It seems that I was 2,000 too high.

Q. When you said yesterday that you knew that there was much a set of minutes somewhere available, referring

to some 18,000 or 20,000 men employed in gold mines, it was this particular document that you were referring to. is that right?

A. It was.

The Commissioner: We will recess to 2:00 o'clock.

Whereupon, at 12:30 o'clock p.m., a recess was taken in the hearing until 2 o'clock p.m.)

[fol. 674] AFTERNOON SESSION

(The hearing was resumed, at the time above mentioned, pursuant to the recess previously taken.)

WILBUR A. NELSON, resumed the witness stand and was examined and testified as follows:

Redirect Examination (resumed)

By Mr. Rigney:

Q. Professor Nelson, at the time we recessed for lunch I had shown you Plaintiffs' Exhibit 129, the minutes of October 25, and I hand them to you now. Or let me put it this way: were you at this meeting of August 25, to which these minutes, Plaintiffs' Exhibit 129, relate?

A. Yes.

Q. Was Mr. Samuel Lipkowitz there?

A. He was.

Q. Now, Professor Nelson, I show you Plaintiffs' Exhibit 15 for identification, being a memo of August 3, 1942, from you to Mr. A. I. Henderson, and I ask you if you wrote that memorandum and transmitted it to Mr. Henderson?

A. I did.

Q. Mr. Henderson was your——

A. Superior.

Q. Superior in the WPB at that time, is that correct?

A. That is correct.

[fol. 675] Mr. Rigney: Plaintiff offers Exhibit No. 15 for identification in evidence.

Mr. Barnes: No objection.

The Commissioner: It is admitted.

Said memo dated August 3, 1942, from Mr. Wilbur A.

Nelson to Mr. A. I. Henderson, marked "Plaintiffs' Exhibit No. 15", admitted in evidence and made a part of this record.)

Mr. Rigney: May this be marked Plaintiffs' Exhibit 130, I believe, for identification?

(Said document was marked for identification as Plaintiffs' Exhibit No. 130.)

By Mr. Rigney:

Q. Now, Mr. Nelson, I show you Plaintiffs' Exhibit No. 130 for identification, being a memorandum dated July 31, 1942, from Richard A. Lester to Mr. A. I. Henderson, and I ask you if that is the memorandum to which you refer in your memo of August 3, 1942, which has just been received as Plaintiffs' Exhibit 15?

A. It is.

Mr. Rigney: Plaintiff offers Exhibit No. 130 for identification in evidence.

Mr. Barnes: No objection.

The Commissioner: It is admitted.

(Said memo dated 7-31-42 from Mr. Lester to Mr. Henderson, marked "Plaintiffs' Exhibit No. 130", admitted in evidence and made a part of this record.)

[fol. 676] By Mr. Rigney:

Q. Do you know what position Mr. Harry King, the Chief of the Copper Branch, took in the summer of 1942 with respect to the proposal to order a shut-down of the gold mines?

A. He was in favor of it.

Q. And did you send him this memorandum of August 14, which is Exhibit No. 16, and for what purpose did you send that memorandum to him?

A. To bring to his attention the fact that proper steps had not been taken to channel any miners made available through a closing of the gold mines to copper mines.

Q. Now, Professor Nelson, you remember that you and I discussed in December, for a day and a half or so, the exhibits here in preparation of this case for trial, is that right?

A. I did.

Q. And again late in December, is that right?

A. In New York.

Q. Right. Then you next saw me, am I correct in this that you next saw me last Friday afternoon when you arrived from your home in Virginia?

A. That is correct.

Q. And we had further discussions in preparation for your appearance here?

A. Yes. That is not all the time I have spent on preparation for this case.

[fol. 677] Q. Yes, I understand.

Now, showing you Defendant's Exhibit No. 2——

The Commissioner: For identification?

Mr. Barnes: For identification.

By Mr. Rigney:

Q. ——for identification, showing you Defendant's Exhibit No. 2 for identification, I will ask you when you and I had our first discussion with respect to the existence of that particular piece of paper that you are looking at?

A. Last Friday night or Friday afternoon.

Q. And did I show you at that time this photostatic copy? (Handing).

A. You did.

Q. And we had some discussion about it?

A. We did.

Q. And prior to that time you had not mentioned to me the existence of any such documents as this; is that right?

A. Prior to that time I did not know the document existed.

Q. And I had not asked you anything about it?

A. You had not.

Q. Do you recall this morning that Mr. Barnes interrogated you with respect to some of your testimony before Senator McCarran's committee in May of 1942?

A. He did.

[fol. 678] Q. And do you recall his reference to a portion of your testimony there?

A. I do.

Q. Now, I don't suppose that you can recall now the

questions which were asked you there and the answers which you gave?

A. I do not, except one.

Mr. Rigney: Your Honor, may I read a brief portion of the testimony at this very point in order that the record may reflect the entire testimony on this point that Mr. Barnes interrogated Mr. Nelson on this morning?

By Mr. Rigney:

Q. Let me ask you if you were asked this question by Senator Johnson: "I would like to have you develop something along the lines of what these other mines may expect if they do apply for relief."

Were you asked that question?

A. Yes.

Q. And did you give the answer which appears here: "We will be glad to review each case very critically and very fully and very sympathetically"?

A. Yes.

Q. And then were you asked: "Are you acting sympathetically and generously with these applications where they produce vital and essential and critical materials?" Were [fol. 679] you asked that question?

A. I was.

Mr. Barnes: In what tone of voice were you asked it; do you recall?

The Witness: Well, it is quite remarkable, but that particular question I seem to remember very vividly. Now, Senator Johnson has a very delightful delivery.

By Mr. Rigney:

Q. Did you give the following answer to that question: "We are acting sympathetically with every one. A person can not act generously during a war effort if they are going to carry out the duties they are supposed to have imposed upon them. We have to be sympathetic, but we have to hew to the line and do what is best to the war effort"?

A. I did.

Q. Were you next asked the following question by Senator Johnson of Colorado: "Of course, priority takes in the

element of preference just naturally, but you weigh your priority against their performance"?

A. Yes.

Q. Were you asked that question?

A. Yes.

Q. Did you make the answer: "Yes; we do"?

A. I did.

Q. Were you asked then by Senator Johnson: "Now, we [fol. 680] have, as Senator Millikin pointed out, exclusively gold operations in Colorado. There are very few of them. I was quite pleased to hear you say a moment ago that you had not shut the door on any kind of mining operation as yet. Did you mean where only gold is mined?" Do you recall that question?

A. Yes.

Q. And did you give in answer: "I mean that any operator operating a 100-percent gold mine is still operating under PD-100 and has the privilege of sending in PD-1-a ratings for items that need a higher priority rating than he can get under P-100." Did you give that answer?

A. I did.

Q. Were you then asked by Senator Johnson: "Is he actually able to get priority assignments?"

A. Yes.

Q. Did you reply as follows: "They have in the past, but remember this: that if they were operating under P-56 they could buy, in a blanket way, repair parts without having them scrutinized and clearing them through Washington. Today they have to come in to us for each item they need as they need it, and they have to show that they actually need it.

"We have got to know that the pooled resources of a gold-mining district can not take care of a needed part when it is needed. I have a list here of items bought by a number of gold mines in the west before their numbers were taken [fol. 681] away, and practically everything they bought is of a most critical nature today. For instance, here are machine bolts, chains, key stock, files, pipe dies, fuse lengths, fuse-plugs, a large amount of wire, bushings, lock nuts, cable, and lead. Things of that type are very critical."

Did you give that answer that I have just read?

A. I did.

Q. Were you then asked by Senator Johnson: "When were these purchases made?"

A. Yes.

Q. Did you give the answer that appears here as follows: "These were purchased in January and February. They had a right to purchase them, but in going over the list of things purchased by those mines when they could purchase them directly from their supplier and just report to us each month what they purchased, they were purchasing critical materials; and we have a definite feeling that if a mine operator has to come in to Washington on a PD-1-a Form for each repair part he needs, he is going to be much more careful in the amount of critical materials he uses.

"I feel that we have made great strides in California since March 2, due to the fact that the gold-mine operators have gotten together and pooled their resources, have made available their repair shops to each other, and I think they are doing a fine job of conserving critical material and still [fol. 682] keeping their mines going."

Did you make that answer that I have just read?

A. I made that answer, and I might say that we had a representative of the Mining Division in San Francisco, a Mr. Goudvis, who was in a great part responsible for working out this pooling arrangement on the mother lode.

Q. These purchases of critical items which you mentioned here in your testimony before this Senate committee in May of 1942 related to a time in January and February of 1942?

A. They did.

Q. And at that time these mines possessed serial numbers, is that correct?

A. Correct.

Q. And their serial numbers were taken away after the March 2nd amendment, is that correct?

A. That is correct.

Mr. Rigney: That is all.

Re-cross examination

By Mr. Barnes:

Q. What is the Bureau of Employment Security; do you know?

A. Nothing more than its name. I don't know really whether there is such a bureau.

Q. Its name appears in Plaintiffs' Exhibit No. 129, does it not, directing your attention to the last paragraph on [fol.683] page 4? (handing).

A. Yes, I remember reading the Bureau of Employment Security got up these figures; but I do not know what that bureau is.

Q. Had you ever heard of it before?

A. I had not.

Q. Dr. Nelson, when counsel for the plaintiff showed you a photostatic copy of a document that is now marked Defendant's Exhibit 2 for identification, did you indicate to Mr. Rigley whose handwriting you thought that was that showed your name there?

A. I told him I was not a handwriting expert, and I was not going to indicate to anyone who I thought wrote it.

Q. Did you authorize anybody in the Mining Division to sign your name on your behalf?

A. Only with my initials, my two deputies.

Q. Who were they?

A. Marcellus Stow and Ed Rott.

Q. Have you seen documents they have signed with your name?

A. You showed me some this morning, or late last night, I have forgotten which.

Q. They were signed by Mr. Stow, and I believe one was signed by Mr. Rott?

A. One was signed by Mr. Rott.

[fol. 684] Mr. Rigney: Exhibit 8.

Mr. Barnes: That was Plaintiffs' Exhibit 8, nothing I showed you.

That is all.

Mr. Rigney: May we have this marked as the next number, No. 131?

(Said document was marked for identification as Plaintiffs' Exhibit No. 131.)

Redirect examination.

By Mr. Rigney:

Q. I show you Plaintiffs' Exhibit 131 for identification and ask you what that is.

A. That is a copy of a telegram sent to the Central Eureka Mining Company on March 2nd, similar to the telegrams sent to all gold companies on that date.

Q. Pursuant to the March 2nd——

A. The March 2nd revision stating to them that they are removed from the benefits of Order P-56. And if the total output in their mine involves 70% or more in dollar value of strategic minerals their reclassification will be reconsidered.

Q. Is this a typical telegram of many others?

A. Typical of all others sent.

Mr. Rigney: Plaintiff offers it in evidence.

Mr. Barnes: No objection.

The Commissioner: It is admitted.

[fol. 685] (Said telegram dated March 2 from WPB to Central Eureka Mining Company, marked Plaintiffs' Exhibit No. 131, admitted in evidence and made a part of this record.)

Mr. Barnes: I have one additional question.

Re-cross Examination

By Mr. Barnes:

Q. Referring to Defendant's Exhibit No. 2 for identification, whether or not you signed this particular document, did you ever sign a document of this type with respect to the issuance of Order L-208?

A. I did not sign anything of that type until after L-208 had been issued.

Mr. Barnes: That is all.

Mr. Rigney: That is all.

(Witness excused.)

The Commissioner: As I understand it, counsel would like an adjournment at this time?

Mr. Rigney: That is correct, your Honor. I think both counsel would like an adjournment.

Mr. Barnes: Both counsel.

The Commissioner: We will adjourn until ten o'clock in the morning.

(Thereupon, at 2:20 o'clock p.m., a recess was taken in the hearing until 10:00 o'clock a.m., Friday, January 30, 1953.)

[fol. 686] IN THE UNITED STATES COURT OF CLAIMS

Transcript of Testimony—January 30, 1953

TESTIMONY FOR PLAINTIFFS (Resumed)

The hearing was resumed, at the time above indicated, pursuant to the recess previously taken.

Present: (The same appearances as previously noted.)

Mr. Rigney: Senator Case.

HONORABLE FRANCIS CASE, a witness produced on behalf of the plaintiffs, having been first duly sworn by said Commissioner, was examined, and in answer to interrogatories, testified as follows:

Direct Examination.

By Mr. Rigney:

Q. You represent the State of South Dakota in the Senate of the United States, is that correct?

A. That is correct.

[fol. 687] Q. And you have been in such position for the past two years?

A. That is right.

Q. Prior to that time you were, for a number of years, in the House of Representatives?

A. Yes, from 1937 until I was elected to the Senate.

Q. You appear here this morning pursuant to a subpoena that was duly served upon, you, is that correct?

A. That is correct.

Q. Let me ask you, Senator, do you or any member of your immediate family own any stock in Homestake Mining Company?

A. We do not.

Q. The district which you represented in the House of Representatives for some 14 years or thereabouts was in the Western part of the State of South Dakota?

A. Yes, the Western half, you might say. The districts I divided by the Missouri River which flows north to south.

Q. And the Homestake mine was located in what was your home district?

A. As a matter of fact, about 60 miles from my home town of Custer.

Q. Now, Senator, did there come a time in 1942 when you learned of a proposal being sponsored within the War Production Board to issue an order ordering the complete [fol. 688] closedown of domestic gold mining in the United States?

A. Yes.

Q. Would you recall approximately when that knowledge came to your possession?

A. I think about August or September of 1942.

Q. Following that, what did you do? Did you get in touch with anybody within the Government, or take any action?

A. Yes, I did. I attempted to find out where the order was being considered and got in touch with Mr. Dudley L. Batt, and had some talks with him about it.

Q. And Mr. Batt was with the War Production Board?

A. Yes. I am not sure what his exact title was, but I think he was deputy administrator. He was one of the chief men in the War Production Board.

Q. Can you tell us when it was that you got in touch with Mr. Batt the first time, the date? Do you have anything that would aid you?

A. I have my files on the matter with me. If I can consult them, I think I can give you the exact date of a conversation I had with him.

Q. All right, sir.

A. I had a telephone conversation with him on the 29th of September, 1942, and attended a meeting the following day.

Q. Now, does your memory serve you to tell us what was said by Mr. Batt and by you in the course of this telephone [fol. 689] conversation of September 29th?

A. I remember the general tenor of the conversation, but

I do have notes on the telephone conversation.

Q. And would they assist you in refreshing your recollection?

A. They would.

Q. I think you may consult them.

A. As a matter of fact, my notes indicate the telephone extension number I used at that time to talk with him. It was Extension 2212. I asked Mr. Batt whether the order had actually been issued, and he told me that it had not but was going to be issued before very long, and in our discussion I asked him the background of it and where it was being considered and he said that the problem was how to get that labor into something more useful to war. He said that General McSherry wanted to set up machinery to move General McSherry wanted to set up machinery to move the men when the order comes out, that there would be a meeting Thursday of the gold mine operators to see about moving the men to other operations. We had some discussion about the things that Homestake was doing in gathering up scrap, purchase of farms, and things like that.

Q. In that connection, were you advancing arguments to him against the closedown order?

A. Yes, I was pointing out to him that the Homestake was making a contribution to the war effort and that a great [fol. 690] many men had gone into the service, and that employees were buying bonds and things of that sort. He said he realized it was pretty difficult but he felt that all labor would be much more useful in something else. Then I arranged the meeting for the following Wednesday afternoon.

By the Commissioner:

Q. How long before this conversation, Senator, did you first learn of the possibility of this order?

A. I have in my files a newspaper article, an Associated Press dispatch from Washington, which appeared in the Rapid City Daily Journal, Rapid City, South Dakota, on August 13, 1942, which has the paragraph: "One controversial phase of the plan before the Committee is a proposed gradual shutdown of some 300 of the largest gold and silver mines to divert some of their miners into copper." And the fact that that is in my file and was put in my file

under the heading of Homestake Mining Company, I must have known about it at least on the 13th of August, or shortly thereafter, through the Rapid City paper.

By Mr. Rigney:

Q. Then following the telephone conversation you just testified to with Mr. Batt, what next happened so far as you are concerned, in connection with this matter?

A. Well, I attended that subsequent meeting.

Q. I think you testified that in your conversation with [fol. 691] Mr. Batt on the 29th, a date was made to see him on the 30th, was it, the following day?

A. Yes, or was it the 29th or the 1st of October?

Q. There is testimony here that there was a meeting on the 5th of October attended by a number of people including representatives of the gold mining industry. I am wondering whether or not you recall any meeting with Mr. Batt on the 30th of September which would be the day after your telephone conversation with him, or whether your notes reflect any meeting with him on the 30th?

A. I do not think I took any notes when I was meeting with him directly. My notes that I referred to a moment ago were of a telephone conversation.

Q. What is your best recollection as to whether or not you did see him on the 30th in his office or anywhere else?

A. I have a copy of my weekly report which I made of practice of writing back to the districts of the state once a week every week since I have been in Congress. It is dated October 5, 1942. It was generally written in advance of that. I do not know whether that was the Monday following, but ordinarily we write them for the Monday following the weekend on which they are written.

Q. I see.

A. But, in any event, I do have a reference in there to what happened on several days of that week.

[fol. 692] Q. Of that previous week?

A. Of the previous week, and in that, I have, "On Wednesday a conference was arranged by Congressman Case in the office of W. L. Batt, director of the Raw Materials Division of the WPB. It was attended by Dr. Wilbur Nelson, Chief of the Mining Section, Samuel Lipkowitz, labor adviser of WPB, Samuel Hill of the War Manpower Com-

mission, Senators McCarran of Nevada, Gurney of South Dakota, Congressmen Englebright and Case.". I also have "On Thursday, gold mine operators came in by plane, from all the Western states."

Q. Just at this point, directing your attention to the September 30 meeting to which you have just referred, do you recall at that meeting any discussion on the part of Mr. Lipkowitz of WPB or anyone else on behalf of WPB of the question of number of gold miners that could be made available for copper mining if the gold mines were closed down?

A. Yes, I do. I recall some conversation on that little note that both Mr. Lipkowitz who was labor adviser of the War Production Board and Samuel Hill, adviser to the War Manpower Commission, were present, and we had quite a discussion about whether or not such an order would be effective in getting miners for the copper mines. There was some discussion as to whether or not gold miners accustomed to working in the temperature conditions they had in gold mines, would work in copper mines with differ- [fol. 693] ent atmospheric conditions and temperature, but the thing I do remember which rather amused us at the time was the discussion of the numbers involved. I knew something about the employment at Homestake. I think there was something over 2,000, perhaps up to 2300, but whatever the figure was at that tie Mr. Lipkowitz wanted to use that entire figure as the prospect of number of miners going into copper mining. I laughed because from my own knowledge I have been at the timber operations at Nemo, and they also had an operation over at Moskee, Wyoming, and a great many of the Homestake employees are engaged in cutting logs and trimming them, and originally the Homestake mining operations were for getting logs for mine timbers, but in cutting timber economically and efficiently they had other uses for part of the lumber so they conduct quite a logging operation. So a great many employees were engaged in logging operations and operating the sawmill. In addition to that, Homestake operates a hospital at Lead and I knew that some of their employees were nurses and some doctors. I have been in Homestake's general offices at Lead and they had a great many bookkeepers and people of that sort. Then I have known a great many employees of Homestake personally. They run in

two classes, those who work at the mine, those who work above ground and those who work underground. Homestake has several large buildings and considerable property above ground and a great many employees are engaged [fol. 694] in that kind of operation. So I knew that it was ridiculous to suggest that the total number of employees at Homestake would be miners and such who would go underground working in a copper mine.

Q. Did you state, in effect, what you said now with respect to the knowledge of the categories of employees?

A. I was a little amused, but I did try to say it reasonably respectfully under the circumstances.

Q. Do you recall further discussion on your part and on the part of other senators and congressmen in attendance at this meeting with Mr. Lipkowitz and other government people about his over-all figure for the country as a whole?

A. Yes. That, of course, precipitated some discussion and the observation was obvious that if his figures were no more accurate with regard to the industry as a whole, then they were with regard to Homestake where I have personal knowledge that it was an inaccurate figure and anybody who had been led to believe that the copper mines would get anything like 20,000 miners—I think he figured they would get that—whatever the figure was, if it was based upon comparable use of figures as used on Homestake, the whole thing seemed out of reason to me.

Q. Was there anything further at that meeting of September 30, or have you told us in substance about everything that occurred that day?

A. Well, we did bring out the things involved, and, re- [fol. 695] ferring again to my report dated October 5, I recite there all the conferences of that week, and there were conferences that I referred to on three different days.

Q. Was there any discussion at the September 30 meeting on the part of any of the government representatives about the necessity for issuing this order in order to save critical materials and supplies? Was that argument advanced in support of the proposed order?

A. I don't recall that at all, and I have six different things that were brought out as facts at the several conferences, and none of them refers to that.

Q. Now, with respect to the October 1 meeting, would you tell us about that, who was in attendance so far as you recall or so far as your notes refresh you?

A. Referring to my notes, "Gold mine operators came in by plane from all the Western states and a five hour conference was held with Mr. Batt. General McSherry of the War Manpower Commission, experts from several sections of WPB, and senators and congressmen." I also in my notes, have some newspaper reports of that meeting, I think. I have given a clipping from the Rapid City Daily Journal of October 2, 1942, which carries a Washington October 2 dateline headed AP. "The War Production Board had notice from congressional spokesmen from gold mining states today that they would protest vigorously any [fol. 696] order of closing gold mines as a means of producing labor," and in that it quotes Senator McCarran as saying that the gold delegation itself convinced officials that WPB officials headed by William L. Batt had been told that few gold miners would take jobs in other mines where methods differ, but most would be attracted to shipyards, and war plants paying higher wages; that Representative Case, R-S.D., protested that mines such as Homestake in South Dakota would be ruined by such operations.

Q. Now, again with reference to the October 1 meeting, would you by reference to your October 5 memorandum tell us now what arguments or reasons are set forth there as constituting background of this order?

A. Well, I have this summary in the October 5 report: That at all of these conferences, these facts were brought out: One, that not over 2500 underground miners were available and that many of these were men of middle age who owned their own homes; that reference to underground goes to the distinction to the general employees of the mining company; two, that gold mines when shut down are reopened only at good expense from water seepage and cavein loss; three, that communities built around gold mines would suffer out of all proportion to the possible labor supply that could be recruited for copper mines; that the same things that draw men out of copper mines to Army and defense plants would take the released gold miners; four, [fol. 697] that coal miners working but 35 hours a week, or some of the unemployed people in New York City would

yield several times more miners than the thrown out gold miners; five, that gold mines have been and are contributing to the war effort in addition to producing the only metal that speaks in international language at all times. Homestake has sent men to the Armed Services, collected 100 carloads of scrap iron and several carloads of rubber, brass, and manganese steel scrap, provided a stand-by force, etc. Six, that every gold mine, Homestake included, is branching into strategic mineral production.

I point out that at weeks ended the order originally considered might be modified or even held in suspense pending solution of the over-all problem of manpower supply; that authorities said the administration was considering a general manpower draft act to permit assigning workers wherever needed.

Q. Then was the next thing that happened, so far as your knowledge goes, the issuance of the order the following week?

A. Well, my notes also indicate that a senatorial conference was held, sort of a showdown conference, in the Senate Office Building with Mr. Batt, General McSherry, and Paul McNutt, chairman of the War Manpower Commission. That was one of the group of meetings that week on which the summary is based.

By the Commissioner:

[fol. 698] Q. Did you attend that meeting?

A. It is not indicated that I did in my notes, and I do not remember it. The fact that I designated it as a "Senatorial conference", and I was a member of the House at that time, makes it seem probable that I did not.

Q. I was wondering if they may have invited some members of the House?

A. I don't recall. I think maybe I did not attend.

By Mr. Rigney:

Q. Now, Senator, when you were in the House of Representatives, were you a member of the Appropriations Committee of that body?

A. Yes, sir, for 12 of the 14 years.

Q. Now, do you recall having attended a meeting of the Appropriations Committee of the House of Representatives

in November, 1943, at which time Under Secretary of War Patterson was a witness before your Committee?

A. Well, a meeting of the Subcommittee on the War Department. I was a member of the Subcommittee for the War Department. That is, the Appropriations Committee breaks down into various subcommittees, and between 1940 and 1949, I was a member of the Subcommittee for War Department and I do recall Secretary Patterson coming before us on many occasions, and on one or two occasions, he was before us and I questioned him with reference to this man-[fol. 699] power problem as it applied to the closing of the gold mines.

Q. Now, do you have a record of questions which you put to Under Secretary Patterson at this subcommittee meeting in November of 1943, and the answers which he gave with reference to the closing of the gold mines in 1942?

A. Yes, I have in my file a copy of the transcription of the hearings which was placed here by my secretary, Mrs. Maud Sparks.

Q. Would you be good enough, sir, to read the questions and answers which you put to Under Secretary Patterson, answers which he made to those questions regarding the shutdown of the gold mines?

Mr. Barnes: Your Honor, I object to this on the grounds that the transcript of those hearings would be the best evidence, rather than selective excerpts read from some document in the personal copy of the witness.

By Mr. Rigney:

Q. Is there a printed transcript in existence now, Senator Case, as far as you know?

A. Frankly, I do not know whether the hearings, the transcript of that particular hearing, is printed or whether it would be in manuscript form. During the war there were many times when we had hearings with officials from the War Department where we simply kept a transcript and did not print it, so that they wouldn't be available for gen-[fol. 700] eral circulation. So, I am sure there is a transcript which corresponds with this, and whether it is in printed hearings or not, I do not know.

Q. Have you endeavored within the last day or two to ascertain that?

A. Yesterday, I asked my assistant, Mr. Charles Gardner, to see if he could find the printed hearings which correspond to this copy of the transcript. He was not able to find it in my files. He did find the printed hearings of some open hearings that were held at another time when I interrogated Secretary Patterson about that, and these are hearings of June 10, 1943, when Mr. Patterson appeared and we questioned him. He did not in my files nor in the files at the Committee room find a copy of the printed hearings. The man who was the clerk of the Committee at that time was John Pugh who is no longer clerk of the Committee. The present clerk is Bob Lambert, and Bob Lambert was home with the flu or something yesterday so it was impossible to find whether or not in the files of the Committee they have the transcript. All I can say is that I do have these in my files. These files have been in my possession for a long time.

Q. Are these questions and answers accurate and correct copies of the questions which were put to Under Secretary Patterson at the time, the questions and the answers which he gave?

[fol. 701] A. They were a direct copy of the transcript of the hearings made at my direction to Mrs. Sparks. At the time of the June 10, 1943, hearing, Mr. Patterson was the Under Secretary of War.

Mr. Rigney: I submit, your Honor, that the Senator should then be permitted to testify to the questions put to the Under Secretary, and the answers which he gave. It will be offered in the nature of an admission by the Under Secretary of War concerning a subject with which he was connected in his official capacity, of which he had full knowledge, and I think under Judge Wyzanski's decision in the United Shoe decision, it would be permissible.

The Commissioner: I think that it would be. However, I think also that counsel for the defendant at the proper time should be permitted to see the entire portion of the transcript which the Senator has before him.

Mr. Rigney: I, of course, raise no objection to that and I do not think the Senator has an objection.

The Witness: I have no objection.

Mr. Barnes: My objection goes to that very fact, that the Senator has here only a portion of those hearings, your Honor, selected by him or by his secretary. There has been no showing that the complete transcript of those hearings is not available; merely that because of the absence of a man from his office yesterday they were not able to look in [fol. 702] the Committee files does not establish unavailability.

Mr. Rigney: More than that, your Honor, the Senator tried to locate them and was unable yesterday to locate them and to determine whether they are in existence.

By Mr. Rigney:

Q. Let me ask you this, Senator: Does your transcript there contain all of the questions which were asked and all of the answers given by Under Secretary Patterson on the day in question concerning this subject, concerning the closing of the gold mines?

A. That was my instruction to my secretary at the time and, to the best of my knowledge, includes everything on the subject of gold mines.

Q. And you base that conclusion on having read this transcript now, and on your recollection of the hearings on that day?

A. Yes, sir.

The Commissioner: He may answer.

By Mr. Rigney:

Q. Now, would you be good enough, Senator, to read the first question which you put to Under Secretary Patterson? Do your notes show what date in November that was?

A. Monday, November 15.

Q. 1943?

A. Yes.

[fol. 703] Q. Now, would you go ahead, sir, and read the questions which you put and the Under Secretary's answers?

Q. "Mr. Case. Going back, Judge Patterson, to the question we were discussing with General McInerney this morning in connection with the closing of a munitions plant

all because of denial of priorities for the completion of the aluminum plants program, who gives the death sentence in determining what particular plants should be closed?

"Mr. Patterson. If it is a specific plant in the Ordnance Department, for instance, it is in some cases with my approval. As to plants like small arms, ammunition plants, TNT plants, and sometimes powder plants, that is a direct War Department responsibility. If it is aluminum, that is a basic material. We do not buy aluminum as such. We get the benefit of aluminum principally in aircraft. That is a base material and the responsibility for the supply of aluminum rests upon the War Production Board."

Then, in my transcript there are some stars. Probably indicating further discussion of the aluminum.

"Mr. Case. What about the mines that were shut down the other day?

Mr. Patterson. Which mines?

"Mr. Case. There was a statement in the press that a good many so-called war baby mines were being shut down.

"Mr. Patterson. Those are war production board mate-
[fol. 704] rials, they are basic raw materials.

"Mr. Case. What about the closing of gold mines?

"Mr. Patterson. That was the War Department. The War Department recommended that and the War Production Board adopted that recommendation.

"Mr. Case. What about lifting the restriction to get them back into production? Will the War Department take the lead in recommendations there?

"Mr. Patterson. I do not know. The reason we did that was this: This last fall we recommended to them, impressed them, both myself and General Somervell, to cut down the production of gold in this country. We did it because there was a shortage of production in the copper mines. They were pressing us to release soldiers from the Army to mine copper and we had to do it. They came back again this summer and asked for more soldiers to be released. We opposed that. We were directed to do it but it seemed folly for us to release trained soldiers to operate copper mines when there were many high grade gold miners to produce copper.

"Mr. Case. Was there not another reason, that the machinery running the mines was easily destroyed and had to be replaced?

"Mr. Patterson. That involves critical materials but we did not think gold mining had anything to do with the running of the war.

[fol. 705] "Mr. Case. How does it happen that the War Production Board had permitted the export of machinery to operate the gold mines in other countries?

"Mr. Patterson. We have protested that every time the question has come up.

"Mr. Case. Gold production in those countries in many cases is running ahead of what it was before because we are supplying the materials.

"Mr. Patterson. In the War Department, we have always taken the position that that should not be permitted."

I might add that the reference to the so-called war baby mines grew out of the situation which was current then in November.

Mr. Barnes: November, what year, Senator?

The Witness: November of 1943. This interrogation took place in November of 1943 and my reference in "What about the mines that were shut down the other day?" and Patterson's "Which mines?", and the statement in the press that a good many so-called war baby mines were shut down had reference to the directive which Homestake had received advising them to close down all the investigations. That was advice from the Metals Reserves; as I recall it, I used that as a lead because Patterson was before us and I understood he had a part in the shutting down of the gold mines and I took the opportunity to inferrogate him on these war baby mines and to interrogate him on the [fol. 706] gold mines.

Mr. Rigney: Thank you, sir. I have no further questions, sir.

By the Commissioner:

Q. Was there any discussion among the legislators concerning a possible legislation to forestall the issuance of the order closing the gold mines?

A. I don't recall any. I don't know that there was much opportunity for it. *The thing came on rather sud-*

dently. I think the first I heard of it was indicated by that item in that paper of August, 1942. Of course, we were in a war and the general procedure at that time was that if you didn't like something that the War Production Board was doing or some agency was doing, that you sought to forestall the issuance of the order by presenting the situation to them. I think also there was this suggestion in this one conference, that they were considering a general war manpower draft act. I think a lot of us really did not think that they could do it. Of course, the way they implemented the order was to use the employment service to direct that they shouldn't make any referrals of persons in a certain part of the country, east of the Mississippi River, things of that sort.

In other words, to prevent the released gold miners from getting jobs in the East, they directed the employment service not to give any referrals east of the Mississippi. I re- [fol. 707] member that in talking with Mr. McNutt, that was implicit.

Q. After they did get the order, was there any suggestion of legislative action to change?

A. To countermand the order?

Q. Yes, sir.

A. I don't recall any.

The Commissioner: All right.

Cross-examination.

By Mr. Barnes:

Q. Specifically, did you ever introduce a bill either to stop the issuance of an order or to countermand it?

A. No, I did not. I think my attitude was perhaps that of Congress as a whole, although perhaps a little more so. I was quite familiar with the war effort as such, and was serving on this Appropriations Committee for the War Department which handled both the Army and the Air Force at the time, and I think that all of us were sensitive to any suggestion that we were impeding the effort in any way and, while we tried to question the wisdom in this particular case, as to the matter of legislation, I do not recall that it was proposed. At least, I did not introduce such a bill. Some others may have suggested it. I do not recall it.

Q. Senator Case, prior to your election to Congress, what had been your business background?

A. I was in the newspaper business. I published the [fol. 708] Custer County Chronicle at Custer.

Q. Over how long a period of time?

A. I went to Custer in the fall of 1931.

Q. And you were elected to Congress when?

A. In 1936.

Q. Do you know how this clipping from the Rapid City paper came to your attention in August of 1942?

A. Just in the general practice of our office, followings things of interest. I think that if counsel were to come to my office, he would be interested in seeing the way in which we try to develop files on all activities in the district then or now in the state, and matters of the welfare of the general area. We try to follow them and represent the state the best we can.

Q. Could I see that August 13 clipping that you referred to? The paragraph you read is the one starting "One controversial phase". Is that correct?

A. I believe it is. I do not know.

Q. I wonder if the reference to "committee" refers to the preceding paragraph which starts "A WPB official which declined to permit use of his name said a five-agency committee deliberating a sweeping but tentative plan to bring fresh labor into the copper mines and prevent present workers from deserting their jobs in favor of shipyards and war plants where they can get higher pay", is that correct?

[fol. 709] A. Yes.

Q. At this meeting in Mr. Batt's office that you referred to, the first one, which I think was about September 30, do you recall Mr. Batt saying at the conclusion of that meeting that if a use for gold could be found in the war program, the gold mines probably would not be closed?

A. I do not recall it.

Q. You have no recollection of that?

A. No. He might have said that. I just don't remember.

Q. Now, at this meeting, the succeeding day, the later meeting when representatives of the gold mine companies

were present, do you recall whether or not reporters were present at that meeting?

A. I do not.

Q. You referred to a newspaper clipping that set forth some of the discussion at that meeting. Does the clipping itself show the source of the information that the reporters had?

A. I will see. This is the clipping. It is an Associated Press dispatch. There could have been a reporter present. They quote Senator McCarran and quote myself and quote Representative Engelbright.

Q. In quoting Senator McCarran, they say this: "Senator McCarran said the gold states delegation had sought to convince Board officials that an order closing gold mines [fol. 710] would fall far short of the desired result." Doesn't that sound like a statement Senator McCarran made to a reporter after the meeting rather than a statement that a reporter heard at the meeting?

A. I would not say so. I was in the newspaper business for a number of years and I do not think that that would necessarily follow. I do not recall discussing the matter with reporters afterwards. In fact, I seldom do. But it could have been either way. I just don't know and I don't see anything in the story which proves one way or the other. That is the only clue as to how it was reported is that it carries the AP right after the date.

Q. But referring to the last four paragraphs, they start with the phrase, "After the conference, McCarran suggested that miners now in the Armed Forces," and so forth, is that correct?

A. That is correct. At the conclusion of the article or in the latter part of it, they say, "After the conference, McCarran suggested that miners . . . .".

Q. And then it later on states that McCarran disclosed he had filed with the Board a formal letter of protest. Don't those references, at least, indicate the statements made by McCarran to a reporter after the conference?

A. As to that, yes, but I do not even read into "McCarran disclosed that he filed with the Board a formal of [fol. 711] protest," whether that was referring to a filing at the time of the meeting or a filing on his own part.

Q. Do you recall his filing anything at the meeting?

A. I do not.

Q. Did you ever write any letter of protest, formal or informal, Senator?

A. If the Court will pardon me, I am looking through my files. I do not recall offhand writing such a letter. The best evidence I could have in this is a copy here in the files. There are other notes of conferences here with Wilbur Nelson and other persons with whom I had personal conferences on the subject protesting it.

By the Commissioner:

Q. What did he say about it?

A. Here are the notes of a talk with Wilbur Nelson, apparently a telephone talk. At least, I see 3314 which I think is probably his extension number.

By Mr. Barnes:

Q. Do they give a date for that, Senator?

A. I do not see a date on it. It is in the file there presumably in sequence of time. These are catch notes, apparently, of a telephone conversation. In one place, I have this: "Somervell is the man raising most of the cain." Somervell was General Somervell. The notes are very fragmentary. I have this note: "Just wondering what percentage will be willing to move particularly if trans-[fol. 712] portation is paid and including a family."

Q. Does that indicate a question you asked or a question Wilbur Nelson asked? Do you know?

A. My interpretation of that would be that that was one of the questions we discussed at the time. I had been raising the question about how many would move. I see I have "Not send 500 miles if find job within 50." I think probably I could interpret some of these notes a month afterwards more easily than I can now. It wasn't a shorthand reporter, just catch notes, as we were talking. There was another conference I had with John Carson on Extension 2884, head of the United States Employment Service, and with a Mr. Stephen Wood, Extension 2981, Social Security Building, who had a good deal to do with the gold order. That was on what jobs would be open: "What about guards for the homes of men who have gone? Who will de-

termine the type of job?" Then one note, "Almost any other than clerical, broad term. Would the hospital men go?" "Recreation? No. Timber, that is a borderline question." I was trying to determine which of the Homestake employees would be affected by the order. That is a note from Hiram Walker.

Q. Who is Hiram Walker?

A. He was assistant general manager of Homestake. Those are notes of a telephone conversation I had with him, and apparently Mr. Walker said that he was convinced [fol. 713] that after all the advertising they wouldn't go to copper; they would go to the shipyards.

Q. Chronologically, when did these notes appear in your file? Are they before or after October 8? Can you tell us that?

A. They are just on top of the telephone conversation I had with W. L. Batt on the 29th of September.

Q. They probably covered that same week covered by your report of October 5, approximately?

A. Probably so.

Q. In that report of October 5, Senator, you had a reference to the fact that Homestake was branching into the production of critical materials, I believe was the phrase you used? What information did you have on that subject?

Mr. Rigney: I am not sure whether the word was "critical" or "strategic", your Honor, that was used.

Mr. Barnes: My catch notes probably suffer from the same deficiency that Senator Case's do, and I may have written down the wrong word.

The Witness: The word is "strategic mineral production."

By Mr. Barnes:

Q. What information did you have on that subject?

A. Without going through quite a few notes here, I don't know whether I could be too specific, but in general, I might [fol. 714] say this: During World War I, there was some tungsten production in the Black Hills, I think in the Wasp mines, and some other mines in the general area where the Homestake was located, and it was my understanding that the Homestake people were looking into the possibility of

permitting the miners to live at home and experiment on whatever they could for some investigation into possible tungsten production right there, and then later—and I do not know about the chronology of this but perhaps at that time Homestake was given an exploratory project in connection with the Navy. Whether that was right at that time, I do not recall. If it is important, I can probably trace it down in going through the files I have here.

Q. That is not necessary to do that now. I think that will probably come out in testimony later on. After Wilbur Nelson indicated to you that General Somervell was putting most of the push behind this order, or whatever the phraseology was that you had there, did you communicate with General Somervell or anybody in the War Department?

A. I did with Secretary Patterson a couple of times.

Q. When?

A. Well, in these hearings, when he was before the Committee.

Q. But that was in November of 1943.

A. Also at an earlier hearing in the spring I discussed [fol. 715] the matter with Secretary Patterson.

Q. Did you, at any time, between receiving that information from Mr. Wilbur Nelson presumably some time in late September or early October, 1942, and the date of issuance of the order, communicate with anybody in the War Department?

A. I might add that the investigation of an arsenic project to those strategic propositions, was under consideration for Homestake at the time. General McSherry was present at the conference we had. He was the War Manpower man under Patterson and Somervell.

Q. Are you sure that it was General McSherry detailed to the War Manpower Commission under Mr. McNutt?

A. He might have been detailed to McNutt, but in any event, on this Commission I suppose he would be subject to Patterson and Somervell. I do not find any notes indicating a conference with Somervell at the time. The decision, apparently we felt the place to register complaint was with the WPB people.

Mr. Barnes: That is all I have.

Redirect Examination:

By Mr. Rigney:

Q. Do you remember, Senator Case, if General Clay was at the first meeting of WPB, this large meeting with the operators and you people?

A. I do not recall and I do not see it in my notes. He [fol. 716] might have been. I know General Clay.

Q. Lucius Clay?

A. Yes. I do not recall it.

Q. Directing your attention to all of the conferences to which you have testified here this morning that you had with anybody and any branch of the government in connection with this proposed closedown order, did any of these government officials say to you in connection with this proposed order that its purpose was to save critical materials?

A. No, the suggestion was that they wanted men for the copper mines.

Mr. Rigney: Thank you, Senator Case.

By Mr. Herrington:

Q. Senator, did you know Harry Engelbright, representative from California, in his lifetime?

A. Quite well. Harry Engelbright was the Republican Whip when I went to the House.

Q. I believe you said he was present at this meeting on October 1?

A. He was quoted in the article as having been present.

Q. Do you recall the statement that he may have made?

A. Not that I can make a direct quotation on. Harry Engelbright was the Republican Whip when I came to Congress, when there were only 89 Republicans in the House, and I got to know Harry quite well. Harry represented a district which I felt had a great many things in common [fol. 717] with mine, and he was very kind. If you look up the remarks that I made after Harry died, I think you would find that he meant much to me. After Mr. Engelbright was succeeded by Clair Engle from the same district in California, it was Clair Engle that I worked at some length with at the time the order was lifted. We went

to see Mr. Nathan at the time the order was lifted. It was probably the background of somewhat similar interests in the district that added to my interest in both Harry Engelbright and Clair Engle.

Q. Generally speaking, were the Representatives and Senators opposed to the order closing the gold mines?

Mr. Barnes: I object to the form of the question, your Honor.

The Commissioner: Sustained.

By Mr. Herrington:

Q. To phrase it another way, did the Senators and Representatives express the same views generally that you yourself have stated you expressed at this meeting?

Mr. Barnes: Your Honor, I object to that as not being the best evidence, what the Senators and Representatives said.

The Commissioner: You really object to the form of the question?

Mr. Barnes: I really object to the form.

By Mr. Herrington:

[fol. 718] Q. I will change the form. Do you recall what the Senators and Representatives from the Western states said at these meetings to the War Production Board concerning the action being taken at the time?

A. The representations of Congressman Hill of Colorado, present at one conference, and Congressman Engelbright at another conference, were similar to the point of view I expressed.

The Commissioner: Are there any other questions?

Mr. Barnes: I have just one more question.

Re-cross examination.

By Mr. Barnes:

Q. You referred to the fact that when the order was lifted, you and Congressman Engle saw Mr. Nathan. When was that?

A. I have another file, may I say to counsel, which I did not bring with me. That had to do with the lifting of the order. I did not bring that one along with me but it was immediately prior, it was within a few days before the order was lifted. We saw Mr. Nathan together on one occasion. I think we had some telephone conversations with him and possibly saw him more than once, but I remember definitely going with Mr. Engle to see Mr. Nathan a few days immediately prior to the lifting of the order.

Q. Was that with Mr. Robert S. Nathan?

[fol. 719] A. I am not sure that I recall his initials.

Q. What was his position?

A. He was a solicitor, I believe, to either Mr. Byrnes or Mr. Vinson. If that becomes important, I would be glad to return with the other file. Names of agencies change rather frequently, and titles, and I would hesitate to hazard a guess. I think that that is determinable.

Mr. Barnes: That is all right. That is all.

The Commissioner: Is there anything further?

Mr. Rigney: No, sir. I call Mr. Bjorge.

Guy N. Bjorge, a witness produced on behalf of the plaintiffs, having been first duly sworn by said Commissioner, was examined, and in answer to interrogatories, testified as follows:

Direct examination.

By Mr. Rigney:

Q. Mr. Bjorge, what is your full name?

A. Guy N. Bjorge, B-j-o-r-g-e.

Q. Now, Mr. Bjorge, you are the general manager of the Homestake Mining Company, is that correct, sir?

A. I am, yes.

Q. And you have occupied that position as general manager since about 1936?

A. Since 1936.

Q. Now, what is your educational background, sir?

[fol. 720] A. I was educated in the public schools in Minnesota and the University of Minnesota from which I re-

ceived a degree of Engineer of Mines in 1912. Then, I proceeded to the Messaba Range in Minnesota and worked for Pickands-Mather and Company. I then went to Venezuela on reconnaissance work for oil, from which I had to return because I finished in a hospital down there. I returned to Pickan-s-Mather and Company the following spring.

Q. What year would that be?

A. 1913, as Assistant Chief Engineer. I remained there for six months and then went to Arizona and joined Mr. John M. Boutewell in an examination of the Old Dominion copper mine at Globe, Arizona.

Q. What kind of mine was that?

A. A copper mine.

Q. How long were you connected there?

A. After completion of the examination, I remained as Chief Geologist until 1917.

Q. And then did you go to San Francisco in 1917?

A. I then went to San Francisco and engaged in mine examination work as a consultant. That was interrupted for a short time by service in the Army. I was called to service and went to the Enginers Officers Training Camp at Camp Humphreys, Virginia, near the end of the war, and was promptly discharged after the armistice. I then re- [fol. 721] turned to San Francisco and continued the consulting work until 1932.

Q. So that you were in San Francisco for approximately 15 years, from 1917 to 1932, is that correct, sir?

A. That is correct.

Q. And during a good part of that time, or perhaps during all of that time, were you doing consulting work for private clients?

A. Yes.

Q. And would you name some of these clients?

A. Well, I did work for the Old Dominion Company, the Arizona Commercial Copper Company, and Iron Cap Copper Company, all at Globe, Arizona. I worked for the Phelps-Dodge Corporation in an examination of the Montezuma Copper Company mine in Mexico.

Q. Is Phelps-Dodge a large company?

A. One of the three largest copper producers in the United States. And I worked for the Lucky Tiger in the

examination of their El Tigra property in Mexico; extensive work for Calumet and Heckla in the examination of prospects, and I examined the North Star mine at Grass Valley, California, and later a joint examination of the North Star and Empire at Grass Valley, California, and an examination of the mine of the St. John Del Rey Mining Company in Brazil; and others.

Q. Now, when did you become connected in any capacity, [fol. 722] with the Homestake Mining Company?

A. I went to the Homestake in July of 1932.

Q. And your position with them then was what?

A. In December of that year, I was made assistant general manager, in which I continued until 1936.

Q. And it was in 1936 that you became general manager?

A. Yes.

Q. Counsel has asked that I inquire if you represented Central Eureka at any time when you were in private consulting work?

A. No, I did not.

Q. Did you ever visit the Central Eureka mine?

A. I visited the mine once.

Q. Now, have you also, in addition to your duties as general manager of Homestake since 1936, been vice president of the company since 1940?

A. I have been a director and vice president since 1940.

Q. Are you a member of any professional society, Mr. Bjorge?

A. Yes.

Q. Would you name some of those?

A. American Institute of Mining and Metallurgical Engineers, Mining and Metallurgical Society of America, The Society of Economic Geologists.

Q. Now, during the last war, World War II, Mr. Bjorge, [fol. 723] were you asked by the Government to undertake any assignments on behalf of the United States?

A. Yes, on three occasions.

Q. Would you tell us what those were?

A. The first was an assignment from the War Production Board, and then the Board of Economic Warfare, to go to Nicaragua for a study with regard to production and inventories and supplies in the gold mines of Nicaragua.

Q. When was that, sir?

A. That was in May of 1942.

Q. And did you go there and make that investigation?

A. Yes, I went there and visited seven of the eight producing gold mines in Nicaragua.

Q. And did you render a report to the government?

A. Yes.

Q. What were the other assignments that you undertook?

A. The second was a request by the War Production Board and the OPA for work at Anaconda in connection with the premium price plan, which was in January, 1943.

Q. And that was a survey to be made at Butte, Montana?

A. Yes, to report on certain matters that had to do with the preliminary price planning.

Q. Did you undertake and complete that assignment?

A. Yes. When we requested to make that examination, I said that it sounded like a very extensive job and I didn't [fol. 724] see how I could have time to do it all alone, and requested authority to take Mr. Noble, our chief geologist, and Mr. Kravig, our assistant mine superintendent with me. They accompanied me to Butte and we made the examination and report.

Q. Then what was the last one of these?

A. The third was also for the War Production Board and the office of Price Administration in connection with the United Verde Copper Company at Jerome, Arizona, and also on the premium price plan.

Q. And what minerals are produced in these mines that you speak of?

A. I might add one thing to the previous question. In that case, I asked permission and authority to take Mr. Kravig to assist me in that work, which I did.

Q. And are these copper mines?

A. These are copper mines. Anaconda and United are copper mines.

Q. Are you familiar, sir, with copper mines and the method of mining used in such mines?

A. Quite generally.

Q. Now, from your experience with the Homestake Mining Company, can you tell us what the fact is with respect to the stability of employment of the employees of that company, and the continuity of their employment. What has been the company's experience in that regard?

[fol. 725] A. The company has had a very remarkable experience as to the stability and continuity of service of

its employees. That has been the history of the company throughout the years. There have been numbers of men that have exceeded 40 years of employment with the company, a few more than 50, and the record of employment service was one man who served from 1880 to 1942, 62 years.

Q. Does the Homestake Mining Company maintain any sort of medical service for its employees?

A. Yes. The Homestake Medical Service for employees was begun in 1879 and it has continued up to the present time. I think that their service is unique in the mining industry in that they render complete medical and hospital service to the employee, his wife, and direct dependents living with him without any cost to the employee. The company bears the cost. There is no medical fee paid by the employee.

The Commissioner: We might recess for about five minutes.

(Thereupon, a five minute recess was taken.)

[fol. 726] By Mr. Rigney:

Q. I think you were speaking of the hospital at the recess, and I don't know whether there was anything you wanted to add with respect to the hospital, that is, in your testimony with respect to the hospital, or have you completed what you wanted to say about that, sir?

A. As I remember it, I think I completed my testimony with regard to it.

Q. Does Homestake have any plan for group insurance for its employees?

A. Yes. In a number of these things, as well as with the hospital, Homestake was definitely a pioneer and established an employee insurance plan in 1910 which paid sick benefits and death benefits to employees, and it was a plan to which the employees contributed.

Q. What about a pension, Mr. Bjorge? Does Homestake have any such plan?

A. It does. The pension plan was initiated in 1917, and has been entirely at the cost of the company, and has what is termed a non-contributory plan. It was a completely informal plan with no fixed retirement ages until 1949, when

a formal plan was set up with a trustee fund to guarantee future payments of pensions.

Q. Reference has been made in testimony here to the existence of an organization, a social organization, I believe, [fol. 727] of Homestake employees. Could you say just a word about that?

A. Yes. A social organization of older employees has been in existence for many years. According to the records, it was organized in 1906, and they set up their requirements for membership, in which eligibility was based on having been in the service of Homestake for 21 years. And that organization in 1942 had approximately 440 living members.

Q. Does that organization have a name, a formal name?

A. It is the Homestake Veterans Association.

Q. Are its activities exclusively social?

A. Yes.

Q. What about the situation so far as recreational activities are concerned?

A. Again, Homestake was a pioneer in that they built a recreation building which was opened in 1914, which included a library, pool and billiard tables, bowling alleys, swimming pool, and that building has ever since been open without charge, not only to employees but to everyone in the community.

Q. Do you know what that cost?

A. It is on the records as having cost $250,000.

Q. Now, does it frequently happen, Mr. Bjorge, that you have two or more generations in one family working for Homestake?

A. We frequently have had two generations, and in some cases three generations at the same time.

[fol. 728] Q. In other words, continuity of employment within families there in Lead. Homestake is about the only thing there in the way of any kind of industry, isn't that true?

A. Yes, it is a one-industry community.

Q. Now, would you tell us, sir, what your duties are as general manager, what they comprehend and include?

A. As general manager I have complete supervision over the operations. The organization is divided into two production departments, the Mine and the Metal-urgical Department. The two production departments each have a superintendent, and there are several service departments,

a mechanical department, electrical department, the engineering and construction and maintenance departments, a supply department, a geology department, each with a head, and, of course, the employment department. And then there are the subsidiary operations of a logging and lumbering operation, with a manager, and a coal mine with a manager.

Q. Are all of these department heads that you have mentioned under your general supervision.

A. They are under my direct supervision, and I have frequent conferences with them individually and collectively to go over all phases of the operation.

Q. And do they report to you not only verbally or orally but in writing?

A. There are a great variety of daily, weekly and [fol. 729] monthly and annual reports on production, metallurgy, ore reserves, supplies, and everything that has to do with the operation.

Q. Where is the coal mine in reference to the gold mine?

A. The coal mine is operated by a wholly-owned subsidiary, of which the corporate name at that time was the Wyodak Coal and Mfg. Co. It is a combined name of Wyoming and Dakota, Wyodak. And it operates the coal mine which is located five miles east of Gillette, Wyoming, about ninety miles airline west of our gold mine.

Q. And what about the lumbering and timbering operations? Whereabouts are they carried on?

A. The lumbering and timber operations are carried on in the northern half of the Black Hills. The sawmill was originally at Nemo, South Dakota. We had a second small one which was designated as Camp Five, and one at the Wyoming side of the hills at Moskee, which was operated by a wholly-owned subsidiary. The then name of that was the Golden Gate Mine & Timber Co., which was organized because the operation was in Wyoming.

And in 1940 we centralized our sawmill operations at a new sawmill located just outside of the town of Spearfish, South Dakota, about twenty miles from Lead.

Q. How far generally are the lumber and timbering operations from Lead, or from the mine?

[fol. 730] A. Well, the sawmill is twenty miles from Lead, and the logging operation is within a fifty-mile radius of the sawmill.

Q. Now, would you take just a moment, Mr. Bjorge, to tell us in a little more detail of the reports which come to your desk as general manager from the various divisions or department heads under you? What do they consist of?

A. Well, there are various daily and weekly reports on production, and monthly reports on the number of men employed, the reports of the metallurgical plants as to the quantity of ore treated and the recoveries, mine reports on production, and labor supply, and any out-of-routine things that may have happened during the month, reports from the geological department on the results of development, annual reports prepared by the geological staff on ore reserves, and there are also annual reports from each department covering the year's activities in their department.

Q. Now can you tell us, Mr. Bjorge, when you first learned of a change in priorities, so far as gold mines were concerned, at or about the beginning of World War II?

A. The first intimation we had that there would be a different treatment for gold mines than for any other type of mines was with the amendment to Order P-56 in March of 1942.

Q. And when did you first obtain knowledge or hear anything about the possibility, or any proposal to close down the gold mines in the United States, a complete shut-down? [fol. 731] A. I think we began to hear rumors and newspaper reports of that about the middle of August, 1942.

Q. Now, do you recall what you did, the first action of any sort that you took, following your learning of this proposal for a shut-down in domestic gold mining?

A. Well, the reports became more numerous with the result that late in August I came to Washington and spent a few days here interviewing various people to see what I could find out about the situation.

Q. And do you recall now some of the people that you saw when you came to Washington at that time?

A. Yes.

Q. Who were they?

A. I first went to see Wilbur Nelson, the head of the Mining Branch of the War Production Board, and he was kind enough to give me sufficient time to present our story, and various arguments that we thought should be presented.

Q. You had a conference with him at that time, with Mr. Wilbur Nelson?

A. Yes.

Q. You went into this thing in some detail?

A. In some detail, yes, giving figures as to the number of men that might be released to copper mines by such an order, and my very definite opinion as to the ineffectiveness of the order because the men who had left us during 1942 [fol. 732] had gone to west coast, mainly to aircraft and ship yards, and it seemed very definite that men had left the copper mines for the same reason. Our men were a stable crew, a large percentage of home owners, and it seemed hardly probable that they would go to another mining camp to take the place of men who had left because they were attracted by higher wages in the defense industries.

Q. In the ship yards and aircraft plants?

A. The ship yards and aircraft factories. And going to a new community, regardless of the quality of that community, they would be forced to take the leavings in the way of housing and would have to live under poor conditions.

Q. Now, are you telling us of statements that you made at that time to Wilbur Nelson?

A. Yes. And that the nearest copper mine, the one they were talking about most with relation to Homestake, was Anaconda, which is a hot mine.

Q. How far is that from Lead, South Dakota?

A. About 300 miles.

Q. In addition to seeing Wilbur Nelson in August of 1942 did you see anyone else in the Government here in Washington at that time?

A. Yes.

Q. Who else?

A. I was practically new in Washington and was check- [fol. 733] ing around with various people to try to find out who to see. I interviewed Congressman Case and Senator Gurney, and I talked with a number of old mining friends that I had that were working in various divisions of the War Production Board, like Frank Ayer, Harry Havies, they were in the Copper Division, Phil Wilson in the Light Metals Division, and a number of others.

I then arranged appointments and had interviews with Donald Nelson and General McSherry of the War Production Board. My interviews with them were, of necessity, short because they were busy men.

Q. But they did see you, however?

A. They permitted me to summarize the arguments that I had presented more fully to Wilbur Nelson.

Q. Do you remember whether or not at that time you saw General Somervell?

A. Yes.

Q. You did see him, is that so?

A. I received the information—I wouldn't be sure whether it first came from Wilbur Nelson or Senator Gurney or Congressman Case—that the demand for the closing order was coming from General Somervell's office. And Senator Gurney made an appointment for me to see General Somervell, and went with me to see him.

Q. Now, do you have any recollection of what was said or what transpired in this meeting with General Somer- [fol. 734] vell in substance?

A. I summarized the arguments against the closing order, and he reviewed the great need of men for the copper mines, and I think he also referred to the plan of furloughing men from the army to the copper mines. And I cannot say that he gave me any encouragement. When we left he said they would give consideration to the statements that we had made.

Q. Now, I wonder if you have told us of all of the people that you saw in this August trip, that is, Wilbur Nelson and Donald Nelson, General Somervell and General McSherry, as I recall. Was there anyone else?

A. I am not certain.

Q. You don't recall.

A. I have not been in the habit of keeping a diary or an extensive memo of things.

Q. You don't recall anyone else?

A. I probably saw others, but I do not recall the conversations with others.

Q. You spoke about the reduction in your working force among your miners which had occurred in the year 1942 prior to August. Was that reduction in force particularly predominant in any age group?

A. That was mainly in the younger age group, and the men who had been with us a very short time. In August, 1942, in contrast to our previous very stable labor force, we [fol. 735] had begun to have a very heavy turnover.

Q. And particularly among the younger men? I suppose that would be made up of losses to the west coast war industries that you mentioned, and undoubtedly to Selective Service also; is that right?

A. Yes. Many of the men that we hired as replacers for those who had left us remained only a short time, so that there was a revolving portion of our labor force during that year.

Q. In addition to the Anaconda mines at Butte, which you have mentioned, what other copper mines are there in that general area of the country out there?

A. The next nearest are near to Salt Lake City.

Q. How far would they be from Lead?

A. About 650 miles.

Q. I think you said Butte was about 500 miles from Lead?

A. That is right.

Q. Would that be the nearest copper mine to Lead, the Anaconda mine?

A. Yes.

Q. So that there are no substantial copper mines of any sort any closer than those at Butte or Salt Lake City?

A. No, there are not.

Q. Now, what other mines, non-ferrous mines, are there in the general area of Lead, South Dakota?

[fol. 736] A. In the immediate vicinity of Lead and the Black Hills there is one other gold mine than Homestake, and it is a small operation, at times producing a variety of minerals. There is an area around the Black Hills producing bentonite.

Q. What is that?

A. That is a non-metallic mineral that has its principal value in the fact that it has great ability to absorb water. And in the southern end of the hills there is feldspar.

Q. What is the bentonite used for?

A. It is used for mudding oil wells, and for foundry sand in making moulds, and a great variety of uses. They even go to the extent of making bread and candy with it.

Q. What is the feldspar that you mentioned?

A. Feldspar is produced down at Keystone, South Dakota.

Q. Are either one of those operations of any size?

A. No. There are a number of relatively small operations. The bentonite is entirely surface mining. And then there is at times production of some rare minerals from pegmatites down in the region around Custer.

Q. What about the mines at Climax, Colorado, Mr. Bjorge?

A. The mines at Climax, Colorado produce molybdenum, and that is the other large mining operation within a reasonable radius of Lead.

Q. When you say other you mean in addition to Homestake?

A. Yes. Well, in addition to Anaconda and the copper [fol. 737] mines in Utah.

Q. What is molybdenum?

A. It is a metallic element that is used for alloying with iron to make moly-steels.

Q. How large an operation is that?

A. That is quite a large operation. I am certain they have produced as much as 15,000 or 16,000 tons a day down there.

Q. How far is that from Lead, Climax?

A. About 500 miles.

Q. Now, taking you just a moment back to the situation of your employees, can you tell us what the fact is with respect to the percentage of your people who are married men, that is, your employees in the year 1942?

A. Yes; a very large percentage of them were married.

Q. And was there a very large percentage of them who had a long period of service with Homestake?

A. Yes.

Q. Now, in addition to the reasons which you have mentioned heretofore as constituting the arguments that you made against the closing order on the gold mines, were there any other reasons which you advanced having to do with the community of Lead and the surrounding area?

A. I definitely advanced the facts as to the drastic effect on a one-industry community when that industry was [fol. 738] closed down and forced to lay off a substantial portion of its employees.

Q. What did you say along this line in your talks with any of the officials of WPB that you did talk to?

A. I recited the long service of the employees with us, and that a large percentage of our men were home owners, and they were married men who had lived in the community a long time. It is a very attractive and desirable community, being very definitely a tourist area now, and living conditions were good, recreational facilities were good.

Q. Did you make reference to the almost complete dependence of the immediate community upon the Homestake Mine?

A. Yes. The community which constitutes the——

Q. What would be the population of Lead at that time?

A. About 7,500, and the adjoining town of Deadwood, about 4,000.

Q. And what percentage of those people would you say were dependent at that time upon the operations of the Homestake mine, directly or indirectly?

A. I should think that they were almost all directly or indirectly dependent upon employment with us. There were normally a little over 2,000 employees with Homestake, and their families who were directly dependent, and the business men that serve the community, all of the other facilities of the community were dependent on the [fol. 739] patronage of our employees. The city and county school districts were very largely dependent on taxes received from Homestake.

Q. These are local taxes?

A. Local taxes, yes.

Q. What was the significance in 1942 of the Homestake gold mine's operation to the economic life of the State of South Dakota, that is, the State government?

Mr. Barnes: I object, unless the qualifications of the witness on this subject are shown.

By Mr. Rigney:

Q. Do you know, Mr. Bjorge, how much annual taxes the Homestake Mine was paying to the State of South Dakota at this time, 1942?

A. Homestake was paying a State tax in the amount of about $1,100,000 a year.

Q. What sort of a tax was that?

A. That was a severance tax, a percentage tax on the value of the gold produced.

Q. And do you know of your own total knowledge what the total budget of the State of South Dakota was at that time, how much money they raised annually by taxes from all sources?

Mr. Barnes: I object, unless the sources of the witness' knowledge are also shown.

By Mr. Rigney:

Q. Do you have knowledge on this point, Mr. Bjorge? [fol. 740] A. We always followed the affairs of the State, and the State expenditures, because of the tax problem. And I do not have the exact figures, but in the middle '30s when the severance tax was first initiated, that tax——

Mr. Barnes: Your Honor, I object to estimates on the part of the witness, because he said he does not have the exact figures. It could be nothing but estimates.

Mr. Rigney: I think he could testify to the approximate figure, your Honor, within reasonable limits.

The Commissioner: Well, I thought you were asking questions in an effort to overcome the earlier objection. I have in mind that I have to rule on that earlier objection.

Mr. Rigney: Yes.

The Commissioner: I am going to sustain it. The figures with respect to taxes are matters which can be precisely tied down, if they should become important.

Mr. Rigney: Yes, your Honor, I appreciate that.

The Commissioner: I think in order to make it easier to rule on an objection you should state what you are doing, whether you are withdrawing the question or proceeding to answer the objection, so that I will know when I am called upon to enter the ruling.

Mr. Rigney: Well, now, I take it that your Honor has sustained the last objection?

The Commissioner: I did indeed.

[fol. 741] Mr. Rigney: Now, does your Honor want me to except?

The Commissioner: You do not have to.

Mr. Rigney: I did not think you had to.

The Commissioner: You do not have to. My point was, I am going back into the problem that was presented for my—we can go off the record here.

(Here followed discussion off the record.)

The Commissioner: Very well.

By Mr. Rigney:

Q. Now, Mr. Bjorge, what can you say about the comparable working conditions as between the Anaconda mine at Butte and the Homestake mine at Lead?

Mr. Barnes: Your Honor, I object to the form of the question as being indefinite. The question asked the witness: what can you say about——

Mr. Rigney: I will withdraw that. I am only trying to develop the facts here, and perhaps I am doing it too informally in that kind of a question.

By Mr. Rigney:

Q. Are you familiar with the Anaconda copper mine at Butte, Mr. Bjorge?

A. Yes.

Q. You have knowledge of that from having visited that mine?

A. I have knowledge of it from having visited it. My [fol. 742] first visit to it, however, was in January, 1943. Prior to that I was familiar with it from reading technical articles on the mine in the technical press, and I knew with regard to many mines and mining districts.

Q. But you have also been there personally and been physically present on the premises, have you not?

A. Yes.

Q. It goes without saying that you are thoroughly familiar with the Homstake mine, does it not?

A. Very.

Q. Now, can you compare for us the working conditions in the copper mine at Anaconda with the working conditions in the Homestake mine at Lead?

Mr. Barnes: I object to this on the grounds it is completely immaterial. There is no showing that these facts known to Mr. Bjorge were known to the employees of the mines and that they would have in any way an effect on whether they took employment or did not take employment.

The Commissioner: Overruled.

Mr. Rigney: Would you read the question back so Mr. Bjorge has it in his mind?

(The pending question was read by the reporter.)

The Witness: The working conditions in the Homestake mine at Lead are exceptionally good. The mine is a hard rock mine where the great majority of mine openings stand [fol. 743] well without timber. The mine is relatively dry, the temperature is comfortable, the increase in temperature with depth is slow, and the mine is cool and well ventilated. The principal drawback of the mines at Butte are that they are high-temperature mines, they are very definitely hot and uncomfortable.

By Mr. Rigney:

Q. Are they what is known in the mining industry as a hot mine?

A. Yes.

Q. Now, are the facts to which you have just testified common knowledge within the mining community so far as employees of Homestake are concerned?

Mr. Barnes: I object, unless the qualifications of the witness to answer that question are shown.

By Mr. Rigney:

Q. Have you ever discussed these facts with employees of Homestake at any time prior to October of 1942?

A. I have discussed it with many people in discussing the comparison of different mines.

Q. And do those many people of whom you speak include Homestake miners at a time at or prior to October 8, 1942?

A. Certainly on occasions underground in the mine, stopping in a working place to talk with miners, I have talked

to them about the fact that it was a cool, comfortable place in which to work as compared to the mines at Butte or [fol. 744] other mines that I have been in, in a variety of places.

Q. Had you had such conversations as you have just testified to on several occasions with Homestake employees before October 8, 1942?

A. Yes.

Mr. Rigney: Your Honor, I think he is qualified to answer the question that I put to him earlier, if it is not the fact that these comparable conditions as between these two mines was generally known within the mining community so far as Homestake miners are concerned.

Mr. Barnes: Your Honor, all that we have got from the witness so far is that from time to time he told miners at Lead that their working conditions were better than at Butte. That does not establish common knowledge on the part of the miners at all.

The Commissioner: I do not think there is enough there to establish common knowledge.

By Mr. Rigney:

Q. Well, have you ever heard any Homestake miners prior to October 8, 1942 make any statements with respect to the conditions within the Anaconda mine at Butte, working conditions I am speaking of now, with particular reference to temperature?

A. Yes.

Q. And are you able to say on how many occasions you [fol. 745] have heard statements on that subject from Homestake miners?

A. Not the number, no, but on several occasions.

Q. Would you say that it was on numerous occasions?

The Commissioner: Well, he didn't.

Mr. Rigney: Well, several might be two or more.

The Commissioner: If you want to get away from the relative term used by the witness, pin it down by numbers.

By Mr. Rigney:

Q. Over how long a period of time did you have any such conversations with various Homestake miners?

A. That is very difficult to state. Probably a number of times during that year when there had been men who had gone to Butte to work and had returned to Lead.

Q. Had that occurred on some occasions, that Homestake miners had gone to Lead prior to October 8, 1942?

A. Yes.

Q. Had gone to Butte, I meant to say, and had subsequently returned to Lead?

A. There were some that had gone to Butte and returned to Lead.

Q. And did you have conversations with them about these things?

A. I cannot name specific men, but I did meet such men and they gave as their principal reason for returning the temperature in the Butte mines.

[fol. 746] Q. Now, can you tell us whether or not this subject of the comparable working conditions between Homestake and Butte was a matter of common knowledge to the Homestake miners in the summer of 1942?

Mr. Barnes: Your Honor, I feel I have to press my objection. The witness' only statement has been that on several occasions he had discussions with some men.

The Commissioner: Sustained.

By Mr. Rigney:

Q. Now, how does the Climax mine compare physically with the Homestake mine at Lead, Mr. Bjorge? Would you say that there was one distinguishing characteristic between these two mines, at Climax and Lead?

Mr. Barnes: Your Honor, I will concede that Climax produces molybdenum and Lead produces gold. That is a distinguishing characteristic, I will agree to that.

Mr. Rigney: That was not the one I am seeking to develop, your Honor.

The Witness: We are discussing living and working conditions, and the one important factor is that Climax is located at an elevation that ranges from 11,000 to 13,000 feet.

By Mr. Rigney:

Q. Above sea level?

A. Above sea level.

Q. As compared with what elevation at Lead for the [fol. 747] Homestake mine?

A. A little over 5,000 feet.

Q. Does that difference in altitude have an effect upon miners working in the two mines?

Mr. Barnes: I object, unless the source of the witness' knowledge is shown, your Honor. It seems to me we are getting into a medical question.

Mr. Rigney: Your Honor, Mr. Bjorge has been in this field all his life.

The Commissioner: Overruled.

The Witness: I think anyone that has ever been in high altitude knows the discomfort of any effort at high altitudes.

By Mr. Rigney:

Q. Labor or work becomes much more difficult at the higher altitudes; is that right?

A. Yes, indeed.

Q. Do you recall from your knowledge in this field whether or not there were any gold mines in operation in September of 1942 which would not be affected by the close-down order L-208, which was under consideration by the WPB?

Mr. Barnes: Your Honor, I have to object to that. The evidence here already shows that prior to October 8, 1942, in September, the period to which this question is addressed, the terms of the order had changed several times in successive drafts. The question is too indefinite.

[fol. 748] The Commissioner: What was that question?

(The pending question was read by the reporter.)

The Commissioner: You are asking him to——

Mr. Rigney: I will withdraw that and put it a different way.

The Commissioner: All right.

By Mr. Rigney:

Q. From your conversations with WPB officials in August and September, 1942, did they state to you that under the proposed order there would be some gold mines which would not be closed down?

A. No, I don't think we went into that in those meetings.

Q. And do you know from your own knowledge if there were gold mines operating at the time of the issuance of the order on October 8 which continued to operate which were exempted from the order by the terms of the order?

Mr. Barnes: Your Honor, it seems to me that now we are getting into a question of interpretation of the order. If he knows whether gold mines, any gold mines, continued to operate, that is one thing, but if we are getting into the question of the terms of the order that is something else. I do not think the witness is qualified on that.

Mr. Rigney: I will withdraw it, your Honor.

By Mr. Rigney:

Q. Were there gold mines in operation in September of [fol. 749] 1942 which continued to operate after the issuance of the order of October 8, 1942?

A. Yes.

Q. Now, can you tell us the several largest gold mines which were affected by the order, closed down by the order of October 8?

The Commissioner: Wait a minute. I am not going to let him testify to that. If they did close down, and he knows, he can testify. But I don't think that he can testify that the order closed them down, because there may have been some other factor that entered into it. And, as has been suggested, there was authority given to some of the mines to operate for limited periods.

Mr. Rigney: All right. I wanted to show the principal mines which were directly affected by this order and were immediately closed down, but we can do that a different way.

The Commissioner: All right.

By Mr. Rigney:

Q. Do you recall in your conversations with the WPB people that you talked to in August and September of 1942, Mr. Bjorge, having any discussion with them with regard to the shipment of gold mining machinery and supplies abroad to gold mines in foreign countries?

A. Well, I included in the arguments that I presented to them the unfairness of taking drastic action with respect [fol. 750] to the gold mines in the United States when the gold mines in all of the other countries of our allies were still operating and getting machinery and supplies from this country.

Q. And did you have some personal knowledge of that by reason of your trip to Nicaragua that you have testified to?

A. I personally was familiar with the situation in Nicaragua.

Q. Directing your attention to the latter part of September, 1942, Mr. Bjorge, what next happened after the events that you have covered in your testimony up to now?

A. I received on the Monday before October 1st, which I think would be September 28, a telephone call from Wilbur Nelson. The call came in the late afternoon when I was the only one left at our office.

Q. Proving that the boss always works the longest hours, I guess.

A. And he told me that a meeting had been called for Thursday, October 1st, and suggested that I come to it. I replied that I had my reservations to leave on that Thursday for San Francisco to attend a directors' meeting on the following Tuesday, and he said that he would advise me to change my plans and come to Washington.

Q. Now, did you ask him why, or what it was all about?

A. Yes, I asked him what it was all about.

Q. What did he say?

[fol. 751] A. He said he was not at liberty to tell me, but that he thought it would be definitely desirable for me to be present at this meeting. I then told him that in order to get to Washington by train in time I would have to leave within about two or three hours, and that I couldn't leave without making some arrangements with some of our staff

on pending matters. And he replied that he would get priority for me so that I could come by plane. So I put in the next day at work and left in the late afternoon and drove to Cheyenne, got a plane out of Cheyenne at 2:00 a.m. and arrived in Washington Wednesday afternoon.

Q. Would that be the 30th of September?

A. That would be September 30th.

Q. Do you recall what happened upon your arrival in Washington on the 30th, sir?

A. Yes. Congressman Case's secretary met me at the airport, and brought a message from Mr. Case that a meeting was being held at the War Production Board, I believe it was, in Mr. Batt's office that afternoon, and he suggested that I go with him to that meeting. I arrived just as the meeting concluded so that I had no part in that meeting. The meeting that I had been requested to come to Washington for was scheduled for the afternoon of the following day.

Q. Do you recall seeing anyone who was at this meeting of September 30, or had they all left by the time you got [fol. 752] there?

A. No, I met Case. Case was waiting for us because his secretary was at the airport, and I saw him for a few moments there.

Q. You did not see any of the WPB people that day?

A. I am not sure.

Q. All right now, the meeting then of October 1st was the following day, is that right?

A. That is right.

Q. Now, tell us to your best recollection about this meeting of October 1st that began in the afternoon, I believe.

A. That meeting convened at, I think, about 2:30 in the afternoon.

Q. At Mr. Batt's office, was it?

A. No, I don't believe so. It was in a rather large conference room.

Q. I see, but Mr. Batt was presiding?

A. Mr. Batt was presiding.

Q. And who else was there, to the best of your recollection?

A. Well, General McSherry, Wilbur Nelson, General Clay, and there were a number of men from various divi-

sions of the War Production Board, Mr. Hill, Mr. Lipkowitz, Mr. Harkison, Mr. Ayer, Mr. Hayes, Mr. Heikes, Mr. Hatch; and then there were Senators McCarran, Gurney, and I believe Johnson of Colorado, and Congressmen Case and Englebright.

[fol. 753] Q. Did you make notes at the time of this meeting of October 1st of some of the people in attendance?

A. I made no notes, no memorandum of the meeting, but I jotted down the men whose names I got because they spoke, or men that I knew that were in the meeting.

Q. And your listing of these names just a moment ago is predicated upon your having refreshed your recollection from this memorandum, is that right, that you are looking at now?

A. Yes.

Q. That was a list made at or about the time of the October 1st meeting, is that right?

A. Yes.

Q. And do you see on the list anyone in attendance whose name you have not mentioned?

A. Yes, Mr. Stow, Mr. Kennefee, Mr. Smith.

Q. If you know what particular branch of the WPB or the Government they were connected with, would you mention that as you mention their names?

A. Just those additional ones or all of them?

Q. Mr. Kennefee, do you happen to know what branch he was with?

A. I am not sure whether he was Service of Supply or War Manpower.

Q. How about Mr. Stow? Do you remember?

[fol. 754] A. He was in the Mining Branch of the War Production Board.

By Mr. Barnes:

Q. You referred to a Mr. Heikes, Heikes I think the name was.

A. Yes.

Q. What division was he with?

A. He was with the Lead and Zinc Division, I believe.

By Mr. Rigney:

Q. Now, have you given us the names of practically every one that was at the meeting as far as you know?

A. Except I did not give the industry representatives that were there.

Q. No. Would you do that, please?

A. There were myself, Carroll Searls, Errol MacBoyle, Mr. Shoup and Mr. McCormack.

Q. Mr. MacBoyle was president of Idaho Maryland, is that right?

A. Yes.

Q. He is deceased now?

A. Yes.

Q. How about Mr. McCormack, what was his company?

A. Mr. McCormack was with Natomas Company, a dredging company in California.

Q. Do you know whether he is living or deceased?

[fol. 755] A. I think that he is deceased. I haven't seen him personally for many years.

Q. Mr. Shoup's company is what or was what?

A. The Gold Cycle in Colorado.

Q. And Carroll Searls was connected with what company?

A. He was attorney for the Newmont Corporation which operated the Empire Star Mines at Grass Valley, California.

Q. Now, can you tell us, as near as you recall, Mr. Bjorge, what transpired at this meeting from the time it opened until it broke up, in substance, as near as you recall?

A. Mr. Batt presided and opened the meeting, and stated that an order to suspend operations of gold mines was under consideration and that they had called the representatives of the industry in order that they might be heard before a closing order was issued. I am not quite certain of the order of the procedure after that, as to whether the industry representatives were called on first or the others, or the congressional representatives. General McSherry made a statement with regard to the great need for miners in the copper mines.

Q. And did each one of the representatives of the industry have something to say?

A. Yes. The five representatives of the industry all presented their statements.

Q. Now, tell us what you had to say.

A. I presented the arguments that I had previously given [fol. 756] in oral conversations in summary with Donald

Nelson and General McSherry and General Somervell, and at greater length with Wilbur Nelson, with regard to all of the arguments for the ineffectiveness of the order, there was no machinery, no legal machinery for drafting labor, and it seemed entirely unreasonable to expect that if the miners—I was talking mainly about our own mine—were forced out of their jobs and out of their homes there that they would go to other mines to take the place of men that had left there. It was general information that there had been a great turnover of labor in all of the mines and that if they were forced to leave our place that they would go to the jobs they considered the most desirable.

I also emphasized the effect on the community, on the business in the community, the State's from the tax angle, and the fact that we were singled out for special treatment and that we at no time had objected to treatment that was applied equally to all.

Q. Is it fair to say that at this time you repeated substantially all of the arguments that you have testified to here this morning as having been advanced in your previous meetings with the various WPB officials that you had seen prior to October 1st?

A. Yes.

Mr. Rigney: Off the record.

(Discussion off the record.)

[fol. 757] By Mr. Rigney:

Q. Now, did the other representatives of the other gold mining companies who were present make statements there that day?

A. They made similar statements of account, as I recall, and they argued about the ineffectiveness of such an order, and that it wouldn't do what was proposed, would not get the men for the copper mines, and the unjustness of the order for their respective communities.

Q. Now, do you recall anyone speaking in support of the proposed order on behalf of the WPB or on the Government's side at all?

A. Yes. I recall that in addition to General McSherry of the War Manpower Commission, General Clay spoke strongly in favor of the order, Mr. Hill, Mr. Harkison and

Mr. Lipkowitz spoke favorable to the order; and Mr. Hatch, Mr. Heikes and Mr. Ayer raised questions as to the possible effectiveness of the order or possible ineffectiveness.

Q. Were those last three gentlemen that you named at that time connected with the WPB in some capacity or other? That is, Mr. Hatch and——

A. Mr. Ayer was in the Copper Division, I think Mr. Heikes was in the Lead and Zinc Division, and I don't know which division Mr. Hatch was in.

Mr. Barnes: Ferro Alloys.

[fol. 758] By Mr. Rigney:

Q. Mr. Ayer was in what division?

A. Copper.

By Mr. Barnes:

Q. What about Mr. Hill that you mentioned speaking in favor of the order? What was his position?

A. He spoke in favor of the order.

Q. What was his position?

A. I do not know.

Q. Do you know his initials, or do you have any other identification of him?

A. I just have the name Hill here in my notebook.

The Commissioner: We will recess at this time until two o'clock. Did you finish your answer?

The Witness: I was just going to say that the only indication that I had of the tone of the talks made by the different people is that I have a small cross in front of the names of Lipkowitz, Hill and Harkison as being adverse, and a check mark in front of Hatch, Heikes and Ayer.

(Thereupon, at 12:30 o'clock p.m., a recess was taken in the hearing until 2:00 o'clock p.m.)

[fol. 759] Afternoon Session

2:00 p.m.

(The hearing was resumed, at the time above mentioned, pursuant to the recess previously taken.)

GUY N. BJORGE resumed the witness stand and was examined and testified as follows:

Direct examination (Resumed).

By Mr. Rigney:

Q. I think, Mr. Bjorge, that when we recessed for luncheon you were testifying about this October 1 meeting and, as I recall it, you said that Mr. Heikes, Mr. Hatch and Mr. Ayer, who were there among others on behalf of the government, had raised certain questions as to the possible effectiveness of the proposed gold mine closing order. Now, I ask you if those three men whom you mention were men of previous mining experience prior to coming with the government?

A. I do not know Mr. Hatch's background, but I know that Mr. Heikes and Mr. Ayer had broad mining experience and were familiar with mining communities.

Q. And were those two gentlemen, Mr. Heikes and Mr. Ayer, emergency employees, if we might use that term, who were in WPB during the war period like many other people were?

A. Yes, Mr. Ayer was in the Copper Division and I think that Mr. Heikes was in the Lead-Zinc Division.

[fol. 760] Q. Now, do you recall any comment or statement at this October 1 meeting by Mr. Samuel Lipkowitz whom you testified was there?

A. Yes.

Q. Will you tell the Court what your recollection is as to what Mr. Lipkowitz had to say?

A. He gave the estimates of the number of men that were in gold mining and would be made available by the closing order as a total of 10,000 to 12,000, of whom 4,000 to 5,000 were miners.

Q. And was there discussion on that subject? Was there discussion on the issue of the figures which Mr. Lipkowitz advanced?

A. Yes, the meeting later developed the figures of the number of men.

By the Commissioner:

Q. When you say "later", do you mean at the meeting or after the meeting?

A. No, at the meeting.

By Mr. Rigney:

Q. And were those the figures that were referred to in one of the exhibits that went into evidence here, in that memorandum of October 3, 1942? Do you remember seeing that memorandum, or do you remember seeing the official minutes of the WPB meeting of October 6? Supposing I [fol. 761] show you the original of these October 6, 1942, which are in evidence here.

Mr. Barnes: Plaintiff's Exhibit 92.

By Mr. Rigney:

Q. And I ask you if the figures referred to here in this first paragraph which starts out "Mr. Batt reported . . .", are the figures that you speak of as having been the figures which were developed at this meeting?

A. Yes, except that I think the figure of 3,270 was probably corrected in the figure developed at that meeting the following day.

Q. I see.

A. At that meeting, Mr. Batt stated at five o'clock that he had other commitments, and there was a recess, and Mr. Batt had asked Wilbur Nelson to preside. And it developed from the mining industry members present the number of men that might be released if such an order were issued.

Q. Now, was there any discussion at all at this October 1 meeting on the part of anyone representing the government of the necessity of issuing this order for the purpose of conserving critical materials?

A. No.

Q. Now, have you told us as best you recall, Mr. Bjorge, of the substance of what transpired at this October 1 meeting?

A. Yes.

The Commissioner: Let me see Exhibit 92.

[fol. 762] The Witness: Yes, I have a very definite recol-

lection of the substance of the discussion, but naturally do not remember details.

By Mr. Rigney:

Q. Now, what did you next do following this meeting of October 1?

A. Well, I left Washington on Saturday evening and went to San Francisco, and on the following Tuesday afternoon I received a telephone call from Senator Gurney that the order closing the gold mines had been approved, and he gave the terms of it to the extent that breaking of ore had to be completed within one week.

Q. And after learning that the order L-208 had been approved by the War Production Board, what did you next do?

A. Then after discussion of the question with our Board which was in session when this telephone call came, I left to return to Lead as soon as I could in order to proceed with complying with the order.

Q. And this Board meeting was taking place in San Francisco?

A. Yes.

Q. What was the first official notification that you received of the issuance of the order?

A. The first official notification in other than the telephone call was a telegram from Mr. Patterson.

[fol. 763] Mr. Rigney: May this be marked as Plaintiff's Exhibit next in order.

(Said document was marked for identification as Plaintiff's Exhibit No. 132.)

By Mr. Rigney:

Q. I show you Plaintiff's Exhibit 132 for identification and ask you if this is the telegram to which you just referred as coming from Under Secretary of War Patterson?

A. This is the telegram that came to Mr. Edward H. Clark, president of the Homestake Mining Company in San Francisco.

Q. Has this been produced from the files and records of the Homestake Mining Company?

A. Yes.

Mr. Rigney: I offer it in evidence.

Mr. Barnes: Do you know when this was received?

The Witness: It is the 10th of October.

Mr. Barnes: No objection.

The Commissioner: Admitted.

(Said telegram, dated October 10, 1942, from Robert P. Patterson, Under Secretary of War, to Mr. Edward Clark, President, Homestake Mining Co., marked "Plaintiff's Exhibit No. 132," admitted in evidence and made a part of this record.)

[fol. 764] Mr. Rigney: May I read this into the record?

The Commissioner: Not if it is in evidence.

Mr. Rigney: I will call your Honor's attention to the fact that the telegram from Under Secretary of War Patterson stating the issuance of L-208 cites the need for miners in the non-ferrous metal mines, and makes no reference to critical materials as constituting any reason for the issuance of the order.

By Mr. Rigney:

Q. What was the next thing you did after the formal notification to the company of the issuance of L-208?

A. We proceeded to discontinue the breaking of ore by October 15 as specified in the order, and the layoff of men with the discontinuance of mining began at about that time.

Q. Were notices posted in that connection?

A. Yes, we posted notices on the bulletin boards in the several departments of the company.

Mr. Rigney: May this be marked Plaintiff's Exhibit 133 for identication?

(Said document was marked for identification as Plaintiff's Exhibit No. 133.)

By Mr. Rigney:

Q. I show you Plaintiff's Exhibit 133 for identification, Mr. Bjorge, being a document which purports to bear your signature. Is that your signature?

[fol. 765] A. It does bear my signature.

Q. And is this a copy of the notice to employees about which you just testified?

A. Yes. It is dated October 15, 1942.

Q. And were several copies of this notice posted at various places in the Homestake operation in the mine?

A. Yes. We have bulletin boards in every department, in some departments in several places, and notices to employees are posted on those bulletin boards.

Mr. Rigney: Plaintiffs offer Exhibit No. 133 in evidence.

Mr. Barnes: No objection.

The Commissioner: Admitted.

(Said notice, dated October 15, 1942, to employees of Homestake Mining Company, signed by Guy N. Bjorge, general manager, marked "Plaintiff's Exhibit No. 133," admitted in evidence and made a part of this record.)

By Mr. Rigney:

Q. And was this announcement which you have just identified here also published in the newspaper in Lead?

A. Yes, it was published in the Lead Daily Call.

Q. Now, can you tell us what steps were taken in an effort to secure gold miners from Homestakes for the nonferrous metal mines?

A. Yes, we received a request to meet with certain officials that were coming to Lead, and we did so. The meeting was [fol. 766] in Mr. Chambers Kellar's office. He was our senior counsel at the time.

Q. And when you say "we", whom do you include in that?

A. Well, for the company, Mr. Kenneth Kellar and I were present, and there arrived seven men from the government.

Q. Perhaps you would like to refresh your recollection with respect to them?

A. I think I have the names of the men, but by refreshing my memory I can give their connections.

Q. They were representatives of the War Manpower Commission?

A. War Manpower Commission, U.S.E.S., Selective Service.

Q. Let us have those.

A. Mr. McCusker, War Manpower Commission, Denver;

Colonel Andrews, Selective Service, Washington; Major Hutchinson, Services of Supply, Washington; Major Ryan, Selective Service, South Dakota; Mr. McCullen, Employment Service from Minnesota; Mr. McDonald, Employment Service from South Dakota; and Mr. Bjerke, Publicity from Washington. His name happens to be very close to mine but it is B-j-e-r-k-e.

Q. And did those gentlemen stay in Lead for several days?

A. We met with them on October 14, with five of them on October 14, and all seven of them on October 15.

Q. And then, if you know, can you tell us what followed [fol. 767] so far as the efforts to obtain miners from Homestake to go elsewhere?

A. Mr. McCusker was the principal spokesman in the thing, and he outlined the plans for the work of the U.S.E.S. which proceeded to set up an office in Lead, and Mr. McCusker stated that it would be their aim to refer our men to nonferrous metal mines with Anaconda as number one, and Climax Molybdenum as number two in order of choice.

Q. And do you know how long those recruiting efforts went on, how long they were there?

A. I think that the U.S.E.S. office in Lead was open for about two months.

Q. I see.

A. Mr. Sandell was placed in charge of this office.

Q. Can you say of your own knowledge whether or not these U.S.E.S. people interviewed any considerable number of Homestake miners?

A. Well, Mr. Sandell conferred with us a number of times during that time, and he gave us the information that substantial numbers were interviewed in their office, many of whom were referred and some were not, and that on the basis of the number of men that we had laid off and the number that came to their office, there was over 100 that never went to the U.S.E.S. office.

Mr. Barnes: Your Honor, I object and move to strike that [fol. 768] as being a conclusion on the part of the witness.

The Commissioner: Will you read that back?

(The pending answer was read by the reporter.)

The Commissioner: Overruled.

By Mr. Rigney:

Q. Would you be able to give us a figure as to the approximate number of men who were interviewed by the U.S.E.S. people?

Mr. Barnes: Your Honor, I object unless the source of the witness' knowledge is shown.

The Commissioner: He has already testified that Mr. Sandell made certain statements to him. If he knows, he may be permitted to answer.

By Mr. Rigney:

Q. Do you know from your conversations with Mr. Sandell or any of the other officials of U.S.E.S. how many were interviewed?

Mr. Barnes: Your Honor, this is bringing in a new element now.

The Commissioner: Yes, it does. Sustained.

By Mr. Rigney:

Q. Do you know from your conversations with Mr. Sandell how many were interviewed?

A. I don't remember without refreshing my memory as to the number of men that were interviewed.

[fol. 769] Q. Do you know of your own knowledge whether at a period within a few days prior to October 8, 1942, recruiters were in Lead from other industries interviewing laborers, miners?

A. There had been recruiters prior, a recruiter from Anaconda, and during the period that the U.S.E.S. office was open, there was a recruiter there from Basic Magnesium.

Q. Now, Mr. Bjorge, can you tell us what the fact is from your own knowledge with respect to the Homestake labor force after October, 1942?

Mr. Barnes: Your Honor, I object to this on two grounds: One, I fail to see the relevance and materiality of the October 1 date; in the second place, I object on the grounds that the employment records would be the best evidence.

The Commissioner: Sustained.

Mr. Rigney: We have some records here, Your Honor.

By Mr. Rigney:

Q. Do you have some data with you, Mr. Bjorge, relating to the labor force at Homestake about this time, October, 1942?

A. Yes, I have a summary of the number of men that were separated from our employment between the time of issuance of L-208 and December 31, 1942. That summary is developed from the full list of men laid off which is here and was prepared under my direction by our employment office from the records, routine records kept there.

[fol. 770] The Commissioner: Is this the kind of testimony that it was anticipated would be discussed between counsel ahead of time and that a stipulation would be entered?

Mr. Rigney: There have been discussions between Mr. Barnes and Mr. Connor, your Honor. I think we may be able to expedite it.

Mr. Connor: That covers a little different phase.

Mr. Barnes: I am not sure what the situation is here. Shortly after the first of the year, Mr. Connor submitted to me a schedule dated by the company December 18, 1952. That has been sent to the FBI with a request for audit. It does, as has been indicated here, include some 2,000 names. I spoke to you informally about it and indicated to you that it was going to be, in my opinion, absolutely impossible for the FBI to complete an audit for that prior to the date set for the commencement of this hearing. I have received no report from the FBI as yet as to the results or progress of that audit.

Mr. Connor: Just parenthetically, we intend to offer that compilation which we handed Mr. Barnes on January 5, but I think that we are now attempting to introduce on matters which are not actually covered by that report, in our proof here. As far as the compilation goes, it was prepared promptly and delivered to Mr. Barnes assoon as I could get to see him after I received it.

[fol. 771] The Commissioner: Well, with respect to the "promptly", it was the distinct impression that I had at pre-trial that any of those matters about which stipulation was contemplated would be submitted to counsel for the defendant 60 days prior to trial.

Mr. Connor: Excuse me, your Honor. I think it was six

weeks. There was a discussion of six weeks prior to trial.

The Commissioner: I believe so.

Mr. Connor: But you will recall at the hearings in Seattle on Alaska-Pacific Consolidated Mining proof, we discussed and decided that we would use social security records to prove at least where the men went to after closedown. We all decided that would be a good way to do it. We attempted to check in Seattle at the Social Security office in the same building, as you may recall, and they could not tell us definitely what facts would be learned from those records, and we promptly started to get our records together on social security numbers. And I believe that Mr. McGuire either conferred with Mr. Barnes or with you, or all three of you conferred together and it was found that social security records were unavailable for any purpose.

The Commissioner: Because of the statute.

Mr. Connor: Because of the statute itself which makes them unavailable for any purpose. And as a result the [fol. 772] work which we had started on preparing the form of proof which we finally submitted to Mr. Barnes was not carried forward because we thought we were going to get it through social security records. I do not think that Mr. Barnes has really any serious doubt that these were prepared from our records, and my suggestion is that when we get around to offering this exhibit which gives him details, it be taken subject to verification by the FBI and, if it is shown that the facts are not as we have set them forth, then we will have to reopen the hearings and submit other proof, or be bound accordingly.

Mr. Barnes: With one exception, your Honor, that is a satisfactory agreement to me as Mr. Connors stated. I am afraid that he has shifted the burden of proof, in effect, by putting in the unaudited schedule, as he stated it, he is casting on me the burden of proving error. I will not assume that burden. I am willing to accept the schedules subject to verification, but upon my notice to counsel for plaintiffs that we have been unable to verify the schedule, it seems to me that then it is subject to motion to strike.

Mr. Connor: Then I will repeat what I said at the Seattle hearing, and then we will have to proceed to Lead and either take testimony by interrogatories or depositions, or hold hearings out there over whatever is necessary to complete this proof, which we think is very important from the

standpoint of our case. I do not think that we should have to do that. I think that we are all sensible people.

[fol. 773] (Here followed discussion off the record.)

Mr. Barnes: It seemed to me we had gotten away from the question which was immediately before us. The document which they are now offering seems to me to be some other employment record which has never been submitted to me for verification.

The Commissioner: That is why I asked the question. I thought that there had been some decision with respect to some efforts toward stipulation being made, if not concluded.

Mr. Connor: This was a record which was in the Homestake office at the time I arrived in Lead and, as a result of these preparations which they had, the exhibit here which Mr. Barnes has a copy of and which we intend to offer was prepared from it. This is in summary form and sets up the various figures which are in here. That is the situation.

The Commissioner: Well, I just asked a question so that I would know what the situation is with respect to employment records.

Mr. Connor: All this is a summary.

The Commissioner: Do not interrupt.

Mr. Connor: I am sorry. I beg your pardon.

The Commissioner: I just asked the question so that I would be able to understand what the situation was with respect to the efforts toward stipulation concerning employment records and the manner in which that might re-

[fol. 774] late to the present line of testimony and the exhibit which counsel has in his hands.

Mr. Rigney: May I suggest, your Honor, that we defer this for the moment. I am ready to go on to a different topic and at the recess perhaps counsel can agree upon some arrangement which will resolve the problem.

Mr. Connor: What I started to say, your Honor, is that this is simply a recapitulation to refresh Mr. Bjorge's recollection as to what actually appears in those records.

The Commissioner: I did not mean to alter the course of the examination. I merely wanted to get information. If you want to defer it until the recess, it is all right. That is up to you.

Mr. Rigney: All right, sir.

May this be marked Exhibit 134 for identification?

(Said document was marked for identification as Plaintiff's Exhibit No. 134.)

By Mr. Rigney:

Q. Mr. Bjorge, will you look at Plaintiff's Exhibit 134 for identification, please, and tell us what that is.

A. This is a recapitulation of the total number of Homestake Mining Company employees by departments who were laid off or quit as a result of the War Production Board Order L-208 up until December 31, 1942.

Q. What is the basis for the figures which appear on [fol. 775] here? Where are they taken from?

A. From employment office records, which has an individual card for every man with his record of date of employment, date of separation, and any other information with regard to his employment or his marital status, number of dependents.

Q. And are those cards and records kept in the regular course of your business?

A. They are kept in the regular course of business.

Q. Is it the regular course of your business to keep those records?

A. For 40 years I think they are entire and complete. They are incomplete prior to 1912 but since then are complete.

Mr. Rigney: Plaintiffs offer Exhibit 134.

Mr. Barnes: I object on the grounds that it is not the best evidence.

The Commissioner: Sustained.

By Mr. Rigney:

Q. Mr. Bjorge, did the Homestake Mining Company take an appeal following the issuance of L-208 on October 8?

A. Yes.

Q. Do you recall how soon after the issuance of the order the appeal was taken?

A. About ten days, I think.

Mr. Rigney: May this be marked Plaintiff's Exhibit 1[illegible] [fol. 776] for identification?

(Said document was marked for identification as Plaintiff's Exhibit No. 135.)

By Mr. Rigney:

Q. I show you Plaintiff's Exhibit No. 135 for identification, and ask you if that is a copy of the appeal which Homestake submitted to the War Production Board following the issuance of L-208?

A. That is the copy of the appeal, signed by me.

Q. And was this the return receipt which you received from the WPB?

A. That is the receipt for a registered article.

Mr. Rigney: Plaintiffs offer in evidence Exhibit No. 135.

Mr. Barnes: Your Honor, I was showing some amusement here. I picked up the WPB appeals file and find a file several inches thick not in chronological order. I will have no objection to this, subject to verification.

The Commissioner: It may be admitted.

(Said document, dated October 17, 1942, appeal of Homestake Mining Company from War Production Board Limitation Order L-208, with accompanying receipt for registered article number 997, marked "Plaintiff's Exhibit No. 135," admitted in evidence and made a part of this record.) ord.)

[fol. 777] By Mr. Rigney:

Q. Now, do you recall that the War Production Board granted Homestake a hearing on this appeal?

A. Yes, it did.

Q. And you attended that hearing?

A. Yes.

Q. And Homestake was represented by counsel there?

A. That is right.

Q. And testimony was taken, or at least statements were made by people appearing there on behalf of Homestake, is that correct?

A. Yes.

Mr. Rigney: May this be marked Plaintiff's Exhibit No. 136 for identification?

(Said document was marked for identification as Plaintiff's Exhibit No. 136.)

By Mr. Rigney:

Q. I show you Plaintiff's Exhibit No. 136 for identification, Mr. Bjorge, purporting to be the verbatim transcript of the hearing by the W.P.B. Appeals Board and Homestake Mining Company's appeal, November 12 and 13, 1942, and ask you if you have examined that document recently?

A. Yes, I have.

Q. You have read it through, have you, within recent weeks?

[fol. 778] A. Yes.

Q. And is that a transcript of the proceedings of the appeal on the 12th and 13th of November by Homestake from Order L-208.

A. Yes.

Mr. Rigney: Plaintiffs offer Exhibit No. 136 for identification in evidence.

Mr. Barnes: Go back a minute, your Honor, I have found the original of Plaintiff's Exhibit No. 135 and made a hasty check of it. That is a correct copy of it.

The Commissioner: Very well.

Mr. Barnes: From what source did you get that transcript, Mr. Bjorge? Do you recall?

The Witness: I think our counsel obtained it in Washington and sent it to us.

By Mr. Rigney:

Q. Do you know if he obtained it from the War Production Board or through the War Production Board?

A. I would certainly assume so, but I don't know of first hand knowledge.

Mr. Rigney: I notice on page 2 the notatiey of who reported it. You will be better familiar than I, Mr. Barnes, with some of the symbols there. I think it was an official WPB reporter.

The Witness: It was obtained shortly after the hearing.

[fol. 779] Mr. Rigney: It is my understanding that this was a reporter there employed by the WPB, and that is

the report. I cannot make that absolute statement to your Honor, but that is what I understand.

Mr. Barnes: Subject to verification, I have no objection.

The Commissioner: Admitted.

(Said volume, dated November 12 and 13, 1942, verbatim transcript, Appeals Board, WPB, Homestake Mining Company, marked "Plaintiff's Exhibit No. 136", admitted in evidence and made a part of this record.)

Mr. Rigney: May this be marked Plaintiff's Exhibit No. 137 for identification?

(Said document was marked for identification as Plaintiff's Exhibit No. 137.)

By Mr. Rigney:

Q. I show you Plaintiff's Exhibit No. 137 for identification, Mr. Bjorge, being a letter dated November 25, 1942, from the War Production Board, which carries the name of Ernest Kanzler at the bottom, addressed to the Homestake Mining Company, Lead, South Dakota, and ask you if that communication was duly received by Homestake?

A. That was duly received. It has the notation initialed by me that it was received on November 29, 1942.

Q. Does this represent action of the Appeals Board on your appeal?

[fol. 780] A. Yes.

Mr. Rigney: Plaintiffs offer Exhibit 137 for identification in evidence, your Honor.

Mr. Barnes: The typing that appears under Mr. Kanzler's signature is apparently a different typewriter. It was not on there when you received it, the parenthetical note there?

The Witness: I think it was.

By Mr. Rigney:

Q. Is it possible that that was put on by someone in Homestake's office for the information of Homestake?

A. It may have been. It may have been subsequent to a modification that we received later, but it wouldn't be customary to make such notation on the original letter in

our office. I only state that from the manner of our custom, not direct memory.

Mr. Barnes: Your Honor, I have the original file copy, the document here, which does not have that notation on it.

Mr. Rigney: May the exhibit be received with this typing underneath Mr. Kanzler's name, physically excided from the document?

Mr. Barnes: I do not care if it is physically excided but just with the understanding that it was not in the document of the War Production Board?

The Commissioner: It may be received.

[fol. 781] (Said letter, dated November 25, 1942, from War Production Board, to Homestake Mining Company, signed Ernest Kanzler, marked "Plaintiff's Exhibit No. 137", admitted in evidence and made a part of this record.)

Mr. Rigney: May this now be marked Plaintiff's Exhibit 138 for identification?

(Said telegram was marked for identification as Plaintiff's Exhibit No. 138.)

By Mr. Rigney:

Q. I show you Plaintiff's Exhibit 138 for identification, Mr. Bjorge, being a telegram to you as general manager of Homestake Mining Company from Washington, D. C., bearing the name Wilbur A. Nelson, Administrator of Order L-208, and the month November in the year 1942. The date has been torn off. I will ask you if that telegram was received by Homestake?

A. Yes, that telegram was received.

Q. With reference to the appeal?

A. Yes.

Mr. Rigney: Plaintiffs offer Exhibit No. 138 for identification in evidence.

Mr. Barnes: Subject to verification, no objection.

The Commissioner: Admitted.

(Said telegram, bearing identification time 1942 Novem-
[fol. 782] ber, from Wilbur A. Nelson, Administrator of Order L-208 to Guy N. Bjorge, general manager, Homestake Mining Company, marked "Plaintiff's Exhibit No. 138," admitted in evidence and made a part of this record.)

By Mr. Rigney:

Q. Can you tell us now, Mr. Bjorge, by looking at Plaintiff's Exhibit 137, the letter from Mr. Kanzler about the appeal, and Plaintiff's Exhibit 138, the telegram that you have just identified, if this notation at the bottom here was placed down there as a result of receiving this telegram? I do not know whether you know or not, but if you do know, I would like you to tell us.

A. This was permission to employ an additional 60 men in addition to the number that had been stated in our hearings required for proper maintenance of the property.

The Commissioner: That does not go to this.

By Mr. Rigney:

Q. I just want to know if you now recall whether or not the notation here——

A. Is the substance of that telegram?

Q. —was placed on there at Homestake's office as a result of having received this telegram?

A. I think it probably was.

Q. Now, Mr. Bjorge, when did the Homestake gold mine shut down completely except for maintenance by a standby crew?

[fol. 783] A. The decision on our appeal permitted us to continue in operation for an additional six months after December 8, 1942, for the purpose of drawing and milling previously broken ore. It finally ceased that operation near the end of May, 1943, and the final bullion shipment was made on June 2, 1943.

By the Commissioner:

Q. When did you stop breaking ore?

A. By October 15, seven days after the date of the order. That was specified.

By Mr. Rigney:

Q. Will you now describe, Mr. Bjorge, what the situation was so far as the operations of Homestake were concerned from June, 1943, to the rescission of Order L-208 on June 30, 1945?

A. During that period all production was suspended, the mine was maintained in good condition, and all of the surface plant was maintained. The power plants were operating of necessity for the production of power for the operations that were continuing: the operation of the sawmill, the operations in our shops, pumping the water out of the mines, pumping water for the City of Lead.

Q. You refer to pumping water out of the mines. Could you tell us just a little bit how extensive an operation that is in order to maintain the mine?

A. Well, I stated previously that Homestake was a relatively dry mine. That term is purely relative. All mines [fol. 784] make some water, and pumping was continuous in operation at about 500 gallons a minute.

Q. 500 gallons a minute?

A. Yes, pumped from various depths in the mine down to the 5,000 level.

Q. And is that a continuous process, 24 hours a day?

A. Yes.

Q. What about hoists and underground maintenance?

A. Well, the hoists have to operate as long as there are men under ground.

Q. Would you explain what you mean by "hoists"?

A. Well, the hoist is the engine that operates cages and skips in the shaft for handling men and materials into the mine and out again. The mine is very extensive. It has upwards of 200 miles of level workings on which there are upwards or were at that time upwards of 80 miles of narrow gauge track on 29 levels. The shafts and shaft stations are timbered and the timbering must be replaced at times whether it drops or breaks from pressure, and all of the pillar stopes are timbered and the access to them. Certain portions of the drifts are timbered and must be repaired from time to time.

Q. You referred to 29 levels. Did you expand on that just a little bit as to just what you mean by that?

A. Well, from the surface to the 1100 level, there are mine levels at 100 foot intervals. From the 1100 level to [fol. 785] the bottom of the mine, they are at vertical intervals of 150 feet, so that there are actually down to the 5,000 level 37 levels, but 29 were active at that time. Some of the upper levels were mined out and not active.

Q. Do I understand by that that there were mining operations being conducted on 29 levels at that time?

A. Yes. The levels are openings. A tunnel would be a better lay term than the terms drifts and crosscuts that we use in mines, that are driven out from the shafts to the places where the ore occurs, and beyond that doing exploration for new ore bodies.

Q. What can you tell us about the metallurgical department after the closedown order?

A. Well, the metallurgical department has a large plant, at that time consisting of a 180 stamp mill, two cyanide sand plants which had a total of 27 leeching vats of 700 tons capacity each, in which the sand fragment was leeched, and a slime plant in which the slimes, which is the very finest product after grinding, was treated in filter presses, leeched by a cyanide solution.

Q. What about the machine shops?

A. The property also has complete machine shops, blacksmith shop, drill repair shop, drill sharpening shop, and foundry, and the foundry, machine and blacksmith's shops, were operated through the shutdown period in efforts to [fol. 786] manufacture various things for the war effort.

Q. What were some of those things?

A. Well, in some cases, we knew and in some cases we didn't know. They were the manufacture of parts that were——

Q. Components of something?

A. Components of airplanes, ships, they ranged from small parts for airplanes to large, 10 inch shafts, some 10 feet long or more that probably were for ships. The thing that was perhaps most interesting to us that we manufactured at that time far inland in a mountain section of the country were fishing net weaving machines. We began by making parts for a Chicago concern and shipping them to them for assembly, but toward the end of the war we assembled one complete machine at Lead. Our shops were repair and maintenance shops in which a great majority of the time one part may be made and later, for example, they may make one part of one kind and then it has to be set for another part of another kind. So that they were not well adapted to quantity production of identical units, but we did the best we could with them.

Q. I was going to ask you whether you were set up for mass production of any sort.

A. No. On mass production of identical units, most of those machines would be semi-automatic or in most cases automatic. Ours had all to be manually operated.

Q. Now, were these activities that you have just been de- [fol. 787] scribing that were going on in the shop going on prior to the shutdown?

A. They began just shortly before the shutdown. We were in negotiations with people who wanted us to make things for them before the shutdown, but the first actual work began just very shortly before the shutdown.

Mr. Barnes: What do you mean by "very shortly"—weeks, days, hours?

The Witness: I think a week or ten days. And at the end of the period we had a contract to case hand grenades which we had to do a lot of experimental work on before we could get any quantity production on them, and just reached quantity production when the war ended.

By Mr. Rigney:

Q. Now, Mr. Bjorge, the testimony here is, and I think you will agree, that Homestake lost its serial number under P-56, on March 2, 1942, is that right?

A. That is correct.

Q. Let me ask you now, assuming that Order L-208 had not been adopted by the War Production Board and that Homestake mine had been permitted to continue operations subject to the existing priorities and allocations, can you say what effect such operation would have had on Homestake's productive capacity in its lumber and timber operations and in its shop, so far as this War Production [fol. 788] program that you have described is concerned?

A. I don't think it would have made any difference. Our lumber and timber operation produced mine timber and that is timber that was framed in lengths shorter than the usual commercial lumber for use in the mine, and then produced commercial lumber from site cuts and from logs that wouldn't produce mine timber. We had a large stock of plain mine timber in stock in our sawmill yards at the time that would have lasted us through the shutdown period even though we had produced for commercial sales throughout the war.

Q. Were your shops and lumber operations operated on a seven hour day?

A. Yes.

Q. When was that established?

A. That was established in 1940.

Q. Was that changed anytime during the war period?

A. No, because of the suspension of our operations, we didn't change that.

Q. Now, can you tell us up to the issuance of the L-208 on October 8, 1942, what effect labor shortages and priority restrictions had had on Homestake's operations?

A. Well, they naturally had had an effect on our operation, but they had not reduced our production. We had adjusted operations to the shortages and were still producing at the full capacity rate.

[fol. 789] Q. Would it have been possible with the shorter labor force and priority restrictions in effect to have continued a profitable operation, assuming that Order L-208 had not been issued?

A. Yes.

Q. Now, has there been any previous experience in Homestake's history upon which you predicate that conclusion?

A. In World War I, labor shortage developed and they maintained full production in tonnage and ounces of gold with the shorter labor force.

Q. Now, Mr. Bjorge, would you explain the type of ore body in the Homestake mine?

A. Well, the ore mines were described by Mr. McLaughlin on the opening day, but I think it is well to describe in a little more detail the size of them.

Q. Would you like me to get that chart?

A. The ore occurs in one formation in metamorphic rocks that are very highly potent, so that the traces of that formation either on horizontal level or vertical plane are very crooked. In certain folds of that structure the ore bodies occur. Sometimes they may be only two feet wide, and at other times, they may be in widths running up to a maximum of 400 feet wide. They have been followed from the surface. The main group of ore bodies have been followed from the surface to the 5,000 level. There are other ore [fol. 790] zones, one that was followed from the surface to about the 1400 level and played out at that depth, and another large ore body that was first found at a depth of

3200 feet and has been followed upwards and downwards along the pitch from that.

Q. Now, would you tell us what the normal underground procedures are which are followed to exploit these ore bodies?

A. Of course, at the beginning of a mine, you have to sink from the surface at open levels. I think we might assume now that in an operating mine, and that the mine is deepened to a new level, on that new level drifts or tunnels are driven out to the ore areas. Then there is a great footage of drifts, cross cuts, raises. The raises are vertical openings. Then they drill holes to delimit the ore bodies, to find the ore bodies, and to outline them. Then further work is done to get the necessary openings to make them available for ore extraction. And finally the ore extraction begins. In Homestake along the length of the ore body the stopings are laid out across the full width of the ore body, in alternate 60 foot and 40 foot distances in the direction of the length of ore body. Then the original stoping begins with the 60 foot sections. I think probably those diagrams will illustrate.

Q. What is the meaning of that term "stoping"?

A. Stoping is the process of ore extraction, and the stope is the opening in which the ore is being broken and taken out.

[fol. 791] Q. Now, can you describe the procedures which are used after ore is withdrawn from the stopes?

A. Well, after the ore is withdrawn from the stope it is drawn into mine cars and hauled in trains around to the shafts where it is dumped into ore pockets and transfer raises, and then eventually drawn from those into the skip, which is the bucket in which the ore is hoisted to the surface in our two shafts. Those buckets in one shaft have a 7-ton and in the other a 10-ton capacity. The ore is hoisted to the surface, crushed into about 1½-inch size at that time, and then it passes into storage bins that are directly at the shafts from which the ore is drawn into cars and hauled by train to the mill, where the process of crushing with stamps and grinding in rod mills and ball mills continues until the material has reached a fineness from which the gold can be extracted.

In the stamp mill, or rather in the rod mill section of that mill, 65% to 70% of the gold is extracted by amalgamation. The residue from that operation is then re-

ground and reclassified into sands and slimes. The sand portion is a fine sand, but it is still coarse enough to settle quickly in water, although it is very fine and can be leached in large vats. The slimes are so fine that they cannot be leached in that way. They do not settle in water and they are leached in filter presses. The slimes will substantially all pass through 300 mesh, and that means that there are 90,000 openings to the square inch, much finer than flour. [fol. 792] The chemical process in the sand plant and the slime plant is the same, but the physical method of treatment is different. They are leached by a cyanide solution which has the power of dissolving gold like coffee dissolves sugar, and it goes into a solution which contains about two cents in value to the quart, and minute quantities of zinc dust are added which precipitates the gold out of the solution, and that precipitate is collected in filter presses and eventually both the amalgam from the mills and the precipitate from the cyanide plants go to a small refinery we have which is virtually a miniature smelter where they are treated and fine gold is ultimately produced.

By the Commissioner:

Q. What is the filter press you speak of?

A. They are steel frames with plates in between, and a filter media of duck or twill. And in the space in between in the slime plant, for example, there are, I think, ninety such frames in each press. When a mixture of finely ground ore and water passes into that press the liquid, the water and cyanide solution passes through the filter cloth while the slime remains as a cake in that press. And in the collection of the precipitate, after cyanidation, the solution containing the gold and the precipitate is passed through a similar, much smaller filter press, and the precipitate collects as cakes between the filter cloths and the press is [fol. 793] opened once a week and all of that precipitate carefully cleaned out and transported to the refinery.

The Commissioner: It did help to go through a gold mine and see it in operation.

By Mr. Rigney:

Q. Now, Mr. Bjorge, assuming that Order L-208 had never been issued, and assuming that shortages of labor

and materials would have existed during the period of actual shut-down, can you tell us what specific changes in your operations could have been undertaken and would have been undertaken?

A. In our operations we could have eliminated all development work.

Q. Now, may I ask you if you would just expand a little bit on that development work?

Mr. Rigney: Let this be marked, please, Plaintiff's Exhibit 139 for identification.

(Said photograph was marked for identification Plaintiff's Exhibit 139.)

By Mr. Rigney:

Q. I show you Plaintiff's Exhibit No. 139 for identification, and ask you what that photograph represents?

A. This photograph represents a drift heading, a place in which a drift is being advanced, taken in the Homestake mine. The picture happens to be dated April 18, 1934, but the situation would have been the same in 1942. It is one [fol. 794] part of the development work, the advancing of drifts and cross-cuts. And this shows an operation with two miners with their machines set up for drilling.

The cycle of operation would be that those miners would come on the shift in the morning, clean up, if there was anything remaining to be cleaned up in that drift heading from the previous day's work, set up their machines, and drill something like twenty-eight 6½-foot holes, and then take their machines down and remove them, load the holes with dynamite and, at the end of the shift, blast. On the opposite shift the broken material would be removed, and the following day the same cycle would begin over again, with the advance of about sixty in twenty-four hours of the drift heading.

By Mr. Barnes:

Q. What is the difference between a drift and a cross-cut? You used those two terms.

A. The drifting was developed from the old idea of simple vein deposits, that a drift was along the length of the vein. Drifts that are parallel with that in the wall are

also called drifts, and the drifts across at right angles to the long section of the vein are called cross-cuts. They are the same kind of opening, but it just designates whether you are going in the long direction of the ore body or across it.

Mr. Rigney: Plaintiff offers in evidence Exhibit 139 for [fol. 795] identification.

Mr. Barnes: No objection.

The Commissioner: It is admitted.

(Said photograph of drift heading operation, marked "Plaintiff's Exhibit No. 139, admitted in evidence and made a part of this record.)

The Commissioner: We will recess for five minutes.

(Thereupon, a five-minute recess was taken in the hearing.)

By Mr. Rigney:

Q. Mr. Bjorge, had you completed your testimony with regard to the development operation? Was there anything you wanted to add to that?

A. The description here was of a drift heading. There would also be the driving of many cross-cuts as we have explained them, and the vertical openings called raises, and diamond drill holes, in order to sample and bring up the ore.

Q. In addition to this development program, I think you indicated that there were two other steps that you could have taken, or changes which you could have made in your operations.

A. Yes.

Q. What were those?

A. With a shortage of men, we would have eliminated the pillar stopes and confined our production to the shrinkage stopes, with a very much smaller use of expendable materials, and much greater production per man.

[fol. 796] I may say that in normal operations, our aim is to have a balanced operation in which each year you endeavor to develop as much new ore as is mined during that year. That does not hold for one particular year, but

it will hold over an average of years, because one year your development results may be better than expected and another year are not as good. The aim is also to keep a proper balance between the different methods of stoping in order to eventually mine out all of the ore. But whenever you get in a tight pinch you meet that, and we could under those circumstances confine our operations to the shrinkage stopes, and we could have, the third item, returned to the eight-hour shifts.

Q. Now, in connection with what you have had to say about the changes that could have been made in your development program, Mr. Bjorge, I would like to show you Plaintiff's Exhibit 139 and ask you if the machines and drill steel and other tools shown in that photograph are usable or were usable in shrinkage stoping?

A. Yes, definitely.

By Mr. Barnes:

Q. What is the difference between shrinkage stopes and pillar stopes?

A. It is quite a long story, but we will come to it very soon.

Mr. Connor: We are coming to that practically next.

[fol. 797] By Mr. Rigney:

Q. Can you tell us what Homestake's ore reserves as of October 8, 1942 were?

A. Yes, because it was the same as the estimate that was prepared for December 31 of that year, and it was 19,400,000 tons.

Q. Now, would the existing reserves as of October 8, 1942 have been sufficient to have furnished ore for the shut-down period without the performance of any development work?

A. Yes.

Q. Can you tell us what the basis for your conclusion is?

A. I can show you, this is the curve of the tonnage of ore in reserve (indicating) and you will note that prior to 1938 the reserve of developed ore was maintained at substantially 15,000,000 tons. Late in 1936 we had found a

new ore body, and the development of that ore body, in subsequent years, increased our reserves so that at the end of 1942 it was 19,400,000 tons.

We could, therefore, have mined 4,400,000 tons, which would be equivalent to a little more than three years' production, without doing any new development work and still have the ore reserve which had been the normal reserve prior to 1938.

Mr. Rigney: I think perhaps the most expeditious way is [fol. 798] to have these five exhibits marked now, your Honor.

The Commissioner: Yes.

(Said documents and photographs were marked for identification Plaintiff's Exhibits Nos. 140 through 144.)

By Mr. Rigney:

Q. Would you look, Mr. Bjorge, at Plaintiff's Exhibit No. 143 for identification, and tell us what that is?

A. That is a vertical projection in the direction of the long dimension of the ore body. The ore body is the red portion projected down through here (indicating). The alternate 60-foot and 40-foot distances in the direction of the length of the ore body are shown down here at the bottom. These going back show the different stages in a shrinkage stope. There is where the stope is starting (indicating) at the bottom of the ore body. It will be of considerable width at right angles to this section. And it is carried up. And the reason for the term "shrinkage stope" is that when you break the ore it expands in volume over the ore in place by about one-third, and that third is drawn off, and the remaining two-thirds is left in the stope and serves as a floor on which the miners work in drilling and blasting the next round. And the stope continues to go up until it reaches as great a height as is safe, and then all of the ore is drawn out of it and it is filled with waste, and the stoping again begins and is carried through until that stope is mined through from the bottom to the top of [fol. 799] the ore.

In that system of mining very little timber is used. The only timber necessary is for the drift and the chutes and

for these drifts after they are filled. What we call a timber line or line of drift sets with chutes for drawing the ore are installed. But beyond that there is no timber in the stope.

May I have the next section?

Q. Yes sir.

A. This is a similar section.

Q. Referring to Plaintiffs' Exhibit 144 for identification.

A. —— in which the shrinkage stopes have been finished and filled with waste. Then the 40-foot sections between the shrinkage stopes, where the ore has been mined across the full width of the ore on both sides will not stand the way the first opening will stand, and that is extracted in much smaller openings, with timber support for every round taken out. One round is blasted and then that cleaned out and that space supported by timber, and another one taken out, and so forth. We generally begin at the top and take those sections out in 75-foot vertical lifts. And when this one is finished (indicating) another one starts. Here we see one that is finished, and another one is started and well on its way there. (Indicating). Those are of considerable widths at right angles to these diagrams, and each one of these little squares in the pillar stopes [fol. 800] represents one set, one square set as we call it, and the square set mining requires a great amount of timber. The timber consumption in shrinkage stoping is about one board foot per ton of ore mined. In the square set it is about fourteen or a little over fourteen board feet per ton of ore mined.

It also requires a great deal more work in transporting of supplies, timber and steel and what not into the pillar stopes than it does to the shrinkage stopes.

Mr. Rigney: I should like to offer these, Plaintiffs' Exhibits 143 and 144, in evidence. They might be useful, I think.

Mr. Barnes: There is no objection, as illustrative of his testimony, your Honor.

The Commissioner: They may be received.

(Said diagrams of stoping operations, marked "Plaintiffs' Exhibits Nos. 143 and 144", respectively, admitted in evidence and made a part of this record.)

By Mr. Rigney:

Q. Now, Mr. Bjorge, would you look, please, at Plaintiffs' Exhibit No. 140 for identification and tell us what that picture depicts?

A. That is a picture taken in the Homestake mine of a shrinkage stope, showing three crews with their machines set up and drilling, showing how they are working on top of the broken ore.

[fol. 801] Q. And is Plaintiffs' Exhibit No. 41 for identification also a photograph of a shrinkage stope?

A. That is also a photograph in a shrinkage stope. The one man has a machine set up drilling to break ground and the other one is drilling for the secondary blasting where boulders are too large to go through the chutes. We speak of it as block holding. They drill and blast the boulder. That is where the man is drilling downward.

Q. Similarly, is Plaintiffs' Exhibit 142 for identification a photograph of a shrinkage stope of Homestake?

A. This is another photograph in a shrinkage stope, and I may add the remark that this photograph is obsolete, in that the miners are using carbide lamps instead of electrical lamps.

Q. But as a shrinkage stope it depicts typical——

A. Typical shrinkage stope conditions.

Mr. Rigney: Plaintiff offers these in evidence.

Mr. Barnes: I have no objection.

The Commissioner: What are those numbers?

Mr. Rigney: 140, 141 and 142, your Honor.

The Commissioner: They may be received.

(Said photographs of Homestake shrinkage stopes, marked Plaintiffs' Exhibits No. 140, 141 and 142, respectively, admitted in evidence and made a part of this record.)

[fol. 802] By Mr. Rigney:

Q. Would you briefly summarize, Mr. Bjorge, what the adoption of this plan for concentrating on shrinkage stoping would have accomplished in the way of savings of scarce materials and labor?

A. Well, it would get materially more production for each man working. Our figures for that in 1942 were that

in shrinkage stoping we got about 12 tons per manshift, and in square set stoping 8.7 tons per manshift. It would have greatly decreased the consumption of materials. The ratio of the amount of timber used would be 1 to 14 in the pillar stopes.

By the Commissioner:

Q. Do I understand that your usual practice does not involve the shrinkage stopes?

A. Oh yes, but we would have limited the operation to the shrinkage stopes in case of extreme shortage of men and materials.

Mr. Rigney: We are going now into the square set stoping.

The Witness: That is over a long period of time, you would want to have what I described as a balanced operation. But if you were faced with a temporary limitation of manpower and supplies, you would adjust yourself to that and get the maximum production during that period that you could get, and, as is shown by our ore reserves, we could do that.

By the Commissioner:

[fol. 803] Q. Well, does that contemplate then leaving these portions which are shown on this Exhibit 144 in red in between the two black portions, leaving the parts shown in red alone?

A. Leaving them to be mined at a later date.

The Commissioner: That is what I wanted to know.

Mr. Rigney: May this be marked Plaintiffs' Exhibit 145, and also 146.

(Said photographs were marked for identification as Plaintiffs' Exhibits Nos. 145 and 146.)

By Mr. Rigney:

Q. I show your Plaintiffs' Exhibit No. 145 and 146 for identification, Mr. Bjorge, and ask you what those two photographs depict?

A. Those are photographs taken in the Homestake mine showing the operation of square set stoping. The first one was taken at a place where there happened to be an

opportunity to get a view of a fair-sized opening so as to show a number of sets of timber. In most stopes you could not get that much of a view. But those timbers are about six feet apart. They are 12x12-inch timbers, so that——

Q. You are referring now to Plaintiffs' Exhibit 145 for identification.

A. —you see the quality of timber.

And this one——

Q. Referring to Plaintiffs' Exhibit No. 146 for identification——

[fol. 804] A. —shows the miners in the process of setting up the timbers. It shows the additional labor in the square set stopes over that in the shrinkage stopes.

Q. Now, could you give us a description of how the square set stopes are operated under normal conditions?

A. Well, they begin at the bottom and mine out one: Well, let us take this one. They mine out one floor, and this man is drilling, and he will blast here (indicating) and as soon as he has made room for another set, that set of timber will be set here (indicating).

Mr. Barnes: I am afraid the transcript is not going to make much sense when the witness indicates on the picture and says here and here.

Mr. Rigney: Supposing I withdraw that question and answer, and have that stricken, and I will put the question to you this way:

By Mr. Rigney:

Q. Directing your attention to Plaintiffs' Exhibit 145 for identification, would you describe how what is known as square set stoping operates?

A. The process of square set stoping begins at the level the ore is drilled and broken, and only a small area will be broken at a time, and then a set of timber set in. Then room for another set is broken and it is set in, until that floor is completed for the particular area to be taken out by that stope.

[fol. 805] Then they raise in the back of the stope and set one square set above another, and then proceed on that floor to work out from that raised set to break room for another set, and so on, until that floor is completed.

By the Commissioner:

Q. Leaving the timber in place?

A. Leaving the timber in place.

Q. Is it ever recovered?

A. No.

Then when that stope has gone to a height of 75 feet it is cleaned down, all of the ore cleaned out of it and some of the timbers. The timbers that are on the floor of the stope are salvaged, but the main timber structure remains, and the stope is filled with waste and sand tailings, and another section is started alongside of it.

By Mr. Rigney:

Q. Directing your attention to Plaintiffs' Exhibit No. 146 for identification, what are these men doing here, who are shown in this photograph?

A. They are putting up a cap. The segments of the timber structure, the vertical members, are known as posts, and the horizontal members are caps in one direction and ties in the other. They are raising the cap into place.

Mr. Rigney: Plaintiffers Exhibits 145 and 146.

Mr. Barnes: No objection.

[fol. 806] The Commissioner: They are admitted.

(Said photographs of Homestake square set stoping, marked Plaintiffs' Exhibits Nos. 145 and 146, admitted in evidence and made a part of this record.)

By Mr. Rigney:

Q. Is this method of mining which you have been describing here, square set stoping, the method of mining which you would have postponed during the period in question?

A. Yes.

Q. During the period, I mean, from October, 1942, to June, 1945, assuming that L-208 had not been in effect?

A. Yes.

Q. What would have been the effect upon your labor situation, your manpower situation, as a result of this concentration on shrinkage stoping which you have referred to?

A. We could have obtained large production with a substantially smaller number of men.

By the Commissioner:

Q. How long could you have continued that?

A. Well, in the estimate of 19,400,000 tons in 1942 there was 8,000,000 tons of ore in the shrinkage sections.

By Mr. Rigney:

Q. And your annual——

A. Annual production was 1,400,000 tons.

[fol. 807] Q. So that you would conclude that you could have continued it for five to six years or something like that?

A. We could have if we had been forced to it.

By the Commissioner:

Q. What about the ore in between the columns?

A. The mining of that would be postponed.

Q. Is that included in the 8,000,000 figure?

A. No, the total figure is over 19,000,000.

The Commissioner: I see. All right.

By Mr. Rigney:

Q. You have referred, Mr. Bjorge, to a third measure which you could have adopted, which was the return of the eight-hour shift. Would you describe and expand upon that answer to the extent that we may understand what your program would have been if you had done that?

A. Yes. Of course, the change to the eight-hour shift would have made a direct increase of 14% in the working time of all of the men. But in the mining operation it would have increased the ore breaking time in a greater percentage than that, because the amount of time taken during each shift to travel to and from the working place, to bar down loose rock in order to make the working place safe, to set up their machines, to tear them down at the end of the shift and to load their holes and blast, is substantially constant. And a lot of their additional time of the [fol. 808] working shift would be largely devoted to the drilling which measures the amount of ore broken. And

the increase in ore broken would therefore be substantially more than the 14% indicated by the flat increase in working time. It would probably be somewhere in the range of 30% to 50%.

Q. Can you tell us the total number of employees who were on the Homestake payroll for the period October 1 to 15, 1942? Do you know what that figure is?

A. That figure was 1,777.

Mr. Rigney: May this be marked Plaintiffs' Exhibit No. 147?

(Said bound volume was marked for identification as Plaintiffs' Exhibit No. 147.)

By Mr. Rigney:

Q. Were you operating in full production in the October 1 period, 1942, with the labor force you said was on your payroll?

A. Yes.

Mr. Rigney: I said before the recess that we would endeavor to accomplish something with respect to this employee data during the recess, but I did not have an opportunity to do anything about that, so I had the exhibit marked for identification now, and we will try to work out something satisfactory.

The Commissioner: All right.

[fol. 809] By Mr. Rigney:

Q. Mr. Bjorge, what has Homestake's inventory policy been over the years since you have had knowledge of it?

A. Homestake has always had a policy of maintining a very substantial inventory. I think that that inventory is in excess of what many mining men would deem as necessary. That is the policy and has been maintained for many years, in fact, I think, always.

Q. Was that true in 1942?

A. Yes.

Q. Now, at the time of the issuance of Order L-208 on October 8, 1942 was an inventory prepared showing the operating supplies on hand as of that date?

A. Yes. One was required by the Order and was filed.

Q. And was the regular inventory taken as of the close of 1942?

A. Yes.

Q. Were you familiar with that inventory, or both of those inventories?

A. I was familiar with it as always with inventories, familiar with the total amounts and, of course, not familiar with the detail of myself counting every piece, but in going through the warehouses and seeing the stock.

Q. Was the inventory as of the close of 1942 substantially the same as the inventory that was taken as of the date of [fol. 810] the close-down order, October 8, 1942?

A. Substantially the same, yes, with some slight consumption in the meantime.

Q. Can you tell us what materials and supplies were necessary, or are necessary to operate a gold mine?

A. Well, the list of items of materials and supplies necessary to operate a large mine would be so lengthy that it would be quite beyond anyone's memory to list. The principal items that might be used as a measure of the——

Q. Some of the key items.

A. —the key items would be, for the mine, explosives, pipe, rail,——

Mr. Barnes: A little slower, please.

The Witness: Pipe, rail, rock drills, parts for rock drills, drill steel, mine cars, locomotives, mechanical shovels, hoisting ropes, and I think that about covers it.

By Mr. Barnes:

Q. Is that a wire or metal rope or cable?

A. That is a wire rope. In mining we always speak of them as ropes rather than cables.

Q. What about wiring itself, electrical wiring? Is that necessary?

A. Electrical wiring, yes.

For the mills, cyanide, lime, stamp shoes and dies, balls and rods for the grinding mills, liners for the grinding [fol. 811] mills, cones and mantles for the crushers, and I think that is a fair list for the milling operation. And for the——

By Mr. Rigney:

Q. Foundry?

A. For the shops and foundry we would need scrap material, scrap iron and steel, scrap bronze and brass, and would require various structural shapes, tools, tool parts for the shop tools——

Q. Mr. Bjorge, do you have an opinion as to the length of time Homestake could have continued to operate profitably with the materials and supplies on hand as of the inventories prepared in 1942 that you have just referred to?

Mr. Barnes: Your Honor, maybe I had better have that question read, please.

(The pending question was read by the reporter.)

Mr. Barnes: I think that question is unobjectionable, but I think the witness should be advised that he can answer it with a yes or no answer. He only asked him whether he has an opinion.

The Commissioner: Yes. I think you ought to fix the time a little better.

Mr. Rigney: Shall we say with the inventory on hand of the materials and supplies on hand as of October 8, 1942?

The Commissioner: Yes.

By Mr. Rigney:

[fol. 812] Q. And the question is now: do you have an opinion as to whether or not Homestake could have continued to operate profitably with the materials and supplies on hand as of October 8, 1942, assuming there were no additions to them and assuming there had been no shut-down?

A. Well, the period hasn't been stated.

The Commissioner: The question originally was: did you know how long a period the period might be, but the question is only directed at do you know.

Mr. Rigney: Supposing we withdraw the question and we will try it this way:

By Mr. Rigney:

Q. Do you have an opinion as to the length of time that Homestake could have continued to operate profitably with

the materials and supplies on hand as of the inventory of October 8, 1942?

A. Yes.

Q. What is your opinion as to how long Homestake could have continued profitable operations?

Mr. Barnes: I object to that on the ground that it is not the best evidence. This is an opinion based on two sets of records, one being the inventory, the material on hand, and two being the historical record of use of materials in inventory. This witness is being asked to, in effect, interpret two documents that are not before the Court, two rec- [fol. 813] ords, and give an opinion based upon them.

Mr. Rigney: It seems to me, your Honor, with his qualifications, his knowledge, his intimate knowledge of the situation at Homestake, he is qualified to give an opinion on that. He is subject to cross-examination.

Mr. Barnes: How can he be subject to cross-examination without the basic documents being produced, or even being available. That is the difficulty under these circumstances.

The Commissioner: Read that question back as finally put.

(The record was read by the reporter.)

The Commissioner: Overruled.

The Witness: It is my opinion that we could have operated for the duration of the shut-down period.

By Mr. Rigney:

Q. Can you describe the physical condition——

Mr. Barnes: Your Honor, in view of this, I would like to give notice now that I am going to have to file a notice on the plaintiff to produce both their inventory records as of October 8, 1942 and the historical records of consumption of materials during the year or two prior to that date, and ask for time to study those prior to cross-examination on those.

The Commissioner: That question was based on, as I understand it, the witness' knowledge of how much material he had, and his knowledge as an operator of gold mines, as to how much the consumption would be. You can serve the notice, as you have done, but I do not see that it is [fol. 814] accomplishing anything.

Mr. Barnes: I do not see how the witness can be cross-examined without having available to counsel the basic records upon which he bases that opinion, your Honor.

The Commissioner: There is no suggesting that it was based upon records from the question as put or the answer as given, as far as the Commissioner is concerned.

Mr. Rigney: Shall I proceed?

The Commissioner: When I say "records" I mean particular records. Go ahead.

By Mr. Rigney:

Q. Can you describe the physical condition of Homestake's plant and equipment in October, 1942, as of October 8, 1942?

A. Homestake's plant and equipment was in exceptionally good condition to meet a period of supplies limitation. We had in the ten-year period from 1932 through 1942 expended in the neighborhood of——

Mr. Barnes: I object to the statement as to what the company had expended. The best evidence of that is the books and records of the company.

The Commissioner: Sustained.

By Mr. Rigney:

Q. Would you describe what the condition of the buildings and the other physical properties was as of October 8, 1942?

A. We had in that ten-year period put down two new [fol. 815] shafts, very well equipped shafts, with the most modern hoisting equipment that was built in the United States at that time. We built a new coal-burning steam-power plant, we added 60 stamps to our former 120-stamp mill and thereby abandoned two old stamp mills and concentrated our milling in the one plant. We had built an addition in a separate building to our cyanide sand plant to take the place of an older cyanide plant that was then abandoned. We had new compressor plants at both of the new shafts.

That about completes it as I remember it, but it put us in an unusual situation of having a 65-year-old mine with an almost new plant.

Q. Mr. Bjorge, would any local requirement of the war effort have caused any serious curtailment in Homestake's ability to obtain power to operate?

Mr. Barnes: Your Honor, I object to that as calling for an interpretation of the witness.

The Commissioner: Sustained.

By Mr. Rigney:

Q. Where does Homestake obtain its power, Mr. Bjorge?

A. Homestake makes its own power. It has three hydroelectric plants and one coal-burning steam turbine plant, which I referred to a minute ago. The hydroelectric plants have 8,000 kilowatts of installed capacity, and the steam plant has about 14,000 kilowatts installed capacity.

[fol. 816] Q. What were Homestake's power requirements in 1942, annual power requirements per year in 1942?

Mr. Barnes: I object to that on the grounds it is not the best evidence. The books and records of the company would be the best evidence.

The Commissioner: Overruled.

The Witness: The annual consumption of power was some 60 to 65 million kilowatts.

The Commissioner: That was not the question. The question was: what were the power requirements?

By Mr. Rigney:

Q. What were the requirements, Homestake's power requirements per year?

A. About 60 million kilowatt hours.

Q. That was what was required to operate the plant in normal operation?

A. Yes.

The Commissioner: That was leading. It was not leading when it was originally asked.

Mr. Barnes: Your Honor, the question was definitely leading. The witness has answered it.

The Commissioner: Yes.

Mr. Barnes: The last question which went beyond the preceding questions was not a summation of the witness' testimony.

Mr. Rigney: I did not mean it that way, your Honor.
[fol. 817] The Commissioner: I did not understand it. We will review it. Let us have the last question read back.

(The record was read by the reporter.)

Mr. Barnes: That brought in normal operation which was not present in the preceding question.

Mr. Rigney: I will withdraw it. It is not important.

The Commissioner: All right.

By Mr. Rigney:

Q. What was Homestake's maximum generating capacity so far as its power plant was concerned in 1942?

A. I gave the installed capacity, and we had in one year produced as much as 65 million kilowatt hours.

Q. And what is the source of fuel for your steam turbine plant which produces the power?

A. The Wyodak mine which is operated by a wholly owned subsidiary, five miles east of Gillette, Wyoming.

Q. Can you tell us whether or not there were ample coal reserves and productive capacity to have taken care of Homestake's operations in this regard?

A. There are very large coal reserves at our Wyodak mine, and the capacity of the plant has never been tested by the demand. It is an open pit or strip mine, as they call it in coal mining, that can produce a large tonnage of coal with a very small number of men.

Q. Are you an officer of the Wyodak Coal Company?

[fol. 818] A. Yes, I am president of the Wyodak Coal Company.

By Mr. Barnes:

Q. Were you in 1942?

A. Yes.

By Mr. Rigney:

Q. Was any machinery or material ever requisitioned from Homestake by the War Production Board, or any other government agency during the close-down period?

A. No.

Q. Did there come a time subsequent to the close-down order when Homestake was allowed to order material and supplies?

A. Yes.

Q. When was that?

A. In September of 1944 we received instructions——

Mr. Barnes: I object to anything beyond the date as not being the best evidence, the instructions they received. The documents would be the best evidence.

The Commissioner: Sustained.

By Mr. Rigney:

Q. Can you tell us when the Homestake mine was permitted to order material and supplies by the Government?

A. September, 1944.

Q. And did Homestake at that time or thereafter place orders for such things?

A. We did place orders.

[fol. 819] Q. And do you know when those orders were filled?

A. Well, we received some stamp shoes and dies in December of 1944, and some grinding mill rods in February of 1945.

Q. Now, Mr. Bjorge, did you reside in Lead continuously during the shut-down period from October 8, 1942 to July 1, 1945?

A. Yes.

Q. Can you tell the Court the effect of the shut-down upon the City of Lead?

Mr. Barnes: I object to this as being completely immaterial and irrelevant.

The Commissioner: Overruled.

By Mr. Rigney:

Q. You may proceed, sir.

A. Naturally, with the shutdown of the mine and the lay-off of the employees, a large number of people moved out. The poulation decreased from 7,500, the census figure for 1940 was 7,520 and the figure for Ration Book #4 was 4,500 and some. There were a large number of vacant houses

with windows boarded up, I think twenty-eight business places, four closed-up service stations with only two operating. We took a count of the vacant places in the spring of 1943.

Q. And can you tell us how many there were?

A. If I may refresh my memory (referring to document).

[fol. 820] I was in error on filling stations. There were twenty-eight vacant stores was correct, eight vacant filling stations, and only two operating, 678 vacant houses and apartments, 41 vacant houses and apartments in Terraville, which is a little community about a mile out of Lead, and 55 vacant houses and apartments in Central City, which is another little community about two miles from Lead.

Q. I asked you before if the War Production Board or any government agency requisitioned any of Homestate's materials or supplies during the shut-down period, and your answer was that it did not. I now ask you if the War Production Board or any government agency made any request upon Homestake for any such materials or supplies?

A. No.

Mr. Rigney: Your witness.

Mr. Herrington: May I ask a question?

The Commissioner: Yes.

By Mr. Herrington:

Q. Mr. Bjorge, in your work as consulting engineer in San Francisco, did you become acquainted with the California gold mine districts?

A. Yes.

Q. Will you state generally how many strictly gold mining districts there are in the United States limited to mines which produce gold as a base metal and not as a by-product?

[fol. 821] A. Well, the principal ones I know are the northern Black Hills in South Dakota, and the Cripple Creek district in Colorado, the Grass Valley and Mother Lode districts in California, and of course the dredging operations in the valleys in California, and there are some smaller dredging operations in Nevada and Montana.

Q. Do you know the relative importance in the production of gold of those various districts, approximately, in 1942?

A. Well, we had the relative production of various mines presented on the first day of this case. I know that Homestake is the first producer in the United States, and that the second producer of gold in the United States is the Utah Copper Co.

Q. I think you misunderstood my question. I was limiting it to mines which produced gold strictly and not as a by-product.

A. The second producer of straight gold mined, I think, at that time was the Idaho Maryland.

Q. Can you tell us whether there is any material difference between the ore bodies in the California gold mining districts and those which you have described in Lead and the Homestake mine?

A. Yes, there is a very great difference, in that the California deposits that I know, the Mother Lode deposits and the Grass Valley deposits, are vein deposits. Those along [fol. 822] the Mother Lode reach quite substantial widths. The veins in the North Star and Empire are very narrow veins. I have not been in the Idaho Maryland.

Q. You have been in the Empire and North Star?

A. Yes.

Q. Do you know where the Idaho Maryland mine is located with respect to North Star and Empire?

A. Yes.

Q. Will you state where it is?

A. It is just outside of Grass Valley, off the road between Grass Valley and Nevada City, a mile out of town, perhaps.

Q. Is it close to Empire and North Star mines?

A. Yes, two miles, I would say.

Q. Do you know whether the Grass Valley mining district is more or less of the same geological formation?

A. I believe so, yes.

Q. What can you tell us with respect to the depths of the mines in the Grass Valley district and the Mother Lode country as compared, we will say, with the depth of the mine at Homestake?

A. Well, I have been over 5,000 feet deep in the Argonaut and Kennedy mines on the Mother lode, and I don't recall the exact vertical depth in the North Star and Empire, because they were incline shafts, and their levels were measured on the incline. The bottom level of the North Star was the 6300 level, but that was down the incline of the vein, and [fol. 823] it was, I think, only about 2600 feet vertical depth, but I am not quite certain of it.

Q. Would it be a fair statement to say they are deep mines.

A. Yes.

Q. The word "Mother Lode" has been mentioned several times. Could you describe that generally?

A. Yes. In prospecting for gold the prospector follows the streams searching for detritus gold in the gravel, placer gold, and when he finds that he endeavors to follow up stream to try to find the source of the detritus that is in the bottom of that stream.

By Mr. Barnes:

Q. What is that word, detritus?

A. Yes.

Q. How do you spell it?

A. D-e-t-r-i-t-u-s.

And the vein or load, or whatever the form or body was that has been eroded to go into that stream, the prospector regards as the mother, the source of the gold in the stream. There have been many prospectors that have talked about finding the mother lode, the true mother lode.

But in California, along the foothills on the Sierra Nevada, there is a belt of slate, I think it varies from a half [fol. 824] mile to a mile in width, and over a hundred miles in length, and along that belt of slate sometimes on one contact and sometimes on the other, and sometimes within the slate are gold-bearing quartz veins, and there are a number of mines along that length of one hundred miles. And when the placer miners, the forty-niners, were mining in California and they found these vein deposits, that was the Mother Lode, and the region has always been called the Mother Lode, and the Mother Lode country since then.

By Mr. Herrington:

Q. That is a region of approximately 125 miles long?

A. It stretches from north of Plymouth down to about Mariposa.

Q. And the Grass Valley mines are by themselves, are they not?

A. Yes.

Q. Usually called the Grass Valley mining district north of the Mother Lode country?

A. That is correct.

By Mr. Barnett:

Q. Central Eureka is in the middle of the Mother Lode, is that right?

A. Approximately. I think it is somewhat north of the middle.

By Mr. Herrington:

[fol. 825] Q. You have described the mining methods that are carried on in the Homestake mine. Can you tell us whether or not comparable mining operations are the customary method of operating in the Nevada City, California and Mother Lode country and Grass Valley districts?

A. I think the operations that I have seen on the Mother Lode were largely stoped by the square shaft method. In the North Star, Empire the narrower veins in hard rock were mined almost entirely without timber. There might be an occasional stull to support a piece of loose ground.

Q. What about the water conditions in the mines in the Grass Valley district as compared, for example, to Homestake?

A. I don't know how much water they pump, but I saw no evidence of any large quantity of water.

Q. Do you know roughly about how far the copper mines in Utah and Montana are from the Grass Valley mining district?

A. Oh, probably in the range of 800 miles.

Q. And about how far is it from the Grass Valley mining district to the mines in Arizona, the copper mines?

A. A range of a thousand miles, not airline, but by way

of travel, four hundred miles to Los Angeles and at least another four hundred miles across to the places in Arizona.

Q. Mr. Bjorge, in your consulting work in California, did you ever have occasion to examine any mercury mines?

A. No.

[fol. 826] Q. Are you familiar generally with the mercury mines of California?

A. Only from the literature. I have never been in one of them.

Q. Do you know roughly where they are located, the principal mines?

A. There are some in Lake County, California and the New Idria District south of San Francisco.

Q. From your work as a consulting engineer you know something of the geology of the Coast Range Hills?

A. Not too much of the Coast Range Hills.

Q. Do you know whether or not the mercury mines in California are located in the Coast Range Hills, principally quicksilver mines?

A. Generally, I would say that is their location.

Q. Whereas the gold mines we have been talking about and the Mother Lode and the Grass Valley District are located entirely in the Sierra Nevada Mountains, are they not?

A. Yes, they are in the foothills of the Sierra Nevada Mountains at elevations of, I think, ranging from six or seven hundred feet at the river levels to twenty-five hundred feet along the Mother Lode; and Grass Valley, as I remember, is around three thousand feet.

Q. Is there a difference, if you know, between the geological formation of the rocks in the Sierra Nevada [fol. 827] Mountains and the Coast Range Hills?

A. There is a difference, I am sure. I know a lot of general geology. I never examined any properties in the Coast Range of California. I don't know too much about the geology.

Q. You have some general knowledge of it, do you not, as a mining engineer?

A. Not very much, because I haven't followed it.

Mr. Barnett: May I ask a question at this time?

By Mr. Barnett:

Q. Mr. Bjorge, you have been in Central Eureka's mine, is that correct?

A. Once, yes.

Q. Do you recall to what level you went?

A. I think that the mine was a depth, a maximum depth of 2600 feet at that time.

Q. And you descended in a skip, is that correct?

A. Yes.

Q. And subsequently did you go through the mill?

A. I don't remember the mill at Central Eureka very well, but the occasion of my visiting the mine was in the spring of 1918. I was making a reconnaissance of the Mother Lode country to see whether I could see anything that looked like a good speculative venture, and not having been in gold mines prior to that time I visited the Central Eureka and obtained permission to go down with Mr. [fol. 828] Spears, who was then superintendent, and also the Argonaut Mine and the Utica Mine at Angels Gap, and one or two others.

[fol. 829-830] Q. Central Eureka was formerly known as the Hetty Green mine? The old Eureka?

A. The old Eureka—I was in the Central Eureka—and the old Eureka which at that time was not opened was known as the Hetty Green.

[fols. 831-835] IN THE UNITED STATES COURT OF CLAIMS

[Title omitted]

Transcript of Testimony—February 2, 1953

TESTIMONY FOR PLAINTIFFS (Resumed)

The hearing was resumed, at the time above indicated pursuant to the recess previously taken.

ADDITIONAL APPEARANCES

Present: (The same appearances as previously noted with the following additional appearances for the plaintiffs: O. R. McGuire and Stanley Snydam).

[fol. 836] Guy N. Bjorge, resumed the witness stand and was examined and testified as follows:

Direct examination (resumed).

Mr. Rigney: May this be marked Plaintiffs' Exhibit No. 148?

(Said document was marked for identification as Plaintiffs' Exhibit No. 148.

[fol. 837] Mr. Rigney: And may this be marked Plaintiffs' Exhibit No. 149 for identification.

(Said document was marked for identification as Plaintiffs' Exhibit No. 149.)

By Mr. Rigney:

Q. Mr. Bjorge, I show you Plaintiffs' Exhibit No. 148 for identification and ask you what that document is?

A. This is a list of machinery and equipment of the types listed in Schedule A to Preference Order P-56 as required in the amendment of November 19, 1942 to Limitation Order L-208.

I wish to call attention to the fact that there is a typographical error in the list. The letter is dated January 16, 1943 and refers to the enclosure which is dated January 16, 1942, which is a typographical error that had not been previously noted.

Q. In other words, the letter of transmittal here of January 16, 1943 transmitted this accompanying list of equipment?

A. Yes.

Q. On or about the date that the letter bears, and where it refers to January 16, 1942 on the list it should read January 16, 1943?

A. That is correct.

Q. What is Plaintiffs' Exhibit No. 149 for identification?

[fol. 838] A. That is our general supplies inventory as of the end of 1942. It is dated January 1—in different departments, some are dated in December 31, 1942 and most of them are December, 1942, but I notice that one, as I looked through, was dated January 1, 1943.

Q. But it is the general inventory?

A. It is the general inventory for the end of the year.

Q. Is there any copy of this in existence?

A. That is our only copy.

Q. Now, Mr. Bjorge, would you tell us what Homestake's inventory practice in 1942 and prior years had been?

A. In 1942 and for years prior to that it had been the regular practice of Homestake to charge certain things directly to operations. Things that were purchased specifically for one use, and would only be used for that one use would be charged wholly to that operation at once instead of being charged into inventory and then charged out as used.

By Mr. Barnes:

Q. Could you give us an example of what you mean, Mr. Bjorge?

A. For example, mine rail, which will only be used for the mine, a carload of mine rail is received and instead of charging that into the inventory and charging it out as it went into the mine, the carload was charged to the mine immediately. The difference was that there would be a high [fol. 839] in the cost sheet for that month for rails, and then perhaps nothing charged for several months, and then another high when another carload is received.

By Mr. Rigney:

Q. Now could you go ahead, Mr. Bjorge, and tell us what other types of items fall into that category?

A. Mine rail, pipe for the mine, hoisting ropes, air and water hose, and other things that would go directly to the mine and only to the mine. They were never included in the general supplies inventory. The general supplies inventory was more the items that were usable in numbers of places and could be issued to any department.

Q. Now, may I ask you, do these two inventories which I have asked you to identify, Plaintiffs' Exhibit No. 148 for identification and 149 for identification, include all of the avaliable materials and supplies for use by Homestake as of the time that the inventories were prepared?

A. No.

Q. And is that because of the practice to which you have just testified?

A. Well, t' at, and also the practice that all capital items, equipment, we e charged when purchased to a capital account, which was then charged out by depreciation and never entered the inventory.

Q. You will recall that on last Friday you mentioned [fol. 840] in your testimony several key items which were required in the operation of a gold mine. I wonder if you can testify now from your own recollection as to what Homestake's inventory position was in 1942 on these various key items?

Mr. Barnes: I object on the ground it is not the best evidence. We now have the inventories here.

Mr. Rigney: Well, I am merely asking that question preliminarily, your Honor, to permit him to use a—the fact is that he cannot testify, of course, from recollection on all these many items, and he has a memorandum here which will aid his recollection in that regard. I want to lay the foundation to permit him to use that.

The Commissioner: Overruled.

The Witness: The question was whether I could——

By Mr. Rigney:

Q. From your own recollection unaided by any record.

A. Obviously, the number of items and great number of figures included in such a record would be beyond memory and could not be testified to without some memorandum.

Q. Do you have a memorandum which will aid you in that regard?

A. I have.

Q. All right, now, I would like to ask you by reference to the memorandum which you have with you, to tell us what the situation was as far as Homestake was concerned [fol. 841] with regard to explosives in the inventory situation.

Mr. Barnes: May I ask a few questions about the memorandum?

The Commissioner: Yes.

By Mr. Barnes:

Q. When was this memorandum prepared?

A. This memorandum was prepared within the last few weeks.

Q. And, from what source was it prepared?

A. The sources were the general supplies inventory, the inventory submitted under L-208, and the records and count of equipment as of October 8, 1942.

Mr. Barnes: Your Honor, I think that those records are the best evidence rather than this memorandum prepared from them, and I object to testimony which is not the best evidence.

Mr. Rigney: Your Honor, it seems to me that the inventories are available now for counsel's examination and for his use in cross-examination, and it would seem to me that it would be a great aid to discovering what the facts are in this case to permit this witness now, with the personal knowledge which he does have, aided by this memo, to testify generally to what the situation was with regard to these several items that he mentioned on Friday in his testimony. I would think that it would be an aid to your Honor, and I am sure it would be an aid to everybody else [fol. 842] in the case to be able to go to the record without going through the minutiae of a 200-page inventory to develop it.

The Commissioner: I gather the memorandum, from the testimony of the witness, is somewhat like an accounting summary.

Mr. Rigney: Yes.

The Commissioner: It could be considered in the same light as an accounting summary.

Mr. Rigney: Compiled from the basic documents.

Mr. Barnes: Your Honor, the difficulty is that we attempted at pre-trial to dispose of all of those accounting summaries before trial, so that there would be no possibility of our having to ask for time so that this memorandum could be compared to the 200-page document which Mr. Rigney has just referred to.

The Commissioner: That is true.

Mr. Barnes: And it puts me in the position of perhaps having to ask for time so a comparison can be made. The witness has also referred to other records with no indication whether they are here or in Lead used to prepare that memorandum.

By the Commissioner:

Q. What records besides these Exhibits 148 and 149 were used to compile that memorandum, Mr. Bjorge?

A. This memorandum has a notation on it as to the [fol. 843] items that are in the general supplies inventory, the items that were in the L-208 inventory that was submitted, and the items that were in both.

The Commissioner: I am asking you now what papers besides the two exhibits that were marked for identification were used in the compilation of the paper.

Mr. Rigney: Any other records, Mr. Bjorge, or documents or papers of Homestake besides the two inventories, if there were others.

The Witness: There were certain items on here that——

By the Commissioner:

Q. I do not care what you have on the paper, Mr. Bjorge, I want to know this: did you prepare that memorandum?

A. That was prepared under my direction by the various departments from the inventories, from the L-208 inventory, and in a very limited number of the items from certain counts that were made in October, 1942.

The Commissioner: I think I am going to have to exclude it.

Mr. Rigney: May I ask this one question, your Honor?

By Mr. Rigney:

Q. Do you have any memoranda there from anyone within the Homestake organization from which any of the data that you have assembled here was taken? And when I say "there" I am referring to the memorandum for refreshing your recollection.

[fol. 844] A. Yes.

Q. Would you tell us what that material is?

Mr. Barnes: Describe it without describing its contents, if you can, without telling us what it says.

By Mr. Rigney:

Q. Yes, just a description of what the particular document is, from whom, to whom, and regarding what.

A. These are reports to me from the several departments.

Mr. Rigney: I think it would be well to take them up one at a time, your Honor, if we may, otherwise we will have a rather general description.

The Witness: The first is by Mr. Kravig, Mine Superintendent.

Mr. Barnes: Dated what date?

The Witness: These are all dated in October and November of 1952. The second is from Mr. Seyhers, Chief Mechanical Engineer, head of our Mechanical Department. This is from Cedric L. Gust, Chief Electrical Engineer. The next one is from Mr. Seyhers, a second one from Mr. Seyhers, our Mechanical Engineer. There is one from Mr. Herz, our Metalurgical Superintendent. And this is a listing of equipment from Mr. R. R. Pullen, then our Chief Mechanical Engineer, dated January 12, 1943.

Mr. Rigney: Now, your Honor, I renew my offer of proof through Mr. Bjorge with respect to these various key [fol. 845] items to which he has referred, and what the situation was as far as inventory and Homestake's needs on those items was.

Mr. Barnes: Your Honor, it seems to me that in these last questions directed to the witness it now begins to indicate that this may be hearsay testimony based upon the reports of other people who are not present for cross-examination, and on the basis of those memoranda some document was prepared.

The Commissioner: Well, we are in a situation here now where you have handed to the witness a paper which you have indicated you want to use for the purpose of refreshing his recollection. That has been excluded. And if you are asking for reconsideration of that ruling——

Mr. Rigney: Yes.

The Commissioner: I adhere to the ruling. I do not think that it is proper to allow the use of such memoranda for the purpose of refreshing his recollection. He did not even prepare it himself.

Mr. Rigney: Very well, your Honor.

The Commissioner: If counsel wants to make his record over the exclusion of the Commissioner, he may make an offer of proof.

Mr. Rigney: Yes, your Honor, but before I do that it may be possible for us to offer this proof directly through the witness.

The Commissioner: All right.

[fol. 846] Mr. Rigney: In view of your Honor's ruling that this memorandum which has been prepared under Mr. Bjorge's supervision with respect to the inventory position cannot be used by him to refresh his recollection, I now propose to interrogate Mr. Bjorge directly to the extent that his memory will enable him to testify on these things. I do not know how far we can go in that way.

By Mr. Rigney:

Q. Would you tell us from your own knowledge, Mr. Bjorge, or by reference to Exhibit 148 or 149 for identification, which I believe would be permitted you, what the situation was with respect to explosives?

Mr. Barnes: Your Honor, I think that the witness should be instructed to indicate whether he is doing this on his own recollection, or whether he is referring to either or both of these documents as he answers the question. We have got three possibilities embraced in the question. I do not want to object on the basis of duplicity, but if the witness will indicate as he answers the question the source of the information, I will not interpose an objection to the question.

The Commissioner: I think he might well do that. It will simplify the later cross-examination.

Mr. Rigney: Yes, I think that is an expeditious way to do it.

By Mr. Rigney:

[fol. 847] Q. Mr. Bjorge, you have before you Plaintiffs' Exhibit 148 for identification, being the inventory submitted pursuant to the provisions of Order L-208, and you have Plaintiffs' Exhibit No. 149 for identification, which is Homestake's general inventory as of December 31, 1942.

Now, I want to ask you what the situation was as far as inventory position is concerned, and the length of time the item would have served Homestake so far as explosives are concerned, first. Now, can you refer to those inventories,

and when you do, specify, please, to what you are referring and tell us what the fact is.

A. In the inventory submitted under L-208——

The Commissioner: Get that identified by number.

By Mr. Rigney:

Q. Exhibit 148 for identification.

A. 148 for identification—it shows that we had 210,980 pounds of Gelex No. 2 dynamite.

Q. And you are referring now to page 3 of Exhibit 148 for identification under the heading Explosives And Blasting Equipment, is that right?

A. Yes.

Q. Is there other material appearing in that same paragraph?

A. Yes. There are 3,165,762 feet of Bear Brand fuse; one blasting machine that would serve 150 holes, three that [fol. 848] would serve 100 holes, thirty-five that would serve 30 holes, and six that would serve 10 holes; 44 reels of 500 feet each of wire for those blasting machines, three reels of 1000 feet each; 18 Galvanometers; 47,408 #6 blasting caps, 59,027 electric blasting caps, 1,319 pounds of lead-in wire #20.

Q. Could you tell us how long that supply of dynamite you have testified was on hand would have lasted Homestake in normal operations?

A. That would have lasted three months under normal operations.

Q. Do you know of your own knowledge whether or not during the shut-down period dynamite was under allocation?

A. Commercial dynamite was not under restriction during the shut-down period.

Q. Now with reference to the other items to which you have just referred appearing under this paragraph Explosives And Blasting Equipment, how long would those items have lasted Homestake?

A. The fuse would have lasted more than a year. We purchased fuse in carload lots in order to get the best purchase conditions, and a carload of fuse lasted us a long

time. I cannot give you the exact number of months, but I am sure that quantity would have lasted us over a year.

By the Commissioner:

Q. You have used the term "commercial dynamite". Was [fol. 849] that dynamite that you testified about commercial dynamite?

A. Yes. All of this dynamite, the fuses and the caps were what is known as commercial explosives, industrial explosives, used in industry.

By Mr. Rigney:

Q. What was the situation with respect to pipe, Mr. Bjorge?

A. With respect to pipe, we had sufficient pipe for an indefinite time. Underground there was installed miles of pipe line, and with an operation such as we have described, and at any time there are extensive workings that were inactive, the pipe can be taken out and installed in another place.

Q. I don't know whether you referred to this inventory with respect to this item of pipe or not. Did you do so?

A. No, I did not. Pipe is not listed in that inventory.

Q. Let me ask you this, in connection with dynamite, Mr. Bjorge: how large an inventory or supply is it feasible for Homestake or anybody else to keep on hand at one time?

A. The inventory we had at that time was near the maximum. Dynamite can be kept for a long time safely, but it is not desirable to store it for too many months. We did keep the dynamite that was in storage at that time throughout the war period and used it after the war.

Q. Would you look now, please, at page 2 of Plaintiffs' Exhibit No. 148 for identification, and let me ask you if this [fol. 850] paragraph which is headed "Air Distribution Equipment"——

A. I made an error. I was looking for the heading of pipe, and pipe is listed under "Air Distribution Equipment".

Q. And then in the breakdown of it by sizes and so forth it is described as low pressure pipe, is that right, sir?

A. Yes sir. The low pressure pipe was the pipe used for 100-pound pressure air, which is the power for the rock

drills. We also use high-pressure pipe which is under a pressure of 1000 pounds for haulage. There is only one item of high-pressure pipe on this list.

Q. Can you tell us, Mr. Bjorge, how long Homestake would have been able to have operated, so far as its inventory of pipe was concerned, during the shut-down period?

A. With this inventory and that which I described as being in the mine, we could have operated for an indefinite period without purchase of additional pipe.

Q. When you say an indefinite period, how long do you mean? What is the minimum that you could operate?

A. Certainly five years or more.

Q. Now I ask you about rails of track, and ask you what the situation was inventory-wise in that regard?

The Commissioner: Are all of these questions related to the period of time at which L-208 became effective?

Mr. Rigney: Yes, your Honor.

The Witness: The inventory submitted under L-208, that [fol. 851] is, Exhibit No. 148, shows 30675 feet of new 40-pound rail, 1800 feet of used 40-pound rail, 3875 feet of used 25-pound rail, and 300 feet of 15-pound rail.

By Mr. Rigney:

Q. Can you tell us for how long a period of time that inventory would have sufficed for normal operations of Homestake?

A. For normal operations that amount of new 40-pound rail, which is the weight we use in our underground track, would have been sufficient for about a year and a half. But with the elimination of development there would not have been any new rail installed. We would not have used any during the shut-down period if we had been permitted to continue to operate.

Also, there were miles of track underground that could have been taken up and the rails placed in whatever new place they might be needed.

A mine the size of Homestake could have, if necessary, operated for many years without any purchase of new rails.

Q. Now, Mr. Bjorge, directing your attention to rock drills and parts, I should like to ask you what the inventory situation was with regard to those items?

A. The rock drills listed in the inventory, Exhibit 149, which are new rock drills, list 9 Cleveland D-12 drifters, 3 Cleveland D-12 drifters with a longer carriage, 42 Cleve- [fol. 852] land H-10-H pluggers, 20 Chicago pneumatics, CP drifters.

Q. Those were on hand as of December 31, 1942 listed in the inventory?

A. Yes, on hand at that time.

The inventory given in Exhibit 148, which included all of the machines in use at the time, lists five drifters, 222 drifters, 77 stopers, 234 jack hammers, 12 sinkers, 8 extension jack hammers, and 1 dry jack hammer.

Q. Those were the items on hand as of October 8, 1942 of that particular category?

A. They were on hand at that time, and in use or new, except for the few that are listed as new.

Q. Can you tell us how long those particular items would have lasted?

A. Those items with repair parts in minor amounts would have lasted through the shut-down period, with a straight stoping operation, and with the use of parts from machines that were taken out of use we could have easily operated without any additional new machines throughout the period of the shut-down.

Mr. Barnes: Could I have the first part of that answer read, please?

(The record was read by the reporter.)

By Mr. Rigney:

Q. You refer, Mr. Bjorge, to repair parts. Where would [fol. 853] those have come from?

A. From the stock that we had on hand at that time.

Q. So that do I understand that when you referred to repair parts in your answer you were not contemplating the buying or acquisition of new repair parts?

A. No.

Q. Mr. Bjorge, what was the situation with respect to mine cars as of October 8, 1942?

A. Exhibit 148 lists 646 1-ton end dump flat bottom cars, 706 1-ton side dump cars, 187 3-ton Granby-type cars, 57 2½-ton Granby-type cars, 45 5-ton bottom dump cars, 388

timber trucks, 179 steel trucks, 92 miscellaneous tramway cars and 21 passenger cars.

Q. And you are referring to the second paragraph, page 4 of Exhibit 148, which is denominated "Mine Cars"?

A. Yes.

Q. Now, how long would that number of mine cars have enabled Homestake to continue operation, assuming no addition to your supply?

A. Much longer than the shut-down period.

Q. What was the situation with respect to locomotives?

A. On page 4 of Exhibit 148 at the top of the page there is a list of locomotives for haulage: one 8½-ton air-operated locomotive, one 13-ton and one 14-ton, and these three are for 22-inch guage track; one 10-ton trolley locomotive for [fol. 854] 30-inch guage track; two 6½-ton battery locomotives, 18-inch guage; twenty-three 5-ton air-operated locomotives, 18-inch guage; ten 3½-ton air-operated locomotives, of 18-inch guage.

Q. And how long would they have permitted operation, assuming no additions to them?

A. The air-operated locomotives would have lasted for, I don't know how many years. They are still in use, every one of them. And the battery locomotives, we have material on hand for two extra batteries which would have given those two battery locomotives at that time a life of about five years.

Q. I take it, then, that they would have permitted operation for longer than the shut-down period?

A. Much longer.

Q. What was the situation as far as mechanical shovels were concerned?

A. At the bottom of page 3 there is a listing of 16 Gardner-Denver small-size 18-inch gauge mucking machines.

Q. And they would have permitted operations for how long a period?

A. With the elimination of development work—they were used almost entirely in drifting—they would not have been used on the kind of operation that we talked about. In normal operations they would have lasted, I would say, longer than the shut-down period.

[fol. 855] Q. What about hoisting ropes, Mr. Bjorge? Are

they normally reflected in the inventory or are they reflected specifically in Plaintiffs' Exhibit 148 for identification?

A. No. The hoisting ropes that we had at that time were on the hoists, and had been charged out to operations, except for two spares, spare ropes, which had also been charged out. There were four hoists, two hoists at each of the two shafts, one for hoisting ore and one for the cages for men and materials. The ropes on the cages at that time would have lasted about five years. The hoisting ropes on the ore hoists were good for a total of about 5 million tons as of that time. The ropes that were on the ore hoists were replaced last October.

Q. What was the situation as far as electrical wiring was concerned?

A. Our entire plant in 1942 was in excellent shape, with no new construction planned. We had just completed an extensive construction program so that the use of electrical equipment in the following years, the electrical wiring and other accessories, would have been exceedingly small. We have not since that time had any major failure of either wiring or equipment that required any substantial installation.

In addition to that, in wrecking the obsolete plants that we had wrecked as a result of our construction program in the preceding years, all such material had been salvaged, [fol. 856] and our electrical department had a large stock of salvaged wire of a variety of sizes, and the accessory equipment, and that could have taken care of any job that might have come up in the next five years.

Q. So, briefly, what do you say with respect to the sufficiency of your inventory of electric wiring to enable you to continue operations for at least the period of the shut-down?

A. We had enough.

Q. I want to ask you now about cyanide, Mr. Bjorge. I show you Plaintiffs' Exhibit No. 149 for identification, being the general inventory, and ask you to tell us what the situation was with respect to cyanide?

A. We had on hand at that time 107,781 pounds of Arrow Brand cyanide, and 26,307 pounds of flotation cyanide.

Q. Do you know whether or not cyanide was listed in

Plaintiffs' Exhibit No. 148 for identification, being the October 8, 1942 inventory.

Mr. Rigney: I think perhaps we could save time by saying it is not listed there.

The Commissioner: All right.

Mr. Rigney: This will be offered in evidence, but I wanted the record to show that he could not testify from this with respect to cyanide.

By Mr. Rigney:

Q. What about lime, Mr. Bjorge?

[fol. 857] A. Lime is produced locally in the Black Hills and was in adequate supply.

Q. How about stamp shoes and dies?

A. Our inventory shows 104 shoes——

Mr. Barnes: Are those all the same size?

The Witness: Yes.

By Mr. Rigney:

Q. You are referring now, sir, to Plaintiffs' Exhibit No. 149 for identification, the general inventory, and does this have a page number?

A. That particular page——

Q. You are referring to a page which is headed under department "General Supplies, Mill Supplies No. 6541, Cyanide Supplies No. 6542". Is that correct? It does not seem to have a page number, does it?

A. Those are the charge numbers in which they are listed. That was in general supplies, and in the metal-urgical section of the same inventory there are listed 117 dies and 104 shoes.

Q. Have you completed now your testimony with respect to stamp shoes and dies, so far as the quantity on hand is concerned?

A. I think so.

Q. Could you tell us for how long a period they would [fol. 858] have served you?

A. I don't think we have used the last of our stock at the present time, in the seven years' operation since the shut-down.

Q. So that they would have lasted for longer than the shut-down period, assuming no additions to it?

A. Yes.

Q. What was the situation with respect to balls and rods and liners for the grinding mills, Mr. Bjorge? I show you Plaintiffs' Exhibit No. 149 for identification.

A. Well, with respect to the balls, the balls are all cast in our own foundry from scrap iron and steel, and there was ample scrap to continue casting those balls for the entire period of the shut-down. The grinding rods, we had in the inventory on the same page that we have referred to in Exhibit No. 149,283,985 pounds of 10-foot rods and 462,672 pounds of 12-foot rods. And in addition to that there would have been approximately 150,000 pounds of rods in the mills that were in operation at the time.

Q. For how long a period of operation would that quantity have sufficed?

A. It would have been sufficient for milling approximately one million tons, as the rod consumption is about one pound per ton.

Q. Is it possible to make a substitution of balls for rods [fol. 859] in this operation if need be?

A. Yes. If we were not able to obtain rods, we could cast balls in our foundry and use balls in the rod mills.

Q. Do you recall what the fact is with respect to cones and mantles for crushers insofar as these two inventories are concerned, Plaintiffs' Exhibits 148 and 149 for identification? Can you tell us whether or not they are referred to in either of those two inventories?

A. They are not in this inventory.

Q. Referring to Exhibit 148 for identification.

A. And I am quite sure they are not in the other inventory. The repair parts, replacement parts for the crushers, were in the class that I previously stated was charged out and not in the inventory. We had duplicate units at both of our crushing plants. We have a crushing plant at each shaft, and each one had two parallel units, each unit with sufficient capacity for all of the ore that could be hoisted. So that in case of any stoppage of one unit they simply had to shift to the other unit. Between those four crushing units and the spare cones and mantles that

we had on hand at that time we could have crushed ore for longer than the shut-down period.

Q. Is it also the fact that scrap iron and steel were not carried in either of those inventories, 148 and 149 for identification?

A. No, they were not inventoried.

[fol. 860] Q. What was the situation as far as scrap iron and steel was concerned on hand, if you know?

A. Well, I don't know the figure, but we had a large amount of scrap iron and steel. In our isolated location, at no time prior to the war was it possible to ship scrap and pay for the collecting and the freight. So that there was an accumulation of scrap everywhere. In fact, it had been regarded of such little value that at one place we found scrap that had been buried in making a shop yard, and we put a powerful shovel into that pile and mined out about five tons of scrap, and even found some pig iron that had been buried along with the rest accidentally many years before.

Q. How about scrap bronze and brass, Mr. Bjorge?

A. Our use was small, so that the scrap on hand was adequate for our use for a long time. Most of that is not expendable. Brass is cast into a bearing for a machine, and when that bearing has worn to the point where it has to be replaced, the amount of brass that has been worn off is very small, and the worn bearing goes right back to be recast for new bearings again.

Q. When you said adequate for a long time, did you mean by that for at least the length of the shut-down period?

A. More than the length of the shut-down period.

Q. Now would you look, please, and see what the situation was with respect to tools and tool parts?

[fol. 861] A. There were tools and tool parts not in inventory as they had been charged out to the several departments for their use, and by interchange between departments there were adequate tools and tool parts to get along for more than the shut-down period.

Mr. Rigney: I am just about to complete, your Honor.

The Commissioner: Suppose we recess for five minutes.

(Thereupon, a five-minute recess was taken in the hearing.)

[fol. 862] OFFERS IN EVIDENCE

Mr. Rigney: Your Honor, Plaintiff now offers in evidence Exhibit 148 for identification, being the inventory submitted pursuant to Order L-208.

Mr. Barnes: Subject to verification, no objection.

The Commissioner: Admitted.

(Said inventory submitted pursuant to Order L-208, marked "Plaintiffs' Exhibit No. 148," admitted in evidence and made a part of this record.)

Mr. Rigney: Plaintiff now offers in evidence Exhibit No. 149 for identification, being the general inventory. I should like to say, Your Honor, that this is the only copy in existence, and we would like to have permission to have it photostated and to substitute a photostat for this original.

Mr. Barnes: I would like to examine the witness from that before the preparation of the document, and before I make any objection.

The Commissioner: I will rule on it after cross-examination.

Mr. Rigney: Surely.

That is all, sir.

Cross-Examination.

By Mr. Barnes:

Q. Mr. Bjorge, going back to this pension plan which you said Homestake had, when was that founded?

A. 1917.

[fol. 863] Q. What group of employees did it cover at that time?

A. All employees.

Q. Did the coverage at any time change between that date and 1942?

A. No.

Q. What about the insurance plan that you referred to? When did that come into existence?

A. 1910.

Q. Did that also cover all employees?

A. It covered all employees.

Q. Did the company handle that, or was that handled through some insurance underwriter?

A. No, the company has handled that throughout the years. They have contributed all of the clerical work necessary to operate the plan, and have made the investments out of the reserve fund. It is known as the Homestake Mining Company Employees Aid Fund, and it is administered by a board consisting of the manager, the chief counsel, and I think there are three department heads and three day's-pay employees.

Q. Does that cover all employees?

A. That covers all employees.

Q. Does that cover only life insurance?

A. And sick benefit.

Q. What about accident insurance?

[fol. 864] A. No, we have always been self-insured on workmen's compensation.

Q. So in case of accident, it is only workmen's compensation benefits that they receive?

A. Accidents off the job are covered by the aid fund. Industrial accidents are covered by compensation, but if a man is injured in an automobile accident, if an employee is injured in an automobile accident, he receives benefit under the aid fund.

Q. In your testimony on Friday, you referred to the fact that the Homestake Veterans Association in 1942 had 440 living members.

A. Yes.

Q. Were all of those employed by Homestake at the time, or had some of them retired?

A. Some of them had retired.

Q. How many of them were employed at the time, do you know?

A. At that time there would be in the neighborhood of 400. I think there were something over 60 or 70 living retired employees at that time. Whether all of them were members of the Veterans Association or not, I can't say. Probably most of them were.

Q. You testified also that sometime in August, 1942, having heard rumors of a threatened shutdown of the [fol. 865] gold mines, you came to Washington, is that correct?

A. Yes, I came to Washington very late in August.

Q. And you told us at some length what you said to Wilbur Nelson on that occasion.

A. Yes.

Q. What did Mr. Nelson say to you? Do you recall that?

A. I think Mr. Nelson was very considerate in allowing me to present my case, and he said that he would keep all of those facts in mind in case any such order was issued. He definitely agreed with the idea submitted with respect to the ineffectiveness of an order that might attempt to do what L-208 was attempting to do.

Q. How long did you spend with Mr. Nelson, Mr. Wilbur Nelson?

A. I can't say exactly. Several hours, probably, at various times.

Q. You mean a total of several hours on various occasions?

A. Yes.

Q. Do you recall how long you were here in Washington? A week, two weeks, three weeks?

A. No. I think it was less than a week. I don't have the dates with me.

Q. You said that you also saw Donald Nelson on that occasion. Did you arrange that appointment, or was that [fol. 866] arranged through some other source?

A. I think that that was arranged through either Senator Gurney or Mr. Case. I am not certain.

Q. Weren't there two Senators from your State at the time?

A. Yes.

Q. Who was the other one?

A. Senator Bushfield.

Q. Did you consult with him at all?

A. I saw him also, yes. He assisted in some of those things, in making appointments. He has since died.

Q. How long did you spend with Donald Nelson? Do you recall that?

A. As I remember it, maybe 20 minutes or so, 20 or 30 minutes.

Q. After you had made your presentation to him, did he say anything?

A. He simply said that he would give consideration to what I had said.

Q. He made no answer to any of the points you mentioned specifically, that you can recall?

A. No. I think he definitely emphasized the need for miners.

Q. Then you said you saw a General McSherry. Who was he?

[fol. 867] A. In the War Manpower Commission.

Q. Page 733 of the transcript refers to General McSherry of the War Production Board. If you said that——

A. If I said that, that must have been an error.

Q. What was General McSherry's position in the War Manpower Commission, do you know?

A. No, I don't know exactly what his title was.

Q. How did you come to see him?

A. I came to see him because some of the men that I visited with, either our Representatives or Senators, or Wilbur Nelson, told me that he was someone that I should try to see.

Q. Do you recall how much time you spent with him?

A. I should say again probably 20 minutes.

Q. Did he make any answer to you after you had presented your various points to him?

A. During the conversation he emphasized the need for miners, and at the end of the interview he said that he would give consideration to the statements I had made to him.

Q. You also referred to having seen General Somervell.

A. That is correct.

By the Commissioner:

Q. Did you pursue the suggestion with either Donald Nelson or General McSherry that there wouldn't be enough gold miners released to mine copper to justify the issuance [fol. 868] of such an order?

A. Definitely. I summarized the arguments which I stated I had made at greater length to Wilbur Nelson. I was certain that the number of miners in gold mines was too small to be of great importance, and that an order would be entirely ineffective because if the men were displaced from their jobs in the copper mines, from the area where they had their homes, they would not be likely to go to replace a man in the Anaconda mine, for example, who had left Anaconda to go to a job that was more attractive to him.

Q. Was there any specific response by either Donald Nelson or General McSherry to that suggestion?

A. I don't remember that there was anything specific with regard to that.

Mr. Rigney: Your Honor, in his previous answer, the witness inadvertently said "men displaced from copper mines." He meant gold mines, I am sure.

The Commissioner: Yes, I am sure he did.

By Mr. Barnes:

Q. With respect to General Somervell, how did you come to see him?

A. Senator Gurney offered to make an appointment for me with General Somervell, and accompanied me to General Somervell's office. Naturally, General Somervell was an extremely busy man, and we had a short interview there.

[fol. 869] Q. What do you mean? Twenty minutes again?

A. Something on that order, yes.

Q. Did you present to him the same arguments?

A. I summarized the same arguments.

Q. Did he make any answer to them?

A. He, of course, more than anyone else, emphasized the need for men in the copper mines, and he gave me no encouragement other than to say that he would give consideration to the statements I had made.

Q. Specifically with respect to the statement you just referred to in answer to the Commissioner's question, that you felt that it was unlikely that gold miners would go to the copper mines, did General Somervell say anything that you can recall?

A. He made the statement with regard to the fact that they were furloughing men from the Service to go to the copper mines; that they could not be doing that as long as there were miners available in gold mines who might be used in the copper mines.

Q. Specifically with respect to your statement that you didn't think the gold miners would go to the copper mines, did he say anything?

A. I don't think there was any statement as to the method of getting them to go there.

Q. You referred to the fact that you also talked to Mr. [fol. 870] Ayers and Mr. Hayes in the Copper Division. Did you tell them the same thing that you had told these other people?

A. Yes.

Q. Did they say anything about it? Did they make any answer at all?

A. Both Mr. Ayers and Mr. Hayes were men of very broad experience in mining, and they were old friends of mine. I had known them both in Arizona. That is why I went to see them. They both agreed as to the ineffectiveness of such an attempt.

Q. You referred to certain types of non-ferrous mining activities in the general vicinity of Lead. I take it that the most remote that you referred to was the copper mining in Salt Lake City, which you said was about 650 miles from Lead, is that correct?

A. Yes.

Q. Within that total 650-mile radius, what non-ferrous mines were there other than gold?

A. There were the copper mines at Butte, the large molybdenum mine in Colorado, several districts in Colorado where they were mining what we generally speak of as the complex ores, ores with a number of metals in them. For example, the Ouray District in Colorado has an ore that contains gold, silver, copper, lead, zinc.

Q. What about any of the ferro-alloys? Were any of them mined in that area?

[fol. 871] A. There are no ferro-alloys mined. They are manufactured.

Q. I was thinking of the alloy materials other than molybdenum, the alloys other than molybdenum.

A. There is iron in Wyoming. There has been a little tungsten in the Black Hills. Homestake had fairly substantial tungsten production in World War I, as did another property, the Wasp No. 2, which is near Homestake and which we owned in 1942. In the summer of 1942, there was exploration work in the areas that had produced tungsten in World War I, but we were unable to find more than a nominal amount, which produced a few carloads.

Q. What about vanadium? Was any of that produced in that 650-mile area?

A. Yes, the vanadium mines of Colorado would come within approximately the 650-mile limit.

Q. You also referred to certain bentonite and feldspar. Do you think we have now exhausted the commercial mining prospects of that 650-mile area to the extent that they were then developed?

A. Oh, no. There are undoubtedly other small operations. I think I mentioned that the Black Hills pegmatite area in the southern Black Hills has produced a variety of relatively rare metals in small quantity. There is mica in certain areas of that pegmatite. There had been no [fol. 872] active mining before the war, but there was fairly active mining during the war. They had a mica drifting plant at Custer, at which the Government was purchasing their mica. They were small operations, largely 2 or 3 or 4 or 5-man operations. The pegmatites have produced lithium, columbium, tantalum, and beryl in small quantities.

Q. Were any of those, to your knowledge, expanded during the war?

A. I think there was a little activity in lithium; and at Tinton, at the South Dakota-Wyoming line, there was a small operation endeavoring to recover columbium and tantalum.

Q. You spoke of the Anaconda mine at Butte as being a hot mine. In mining parlance, what does that phrase mean?

A. It means a mine that is hot enough to be uncomfortable. An hour or two underground, and you will be soaking wet, and everything that you have on.

Q. Reduced to temperatures, for the benefit of people who haven't been in mines of that type, what does that mean, Mr. Borge?

A. It is, of course, related to humidity. I think that the temperature is in the high 90's, with high humidity.

Q. By comparison, for example, what was the temperature at Lead in the mines?

A. In the low 80's.

[fol. 873] Q. What about the humidity?

A. Much drier, a much lower humidity. I think our rock temperature at the 5,000-foot level was 88 degrees, which is a low temperature for that depth.

Q. Referring to this meeting that was held in Washing-

ton on October 1, did each of the representatives of the mining industry have an opportunity to present their views?

A. Yes.

Q. How much time did you, yourself, take to present your views on that occasion, do you recall?

A. I can't give it in time, but I made the longest statement of any of them. I think it probable that I talked for half an hour.

Q. You referred also in your testimony on Friday, in summarizing the remarks that you made at that meeting, to a statement to the effect that you had pointed out the fact that "we were singled out for special treatment." What did you mean by that?

A. Meaning the gold mining industry.

Q. What kind of special treatment? What do you mean?

A. The suggestion was definitely made at that meeting that we were to be closed down, and I knew of no industry where suspension of operation had been ordered.

Q. You mean no industry or no mining industry?

A. Certainly no mining industry, and I don't think at [fol. 874] that time I knew of any other industry in which suspension was ordered.

Q. Hadn't you heard that the production of passenger automobiles had been completely terminated?

A. It hadn't been completely eliminated. I knew it had been curtailed.

Q. Hadn't you heard that the manufacture of coin vending machines had been completely terminated?

A. I don't know anything about coin vending machines.

Mr. Rigney: I object to the form of the question, because it is directed at a different type of situation than the witness testified he was speaking of. He said that at the meeting of October 1, he pointed out that the gold mining industry was being singled out for special treatment. In other words, the Order, L-208, apparently, as it was then drawn and certainly as it was issued, ordered the industry to close down—period; out of business. Mr. Barnes is now interrogating the witness as to whether he heard about various other businesses which were required to make adjustments during the war. I say to Your Honor that it is an unfair type of cross-examination because, in the first place, the witness can not be assumed to have knowledge

of all the "L" or "M" orders issued by the War Production Board, and it presupposes that these orders affecting these other industries were of the same general nature as Order [fol. 875] L-208. They were not. They may have denied steel for the automobile plants or they may have said to a given company, "You shall not make this or you shall not make that," but I know of no industry to which they said, "You will close your doors until this order is lifted." In that respect, it was unique.

The Commissioner: Overruled.

Mr. Barnes: Will yo read the last question and answer?

(Whereupon, the record was read by the reporter, as requested.)

By Mr. Barnes:

Q. Had you heard that the manufacture of bicycles had been prohibited?

A. No, I do not know that I had at that time.

Q. Have you ever heard of that? Was that called to your attention at that time by anybody?

A. I have heard it in testimony in this case.

Q. Did anybody at that meeting, any Government representative, call to your attention the fact that other industries had been prohibited by "L" orders from manufacturing their normal product?

A. I do not believe that that was brought up at that meeting.

Q. So your remark at that time, Mr. Bjorge, was not limited to the fact that gold mining was being put in a different category from other types of mining, is that [fol. 876] correct?

A. No. I think the opinion that I expressed at that meeting was broader than that.

Q. If you had known that the manufacture of automobiles had been prohibited, that the manufacture of children's metal toys had been prohibited, that the manufacture of coin vending machines had been prohibited, that the manufacture of amusement devices had been prohibited, and that the manufacture of bicycles had been prohibited, would you still have felt that the gold mining industry had been singled out for special treatment?

Mr. Rigney: I think that is objectionable.
The Commissioner: Sustained.

By Mr. Barnes:

Q. You said that certain Government representatives spoke in favor of the order. One of them you mentioned was General Clay. Do you recall what General Clay said?

A. In general. He emphasized strongly the need for copper and for miners in the copper mines; that it was very important that they obtain those miners.

Q. Had you repeated at that meeting the substance of the remark you had made to various individuals in August to the effect that you did not feel that gold miners would go to the copper mines?

A. Yes.

[fol. 877] Q. Do you recall General Clay's replying to that point at all?

A. No, I do not.

Q. You also referred to a Mr. Hill, who spoke in favor of the order. Incidentally, do you have any further initials or any other description of Mr. Hill?

A. No, I have not. In all probability, I wouldn't have remembered his name, because I didn't know him before, except for the listing which I made of the men that I either knew or who entered into the discussion.

Q. Have you ever seen Mr. Hill since that meeting?

A. No, I have not.

Q. Do you recall what the substance of Mr. Hill's remarks was?

A. I think it was the same general discussion of the need for men for the copper mines.

Q. Did he direct himself at all, as you recall it, to this argument you had advanced that you didn't feel that the gold miners would go to the copper mines?

A. I do not recall that he did.

Q. What about Mr. Harbison? What was the nature of his remarks?

A. I remember part of his remarks, because he directed them directly at me, arguing that if I went home and assembled our employees and made a speech to them and [fol. 878] urged them to go to the copper mines, wouldn't I have influence with them so that they might go.

Q. Did you answer that?

A. I did. I thought under the circumstances that my influence in that direction would be small, and that I thought I would be in a very difficult position if I took any such action.

Q. Did he make any further comment along those lines after you said that?

A. I think, as I recall it, that was the substance of it.

Q. What about Mr. Lipkowitz? Did he say anything at all?

A. I definitely recall his making statements about the number of men who were employed in gold mines.

Q. In which he said, your testimony on Friday indicates, that there were a total of 10 to 12 thousand people employed in the mines, of whom 4 to 5 thousand are miners? Is that your recollection?

A. That is my recollection.

Q. Do you recall anything else that Mr. Lipkowitz said?

A. No. What I recall has to do with the number of men.

Q. You don't recall his addressing himself to the point that these miners might not go to the copper mines?

[fol. 879] A. No, I don't.

Q. Was there anybody at that meeting, that you recall, who represented the War Manpower Commission?

A. General McSherry was there.

Q. Do you recall whether or not he said anything?

A. Yes. He spoke at the—I think it was near the opening of the meeting. He made the argument for the extreme shortage of men in the copper mines. He referred to the furloughing of soldiers back to the copper mines, and the necessity of getting the men from the gold mines.

Q. Do you recall whether or not he said anything at that time with respect to your suggestion that men from the gold mines might not go to the copper mines?

A. I think he stated that they were making plans for channeling men to the copper mines. I remember no details of how that was to be done.

Q. I take it that this part of the meeting which we might call the general part of the meeting lasted from approximately 2:00 to 5:30, is that correct?

A. Something like that; I think perhaps 2:30 to 5:30.

Q. Then after a recess, you continued under Mr. Wilbur Nelson's ch[illegible]ship to work out the figures as to the approximate [illegible]r of miners, is that right?

A. That is correct.

Q. You said that the figures given by Mr. Batt at the [fol. 880] meeting of the War Production Board on October 6, 1942, which is Plaintiffs' Exhibit No. 92, represented the substance of what you worked out at that meeting as later corrected. What corrections were made after the meeting?

A. None that I have first-hand knowledge of. At that meeting I supplied the information as to the number of men at Homestake, and the approximate number at Bald Mountain, which was a mine which was near us. The other men supplied information as to the men in the mines with which they were connected and other mines.

Q. Do you recall now what estimate you gave as to the number of men at Bald Mountain?

A. I think probably about 140. It may have been a little more than that.

Q. Where was Bald Mountain located?

A. About three miles from Lead.

Q. North, south, east, or west?

A. It is southwesterly.

Q. Was that the only other gold mine in South Dakota that you knew of?

A. That was the only other gold mine in South Dakota.

Q. Did you participate in the discussion as to the number of employees in any of these other areas that you can recall?

A. No. Estimates were made toward the end, of an [fol. 881] allowance of an additional 500 men for the various very small operations, but that was an opinion developed from the joint testimony of the industry men who were there.

Q. What do you mean by the "various small operations"?

A. There aren't any in our section, or there weren't any at that time. There had been one down at Keystone, South Dakota, that might have employed 10 or 12 men, and in other sections of the country there were mines that might have

employed from 1 or 2 or 3 to perhaps 20 or 25 men. I don't know. The men from those districts gave most of the testimony regarding those properties.

Q. Had you, yourself, been in these other gold mining areas? For example, the Cripple Creek area?

A. Not immediately prior to this meeting.

Q. How recently had you been there?

A. I worked around the Golden Cycle as a shoveler in the summer of 1911.

Q. Had you been there between 1911 and 1942?

A. No.

Q. What about the so-called Mother Lode area or the Grass Valley area? When had you last visited it?

A. In the late 20's.

Q. Are there any other sections of the country where there is gold mining?

A. Are you referring now to the straight gold mines, in [fol. 882] which gold is the primary metal produced?

Q. That is right.

A. I think the northern Black Hills, Cripple Creek, and the Alma District in Colorado, the Mother Lode District, and the Grass Valley area, and the dredging operations, the largest of which are in California valleys, will cover nearly all of the major mines in primary gold production. Of course, the Alaska-Juneau, in Alaska.

Q. The figure that Mr. Batt gave to the War Production Board as the total employment of the gold mining industry was 3,270 men. Do you recall how many employees Homestake had at the time?

A. At that time we had approximately 1800.

Q. So Homestake would have had approximately 60 per cent of the total employees in the gold mines in the United States, is that correct?

A. We were by far the largest operator in the United States, and that figure of 1800 men that I gave included the men in our sawmilling operation, which was in the neighborhood of 200.

Q. It would still, even deducting them, have approximated 50 per cent of the men employed in the gold mines?

A. In the major gold mines at that time.

Q. In all of them. How many gold mines were there in

the United States at that time, do you know? By that I mean [fol. 883] mines that produced almost exclusively gold, not gold as a by-product.

A. If you go down to the very small operations, there were probably a large number. I don't know exactly how many.

Q. Is dredging for gold done anywhere but in California?

A. Yes.

Q. Was there anybody at that meeting who represented dredging operations, other than from the State of California?

A. Mr. McCormick from the Natomas Company was the only one there.

Q. That is in California, is it?

A. That is in California.

Q. Was there anybody there who represented any of the mining companies, lode or placer, in Alaska?

A. No. The meeting had been called on short notice, and I presume they had no opportunity to get there.

Q. What was it you said you referred to when you said that the figures were corrected or adjusted after the meeting?

A. There was testimony here that at the end of that meeting, some of the men present stated that they would make telephone calls and get additional information to give to Wilbur Nelson. I did not do so, because I had given the information for our area.

Q. Were you present when any of them spoke to Mr. Nelson after that meeting?

[fol. 884] A. No.

Q. Do you recall how the figures that Mr. Batt is reported to have read at the meeting of the War Production Board, as shown in Plaintiffs' Exhibit 92, differed from the final figures that you had worked out with Mr. Nelson that afternoon of October 1?

A. No, I do not, in exactness. My recollection is that the summary of figures that was gathered that evening was that possibly 2500 men would be released by closing down the gold mines, of whom 750 probably would be miners.

Q. So when you referred in your testimony to the fact that the figures were corrected after the meeting, you were

speaking of only what you heard Wilbur Nelson say on the stand here, is that correct?

A. No. I think I had seen that figure of something over 3,000 subsequently.

Q. Directing your attention to Plaintiffs' Exhibit 132, telegram to Mr. Clark from Under Secretary Patterson, do you recall having a meeting with officials of the War Department and officials of the Anaconda Company as referred to in that telegram?

Mr. Rigney: Will you hold it just a minute, Mr. Bjorge? I want to ask that the question be read back.

(Whereupon, the question was read by the reporter.)

The Witness: I testified previously to the men from the [fol. 885] Army, the USES, and the War Manpower Commission, who came to Lead for a meeting with us. There was no representative of Anaconda at that meeting.

By Mr. Barnes:

Q. Did you ever see a representative of Anaconda that you can recall?

A. Not with reference to this subject.

Q. Mechanically, Mr. Bjorge, what is the process by which you pump water out of a mine?

A. All of the mine workings are ditched. A ditch is put in at the edge of a drift for carrying water to the central points, where it runs into sumps that are so arranged as to provide for settlement of the sediments that are in the water, the crushed rock, and so forth, to minimize the injury to the pump valves. Then it flows to the sumps at the underground pump station and is pumped to the surface.

Q. Physically, are the pumps in the mine, or at the surface?

A. They are in the mine at various places. It isn't economical to install a pump for too high lifts. Our pumping stations are near the Ross shaft. As the pipelines go up the draft, the first pump station is at the 1250 level, the second at the 2450 level, and the third at the 3650 level. Then there are smaller pumps that pump all the way from the bottom of the mine up to that 3650-level station.

[fol. 886] Q. Does the water at each level go into a new sump?

A. It is pumped from the sump at one level, beginning at the bottom level, into the sump at the next level, and picked up by the pumps in that station and pumped to the next one, and the same is repeated until it flows out on the surface.

Q. You have to use pipe to carry that water after the pumps start lifting it, don't you?

A. From the pump to the surface, yes.

Q. What type or size of pipes are those?

A. Those are fairly large pipes. I think the pipes in our Ross shaft, the water columns, are either 10 or 12-inch pipe.

Q. Do you ever have to replace any of those pipes?

A. Only at very long periods.

Q. Because of wastage or damage?

A. The wear from water being pumped through them is very slight. The Ross shaft, those pumping installations were put in in 1934. That shaft went into operation in 1934. Those water columns have not been replaced since then.

Q. Has there been any repair to them?

A. Minor, possibly.

Q. Is there any acid content to this water?

A. No, our water is not acid. We installed steel sets in our Ross shaft, and before making the decision to do that, the mine superintendent and I went through the mine and [fol. 887] inspected the structural steel in stations and other places where he knew that they had been put in at least 25 years before that, in order to see whether the corrosion and rust of that steel would be such that we wouldn't want to put steel sets in the shaft.

Q. Didn't Homestake file a second appeal with the War Production Board to be allowed to continue production because of arsenic that was available in its ore?

A. Not a second appeal, but we had been approached from Washington—the Army, the Chemical Warfare Division—asking us to investigate the possibility of producing arsenic, as our ore contains arsenopyrite. We made the investigation. Such investigations had been previously made, and it was established that it would not be economical. We made them again at that time and submitted the information that we could, with the installation of a very small amount of equipment to concentrate the arsenopyrite out of the ore, produce at full capacity ten tons of arsenic per

day, and at any reduction in production a correspondingly reduced amount.

Mr. Walker, our system manager, came to Washington in December to confer with regard to that.

By Mr. Rigney:

Q. That would be 1942?

A. December, 1942, yes.

We presented arguments with regard to our ability to [fol. 888] produce arsenic at the appeals hearing. But later on, some months later—I don't remember the date—we were advised that they would not call on us for any arsenic production.

By Mr. Barnes:

Q. Let me show you this document and ask you whether you recognize that as a copy of the letter that Mr. Walker wrote relating to the arsenic production?

A. (Examining document) Yes, that is such letter.

Offers in Evidence

Mr. Barnes: I offer that in evidence as Defendant's Exhibit No. 6.

Mr. Rigney: No objection, subject to verification, Your Honor.

The Commissioner: Yes. It may be admitted.

(Said copy of letter from Mr. Walker regarding arsenic production was marked "Defendant's Exhibit No. 6," and was admitted in evidence and made a part of this record.)

By Mr. Barnes:

Q. Let me show you this document, addressed to Homestake Mining Company, dated December 18, 1942, signed by A. N. Holcombe, Chairman, Appeals Board, and ask you whether that represents, to your recollection, the final disposition of that matter?

Mr. Rigney: No objection.

The Commissioner: Admitted.

[fol. 889] (Said letter, dated December 18, 1942, to Homestake Mining Company from A. N. Holcombe, Chairman,

Appeals Board, was marked "Defendant's Exhibit No. 7," and was admitted in evidence and made a part of this record.)

(Whereupon, the pending question was read by the reporter.)

The Witness: That is correct.

With reference to my previous answer, I was not thinking of that as a re-appeal. It was just a letter back and forth, and Mr. Walker came on and met, not with the Appeals Board, but with someone from the Chemical Warfare Division, to discuss our ability to produce arsenic.

By Mr. Barnes:

Q. Where is Mr. Walker now?

A. Lead, South Dakota.

Q. What leads you to believe that no hearing was held on that?

Mr. Rigney: If Your Honor please, he didn't say no hearing was held.

The Witness: I didn't think of it as an appeals hearing.

The Commissioner: Sustained.

By Mr. Barnes:

Q. Wouldn't the presence of arsenic in your mine produce acidity?

A. No.

Q. What effect would it have?

[fol. 890] A. The oxidation of the sulphides in the ore or the arsenopyrite and pyrrhotite, and the oxidation was not sufficiently rapid to produce any acid water.

Q. Even if it was allowed to stand in the sumps for settling purposes?

A. Even when it is allowed to stand ~~in the sumps~~ for settling purposes.

Q. What do you mean when you say that you could have adjusted your activities after October 8, 1942, by eliminating development work? What would you have actually eliminated?

A. Eliminated all of the drifting, cross-cutting, razing, and diamond drilling.

Q. In other words, you wouldn't have extended any,

what to a layman are tunnels, any farther from the shafts, is that correct?

A. That is correct.

Q. How far did those drifts extend? Was there any uniform length from the shaft, or does that vary?

A. Oh, no. They are very irregular in their distribution, many of which are driven to find the ore, to locate it. Some of them do not find ore, and the work in that area isn't carried any further. Where ore is found, then additional drifting and cross-cutting is done to more exactly delimit the ore, and diamond drilling is done with a sampling of the diamond drill core to delimit the ore, and event-
[fol. 891] ually it is made ready for mining.

Q. How large are those drifts? Not in length.

A. Our standard drifts are seven by seven in cross-section.

Q. When you actually start your mining—and you had some plans here that illustrated the method of your operation, which I think were marked as Exhibits 143 and 144—looking at Exhibit 143, which I think you said represents the type of mining you would have done during the period of limitation, is that correct?

A. Yes, we would have extracted ore from these shrinkage stopes.

Q. How large are those stopes?

A. Those are 60 feet in the long dimension of the ore body, and the full width of the particular ore—some of them may be at right angles to this section, 15, 20, 30 or 40 feet wide, and some of them may be as much as 200 or 300 feet wide.

Q. You would have had to cut those out, then, for that full area?

A. That is the extraction of ore, yes.

Q. How high did those veins run? You say that the width varied. Did their height vary, too?

A. Oh, yes. They are that shape (indicating), this being the width and this the height, which will run several
[fol. 892] hundreds of feet in various places. The length of the ore chute is the length down the dip, down the pitch.

Q. Which is not a horizontal distance or measurement, then?

A. No. It is an incline distance.

Q. So actually these stopes that you would have had

to cut out, the shrinkage stopes, would have been of varying sizes. One dimension would have been 60 feet.

A. Yes.

Q. That would be the only constant, is that right?

A. That would be the only constant.

The Commissioner: We will recess until 2:00 o'clock.

(Thereupon, at 12:30 o'clock p.m., a recess was taken in the hearing until 2:00 o'clock p.m.)

[fol. 893] AFTERNOON SESSION

(The hearing was resumed, at the time above mentioned, pursuant to the recess previously taken.)

The Commissioner: Had you finished your direct examination?

Mr. Rigney: Yes.

Mr. Barnes: I was on cross-examination, sir.

The Commissioner: All right.

GUY N. BJORGE, resumed the witness stand, and was examined and testified as follows:

Cross-Examination (Resumed).

By Mr. Barnes:

Q. If Homestake had limited its production to the shrinkage stopes as you suggest, what would have been the situation at the end of three years, say, of operations solely on shrinkage stopes, in the mine?

A. The tons of ore available for shrinkage stoping would have been reduced by the amount of production during that period.

Q. And would you have completely abandoned the pillar stopes?

A. Oh no, they would have been mined subsequently.

Q. They are a more expensive form of mining, didn't you say?

[fol. 894] A. They are somewhat more expensive, yes.

Q. Both in reduced output per man hour and in increased use of materials?

A. Yes, but a slightly higher grade ore because of more selective mining.

Q. What do you mean by "more selective mining"?

A. I mean more selective than the ore that is being produced in the shrinkage stopes. There are certain ribs of material that do not carry enough gold to pay their way, but must be taken. It is not possible to leave them in that type of mining, while in the square set stope you can leave even a very limited area of low grade material.

Q. Is it possible for the miner to recognize whether he has got low grade material or not?

A. We do it by sampling.

Q. But at the end of a period of two or three years of taking only shrinkage stopes you would have had left a considerable volume of pillar stopes that would have had to be removed, is that correct, or would have had to be mined?

A. Yes.

Mr. Rigney: When you say "pillar stopes" you are refering to the same thing that is described as square set stoping, is that right, Mr. Barnes? I mean, the testimony as I recall it up to now has distinguished between shrinkage stopes and square set stopes.

[fol. 895] The Commissioner: They used the word pillar in the testimony. If it was not this witness it was the first witness, Dr. McLaughlin.

By Mr. Barnes:

Q. What is the correct terminology to apply to the material that is left in between the shrinkage stopes?

A. That is the pillar, and it is mined by the square set method of stoping.

Q. And why do you use the words "square set"? Does that refer to the manner of breaking?

A. Because of the set of timber, there are four posts set on the corners of the square, and the caps and ties across the top, so that each set of timbers is a little square. It is actually a little—well, not a cube, because it is not actually cubical, but it is a cubical shape.

Q. As I follow your description, in mining the shrinkage stope you start from the bottom of the vein and work up, is that correct?

A. Yes.

Q. Now, I am not sure I understand, but in the same order of progression, how do you mine the square set stope?

A. We start at the level or a sub-level which is made midway between the two levels, which would be at 75 feet —the levels are 150 feet apart—and we begin at the top section, that is, the top level or sub-level, that has less [fol. 896] than 75 feet of ore above it, and mine to the top of the ore.

By the Commissioner:

Q. Going up?

A. Going up. Then we drop 75 feet below that portion that has been stoped and take another section of 75 feet, and again drop 75 feet and come up with another one until we have reached the bottom and mined out the entire pillar.

Q. How is the ore removed?

A. The ore drops to the botom in each section that you are mining and is drawn out of the chutes into cars and hauled out.

Q. I am thinking about what appears to be a form of flooring in those photographs that were introduced.

A. There is a complete floor on the working floor.

Q. Yes.

A. The miners put down 6-inch material for a floor to work on, and when they have broken ore onto that floor they speak of "turning it down," they pull up a portion of that floor and turn the ore down and it drops down to the bottom of the stope where it goes into chutes from which it is drawn into cars.

By Mr. Barnes:

Q. Do you use blasting in the square set stopes?

A. Yes.

Q. So that actually, if I follow you description, what [fol. 897] you do is that in each of these 75-foot sections you are working upward, but your progression of sections is downward; is that correct?

A. That is correct.

Q. Now, on the shrinkage stope, at what point do you withdraw the broken ore?

A. When the stope reaches a height that is regarded as the maximum for safe operation.

Q. Is that a criterion of management or is that determined by outside safety engineers, for example?

A. No, that is a criterion of our supervision.

By The Commissioner:

Q. You actually stand on the broken ore to work from above, don't you?

A. You stand on the ore to drill above and blast down more ore.

Q. So you use that for a floor?

A. Yes. And that is generally stopped at about 25 feet above a mine level. If that is not the top of the ore, the stope is drawn entirely empty, all of the ore cleaned out carefully, and it is then filled with waste. That will be some coarse waste from the development work and our sand tailings go back into the mine for fill, and then on top of that, at the elevation of the mine level, they lay fills and set a drift, you might say, of timbers with chutes, ore [fol. 898] chutes, and then they again fill with sand to about four feet above the top of those timbers, and then they draw the sand out to make hoppers in the sand above the chutes and start working on top of that sand to take the next lift of the stope up. And they continue and repeat that operation for whatever number of times is necessary for the vertical height of ore in that particular place.

By Mr. Barnes:

Q. Do you use the same type of machinery in working in the square set stopes and in the shrinkage stopes?

A. The machine drills and drill steel are all the same, and tugger hoists for hoisting material into the stope. In the square set stope there is the large additional quantity of timber that must be brought into that stope.

Q. What about hoisting material? You do not have to do any hoisting in the shrinkage stopes, do you?

A. The drill steel is let down into the stope through a raise from the level above. Drill steel on the machines.

Q. By the drill steel do you refer to what would be, in effect, a bit on a home drill, the actual cutting tool that fits into a drilling machine?

A. That drills the hole in the rock.

Q. Would you describe what one of those drills looks like?

A. Well, the drill steel that we were using at that time [fol. 899] was what was called a one-inch, quarter octagon. It means one inch square with a small bevel taken off on each corner. That steel is cut into the required lengths for the operation in the drill shop.

Q. What lengths do you use for that?

A. Oh, they vary from 2 to 10 feet long, with a bit forged on the end of that steel. And that steel is then operated in the air drill and drills the hole.

Q. Does it drill it by rotation or——

A. By impact, it is a hammer drill.

Q. Like a star drill?

A. But it rotates also. The blow is hit and then it rotates a little and another blow is hit and it continues rotation so that the bit is on a cross bite. They have edges in a cross and they rotate so those cutting edges cut at a different point to keep rotating all of the time as they are drilling.

By The Commissioner:

Q. Is it a slow rotation?

A. Well, it is a fairly fast rotation.

By Mr. Barnes:

Q. But it does not rotate at the moment of impact, it rotates between impacts, would that be a correct statement?

A. Those impacts come very rapidly, and it is just rotating all the time, so that the cutting edge is not in the [fol. 900] same position in the hole all the time. Every blow is at a different position in order to cut that rock and chip it and grind it fine enough so that it can be washed out of the hole.

By The Commissioner:

Q. That can be compared to the air drills that we see out in the street?

A. Yes. That is a jack hammer that we use in drilling holes for secondary blasting. We use many of those jack hammers of the same type you see in street work.

By Mr. Barnes:

Q. And these things you call drilling machines are pneumatically operated impact machines?

A. Impact machines operating with 100 pounds air pressure.

Q. Where does that air come from?

A. From the compressor plant on the surface.

Q. And you have permanent piping down to within a certain point of the place where the men are working; is that correct?

A. There is permanent piping to almost directly at the place they are working, and then they attach a rubber hose to the end of that for carrying the air to the machine, and also a water hose for washing the cuttings out and keeping the cuttings all wet to prevent the dissemination of dust.

Q. Is that a water spray that is running continuously? [fol. 901] A. The water goes down through a hole in the center of the drill steel.

Q. So you have to have water lines that come to the same point?

A. Yes.

Q. Where does that water come from?

A. That water comes from the surface.

Q. You do not use any of the water that has been collected in the sumps, then?

A. No, that is all pumped to the surface.

Q. Wouldn't it be simpler to use the water that was already in the mine?

A. Well, there has to be a supply with proper pressures, and what-not, coming down through the various tanks at various levels to reduce pressures, and so forth.

The Commissioner: Let me see those Exhibits 143 and 144, please.

By Mr. Barnes:

Q. So that within the mine you have three sets of pipes, is that correct, or maybe there are four? You have one set for removing water that has been collected in the mine, is that right?

A. In the shafts.

Q. In the shafts.

A. They don't extend around the mine, they are just [fol. 902] from the pump station up the shaft.

Q. You have one set that brings in air under pressure, is that right?

A. That is right.

Q. You have one set that brings in water, is that correct?

A. That is right.

Q. Are there any other pipe lines?

A. There is another set of pipes that brings high-pressure air for the hauling system. Our locomotives, except for two storage battery locomotives, are compressed air locomotives that operate on air that has been compressed to 1,000 pounds pressure, and the high-pressure air lines reach certain points on every level where the locomotives stop to recharge their receiver.

Q. In effect, then, they are not permanently connected to the high-pressure line, but they have a storage tank that——

A. There is a tank on the locomotive, and it is recharged at the necessary intervals. And the man has a gauge that shows his pressure, with a reserve tank that he may use if he runs his pressure too low to get back to a charging point again.

Q. Now, what pressures do you use for those locomotives? What does that line carry?

A. That is 1,000-pound air.

[fol. 903] Q. Referring to Plaintiffs' Exhibits 143 and 144, where is the shaft in relation to the work that is shown there?

A. Well, it may be quite a long distance away. There are two main operating shafts. The openings that are shaded in half of the opening at the line across the approximate middle of that drawing are——

Q. You are referring to which one, you are referring now to 143?

A. 143, yes.

—are the cross-cuts which connect with drifts that come from the shaft.

Q. There are three horizontal lines appearing there, and the half shaded——

A. This diagram represents a section through three

levels. There is a level there, and one there, and one there (indicating), and they are 150 feet apart. And these half shaded squares represent a cross-cut, or tunnel, if you wish to call it that.

By the Commissioner:

Q. That is what you call your development?

A. That is part of the development, yes. And the access to the stoping area is through those cross-cuts from the drifts that go to the shaft, and there are miles of drifts on every level.

By Mr. Barnes:

[fol. 904] Q. Now, referring to Plaintiffs' Exhibit 143 for the moment, the two cross-cuts that appear in the upper right-hand corner of that in the area which is shaded blue, I take it, are part of your development work that produced negative results; is that correct?

A. No, not necessarily because it is right in the ore area, and there might be ore in those cros-cuts at other points in the cross-cuts. This is diagramatic, and the colors, the blue represents what the geologists call the ellison formation which overlies the ore-bearing formation, and the pink is the ore-bearing formation, and in an area of this kind would be substantially all ore, and the green down below is the schist which they call the poorman formation that underlies the ore. But these are highly folded veins, so that the trace of one of those formations, either on a horizontal level or on a vertical section, will be extremely crooked lines or crooked belts. And they are so irregular that—as I said, this is purely diagramatic—but 50 feet or 100 feet off this section there might be ore in the area of that cross-cut.

Q. Referring to the one in the upper right-hand corner of Plaintiffs' Exhibit 143.

A. Yes.

Q. Now, connecting those cross-cuts at the various levels are certain vertical lines or shafts. What do you call those?

[fol. 905] A. They are raises. There are three names for vertical openings in mines. A shaft is a vertical opening,

beginning from the surface and extending vertically down in the mine. A winze——

Q. How do you spell that?

A. W-i-n-z-e—is exactly the same kind of an opening, but it begins at a mine level and it is driven by sinking from that level. A raise is a vertical opening that is driven by starting at the bottom, at our mine level, and drilling and blasting and continue that upward until it connects with the level above. It does not necessarily have to connect with the level above, it may stop short of that, but all of these that are shown are from level to the other.

Q. Do miners and equipment move through those raises?

A. Yes.

Q. By what means?

A. Well, miners will climb ladders.

Q. What about equipment?

A. I will take you on a good work-out by taking you underground and climbing you around a few of them.

Q. What about equipment? Do you have some sort of mechanism for moving equipment?

A. Tugger hoists, small operating hoists, mounted on a column, the same type as the machine drills or drifters are mounted on, with a steel cable on it, and a drum, and [fol. 906] they are used for [illegible]sting material into the stope. In the great majority of cases the material is lowered into the stope from the level above rather than to be hoisted from the level below. It is done the easier way whenever it is possible to do it.

Q. In other words, when you lower it all you have to use is a brake?

A. Yes.

Q. When the men are working, for example, in the shrinkage stope, which is the next to the left hand one shown in Plaintiffs' Exhibit 143, they get access to the working level, I take it, through the raise, and then through these lateral drifts, do you call those still, that are set off from that stope?

A. Yes, they are little drifts or cross-cuts. And there is always access into that stope from a minimum of two places and very often three or four, as a matter of safety. There will be the connection to the level above through

which materials are lowered. In most cases there will be a connection through a raise from the level below, and in the second stope from the right shown here, that has a =5 on it, there will almost continuously be a connection to one or the other of the raises in the pillar with these short drifts or cross-cuts. The levels of those short drifts and cross-cuts are staggered as between two pillars, and when the one that is the lowest connection in the raise to the right is closed off by broken ore, in usual practice, the [fol. 907] connection has already been made to the next higher one on the one on the opposite side of the stope.

By the Commissioner:

Q. You have not quite made it on this drawing yet.

A. We have not quite made it on this drawing. These drawings are purely diagrammatic.

By Mr. Barnes:

Q. In September of 1942, were you familiar with any of the inventory regulations that had been issued by the War Production Board?

A. Yes.

Q. Had Homestake Mining Company, to your knowledge, filed appeals or requests for relief from the provisions of any of those inventory regulations?

A. I am not sure that I know exactly what you mean by filing appeals for relief, but we had, of course, made efforts to obtain as good a priority situation as possible, and we had in February of 1942 made a request for a special consideration to order and reorder and replace gears on the hoists at the raw shaft that failed. We had gear failures on those hoists and asked for priority on assistance to replace those gears.

Q. Now, there was one point that I was not clear about in your description this morning. Apparently some items you say you charge to operating expense and others you [fol. 908] charge to inventory.

A. That is correct.

Q. Would you explain——

A. As of 1942 and prior years, and some years after that.

Q. Would you explain what the difference is, in the first place, from an operational standpoint, in charging them to one account or the other?

A. Certain materials, and a great many of them, the majority of materials, are received and are charged to an inventory account number and are carried as inventory in the inventory account until the supplies department receives an order for some of that material for use in any of the departments. They then issue the material and charge it to the department, to the job that it is requested for, and, of course, credit the inventory by the amount of material that has been taken out.

Certain materials are used—mine rail is an example of that—which was usable only by the mine. Instead of charging it into inventory when a carload of rail was received and then charging it out to operations whenever it was sent down into the mine, the entire carload was charged to the mine when received, and never appeared in inventory.

Q. So that if, for example, a carload of rail had arrived at the mine on December 30 in any year your inventory report as of December 31 would not show that at all, is that [fol. 909] correct?

A. No, that would have been expensed and charged into operations.

Q. And it would have been charged as an operating expense for the year in which it was received or paid for?

A. That is right. It was deemed at a time prior to that time a saving in accounting, and it did make costs erratic by that amount when your costs came in for one month. You might for the mine, say, have the charge of an entire carload of rail and then you might not have any charge for many months again until the next carload of rail was received.

Q. Incidentally, looking at Exhibits 143 and 144, in any of the tunnels—to use the generic term to apply for everything—shown on there, would rails have been laid?

A. Yes.

Q. In which ones of them would rails have been laid?

A. Rails were laid in all of them originally. Every foot of tunnel underground has a track laid as it is driven. Years later, when a level or a portion of a level has been

worked out, and we would have no more ore on it, then that track is torn up.

Q. Now, let me ask you this specifically: you would not lay it in the short drifts that go from the raise into the shrinkage stopes, would you?

A. The ones on the levels. There are no tracks laid [fol. 910] in those short drifts that go into the stopes, except at the sub-level in square set stoping. In the stoping in the pillar there is a sub-level midway between two levels which is not very long. It may be 100 or 150 or 200 feet long, and the track is laid in that.

Q. Can you show us one of those on Plaintiffs' Exhibit 144?

A. In the section near the upper right-hand corner marked 2 there is a half shaded area at the bottom with an indication of chutes coming into it from either side. That is a sub-level cross-cut which will have a track in it. Those are temporary. That will be in there until the ore above that has been mined out, and also the ore below. When it is mined down to the next level, then the tracks in that cross-cut will be taken out and reused in another location.

Q. Now, looking at the point that is marked 4 on there, is that the same type of thing, that has a half shaded area there?

A. That is on the level there, and again the track will be in that cross-cut not only until that immediate ore is mined out, but as long as transportation through that cross-cut is required by any of the operations.

Q. Now, I notice that in the various stopes that are shown here as having been shaded in dark color, as having been filled with waste, at the level, the intermediate level [fol. 911] that appears on Exhibit 144, there is an indication which, I take it, was originally a cross-cut through each of those; is that right?

A. That is right.

Q. Are those still maintained open?

A. Sometimes the future need for them is eliminated when that particular stope is finished, and they are abandoned. But in the majority of cases they are kept open for ventilation ways and possibly for transportation to the other ore areas and under one that has just been mined here.

Q. How are they kept open?

A. They are timbered through the section that has been stoped, and that timber is replaced as it either rots or crushes. With the sand filling that we do now and have done, and were doing in 1942, that sand solidifies to such an extent that those openings stand very well. You can go into them where timber is rotted to the point of having very little strength left, but they are standing perfectly well because the sand around it has become solidified.

Q. Are there still tracks maintained through those, then?

A. In most cases, yes.

Q. Do you have a firm enough base that you can operate your trains and mine cars through there without having to continually put ballast or something akin to it——

[fol. 912] A. Trains operate through them whenever necessary all the time.

Q. Well, are there some items that are purchased that are treated in your accounts as capital items?

A. Yes.

Q. What are those?

A. Everything that the Internal Revenue Department requires that we capitalize for income tax purposes.

Q. Are your mine cars and locomotives treated as capitalized, do you know?

A. The locomotives that are in operation now, with the exception of the two battery locomotives, were purchased long before there was income tax, and there was no accounting of that kind. The battery locomotives, I don't think, were capitalized because the Internal Revenue Department had a ruling for many years that equipment that went underground could be expensed when it went underground. That is with the exception of major installations of pump stations and things of that sort. Of course, all permanent installations, every piece of equipment fixed on a firm foundation, the structure housing it and everything of that sort, is capitalized, and then so much depreciation taken.

By the Commissioner:

Q. How about your new shafts you put down?

A. That was set up as capital and depreciated over a [fol. 913] period of years. All kinds of mobile equipment, the portable compressor, a truck, and automobile, are all

charged to the capital account. A thing like an automobile would be set up for five years life for depreciation, and other types of equipment may be set up for ten, fifteen, or twenty years life for depreciation.

By Mr. Barnes:

Q. Down to March, 1942, when your serial number was revoked under P-56, had you been using the A-8 priority under P-56 for purchasing for the mine?

A. Yes.

Q. What priority did you use up to that date?

A. A-10 under things that needed priorities.

Q. Do you recall whether or not Homestake at any point prior to October 8, 1942 made application for special ratings on PD-1-a or any other form?

A. We made application on PD-1-a for the replacement of the gears that had failed in February of 1942, and received a rating of A-1-a for those gears, I think.

Q. Had you made any other applications that you can recall?

A. I think that is all.

Q. You listed here a number of different items that were what you said essential to the operation of the mine, sir. Limiting ourselves to the period from about October 1, [fol. 914] 1941 to October 1, 1942, do you recall the quantity of explosives that were purchased by Homestake during that period?

A. That was a year's operation, and I should think, therefore, that the quantity of explosives purchased would be approximately one million and one half pounds.

Q. Would that all have been dynamite?

A. That is all dynamite, yes.

Q. What about fuses?

A. Well, the fuse would also have been purchased, and caps.

Q. What quantities of those, do you know?

A. Well, the quantity that was on hand at that time was 1,300,000-some-thousand feet, which was sufficient for a little bit over a year.

Q. I think you will find it was 1,365,760.

A. I am off on my figures, maybe.

Q. You have got the exhibits here. You can use 146 on that one.

By the Commissioner:

Q. That was on fuse?

A. Fuse, yes.

By Mr. Barnes:

Q. I got that figure from 148. Directing your attention to Plaintiffs' Exhibit 148 on page——

A. Correct, I misspoke, 3,165,000. I reversed the figures. [fol. 915] Q. Let me ask you this: during the preceding year had Homestake's inventory remained approximately constant?

A. Yes.

Mr. Rigney: Preceding what?

Mr. Barnes: The year preceding October 1, 1942.

The Witness: 1942. The total inventory had decreased somewhat in that period.

By Mr. Barnes:

Q. With respect to explosives, do you know whether that increased or decreased?

A. The dynamite was relatively stable, because we ordered dynamite every month for delivery the following month. And fuse was always received in large quantities, because we purchased a carload at a time. So that as of any given date the inventory of fuse would depend on whether we had just received a carload or were just about ready to receive one.

Q. I notice that you had some 45 blasting machines of various sizes. Do you know whether you acquired any during the preceding year?

A. Those are not replaceable very often. They are used for a long time.

Q. Do you recall whether you bought any?

A. I cannot recall whether any were purchased in that year or not.

Q. The next item I see under that heading of Explosives [fol. 916] is reels. What are reels?

A. They are the reels of wire.

Q. What size wire is that?

A. It is a fine wire that goes from the blasting machine to the circuit that is to be blasted.

Q. That is not recovered after the blast?

A. Yes.

Q. It is?

A. The short pieces of wire on which the holes are wired up are not recoverable, but the wire from the blasting machine to that ponit is reeled up and reused many times.

Q. And do you recall the extent to which you had purchased copper wire of that type during the preceding year?

A. I am afraid I cannot. At that time I signed practically all of our purchase orders, but with the volume of them purchased in the course of a year it would be impossible to remember just which ones were purchased and which ones were not.

Q. Did Homestake have a purchasing agent?

A. We have a man who was not designated as purchasing agent, but Chief Storekeper, and the purchase orders came down from the supplies department and were signed in our office.

Q. Was he in charge of purchasing items, whether they were to be charged to operating expense or to inventory?

A. He received the orders from the various departments, in the majority of cases. In some cases the routine orders [fol. 917] for dynamite, for example, would come directly from the mine department down to our office and be signed, and then a copy of it would go back to the supplies department.

Q. Do you recall with respect to this copper wire about what the general magnitude of your general usage was in a year?

A. No, I cannot give that, but it was not very large.

Q. One reel, ten reels?

A. Nearly all of our blasting at that time was by fuse rather than by electric blasting. There were rare cases when electric blasting was used. Electric blasting was used in raises.

Q. What about galvanometers? For what purpose were they used?

A. To check the charge given off by the blasting machine. The blasting machine is an electric pull-up machine that sends out an electric current, and that was to check the measurement of that.

Q. Why was it necessary to check that?

A. You have to know whether the current that is going out is the proper current for setting off the blast.

Q. Can't you hear whether the blast is going off or not?

A. Well, you don't want to use a faulty machine, and take the risk of having missed holes. Of course, you have got to hear it and the miners count the holes as they hear them going off to determine whether they have missed a hole or not.

[fol. 918] Q. I noticed you have 45 blasting machines and 18 galvanometers. How do you match them up?

A. They are not matched up, because a galvanometer is used to test these machines at intervals, not at every blast.

Q. Under normal operations, say, in January 1942, how many blasting machines would be in use in the mines at one time?

A. I cannot answer that exactly, but there would not be very many, because they were used for two raises. I am quite sure there would not have been half of these in use at any one time.

Q. Your next item is blasting caps. How long would that supply of blasting caps have lasted you?

A. I am afraid I don't have a recollection of the rate of use of blasting caps.

Q. Well, how much dynamite would you put in a hole?

A. That varies with the hole. In the mining operation it runs to about one pound per ton of ore broken.

Q. I see. The next item is marked electric blasting caps, all delays.

A. That means, the electric blasting caps are with different delays from the time that the electric shock hits that cap, there is a very short period of delay, and in blasting holes they have to be blasted in the proper order, and the caps of varying delays are used in order to get [fol. 919] those holes to go off successively.

Q. In other words, you would have to have a group that would fire blasts in the order, one, two, three, four, five, six, for example?

A. Yes.

Q. Is it possible that you might find yourself with a lot of caps that had a #6 delay and none of the #5?

A. Well, the aim was always to keep them balanced. As I said before, nearly all of our blasting was fuse blasting. All of the blasting in drift headings and all of the blasting in stopes was set off by a fuse.

Q. But you had 45 blasting machines?

A. Right.

Q. And your lead-in wire, which is the last item shown there, would similarly be used in electrical blasting, is that right?

A. Yes.

Q. Do you have any recollection of how much of that you used in the course of a year?

A. No, I do not.

Q. The next item you were asked about was the item of pipe, which I think also shows in Plaintiffs' Exhibit No. 148 under the heading "Air Distribution Equipment".

Now, I take it that the pipe shown there is the type of pipe that was used to bring air in from your compressors to [fol. 920] your drills; is that correct?

A. Those are practically all the distribution lines. There are two or three items of 3- and 4- and 6-inch diameters, but the others, the smaller pipes, are the ones that are used for distribution directly to the working face. The larger pipe is a permanent installation distributing air through the mine, and then as the drift heading is advanced, the pipe, air line and water line, are carried into that drift heading, and extension put on every few days as required by the advance of the heading.

Q. Going back to Plaintiffs' Exhibit No. 143 for the moment, where we show shrinkage stopes, and taking the one on the extreme right, for example, which is marked with the #4, where I take it work is just starting—is that correct?

A. That is correct.

Q. From what source would the air line for that stope have to be brought?

A. The air line is in all probability in the cross-cut immediately above that, installed when that cross-cut was driven, and then it is extended from that point into the point where they need it in the stope.

Q. And what size is that air line in the cross-cut?

A. I think the air lines in the cross-cut would probably be two inches.

Q. Two inch?

[fol. 921] A. Yes.

Q. Then you put, I take it, some kind of a junction on that line in the cross-cut?

A. That is right.

Q. And tap it?

A. We put a T on the end of the line and carry another line down to the stope.

Q. Do you use a two-inch line there too?

A. In some cases we use two-inch line and in some cases it might be 1½-inch line.

Q. As that stope progresses upward, where is the line maintained?

A. The line would generally be maintained in the raise from above. It would come down the raise from the level above, possibly 150 feet, and then as the stope advanced sections would be taken off that pipe as the stope became higher and higher. The air and water lines would come down so that they would not be disturbed except at the actual advance of the stope.

Q. So that then when we get over to the center stope that is shown on that exhibit, where you have just passed one level, would your air lines still be coming from the level above that?

A. Right.

Q. Would they have been coming from that level at all [fol. 922] times during that particular operation?

A. In practically every one of those stopes I think the air lines and water lines come from the level above. That line installed is fixed and permanent, and only has to have sections taken off as the stope advances. The end of the pipe will be the distance from which they can connect their rubber hose.

Q. Now, in the raise above it attaches to the line in a cross-cut, is that right?

A. Yes.

Q. And what happens when, as we see in Exhibit 144, the operation of one of those stopes passes the cross-cut? What happens to the lines that are in the cross-cut during that period time?

A. They will be taken out. And when they get above the level there will be a new set of lines coming in from the level above. In some cases there may be pipe lines in that cross-cut from which they can connect from below and go into the stope for a while, but in a great majority of cases the air and water lines will come from the level above.

Q. Where are all of these lines that, as you said, would have allowed you to continue operating indefinitely by a process of cannibalizing? Where would all of them have been left in the mine?

A. There are upwards of 100 miles of active level workings in the mine, and there are many of those that were [fol. 923] not in active stoping areas at the time from which pipe lines and rail could be removed and taken where they were needed.

Q. Then, in other words, you would have been forced under those circumstances into a potential double or triple handling of that type, is that right, because if those stopes afterward became activated when materials were again available you would have to reinstall the pipe, is that correct?

A. That is correct. That is a very small item of work as compared with the total stoping operation.

Q. Now, if that was the case, if you had so much pipe available throughout the mine, why did you maintain any inventory of pipe at all?

A. We were doing development work and were extending drifts, and there was pipe necessary for us in those extensions.

Q. But aren't there some drifts which have been extended to the boundaries of your property, or something of that kind, so they are no longer in use?

A. There are always some drifts that we at times abandon, but in normal operation that will wait a long time, because at one given time we may not feel sure that that drift has yet served its full purpose.

The Commissioner: A question suggests itself to me, and I like to get the questions out as they suggest themselves because they frequently develop other questions on the part of both counsel.

[fol. 924] Mr. Barnes: If you are like me, sometimes I forget them if I do not ask them when I think of them.

The Commissioner: That is another reason.

By the Commissioner:

Q. How much of these various operations that you have been testifying about is performed by miners and muckers?

A. The mining operation is all men that are classified as miners.

Q. What do you include in the mining operation?

A. Well, the development drifts, cross-cuts, raises, all of the ore extraction, the actual drilling and blasting of the ore in stopes.

Mr. Barnes: He wants to know about the installation of these pipes.

By the Commissioner: That is what I was thinking of, wiring, and——

A. They are done by pipe men. Tracks are laid by track crews.

By Mr. Barnes:

Q. What about wiring, electrical wiring?

A. That is done by the electrical department. As a matter of fact, we don't let anyone except the electricians do electrical work.

By the Commissioner:

Q. So that you have a good many men besides miners and [fol. 925] muckers doing underground operations then?

A. Yes, that work underground in these operations, and the haulage of ore to the shafts is a matter of the chute pullers. They are not miners. That is one of the early jobs that inexperienced men go on, pulling ore out of the chutes into the cars. There are motor men, and there are track cleaners, keeping the drifts and cross-cuts clean, and there are the dumpers that dump ore trains at the shaft, the skip tankers that tend to the drawing of the ore, loading the skips and hoisting it to the surface, the cagers that haul the men on mine cages. In a city building you would call them an elevator operator. They are cagers in a mine.

Q. Percentage-wise, how many of the employees of Homestake work underground as distinguished from above the surface?

In answering that question I don't necessarily mean underground all the time, but wherever their operations include underground work.

A. At full capacity operation, prior to 1940, or to the

shut-down, our Mine Department payroll had approximately 1200 or a little under 1200 men.

By Mr. Barnes:

Q. Does that include your electricians, for example?

A. No, they are in the Electrical Department.

Q. But there are some electricians that work under-[fol. 926] ground too?

A. Part of the time, yes. And the surface departments, exclusive of the lumber and timber operation, would at that time have had about 800 men. And out of the men that were working underground immediately before the shut-down 47% of the men that were on the Mine Department payroll were classified as miners.

Q. But some of these 800 that you classed as surface employees would occasionally have worked underground?

A. Yes.

Q. Electricians, and so forth?

A. Electricians.

Q. Pipe men?

A. The major part of the work of the Electrical Department is to maintain, to operate the hydro-electric plants and the steam plant, and to service all of the electrical equipment, most of which is on the surface, as you know, electric motors that drive all kinds of machines are largely on the surface, and a small part of the crew would be delegated to underground work of making extensions underground. There are the installations and the wiring to the pump stations, and an underground hoist station that we have that were completed with permanent wiring. They extend the wiring for lighting all over the mine. But there are no electric circuits into many of these drifts. The main drifts, [fol. 927] the haulage ways are electric lighted, but most of the secondary ones, the cross-cuts and so forth, have no electric wiring.

Q. What about the pipe men you refer to? Are they included in the mine?

A. They are included in the Mine Department payroll.

Q. Do you have pump tenders or anything like that on the pumps?

A. We have pump men.

Q. Are they in the Mining Department?

A. No, they are in the Mechanical Department.

Q. So they would be part of the 800 that you listed?

A. That is right.

Q. Are there any other groups in the 800 surface employees who would be employed at least part time underground?

A. Hoisting engineers are all on the Mechanical Department payroll, and men that are operating hoists.

By the Commissioner:

Q. Most of those would be above the ground?

A. We have one underground hoist station on the winze, and the others would be on the surface.

By Mr. Barnes:

Q. Now on the question of your inventory of rails that you read from, which I believe again was on Exhibit 148 down at the bottom of page 4——

A. Right.

[fol. 928] Q. I notice you said that you now use entirely 40-pound rail, is that right?

A. The tracks in the the mine are 40-pound rail throughout.

Q. I notice your inventory includes 25-pound rail and 15-pound rail.

A. Small quantities of lighter rails have been used in special places.

Q. Where, for example?

A. I don't think there are any of them in the main mine. If we go out and drive a little prospect tunnel in some surface area we probably would put in lighter rail. The 15-pound rail we practically never use. The 300 feet listed here may have been something that has been in stock for a long while.

Q. But the ratio of your 25-pound rail and your new 40-pound rail is a ratio of about 1 in 10? Isn't it?

A. Just about, yes. But that would be something that would not be a moving stock while the 40-pound rail would be reordered and used all the time.

Q. What about your used 40-pound rail? What do you do with it?

A. Used 40-pound rail?

Q. Yes.

A. We reuse it.

Q. I thought you said in the mine you had used new 40-[fol. 929] pound rail as a matter of practice.

A. We lay new 40-pound rail in practically all of the drift headings. We lay very good 40-pound rail in all of the major haulage ways. But where the rail is taken out, it is always salvaged unless the ball of the rail is too far gone, and it is reused.

Q. How long prior to 1942 had Homestake been using a 40-pound rail?

A. Well, since very long before I came there.

Q. Is it ever necessary to replace any of that rail?

A. Occasionally, yes. They last a long time. But when, as I said, the ball of the rail gets worn down too far then the new rail will be laid. But the replacement of rail in a period of three or four or five years would be very small indeed.

Q. Do you have any idea what it would amount to in magnitude, either in feet, tons or any other measure?

A. Well, I would say that we have probably operated for a length of time when there would be no replacement of rails in most of the haulage ways, and certainly a few thousand feet would take care of that work for a long period.

Q. What do you mean by a few? 2000? 3000?

A. 2000 or 3000 or 4000.

Q. Do you know whether the company had bought any rail during the twelve months preceding October 8, 1942? [fol. 930] Mr. Rigney: I do not know whether Mr. Bjorge wanted to add something to his answer there, Mr. Barnes.

The Commissioner: If he did, he may do so.

The Witness: I think I was just going to say that in that kind of operation, restricted operation we have been talking about, there would be ample recovery of rails underground to more than fulfill any needs.

By Mr. Barnes:

Q. Do you know whether Homestake had purchased any rails during the twelve months preceding October 8, 1942?

A. I am quite certain that they purchased rails during that time.

Q. Do you have any idea what quantity of rail they purchased?

A. I would not be sure, but in all probability, a couple of carloads.

Q. How many feet would that represent? Do you know?

A. I have to calculate it and transpose—we use it in feet all the time.

Q. Your 40-pound rail means 40 pounds to the yard, doesn't it?

A. Correct, so that——

Q. A 40,000-pound car——

A. A 40,000-pound car would be——

Q. A thousand yards?

[fol. 931] A. A thousand yards? It would be more than that. That would be only a thousand yards.

Q. 3000 feet.

A. 3000 feet. And we would be driving possibly 18,000 feet of drift during the year, and that is with two rails. It would take 36,000 feet of rail. I was way off. I made no mental calculations.

Q. On rock drills and parts, I believe you referred to both Exhibits 148 and 149, and I do not know whether you can find the place in Exhibit 149 that you referred to or not because there was some difficulty on page numbers.

A. That is the repair parts.

Q. Repair parts I was going to ask you about specifically. Are these items that are listed in Plaintiffs' Exhibit 149 under the heading "Mine, Rock Drill Repair Shop Inventory as of November 18, 1942" are those items that would be used to repair the drills which are shown on Plaintiffs' Exhibit 148 under the heading "Air Drills and Equipment"?

A. Yes.

Q. And how can you identify the repair parts with the various types of drills? Is there any way of doing that?

A. I cannot do that, no. In some headings here they are listed, Ingersoll X59 Jack hammer parts, Ingersoll X72 drifters, Chicago Pneumatic CP 44 Stopers. And they are distributed through the inventory according to the [fol. 932] machines for which they are repair parts.

Q. Plaintiffs' Exhibit 148 does not show the types of machines in that detail?

A. This simply shows the total number for, for example, there are 222 3½-inch drifters.

Q. What is a drifter, incidentally?

A. A drifter is a machine that is mounted on a column for drilling around in a drift. It gets its name from that, though we also were using them, the same type drifter, column-mounted, in the stopes.

Q. In both types of stopes?

A. In both types of stopes. We were using the column-mounted drifters for the primary drilling and blasting, and jack hammers for the secondary blasting. That is, drilling and blasting the pieces that were too large for handling that had to be reblasted.

Q. Let me see if I follow your description. A drifter is a machine that is basically designed for working in a horizontal position into a face that is vertical to it; is that correct?

A. It obtained its name from that because it was initially, when pneumatic machines were first developed, a machine that was used in drifting.

Q. And when you were working in a stope you were working overhead, were you not?

[fol. 933] A. Yes, drilling flat holes.

Q. What do you mean by "drilling flat holes"?

A. Nearly horizontal. In a shrinkage stope the machine is set up on a column and then drills as many holes as they can fan out from that set-up. In a square set stope, the raised set that I spoke about the other day, one set is raised above with the use of a stoper, which is used to drill vertical or near vertical holes, at least a stope inclination.

The Commissioner: We will recess for five minutes.

(Thereupon, a five-minute recess was taken in the hearing.)

[fol. 934] By Mr. Barnes:

Q. If you will look at the photograph which is marked Plaintiffs' Exhibit 139, I take it that represents a drifter working more or less normally at the end of a drift, is that correct?

A. That is correct.

(Here followed discussion off the record.)

By Mr. Barnes:

Q. I am afraid the reporter, because you were speaking in a low tone of voice to the Commissioner, didn't get that. Will you explain that again for the record now?

A. In this picture——

Mr. Rigney: Referring to Plaintiffs' Exhibit 139?.

The Witness: 139.

—two drifters are mounted on vertical columns which are blocked against the back, and they have a screw arrangement for making them tight. They have an arm which may be moved up and down on the column, or turned to either side of the column, and the machine drill is mounted on that arm and can be positioned to place the holes where they desire. In a drift heading like that, about 28 holes will be drilled in order to blast around.

By Mr. Barnes:

Q. That column that you refer to, I take it, then, is somewhat akin to what, in my experience, might have been [fol. 935] one of these jacks put under a sagging floor that can be screwed up or down?

A. There is a jack at one end of it. They set it on a block at the bottom and put a block at the top, and drive wedges in until it is practically tight, and then give the jackscrew a few turns in order to tighten it so it will stand with the operation of the machine.

Q. I will then direct your attention to Plaintiff's Exhibit 141. Will you tell us what that represents?

A. That represents a picture, inner shrinkage stope, with one drifter mounted on a column, drilling the holes for blasting the back of that stope. A second miner is working with a jackhammer drilling one of the boulders from the previous blast which is too large to go through the chutes, and sometimes require re-blasting. You see a number of the boulders on that pile are much too large to go through any chute, so they have to be redrilled and blasted.

Q. If, as is shown in that picture, the drifter is used in the stope to keep drilling holes at an angle deviating very slightly from the horizontal, how did you ever succeed in getting the top of the stope down?

A. There will always be a high point in the stope. They work from that and drill and advance. With nearly horizontal holes, the blast breaks to a bench ahead, and then they drill into that bench again. If the stope should [fol. 936] be entirely flat, no high point from which to start, they would take a stoper and drill a hole in the back, several holes, and blast it down and get a high point from which to start with this type of drilling.

Q. Do we have a picture here—for example, is there a stoper shown in Plaintiffs' Exhibit 140?

A. No. That picture has three column-mounted drifters, and one jackhammer doing the secondary drilling.

Q. Similarly, I take it the tool shown in Plaintiffs' Exhibit 145 is a drifter, is that correct?

A. That is a column-mounted drifter.

Q. In Plaintiffs' Exhibit No. 146, there is no tool whatsoever.

A. There are no machine drills.

Q. In Plaintiffs' Exhibit 142—frankly, I had some difficulty deciding which is the top and which is the bottom of it—if we put the legend on the left-hand side, would we be looking at the picture right?

A. Yes, that is right.

Q. What is that tool?

A. That also has a column-mounted drifter and a jackhammer doing secondary blasting.

Q. So, none of these pictures shows a stoper?

A. None of them shows a stoper. A stoper is a drill with a mounting on an air-feed leg, so that compressed [fol. 937] air passes also into the leg, which is really a cylinder with a long piston on it, and that pushes the machine against the back. Most of the drilling with it is reasonably steeply inclined, but you can drill 45 degree angle holes.

Q. Counsel has just handed me another picture which hasn't been marked—does that show a stoper?

A. That is a stoper. The end of it, a spike end, is set into this plank beside the rail, and the air feed leg will push the machine up against the back so that it is tight against the bottom of the hole all the time.

By the Commissioner:

Q. In other words, as it pushes into the hole, it gets longer?

A. That is right.

By Mr. Barnes:

Q. I take it that you actually have a stoper in that picture operating a drift, is that right?

A. This particular man is probably drilling a hole to insert a bolt for handing pipe or something in the drifter.

Mr. Rigney: May I suggest that this be marked and admitted into evidence as Plaintiffs' Exhibit next in order?

Mr. Barnes: No objection.

The Comissioner: Admitted.

(Said photograph, showing stoper in operation, was marked "Plaintiffs' Exhibit No. 150," and was admitted in evidence and made a part of this record.)

[fol. 938] By Mr. Barnes:

Q. I see among the other tools you have listed in Plaintiffs' Exhibit 148 are something called sinkers. What are those?

A. It is substantially the same as a jackhammer, like the machine the Commissioner asked about a while ago. It is a machine with which you drill down holes. There is no mounting whatever. The operator of the machine simply holds it with the two handles and drills down holes that are steeply pitched. They are used in sinking shafts, and that is the way they get the name sinker.

Q. You use them in distinction to a jackhammer. You show 234 jackhammers, and then 12 sinkers in Exhibit 148.

A. I think the sinkers would be larger machines than the jackhammers. The jackhammers are used in the stopes for the secondary drilling, while the sinkers are used in the actual sinking of a vertical opening, drilling deep holes. It is therefore a larger machine.

Q. Referring to the drifters, the stopers, jackhammers — I take it that from time to time they need certain repairs, is that correct?

Q. What nature of repairs do you have to make to them?

A. We have a small drill repair shop solely for the repair of rocks drills and the hose, air hose and water hose, [fol. 939] in which normally there would be three men working, two men on rock drills and one on repairing hose. Any machine that is not operating satisfactorily is sent up to that little drill repair shop which is immediately adjacent to the shaft, and the repairman in there will put it in working order. It may be just some little item of repair. It may be something that is simply stuck. There may be dirt in the machine, or what-not, so they just clean it up and send it back. Or they may find it worn in some place so they have to put in a replacement part. In some cases it may be a machine that is fairly far gone, and they have to put in a number of replacement parts. They put the machine back in good working order and send it back to the mine again.

Q. Has there ever, in your experience, been any so far gone that it wasn't worth repairing?

A. Oh, my, yes.

Q. How frequently does that occur under normal operations?

A. They can be made to work for a long time

Q. If you disregard the economics of the proposition, they can be made to work, is that right?

A. Yes. They can be made to work. There is no fixed point that I know of for discarding a machine and starting up with a new one.

Q. But it sometimes reaches the point that the repair is economically unwise, is that correct?

[fol. 940] A. Yes, where the air consumption of the machine is too great. Like every machine, it ultimately wears out. By the replacement of parts, sometimes replacing a cylinder or drilling out the cylinder and putting in a slightly larger piston, and what-not, it is made to work efficiently again.

Q. Incidentally, are these carried as capital items, do you know?

A. No.

Q. They are not?

A. The list on Exhibit 148 is a full inventory of all the machines that we had at that time, new and old; and the

general supplies inventory, Exhibit 149, has a listing of the machines that were new. They are also included in this other list. The rock drills have been an item that has been an expense to operation when it was sent underground.

Q. In your experience you know of no normal measure of the life of a rock drill, is that right?

A. No exact measure. Some years prior to 1942, I made a study of that, inquired of rock drill manufacturers, of their engineers, what they considered a good basis for life, of other mine operators; and from mine operators I found no general practice at all. Various ones had different rules, and in our operation we have discarded a machine when it was determined that it had served its useful life and that it was economy to buy a new machine. [fol. 941] Q. Do you keep any records with respect to individual machines, as to the number of hours or anything else that they operate.

A. We have the number of hours of operation for the various makes of machines in order to try to determine whether one make of machine gives us longer life than another one.

Q. Have you been able from those to draw any conclusion as to the number of hours of operation that you can obtain, on the average, from one of these rock drills before——

A. I don't think we could.

Q. But there are figures that the company has maintained for that purpose, are there not?

A. We have reports that show the comparative footage of holes drilled by various machines, and the comparative repair costs. But the number of machines here would be decidedly ample to take care of the restricted operations that we have talked about, for a much longer period.

Q. How many rock drills had Homestake purchased during the 12 months preceding October 8, 1942, do you know?

A. I can't answer that.

Q. Had it bought any?

A. Yes, I think so.

Q. Do you know whether it would be ten, one hundred?

A. It wouldn't be one hundred, I am sure.

Q. With respect to that inventory of repair parts that [fol. 942] is shown in Plaintiffs' Exhibit 149? since Plain-

tiffs' Exhibit 148 does not show the makes of the drills that the company had, is it possible to tell whether that list of parts was adequate to repair those drills, or not?

A. You couldn't tell from this alone, but it was certain that great effort was made to keep the repair parts in balance with the machines so as to have parts for the various machines.

Q. Had the company purchased any repair parts during the 12 months preceding October 8, 1942?

A. Certainly.

Q. Do you know the quantity?

A. No.

Q. You listed, I think, nine different types of mine cars in Plaintiffs' Exhibit 148. Why do you have so many different types?

A. The one-ton end dump flat-bottom cars are used in development work because of the convenience of dumping them into a worked-out stope or a raise; that you can just push the car to the end of a drift and dump it from the end.

Q. So if you had not done any development work, those 146 cars would not have been used, is that correct?

A. They could have been used for hauling ore. There were 706 one-ton side dump gable-bottom cars, which are our older type of ore-haulage car. Some years before that—it wasn't very long before 1942, I think in 1939, after a [fol. 943] great deal of study, we succeeded in getting a 2-½-ton and 3-ton car. Before that, no satisfactory car had been available in that size to operate on 18-inch gauge track. That has been difficult. That is the reason for the small cars. It definitely is too narrow a gauge for a mine of our production capacity, but we had it and had to get along with it.

We finally got these 187 three-ton and 57 two and one-half-ton cars. They have a special dumping arrangement with a wheel on one side that engages the track at the place where the ore is to be dumped, and dumps as the train is pulled through. They, as I say, were relatively new at that time.

The 45 five-ton bottom-dump cars are the cars used on the surface tramway. I say "surface." It is mostly underground. It is a tramway with a port operating to

the surface, hauling the ore from the two shafts to the mill.

That is the total number of mine cars. The others are timber trucks for transporting the mine timbers underground, the steel trucks for transporting the drill steel from the drill sharpening shop to the working places, and miscellaneous cars that are used for various purposes. Whether they include the latrine cars or not, I don't know.

Then there are 21 passenger cars for transporting the men from the shafts to somewhere near their working places.

Q. With respect to the material which was used to fill up the stopes, was that moved in these cars at all?

[fol. 944] A. All of the waste rock broken in development work was dumped in a worked-out stope that had an opening from the level on which it was developed, if that were possible. In development work below the lowest production level, that material had to be hoisted in cars and taken off the cage at the shaft on a level where there was an available stope in which to dump it.

When the sand tailings after the treatment of the ore is also run back into the mine for stope filling, that is run back by gravity.

Q. Does it go by gravity all the way to the stope?

A. All the way to the stope. It is run at about 55 to 60 per cent solids, sand in water. It flows into the stope.

Q. Do you know whether or not any mine cars had been purchased by Homestake during the 12 months preceding October 8, 1942?

A. I am quite certain that the last cars purchased were the large Granby cars, which I think were purchased in 1939.

Q. During your connection with the company, had any mine cars worn out to the point where they were disabled for operation?

A. Yes. Cars are built and repaired in our own shops.

Q. Do you build your own cars?

A. We build a great many of these cars. There have been none of those small cars purchased since I have been at Homestake.

[fol. 945] Q. When you say you build them, do you buy certain sub-assemblies?

A. No.

Q. You cast your own wheels?

A. We cast the wheels in our own shop and build the truck from structural steel shapes, and build the body of the car from steel plate and the necessary reinforcing pieces of steel.

Q. Are there tires on those wheels?

A. No.

Q. Steel tires?

A. They are cast iron wheels.

Q. With no tires?

A. With no tires.

Q. Doesn't that mean that you get a greater wear at the wheel and greater need of replacement than if you had tires on it?

A. Not in proportion to cost.

Q. What about the body? Does the body have a tendency to wear out before the understructure does?

A. Yes.

Q. How frequently do bodies have to be replaced or repaired?

A. I don't know whether I can give a timing on that, but on an average, they will be in the mine a long time before [fol. 946] the body has to be replaced, unless they get into a wreck and are damaged in that way.

Q. Is there sometimes a wreck?

A. You don't have transportation without having a car jump the track or go into the wall sometimes. They are not frequent, but there are cars that are damaged by that.

Q. The bodies, I take it, are made of steel plates?

A. Yes.

Q. Of the one-ton car, what is the dimension of the body? Do you recall that, approximately?

A. The one-ton car is about a 20 cubic foot car, and the side dump cars are slightly larger. They are about 22 cubic foot capacity.

Q. Are they square or not?

A. The flat-bottom cars are practically a square cross-section, and longer than their width or depth. The gable-bottom cars have an inverted "V" in the middle, with doors on the side that open, so they go out on each side of the car.

Q. Is a mine like the Homestake Mine subject to inspection by any regulatory authorities?

A. There is a State Mine Inspector for the State of South Dakota, but due to the fact that mining has been a very small industry in the State, and Homestake has always been recognized as going well beyond any State safety code in its safety practices, the mining code for the State is very [fol. 947] short, and the inspections of our property are very rarely made by the State Mine Inspector.

Q. What do you mean by "very rarely"? Does he come there once a year?

A. No.

Q. Once every five years?

A. It would be one in several years. I can't give the year now, but sometime, I think before 1929, they decided that the employment of a State Mine Inspector for the one mine operating in the State was an unnecessary expense and, although the law provided for a State Mine Inspector, one wasn't appointed until 1934, when some other mining activity started, and they again appointed a State Mine Inspector, and there has been one in office regularly since.

Q. But he inspects Homestake only once every three or four years?

A. He hasn't been at Homestake for more than a year now.

Q. How many other mining activities are there in the State, do you know?

A. There is the Bald Mountain Mining Company, the feldspar operation that I spoke about, the bentonite operations, which are all shallow surface cuts, and then a number of very small operations in some of the rarer things.

Q. Do you know whether or not he inspects those?

A. I presume that he does. I haven't followed him [fol. 948] around.

Q. You measure the life of the ropes on the hoists which, I take it, are not ropes at all, but cables?

A. They are steel cables.

Q. You measure the life by the number of tons that will be lifted by the cable, is that correct?

A. That is correct.

Q. Is that a standard measure of life?

A. We keep a record every time that a rope is replaced. We make a record of the date that that rope was placed on the hoist, and the date it was taken off, and the number of tons hoisted by it. That is for the ore hoists.

The cage hoist, which handles such a variety of material and such a variety of loads from the empty cage to fairly heavy loads, we just keep a time record on.

Q. For how long have those records been maintained, to your knowledge?

A. I think they have been maintained maybe always, I don't know. They have been maintained since I have been at Homestake.

Q. When was it that you went with the company?

A. 1932.

Q. Referring to Plaintiffs' Exhibits 148 and 149, what do you find there that indicates an inventory of electrical wiring or electrical wiring accessories?

[fol. 949] A. Exhibit 149 doesn't seem to have any electrical equipment. Electrical wiring and supplies inventory, 56 pages.

Q. It is the first section of the book, is that correct?

A. The first section of the book, yes.

Q. All of that, for further identification, goes back to the point where handwritten material appears in the inventory book, is that correct?

A. Yes, there is handwritten material on paint supplies. That is the paint department supplies.

Q. How is that inventory made up, Mr. Bjorge?

A. That inventory is made up by the actual physical count of all of the various items listed, by employees in the electrical department. It is headed at the top with the name of the person who entered it, and the person who priced it, which in some cases is the same person; and in some cases is a different person.

Then there is a spot-check made of these inventories by someone from the supplies department, and when our auditors come annually, they make a spot-check by simply picking out at random the inventory of certain items and going to the several departments and making a check of the particular things that they have picked out as a sample.

Q. Looking here, for example, at what is marked page 2 of the electrical inventory, I see some items have been stricken out. Do you know who did that or when it was done?

[fol. 950] A. No, I do not. There is one item on that page.

Q. Then over on page——

A. There is one item on page——

Q. 4½, the back of page 4.

A. These are sheets, not pages, that are 56.

Q. Then on page 5, I notice several items have been stricken through in red. Do you know what that is?

A. No, I do not.

Q. Then at the bottom of that page, I notice that several quantities have been stricken out, quantities that were typed in there, and red quantities and different prices inserted.

A. Apparently they are corrections of these items up here in the top part of the page that have been eliminated.

Q. Let's look at them and see, now. The first item at the bottom of the page was originally put down as 3,277 feet of half-inch galvanized rigid iron conduit, and it has been changed in red to 1,830. It hasn't been increased but has been decreased, hasn't it?

A. That is correct.

Q. So it hasn't been because of the elimination of the items at the top of the page.

A. I was referring back to this. That is a change in those figures. I think that what had been done was that the original figure had included salvaged conduit and had been [fol. 951] corrected to be only the new conduit.

Q. Do you know that, or is that a supposition that you are making?

A. I am certain that is the case.

Q. I am asking, do you know it?

A. Not absolutely.

Q. You don't think perhaps those might have been some of the items that have been checked by either the storekeepers or auditors and found to be in error?

A. On the basis probably that I suggest.

Q. Now, I notice that on the back of sheet 5, there are some items that have been crossed out in black, and on sheet 6 there have been some items——

Mr. Rigney: If Your Honor please, I think we ought to be specific.

By Mr. Barnes:

Q. There are three lines crossed out in black on the back of sheet 5. On sheet 6 there is one line crossed out in black, is that correct?

A. On the back of sheet 5 there are three lines which cover an item amounting to a value of $5.18, and on page 6 there is one item with a value of 55 cents that is crossed out.

Q. I notice that in some places beside some of these items on page 6 or sheet 6, there are red checkmarks beside some of the items. Do you know what those represent?

[fol. 952] A. No, I don't know what that mark represents.

Q. That is a type of mark normally used or frequently used by auditors?

A. It may be for the auditors to check on.

Q. Again, there is one item amounting to 92 cents stricken out on the back of sheet 6, and one item amounting to 35 cents, and one amounting to $31.11 stricken out on sheet 7, is that correct?

A. That is correct.

Q. Do you know when any of those deletions were made?

A. No. I am quite sure that they were made at the time of the taking of the inventory or immediately afterwards.

Q. When these inventories are made by the Department, what is done with them?

A. These inventories, after their audit, then become the basis for the supplies inventory listed in our annual report.

Q. Do they come to your attention at any time at or shortly after the time they are made?

A. Yes. I look them over.

Q. When?

A. Shortly after the first of the year when they are completed.

Q. Do you know whether or not these items which are [fol. 953] stricken out were stricken out in there at the time you saw them?

A. I don't remember with regard to this particular inventory.

Q. If they had been stricken out, wouldn't you have made inquiry as to the reason for it?

A. Probably, yes, if they were items of any consequence.

Q. Do you think it makes any difference whether your balance sheet is 55 cents off or $55 off?

Mr. Rigney: I object to that.

The Commissioner: Sustained.

By Mr. Barnes:

Q. What about those changes that were made in red there? Do you know whether or not those had been made before you saw it?

A. No, I don't.

Q. Is one of these made up in each department, an inventory of this type?

A. These inventories are made in the several departments. These names here are all electrical department employees.

Q. When it says at the top there, "Entered by," and a name, does that mean that is the person who made the physical count, or does that mean that that is the person who wrote it down on this sheet of paper? Do you know? [fol. 954] A. It is entered on the sheet by that person from sheets turned in by the men who are counting them.

Q. Let me direct your attention, since you called attention to some 55-cent items that have been stricken out, to Sheet 51.

A. I only read those that you were showing me.

Q. Look at Sheet 51. There are four different transformers that are listed there, each of which is priced at $205.10, which have been stricken out, is that correct?

A. That is correct.

Q. Similarly on the preceding sheet, the back of sheet 51, there are two other transformers similarly priced at $105.10 each, which have been stricken out, is that right?

A. I am certain that those are used transformers that had been put in the inventory in error.

Q. You didn't make any inventory of used but usable materials on hand?

A. The supplies inventory was all new material, not salvaged material.

Q. Did you record anywhere in the company the salvaged material that was considered to be usable?

A. No, that is not inventory.

Q. And not recorded anywhere?

A. No.

Q. Then, I notice that the material which is headed [fol. 955] "Paint Supplies" is written in pencil. Do some departments submit their inventories in that form, or did they in 1942?

A. They apparently did.

Q. I notice that although that is described as "paint supplies," the first sheet seems to relate entirely to glass, is that correct?

A. That is correct. All of our glass stock is in the paint shop, because the painters are the ones who replace broken glass.

Q. I take it, then—I just noticed the material on the back of the sheet represents paint, is that correct?

A. The first sheet has glass on one side and paints on the other. The second one has glass on one side and varnishes on the other, varnishes and lacquers. The third sheet has glass on one side and polished wire glass on the other. The fourth sheet has brushes on one side, brushes on both sides. The next sheet has paints and oils on one side, and also on the other.

Q. I started to say that I hadn't seen any paint at all, and I realized it was on the back there.

For the next one, the department is given as General Supplies. What is that?

A. That is the general supplies department.

Q. Where your storekeeper is located?

A. Yes, but in many cases the general supplies depart- [fol. 956] ment does not have the physical control of the materials which are listed. For example, these mill supplies and cyanide supplies are delivered directly to the metallurgical department. They are carried under the general supplies numbers, but they are under the supervision of the head of the metallurgical department.

Q. Do you know who makes the physical count of those at the end of the year, the general supplies department or the metallurgical department?

A. The metallurgical department makes the count, with some spot-checks by the supplies department and by the auditors.

Q. Looking at that sheet, I see, for example, there is no notation as to who entered it or who priced it. Under the heading "Extended by," the date December 31, 1942, appears. Was there any requirement that the people who entered and priced the material had to have their names appearing?

A. It obviously wasn't done regularly. The first one has

a one-letter initial on it. The next one, for the mill, has W. H. Todd, who was the foreman of the south mill.

Q. Now, you are in the metallurgical department, aren't you? I was referring to general supplies.

A. These were metallurgical supplies on that first sheet, also, in the metallurgical department.

[fol. 957] Q. In one case we have a pencil sheet which is headed under the department General Supplies. In the next case we have a typewritten sheet under the heading of the department Metallurgical, isn't that correct?

A. That is correct.

Q. Is there any indication as to who made the entry or did the pricing on the sheet relating to or headed General Supplies?

A. Not for certain. It has an "M" on it, but that may be a reference to the Metallurgical Department.

Q. How many different departments made inventory tabulations of this type?

A. The Supplies Department, the Mechanical Department, the Electrical Department, the Lumber and Timber Department, the Mine Department.

Q. And the Paint Shop?

A. And the Paint Shop, yes.

Q. I think the inventory of cyanide at the end of the year appears on that page that you were just referring to, the handwritten page with the heading General Supplies, is that correct?

A. That is correct.

Q. I see that there are two different types of cyanide listed there. Are they usable interchangeably?

A. Yes, but the one that is regularly used is the Aero [fol. 958] brand cyanide. The other, the smaller quantity, called flotation cyanide, is undoubtedly what remained of a carload of that ordered for special purposes. Our regular ordering month by month was of the Aero cyanide.

Q. How much cyanide did the company use in a year, normally, do you know?

A. That would be in the neighborhood of a million and a half pounds.

Q. How much zinc dust did the company use, do you know?

A. Zinc dust—I may have to do a little calculation on that. It would run between 40,000 and 50,000 pounds.

slightly over 3/100ths of a pound per ton of ore. So for a total operation of 1,400,000 tons, my calculation figures out between 40,000 and 50,000 pounds a year.

Q. What about mercury? You used mercury too, didn't you?

A. We did.

Q. Not all of that is recovered, is it?

A. No. There is a little consumed all the time.

Q. Percentage-wise, how much of it is consumed? Is there any way of measuring that in percentages?

A. There is, but I don't know the exact percentage now.

Q. In normal operation, do you know how much mercury you had to buy each year?

A. Yes. In our full normal operation, we had a consump-
[fol. 959] tion of around 600 or 700 pounds of mercury per month. Early in 1942, we were restricted to 1,040 pounds per quarter, and we got along with that. We used more than was necessary as an absolute safety factor in normal operations.

Q. You say you were restricted. By what means?

A. By the materials control department here, the War Production Board.

Q. You didn't secure your mercury, then, I take it, by use of your AA priority under P-56?

A. No. That restriction was a use restriction. We had been reporting regularly the consumption. There were forms for reporting the consumption of mercury, and they gave us instructions that we were restricted to a consumption of 1,040 pounds per quarter, and we were able to live with that amount.

Q. What do you use lime for?

A. Lime is used in the metallurgical department to get the proper alkalinity to the solution.

Q. With respect to balls, I think you said that you had made those in your own foundry, is that correct?

A. Yes, we cast the balls in our own foundry.

Q. From your own scrap?

A. From our own scrap.

Q. Had you ever encountered regulations of the War Production Board which placed restrictions on the use of scrap materials by other than steel mills?

[fol. 960] A. I don't recall. I know that there were re-

ports made out regularly as to the consumption of pig iron and scrap.

Q. You had shipped some iron and steel scrap out of the plant prior to October 8, 1942, hadn't you?

A. We had.

Q. In what quantities, do you know?

A. No, as of that date I don't know.

Mr. Rigney: I might suggest that if the witness cares to refer to his records that he has, they might aid him in refreshing his recollection on this point. I think he has something there which might help him.

The Commissioner: All right.

Mr. Rigney: You were asking this witness, and I thought he might be able to give us some very accurate records.

The Witness: We had shipped 543 net tons of scrap in 1941, and 3,660 tons in 1942.

By Mr. Barnes:

Q. You still had a substantial quantity of scrap?

A. We still had a substantial quantity of scrap on hand.

Q. There must have been something around the mill that was wearing out.

A. We had an accumulation of scrap from 65 years of operation.

[fol. 961] Q. You never shipped any scrap before that?

A. I don't believe that there was ever any scrap shipped. It wouldn't pay its way.

Q. Do you know what scrap prices were during World War I?

A. No, I do not, but I don't think there was any scrap shipped at that time. I know that we had shipped scrap in World War II that had been there since before World War I.

Q. In World War II, scrap sold at $21 a gross ton delivered Pittsburgh. Do you recall that?

A. We didn't ship any to Pittsburgh. We shipped it to Pueblo, Colorado.

Q. The price was $16.50 delivered at the mill, wasn't it?

A. No, it must have been more than that. I think we received something over $20 for it at Lead. We received whatever the ceiling prices were. They weren't under ceiling price.

Q. Are you talking now about steel or pig iron, cast iron?

A. Steel.

Q. Steel scrap?

A. Yes.

Q. Were you shipping on the basis of allocation made by the Scrap Section of the Steel Division of the War Production Board? Do you know?

[fol. 962] A. I don't know. We were shipping under whatever regulations there were, I am certain of that.

Q. From the standpoint of the price, it made some difference whether you were shipping under an allocation or not. That is why I asked you whether you knew whether or not you were shipping under an allocation.

A. I can't answer that.

Q. Who had charge of arranging those sales of scrap?

A. Whenever we had scrap ready to ship, we advised the Colorado Fuel and Iron, and they sent us in an order for it, and we shipped it.

Q. I mean, who in Homestake had the responsibility for collecting the scrap, loading it and notifying CF&I?

A. The Mechanical Department had the responsibility for gathering and loading.

Q. Who notified CF&I when it was ready for shipment?

A. I think the notices went either from me or Mr. Walker, the assistant manager.

Q. What about your liners for your grinding mills. What type of material were they made out of?

A. The liners for the ball mills we cast in our own shops. The liners at that time in our rod mills were purchased steel liners, but we had previously cast liners in our own foundry for the rod mills, also, a few years previously.

Q. The steel liners that you were purchasing for the [fol. 963] rod mills were what type of steel? Was that an ordinary carbon steel?

A. Yes.

Q. About a 10/40 steel, do you know?

A. I wouldn't attempt to give that analysis.

Q. What about the rods? Were they purchased?

A. The rods were purchased carbon steel.

Q. Do you recall what quantities of rods had been purchased during the 12 months preceding October 8, 1942?

A. The rod consumption was about one pound per ton, and with a year's production of 1,400,000 pounds, the prob-

ability is that approximately that quantity was purchased. [fol. 964] Q. What about the liners? What had been the consumption of that?

A. The liners consumption is a little more than a tenth of a pound to a ton of ore.

Q. What about your cones and mantles for the crusher?

A. I said a little more. A little more than a tenth, perhaps closer to one-eighth.

Q. With respect to cones and mantles for crushers, is it possible to measure their consumption in the same way by the ton of ore produced?

A. I don't have that figure in mind, but of course it is possible to get that figure.

Q. Do you know whether or not the Homestake had purchased any cones or mantles in the twelve months preceding October 8, 1942?

A. No, I am not sure of that.

Q. What about your stamps, shoes, and dies? Had you purchased any of them in the twelve months preceding October 8, 1942?

A. I am not sure that we did that. I made an error in the direct testimony in giving the life of those. I gave it more life than the stock that we actually had at that time. We cast our own dies, and the shoes had been cast previously but were being purchased at that time. They could be cast in our own foundry.

[fol. 965] Q. Incidently, what are stamps, shoes and dies that we are talking about? (Laughter)

A. Well, a stamp mill is a thing that is practically out of the picture now. Our stamp mill crushing will be finished sometime this year. The stamp mill consists of a cast iron mortar in which there are usually five stamps. They have stems with a shoe on the end, which drop on to the die, with a shaft up above with a series of cams on it. These stamps are alternately lifted and then just dropped by their own weight as they go off the end of the cam.

Q. And the die is merely the portion of the plate that they hit?

A. The crushing is between the shoe and the die, and there is a screen on the front of the mortar. There is water mixed with the ore. The ore is fed in to the mortar along with water, and whatever size screen is used on the front of the mortar, the material splashes and washes through when it is fine enough to go through the screen.

Q. You say that that type of crushing is practically out. Are you going to jaw crushers or something of that type now?

A. We have already completely revamped our crushing. We used to crush to minus one and one-half inch in two stages, and at the present time our crushing plants are three stages, in closed circuits with screens, so we crush to minus [fol. 966] one-half inch, and the material from that is going directly into the mills.

Q. What do you use for your crushing now that you didn't use then?

A. That was a two-stage crusher, the first, in a gyratory crusher set at six inches, and the second was a Symons cone crusher set at one and one-half inches. Now we have a new larger gyratory crusher for the first stage of crushing to about four inches, followed by a Symons standard cone crusher, which is set at about one and one-eighth inches, I believe it is. Then a second Symons short-head crusher which is set at one-half inch. That is in closed circuit with half inch screens, so the material comes out of the crusher carried by a conveyor belt to a screen and the material that goes through the screen goes down into the ore bin to be hauled to the mill, and the material which is still too coarse to go through the screen goes back into the crusher again.

Q. Aren't there parts that wear out or have to be replaced on those crushers other than the cones and mantles that you referred to?

A. They are the direct wearing parts that are worn in the crushing of the ore by abrasion with the ore.

Q. But there are other parts to the crusher, are there not? [fol. 967] A. There are the shafts from the drive motor that drives the eccentric and keeps the crusher revolving.

Q. There are gears?

A. They are not the rapidly wearing parts. They will last for years.

Q. You still have failures sometimes, don't you?

A. There is no machine that doesn't have a failure sometime.

Q. These are all powered by electric motors, I take it.

A. That is right.

Q. Occasionally you have to make repairs to some of the electric motors, do you not?

A. Very, very rarely. Those electric motors will operate year in and year out with very little repair work.

Q. What does the mill operate on, an eight-hour day?

A. The mill operates twenty-four hours a day, three hundred sixty-five days a year.

Q. You say there are very few repairs needed to be made to these electrical motors?

A. Very few on the drive motors for those shafts.

Q. Are those individual motors for the various machines?

A. There is a motor for each machine, yes, sir.

Q. How large were those motors?

A. I don't think I ought to try to give that from memory. [fols. 968-975] Q. Do you know whether or not Homestake purchased any electrical motors for the mill during the twelve months preceding October 8, 1942?

A. No, I am sure that we didn't. We had completed an extensive construction program early in 1942, and there was no equipment of that kind purchased after that.

Q. Do you know whether or not you purchased any repair parts for electrical motors during that same period of time?

A. Possibly a very small amount.

Q. Were those all new in 1942?

A. No.

[fol. 976] IN THE UNITED STATES COURT OF CLAIMS

[Title omitted]

Transcript of Testimony — February 3, 1953

TESTIMONY FOR PLAINTIFFS (Resumed)

The hearing was resumed, at the time above indicated, pursuant to the recess previously taken.

Present: (The same appearances as previously noted.)

The Commissioner: You may proceed, Mr. Barnes.

GUY N. BJORGE, a witness for the plaintiffs, resumed the witness stand, and was examined and testified as follows:

Cross-Examination (Resumed)

By Mr. Barnes:

Q. Mr. Bjorge, what was the Sublette Division?

A. The Sublette Division was an operation we had under an agency contract with Metals Reserve. Sometime follow-

ing August in 1942, we were approached by Metals Reserve [fol. 977] to enter into an agency contract to develop vanadium in Lincoln County, Wyoming, and we sent three geologists out to make preliminary investigations before any contract was signed. The actual negotiations and contract were delayed by the amount of time consumed in Washington by the preliminaries to L-208, and then subsequently closing the mine down. The contract was signed on October 27, 1942.

Q. Directing your attention to Plaintiffs' Exhibit 135, it was on October 8, wasn't it, that Metals Reserve Company submitted to you the proposed contract for that operation? I think you will find the date on the first page, the paragraph lettered "A."

A. Yes, the contract was offered October 8, but we had been in discussion with them for some time before that. The contract was executed, I think, on October 27.

Q. Do you recall receiving from the War Production Board a document which authorized you to transfer equipment to the Sublette Division?

A. We had authorization later on. I don't remember the exact date now.

Q. I show you this document, a copy of a letter dated December 16, 1942, and ask if you recall receiving the original of that?

A. Yes, we did receive such a letter.

OFFERS IN EVIDENCE

Mr. Barnes: I offer that in evidence as Defendant's Ex- [fol. 978] hibit No. 8.

Mr. Rigney: No objection.

The Commissioner: Received.

(Said letter, dated 12-16-42, from the WPB to Homestake, was marked as "Defendant's Exhibit No. 8," admitted in evidence, and made a part of this record.)

By Mr. Barnes:

Q. Mr. Bjorge, that letter, among other things, requires you to report to Metals Reserve Company transfers of equipment to the Sublette Division?

A. Yes, sir.

Q. Do you recall whether or not such reports were made?

A. Such reports were made.

I should make a correction, that the actual contract with Metals Reserve was executed in the name of our wholly-owned subsidiary, the Wyodak Coal and Manufacturing Company, because Wyodak was qualified to do business in Wyoming, and Homestake was not. Wyodak was definitely a Homestake operation, and it was all carried out in the name of the Sublette Division of Wyodak Coal.

Q. Let me show you this document, a letter dated December 28, 1942, which appears to have been signed by Mr. Walker. Was he Assistant General Manager of the Company?

A. He was.

[fol. 979] Q. Do you recall his sending a report of that type?

A. Yes. I have in my memorandum here a summary, a listing of these reports that were submitted within the next few months.

Mr. Barnes: I offer this in evidence as Defendant's Exhibit 9, Your Honor.

Mr. Rigney: No objection.

The Commissioner: It may be received.

(Said letter, dated 12-28-42, to the WPB, and signed by Mr. Walker, was marked as "Defendant's Exhibit No. 9," admitted in evidence, and made a part of this record.)

By Mr. Barnes:

Q. In the interest of expedition, Mr. Bjorge, I will show you at one time a group of letters dated February 1, 1943, March 1, 1943, April 1, 1943, May 1, 1943, and July 1, 1943, and ask you whether those are subsequent reports covering transfers of equipment to the Sublette Division?

A. They are.

Mr. Barnes: I offer these in evidence as Defendant's Exhibits 10, 11, 12, 13, and 14.

Mr. Rigney: I think there is no objection to these, Your Honor, and to expedite the matter we have no objection to their being received, subject to verification and check.

The Commissioner: They may be received.

[fol. 980] (Said letters, dated 2-1-43, 3-1-43, 4-1-43, 5-1-43, and 7-1-43, were marked as "Defendant's Exhibit Nos. 10, 11, 12, 13, and 14," admitted in evidence, and made a part of this record.)

By Mr. Barnes:

Q. Mr. Bjorge, did Homestake also operate a manganese property in Lower California?

A. Yes.

Q. During what period of time?

A. In the summer of 1942, a manganese property in Lower California, approximately across the Gulf from Guaymas, was investigated by Homestake, and an option taken on that property. By October, we were mining from 12,000 to 15,000 tons per month of crude ore from that property, which was hand-sorted, and a chemical grade manganese shipped.

Later we had a pilot plant for mill test work on the property, and built a mill and produced substantially larger quantities.

Q. Did you transfer to that property any of the equipment from Lead?

A. I think there was one power shovel that was overhauled and reconditioned in our shops at Lead and shipped to that property.

Q. Did you transfer to that property any employees from Lead subsequent to October 8, 1942?

[fol. 981] A. Only staff employees who were there on investigational work. Mr. Herz, our metallurgical superintendent, was there for a time. Mr. Tario, our electrical superintendent, was there for a time. Mr. Stonefelt, from our auto repair shop, went down to supervise the reassembling of this power shovel. There were no laboring men. The men for all of that work were local Mexican labor. There may have been two or three other men down there. I

think probably there was a carpenter foreman to supervise the construction of the mill, for which, by the way, we framed all of the timber. The structure was designed and the timber was framed in our shops at Lead, and shipped by way of Nogales to Guaymas, and then by boat across the Gulf to Gavilan.

Q. Incidentally, what was the name of that company?

A. That was the Compania Manganeso.

Q. Was it Compania Mexicana de Manganeso, S. A.?

A. Yes, "S. A.," which is the equivalent of our "Inc."

Q. Directing your attention to Plaintiffs' Exhibit 147, I just happened to open it at page 43, and I notice that opposite the second name on the list on that page, Harold Gustafson, the notation appears "Transferred 12-29-42 to Sublette Division."

A. He was a mechanic sent down for the erection of the equipment in the mill, as was Mr. Lawrence Sutter, the foreman of our crusher repair crew, who was sent down for [fol. 982] the mill construction, and Mr. Edward L. Kruskamp is a mechanic who was sent down on that construction work.

Q. Opposite Mr. Kruskamp and Mr. Gustafson, the referent is the Sublette Division rather than to Mexico.

A. Gustafson was sent to the Sublette Division.

Mr. Rigney: That is what he said.

The Witness: And Sutter to Mexico, and Kruskamp also to the Sublette Division.

By Mr. Barnes:

Q. Going back to Plaintiffs' Exhibit 147, was this prepared under your supervision?

A. Yes.

Q. Did you enter in here transfers either to the Sublette Division or to the Mexican company if they appear in your records?

A. I think they are all there.

Q. There were more personnel transferred to the Sublette Division from Lead than there were to the Mexican company, is that correct?

A. Yes. We sent six men to Sublette immediately after the contract was signed, and it reached a maximum of 110 during the time that camp construction was under way. In

visits with the Metals Reserve officials here, they suggested that we contact the War Plants Corporation for the financing and building of a townsite at Sublette. We didn't feel [fol. 983] that that was justified in the initial stages, and we negotiated with the Forest Service and obtained a CCC camp which we moved from Jackson Hole, a part of Yellowstone Park, to Sublette, and erected a mess house, a dormitory, a small shop, an office building, and so forth, from those CCC buildings. The maximum crew at Sublette was during the period of that construction.

Q. Mr. Bjorge, I was questioning you yesterday as to the quantities of materials of various types that Homestake might have purchased during the 12 months preceding October 8, 1942, and with respect to many of them you said that you had no recollection.

Let me show you this letter, dated December 24, 1941, addressed to Dr. Wilbur A. Nelson, which purports to bear your signature, and I ask you, first, whether that is your signature?

A. That is my signature.

Q. Do you recall sending that letter to Dr. Nelson?

A. I certainly sent it.

Q. Did that purport to give an estimate of the requirements of Homestake for the year 1942 for various types of material and supplies?

A. It is so headed.

Mr. Barnes: I offer that in evidence as Defendant's Exhibit 15.

[fol. 984] Mr. Rigney: No objection.

The Commissioner: Admitted.

(Said letter, dated 12-24-41, to Wilbur A. Nelson, signed Guy N. Bjorge, was marked as "Defendant's Exhibit No. 15," admitted in evidence and made a part of this record.)

By Mr. Barnes:

Q. With respect to a number of the items of inventory that we discussed, you referred to the fact that you had an adequate supply to have lasted during the entire period of the shutdown, that is, until June 30, 1945, and I believe at an earlier point in your testimony you referred to the fact that at some point prior to June 30, 1945, the War Produc-

tion Board gave you authority to begin purchasing again.

A. Yes.

Q. Let me ask you whether that authority was given following this letter of September 8, 1944, which you wrote to Mr. Arthur S. Knoizen?

A. That letter is dated September 8, 1944, and it was later in September that we received permission to place orders for materials that would be needed on resumption of operation.

Mr. Barnes: I offer this in evidence as Defendant's Exhibit 16.

Mr. Rigney: No objection.

[fol. 985] The Commissioner: Admitted.

(Said letter, dated 9-8-44, Bjorge to Arthur S. Knoizen, was marked as "Defendant's Exhibit No. 16", admitted in evidence and made a part of this record.)

By Mr. Barnes:

Q. Mr. Bjorge, prior to October 8, 1942, had Homestake had the practice from time to time of listing for sale surplus material which it had on hand?

A. Not as a general practice, but it is probable that under the War Production Board suggestions we made such listings in that year.

Q. Let me show you these four documents, dated January 4, 1942, March 21, 1942, April 13, 1942, and May 19, 1942, and ask you whether you recall those listings having been issued?

A. These are photostatic copies with no signature, but have a rubber stamp, "Homestake Mining Company, Lead, South Dakota," and were undoubtedly listed.

Q. Let me show you this, which is a photostatic copy of what I believe to have been the letter of transmittal, although the files that I received were in such form that they were not physically connected.

The Commissioner: Is there a question?

Mr. Barnes: I was going to wait until he had an opportunity to examine the letter, Your Honor.

The Commissioner: There is no question.

By Mr. Barnes:

[fol. 986] Q. Do you recall that letter going from Mr. Walker to the War Production Board?

A. This letter is dated August 25, 1942, and it is signed by Mr. Walker.

By Mr. Rigney:

Q. Do you have personal knowledge about this particular matter now, Mr. Bjorge, that Mr. Barnes is inquiring about?

A. I think undoubtedly these and a list were sent in as surplus material.

Mr. Barnes: I offer these in evidence, Your Honor, the covering letter and the four lists together, as Defendant's Exhibit 17.

Mr. Rigney: They are pretty bad photostats, Your Honor.

Mr. Barnes: I might state, Your Honor, these are not photostats. These are some material that the War Production Board microfilmed. These come from the microfilm records and have been blown up from the microfilm. I agree that some of it could have been a little more legible.

Mr. Rigney: No objection.

The Commissioner: Admitted.

(Said letter dated 8-25-42, from Mr. Walker to WPB, together with four listings of surplus material of Homestake, were marked as "Defendant's Exhibit No. 17," admitted in evidence and made a part of this record.)

[fol. 987] The Commissioner: Let us get this marked.

Mr. Rigney: I would like to have the record reflect that the letter is dated August 25, 1942, and says, "The attached correspondence and lists are self-explanatory." I don't see any correspondence attached, but I am not going to raise the objection that the document is not complete, and let it go in for what it is worth. I don't know that we can conclude from this that these are the lists that accompanied this letter, but we raise no objection to the admissibility for what it is worth.

The Commissioner: All right.

By Mr. Barnes:

Q. Mr. Bjorge, I hand you copies of two documents, one addressed to Republic Steel Corporation, dated August 3, 1942, and one addressed to Stephens-Adamson Mfg. Co., dated August 13, 1942, both of which have stamped at the bottom of them, "Homestake Mining Company, Lead, South Dakota," and appear to be copies of letters prepared for the signature of the General Manager. I ask you whether you recall those letters?

A. I do not recall the particular letters. The first one, the letter of August 3, 1942, addressed to the Republic Steel Corporation, has the initials RRP, and that is R. R. Pullen, our Chief Mechanical Engineer, and was doubtless dictated by him and sent for my signature.

[fol. 988] The other letter, strangely, has no initials for dictation, but it does have the rubber stamp "Homestake Mining Company." I do not definitely recall the letter myself.

Mr. Barnes: I would like to offer these in evidence, Your Honor, as Defendant's Exhibits 18 and 19.

The Commissioner: Off the record.

(Here followed discussion off the record.)

Mr. Rigney: I shall raise no objection to the admissibility of these.

The Commissioner: Admitted.

(Said letters, dated 8-3-42, to Republic Steel Corp., and dated 8-13-42, to Stephens-Adamson Mfg. Co., both bearing rubber stamp of Homestake Mining Company, were marked as "Defendant's Exhibit Nos. 18 and 19," admitted in evidence and made a part of this record.)

By Mr. Barnes:

Q. Was there an Edward G. Ross connected with Homestake?

A. Yes.

Q. What was his position?

A. Mine Superintendent.

Q. Was there someone in the Rock Drill Repair Department by the name of Cudlip?

A. There was an office man by the name of William Cudlip.

Mr. Barnes: Will you mark that Defendant's Exhibit 20 [fol. 989] for identification?

(Said document was marked for identification as Defendant's Exhibit No. 20.)

By Mr. Barnes:

Q. I show you this document which has been marked Defendant's Exhibit 20 for identification, which purports to be a copy of a memorandum from Mr. Cudlip to Mr. Ross, and I ask you whether you recall the transaction to which that refers?

A. That is a photostatic or at least a copy, without signature. It says, "By Cudlip" at the bottom, and it was presumably sent in along with a letter.

Mr. Barnes: Would you read the question back to the witness?

(The question was read by the reporter.)

The Witness: Not the single one, but undoubtedly this was a memorandum submitted with respect to a purchase request.

Mr. Barnes: I offer this in evidence as Defendant's Exhibit 20. The date under Mr. Cudlip's name is 6-23-42.

By Mr. Rigney:

Q. Mr. Bjorge, do you recall seeing the original of this document?

A. I do not recall the original document.

Mr. Rigney: We have no objection, Your Honor.

The Commissioner: Admitted.

[fol. 990] (Said memorandum, dated 6-23-42, from Mr. Cudlip to Mr. Ross, was marked as "Defendant's Exhibit No. 20," admitted in evidence and made a part of this record.)

Mr. Rigney: It is difficult, Your Honor, to read these things. It takes a little time.

By Mr. Barnes:

Q. Mr. Bjorge, directing your attention to Defendant's Exhibits 17, 18, and 19, do you know whether or not any

of the material listed on those exhibits appears on the two inventories which are in evidence here as Plaintiffs' Exhibits 148 and 149?

A. I do not see any of them, on either one of them.

Q. You see nothing on either one of them that appears on the two inventories?

A. No, I do not.

Q. Directing your attention, for example, to Plaintiffs' Exhibit 149, and calling your attention, for example, to the list of pipe fittings that appears attached to Defendant's Exhibit 17, are there any pipe fittings listed in Plaintiffs' Exhibit 149?

A. Yes, there are, I am sure.

Q. I notice at the page you were just referring to there was a reference to case "Y" branches. I see some of those are listed in the schedule attached to Defendant's Exhibit 17. Have you compared those?

[fol. 991] A. There are many pages in this, and it would require a detailed comparison as to whether they are in the inventory, or whether they might be material which we regarded as obsolete and were taken out of inventory.

Q. Did you sometimes take obsolete material out of inventory?

A. Yes.

Q. Even though it was new and unused?

A. Even though it was new.

Q. Is there anything about a cast "Y" or any other plumbing fitting to make it obsolete?

A. There might be some size. I imagine that most of these are in the inventory if we took the time to go through them and pick the individual items.

Mr. Barnes: That is all.

The Witness: There are many pages of pipe fittings here. In this particular section of the inventory there are pages 19 to 43 on pipe fittings.

Redirect Examination.

By Mr. Rigney:

Q. Mr. Bjorge, did you take some time last night to examine carefully Plaintiffs' Exhibit 149, the General Inventory?

A. I did.

Q. How many pages are there in that inventory?

[fol. 992] A. There is a total of 363 pages.

Q. Did you examine every page in that inventory last night?

A. I looked at every page in that inventory.

By Mr. Barnes:

Q. Because of a misunderstanding, are you referring to 363 pages or sheets?

A. Pages. The inventory from some departments is numbered by sheets, and from other departments numbered by pages. I took the number of actual pages.

By Mr. Rigney:

Q. You physically counted the number of pages yourself, is that right?

A. I took the numbers that run through. For example, there is one section that runs to 122 pages. And I marked down all the various sections, the number of pages in each section.

Q. Can you tell us the total number of divisions or breakdowns, by department or otherwise, in that inventory as it is set up?

A. The breakdowns by departments or subject matter are 17 in number.

Q. Did you examine all 17 of those divisions to determine how many contained deletions of any item?

A. I did.

[fol. 993] Q. How many of those 17 divisions did you find contained any deletions whatsoever?

A. Two.

Q. What were those?

A. The Electrical Department and the General Supplies, Bender Park. Bender Park is a carpenter shop that has some supplies.

Q. So there were 15 divisions or subjects in the inventory which contained no deletions whatsoever, is that it?

A. That is correct.

Q. Directing your attention to the General Supplies, Bender Park ——

A. Yes?

Q. —how many deletions did you find were made in that section, Mr. Bjorge?

A. One.

Q. What was that deletion?

A. That is one 12-inch mill bastard, valued at 30 cents.

Q. What is that?

A. It is a file.

Q. Directing your attention to the Electrical Department, what deletions did you find there? How many deletions did you find there?

A. The Electrical Department has a total of 114 pages. There is a total of 192 deletions which are distributed on [fol. 994] 53 pages.

Q. Do you find in that inventory a section preceding the Electrical Department which you examined last night?

A. Preceding the actual inventory of the Electrical Department there is a list covering five pages which is headed, "Following Material Dropped from Inventory," and the total value of the items listed on those five pages is $3,921.23.

Q. Will you look at the last page of that inventory under the Electrical Department and see whether or not there is a statement there?

A. On the last page of the Electrical Department inventory, the inventory is totaled at $55,502.89. Then there is a statement, "The total value of obsolete and secondhand material dropped from inventory, $3,921.23, making the inventory as of January 1, 1943, $51,581.66," which is the total that is incorporated in the inventory.

Q. Were there other deletions in the Electrical Department, other than this total of $3,921.23 that you have just referred to?

A. Yes. For example, on the back of Sheet 50 and the front of Sheet 51, there are seven items with lines drawn through them, six of which are apparently identical transformers with the same value placed on each one. The original totals, with no changes or erasures, are the totals [fol. 995] of the remaining items on the page.

Q. Excluding the items——

A. Excluding the items that had been crossed out as secondhand material before the pages were totaled.

By Mr. Barnes:

Q. How do we know it is secondhand material?

A. The Electrical Department, as I have testified before, had a tremendous quantity of secondhand and reconditioned material, reclaimed from the plants that had been abandoned during our construction period of several years before 1942.

Q. My question was how you knew these specific items were secondhand material?

A. Because that would have been the thing that was done. The inventory was inspected, and they were checked off as being not inventory material.

Mr. Barnes: I object and move to strike the witness' statement, Your Honor, as being a surmise on his part.

Mr. Rigney: Let me ask this question:

By Mr. Rigney:

Q. Did the practice of striking or excluding from inventory these items about which you have just been testifying—did that practice conform to your usual and normal practice with respect to setting up your inventory?

A. They were a part of the checking of the inventory.

[fol. 996] The Commissioner: The remark about its being secondhand may be stricken.

By Mr. Rigney:

Q. Was this inventory spot-checked by Homestake's regular auditors, Mr. Bjorge?

A. Yes.

Q. Is that the firm of McLaren, Goode & Co.?

A. That is the name of the firm. They had been auditors for the company for a number of years.

Q. They are in San Francisco, is that correct?

A. They are. Their head office is located in San Francisco.

Q. Was this inventory, Plaintiffs' Exhibit 149 for identification, used as a basis for Homestake's annual statement as of December 31, 1942?

A. It was.

Mr. Barnes: I object to the form of the question as being leading.

Mr. Rigney: "Was it" was the question.

The Commission: Overruled.

Mr. Rigney: Your Honor, Plaintiff now offers in evidence Exhibit 149 for identification.

Mr. Barnes: No objection.

The Commissioner: Admitted.

[fol. 997] (Said document, being General Inventory of Homestake Mining Co., marked as "Plaintiffs' Exhibit No. 149," admitted in evidence and made a part of this record.)

By Mr. Rigney:

Q. On cross-examination of you yesterday, Mr. Bjorge, Mr. Barnes inquired of you with respect to drill steel. Will you tell us what quantity of drill steel Homestake had on hand as of October 8, 1942?

A. The new drill steel on hand at that time is in the inventory, but that was not the total of the drill steel. On every underground level near the several main working areas on each level there is a rack with a supply of steel, ma'e-up steel. By "made-up," I mean cut to length with the bits forged on the end of them, to be available to that working area. With those stocks on 29 levels in the mine, that made up a large additional stock.

In addition to that, the drill sharpening shop had a stock of made-up steel, steel that was charged out to operations when it was made up in the shop.

Q. Do you recall now how much of this drill steel was on hand at those various levels in the underground workings?

A. The count of that stock of different lengths, and measuring in feet and then calculating to pounds, amounted to about 470,000 pounds.

[fol. 998] Q. Do you recall how much of it there was in the drill shop?

A. About 90,000 pounds.

Q. That is in addition to what is set up in the inventory?

A. Set up in the inventory. The exact figure is in the inventory. It is 187,000-and-some pounds.

Q. Can you tell us how much drill steel Homestake used in the year 1942? That would be for approximately ten months of operations in 1942.

A. About 100,000 pounds.

Q. What can you say——

By the Commissioner:

Q. What do you mean by "used"?

A. Eventually the drill steel as it is—it isn't just used. It is used to destruction. The drill steel, of course, as it is used for drilling, and is resharpened and reused again, becomes shorter and shorter, and then it is used for the shorter lengths, and eventually due to fatigue, as they call it, in the steel, it breaks and the broken pieces get too short for further use. It then becomes scrap.

By Mr. Rigney:

Q. Perhaps "consumed" would have been a better word. So you would say Homestake consumed approximately 100,000 pounds of it in ten months of 1942?

[fol. 599] A. Yes.

Q. What can you say with respect to whether or not the amount of drill steel which Homestake had on hand would have sufficed to enable you to continue normal operations during the period of the shutdown?

A. The total of that steel, with the stocks in the mine, discounted for the use they had already had, would have taken care of about four million tons of production.

Q. That would have carried you beyond the end of the shutdown period, under normal operations?

A. Yes.

Q. You were asked yesterday about electricians working underground, Mr. Bjorge. I would like to ask you now, how many electricians you have working underground for checking and replacement work as distinguished from any new development?

A. There would be normal electricians working full-time underground. There would be one to two electricians working part-time underground. They made regular routine inspections of the charging stations for the two storage battery locomotives, and they made other trips underground whenever called on by the mine department, the mine superintendent, which would be relatively infrequent.

The Commissioner: We will take a five-minute recess.

(Thereupon, a five-minute recess was taken in the hearing.)

[fol. 1000] By Mr. Rigney:

Q. Mr. Bjorge, I show you Defendant's Exhibit 17, being these lists of January 14, March 21, April 13, and May 19, 1942, with the letter of August 25, 1942, signed by Mr. Walker, and ask you to tell us how much of the equipment listed, or appearing on those lists was sold by Homestake?

A. I don't think we ever had a sale of any of it.

Q. Would you look, please, at Defendant's Exhibit 19, being the letter from Homestake to Stephens-Adamson Manufacturing Company of August 13, 1942, and tell us what that machine is that is described there.

A. That is one 6-A Style No. 9 revolving screen, often called a trommel. I note here that it was purchased from Stephens-Adamson Manufacturing Company, and it gives our order number, dated September 23, 1927.

We have no cylindrical screen of that type installed in any part of our plant. 1927 was before I came there, and it was probably purchased for experimental work or possibly for the screening and washing of rock for concrete work. I don't know, it was before my time, but it has never been used in my time, and there is no such piece of equipment in any part of the Homestake plant.

Q. Directing your attention to the equipment which was sent to Sublette, about which you have testified, could you tell us how much of that equipment could be used underground?

[fol. 1001] A small part of it, the rock drills, drill steel, track pipe.

Q. Could you give us your best judgment as to the proportion of the machinery which could be used underground to the total? What the relative proportions were? Would you say a quarter of it or a half?

A. I think it would be less than a quarter, because a substantial part of the equipment was surface equipment, trucks, compressors, that was sent over there on a rental arrangement.

Q. Now, could you tell us what the ratio was between the equipment sent to Sublette and Homestake's total equipment which you owned at that time?

A. Well, related to the total equipment of all kinds in our plant, and also the supplies and portable equipment, I should say it would be certainly well under one percent.

Q. In other words, Homestake sent less than one percent of its total equipment to this Sublette operation?

A. I should say substantially less.

By the Commissioner:

Q. Is that one percent of the value or one percent of what?

A. I am thinking in terms of value.

By Mr. Rigney:

Q. What was the eventual outcome of this Sublette operation, Mr. Bjorge? What happened there?

[fol. 1002] A. Our contract with Metals Reserve provided that we should proceed as rapidly as possible to obtain production of 500 tons per day of a given minimum grade. That was based on estimates that had been supplied to Metals Reserve by the United States Geological Survey, and the United States Bureau of Mines. By the end of January we had done enough work with surface trenching through the vanadium-bearing bed to enable us to sample it at the surface and with a tunnel at the bottom of the gulch to prepare our own estimate, which we sent to Metals Reserve——

Q. Was that January, 1943?

A. That was the end of January, 1943.

——which had a lower average grade than those that had been submitted by the two governmental departments that I referred to. We then received telegraphic instructions very promptly to expand operations to plan for a production of 1000 tons a day as rapidly as possible. That was early in February.

Q. Were these instructions from Metals Reserve?

A. From Metals Reserve.

Early in March we received instructions to curtail, and all of the work at Sublette was finished by July 15, 1943. In the meantime, in February, the Metals Reserve company had asked us to do some development work at the Paris-Bloomington property a few miles from Montpelier, Idaho. [fol. 1003] And we sent some men to this property for the Sublette operation, and we had a maximum of 60 men at Paris-Bloomington. That 60 is included in the maximum of 110, which was the maximum number we had at the com-

bined properties at any one time. And the work at the Paris-Bloomington property was soon curtailed and was all completed by November, 1943.

Q. Do I understand that the Sublette operation was completely at an end by July of 1943?

A. Yes.

Mr. Rigney: May these be marked the next for plaintiffs' exhibit numbers?

(Said documents were marked for identification as Plaintiffs' Exhibits Nos. 151, 152, 153, and 154.)

By Mr. Rigney:

Q. I show you Plaintiffs' Exhibits 151, 152, 153 and 154 for identification, and ask you what those letters are?

A. Those are copies of letters from Mr. Walker to the War Production Board with regard to the transfer of equipment from Homestake to the Sublette division.

Q. And is it correct to say that these four letters on the dates which they bear reported to the War Production Board that no machinery had been transferred to Sublette as of the period referred to in the particular letter?

A. No equipment was transferred during the month of May, during the month of July, during the month of August, [fol. 1004] and during the month of September.

OFFERS IN EVIDENCE

Mr. Rigney: We offer these in evidence to complete the picture with respect to Sublette.

Mr. Barnes: No objection.

The Commissioner: Admitted.

(Said letters dated 6-2, 8-6, 9-8, and 10-5, 1943, from Homestake to W.P.B., marked "Plaintiffs' Exhibits Nos. 151, 152, 153, and 154," respectively, admitted in evidence and made a part of this record.)

By Mr. Rigney:

Q. When you concluded these two operations that you spoke about, Sublette and the Idaho proposition, was the machinery and equipment which remained returned to Homestake?

A. All of the equipment that was on rental was returned to Homestake, and the supplies that were still usable at Homestake were returned.

Q. Would you describe for us in a little more detail this manganese operation in lower California that you were asked about on cross-examination?

A. That was a deposit of chemical grade manganese. There are two grades of manganese, the metalurgical grade used in the steel industry, and the chemical grade which has a variety of necessary uses in the chemical industry.

We, as I stated, took an option on the property and began [fol. 1005] working originally an American superintendent on the job, and all of the remaining help was Mexican. And we were mining by open cut and sorting and sacking the high grade pyrolucite, which is a manganese oxide. Then we expanded the operation, first adding scrapers to the mining operation, scraping the broken material into trucks for haulage to the mill that had been built by that time.

Q. What period of time now, sir, is this?

A. Well, I don't know that I can give you the dates.

Q. Approximately, I mean.

A. But it was probably by that time the end of 1943, because it took time to build a mill. And the scrapers did not prove satisfactory, and we sent down the power shovel. The milling plant did not give the results that the pilot plant had given. The pilot plant was operated for us by consulting metalurgists during the test work. And we operated down there for a total of something like three years, I think. It was a rather sad story, because it resulted in a substantial financial loss.

Q. In other words, it was a complete failure as far as results were concerned?

A. Yes. The only benefit derived from it was the materials shipped during the period we were operating, all of which, as I remember it, went to the Tennessee-Eastman Company at Nashville, Tennessee.

[fol. 1006] Q. You testified under cross-examination yesterday, Mr. Bjorge, as I recall it, that Homestake's needs for normal full-scale operation, so far as cyanide was concerned, were about 1,500,000 pounds.

A. Yes.

Q. That is, per year. What was the situation so far as

obtaining cyanide was concerned at the end of 1942, the last quarter of 1942, and later?

A. We use in our operation the Arrow Brand or crude cyanide, which is a calcium cyanide, and that was not under restriction at any time. In our operation, in the six months after our appeal, we needed more cyanide, and ordered and received in February without priority.

By the Commissioner:

Q. Did you testify yesterday that dynamite was put in the same category?

A. Yes.

By Mr. Rigney:

Q. From whom did you buy your cyanide?

A. The American Cyanide Company.

Q. With respect to zinc dust, can you tell us this: you were interrogated yesterday about that by Mr. Barnes. Can you tell us what supply of that you had on hand as of January 1, 1943?

A. That figure is in the inventory for January 1, 1943.

[fol. 1007] Q. If I suggest to you that it is approximately 43,000 pounds, would that accord with your recollection from your reference?

A. I can find it here very quickly. 43,081 pounds.

Q. That was the quantity on hand January 1, 1943, is that right?

A. That is right.

Q. Now, under normal full-scale operations, how long would that have lasted?

A. That would have lasted about a year or a normal tonnage of about not quite 1,400,000 tons.

Q. Were there any steps that you could have taken, if necessity required you to do so, to extend the use that could have been made of that quantity?

A. That use could have been stretched to nearly double that amount. The amount of zinc dust added is a small item in cost, and as an absolute safety factor the feed is generous. In case of necessity the feed could be reduced down toward half as much as what we are using.

Q. Now, I think you testified yesterday that there came

a time when there was some restriction upon zinc dust; is that right?

A. I think there was a restriction on zinc dust throughout 1942, and I am not quite certain of the dates now, but I think it was in December in 1942 that the alloys company [fol. 1008] from whom we purchased zinc dust advised us that they could fill orders for less than 5 tons per month without priority.

Q. Do you recall whether that was in December of 1942 or December of 1943 that that lessening of the restriction occurred?

A. I am not quite certain of that.

Q. But, anyway, when the restriction was lessened what amount were you permitted to order?

A. We could place orders for deliveries of less than 5 tons per month, and our use at full normal operations was about in the range of 2 tons per month.

Q. Or, to put it another way, you could order up to 5 tons per month?

A. Up to 5 tons per month, that is correct.

Q. What would your normal consumption of zinc dust be per month?

A. Approximately 2 tons per month.

Q. You were asked yesterday about mercury, Mr. Bjorge. You testified that Homestake had around 600 or 700 pounds, or used around 600 or 700 pounds per month in normal operations. Can you tell us how much mercury you had on hand as of January 1, 1943?

A. We had 5,500 pounds in inventory, and approximately 1,500 pounds in the circuits in the mill operation.

Q. How long would that have lasted under normal full- [fol. 1009] scale operation?

A. Well, at full-scale operation of around 600 pounds per month, it would have been ten months. But we had in 1942 been restricted to 1,040 pounds per quarter, and had gotten along with that quantity. On the basis of 1,040 pounds a quarter, the quantity would have lasted about a year and a half.

Q. Do I recall that you said that was a use restriction?

A. Yes, I recall that that was a use restriction.

Q. Assuming that Homestake had no mercury at all to use, could you have continued operations?

A. Yes.

Q. What step would you have taken?

A. We would have put in mineral jigs, which are a simple piece of equipment that could have been built in our own shops, and obtained a high-grade gold concentrate in the jigs.

Q. You recall yesterday being asked about the use of electric wire, blasting wire.

A. Yes.

Q. Now, is that an essential item for the operations of your gold mine?

A. No.

Q. And if you had had none of that at all, was there some alternative method which you could have used?

[fol. 1010] A. Electric blasting was used only in raises, which would be a limited number of working places, and the blasting in those raises could have been done by fuse instead of electric blasting.

Q. What was the inventory situation of Homestake, Mr. Bjorge, with regard to timber as of January 1, 1943?

A. As I have testified before, Homestake had its own logging and lumbering operation, and on January 1, 1943, the stock of frame mine timber at the sawmill was 4,376,226 feet.

Q. How long would that have lasted Homestake?

A. With a shrinkage operation as we have outlined, consuming one board foot per ton of ore mined, it would have lasted for 4,300,000 tons.

Q. Now, Mr. Bjorge, with reference to this concentration on shrinkage stopping, in a situation where there might be a shortage of labor and material that you have described in considerable detail on your direct and also on your cross-examination, I would like to ask you whether Homestake has had any actual experience in recent years with that type of operation?

A. We did that substantially on resuming operations after July 1, 1945 in order to obtain substantial production as rapidly as possible. And for the remaining six months of 1945 the production from square set stopes was slightly more than 3% of the total production.

[fol. 1011] We were also faced at that time with the fact

that our shrinkage stopes had been emptied, to a large extent. They were not quite all empty, but they had been emptied during the extension period which we were given after our appeal. And in stocking shrinkage stopes we were only able to draw out of those stopes and hoist and haul to the mill one ton for every three tons that were broken. In December of 1945 we sent approximately 25,000 tons from shrinkage stopes to the mill, which meant an additional 50,000 tons had been broken, but it was deferred until at such time as the shrinkage stope was finished and we could draw it empty.

Q. How long would you say, after resuming operations in 1945, did Homestake continue to concentrate largely on shrinkage stoping?

A. Well, we did not reach a full balance between shrinkage stoping and square set stoping until some time in the last year.

Mr. Rigney: Thank you, sir. I have nothing else, except that I would like to call your attention, your Honor, to what appears to be an error in the record of Mr. Bjorge's direct examination at page 817, where the question appears:

"What was Homestake's maximum generating capacity so far as its power plant was concerned in 1942?

"A: I gave the installed capacity, and we had in one year produced as much as 65 million kilowatt hours."

[fol. 1012] I think the capacity was 85 million; is that correct?

The Witness: I think I gave that we had produced in one year 85 million. That was the maximum that we had ever produced.

Mr. Rigney: So we would like the record to be corrected in that respect.

The Commissioner: You can go ahead and make the changes in the copy that you have, and the reporter will make the changes in the further copies.

Mr. Rigney: Very well, sir.

The Commissioner: Are there any further questions?

Mr. Rigney: That is all, sir.

Recross-examination.

By Mr. Barnes:

Q. Mr. Bjorge, referring to Plaintiff's Exhibit No. 149, there were certain items in there that we noted yesterday where changes had been made in the quantities in red. Do you recall those?

A. Yes.

Q. Do you count those as being deletions in making your count?

A. Deletions or changes. I headed my tabulation when I was doing it: "Deletions or changes".

Q. Do you know whether those changes made in red were made at the same time or by the same persons who crossed [fol. 1013] out the items in black?

A. No, I do not know who made the changes, except that they were doubtless made by the heads or near heads of the department that knew which items were new, and which were second hand.

On page 5, for example, there is a correction in red on the number of feet of one half-inch galvanized rigid iron conduit, and also ¾-inch conduit of the same kind. And on the first page of the list of materials dropped from inventory there are two items, 1447 feet of one half-inch galvanized rigid iron conduit and 480 feet of ¾-inch galvanized rigid iron conduit, which are the changes that are made on page 5.

Q. Now, what was the operation which you said Homestake transferred following the close-down of the Sublette operation?

A. The Paris-Bloomington operation. It overlapped partially.

Q. What is that, Paris——

A. Paris-Bloomington.

Q. That is B-l-o-o-m-i-n-g-t-o-n?

A. Yes. That was a property a few miles from Montpelier, Idaho, where the headquarters for the Sublette operation was at Montpelier.

Q. Was that also a vanadium property?

A. Yes.

Q. You also operated that under contract with Metals Reserve?

[fol. 1014] A. Yes.

Q. With respect to the usage of materials and supplies in a gold mining operation, is there any overall dollar figure that is generally applied per ton of production as a measure of what the cost of materials and supplies is going to be?

A. No, I don't believe so.

Q. You have never made such estimates at Homestake, to your knowledge?

A. We had, and we have figure studies from time to time of the dollar use of supplies during the year, but those figures include both construction and expendable supplies. I don't have in mind the dollar value.

Q. It is a figure that is sometimes expressed in terms of dollars per ton?

A. It could well be.

Q. Incidentally, with respect to mercury, isn't the normal measure of mercury a flask rather than a pound?

A. A flask is 76 pounds. They are purchased in flasks.

Q. Now, I take it that after the mine was finally closed down following the year of extension, that your lumber division, your foundry and your machine shop continued operating on other activities; is that correct?

A. Yes.

Q. How many employees were employed in those operations, approximately, do you recall?

[fol. 1015] A. Well, the lumber and timber operations had a total of about 200 men at the sawmill and in the woods operations, and the mechanical department and foundry, which included the shops and foundry, had in normal operations prior to the war around 280 men. That was expanded as our war production, the manufacture of things in our shops, increased.

By the Commissioner:

Q. What was done with the production of your timber operation?

A. The sawmill sawed commercial lumber throughout the war, which was sold commercially under whatever priority regulations were in effect. The stock of mine timber was framed and in lengths that were not suitable for commercial lumber, and that stock was substantially all there at the time that we resumed operations.

By Mr. Barnes:

Q. Mr. Bjorge, directing your attention for the moment to Plaintiffs' Exhibits 137 and 138, the note which has been added to 137, which you said you thought was probably added following receipt of the telegram, Plaintiffs' Exhibit 138, says: "This order subsequently modified to show that 60 men are in addition to 730."

What is the 730 figure?

A. That is the total number of men on the Homestake payroll at that time.

[fol. 1016] Q. That included the men in the lumber division, in the foundry and machine shop?

A. Yes, the electrical department, power plants, pumping stations, all of the men on the payroll.

Q. Now, with respect to some of these items of inventory such as mercury, which you were discussing with Mr. Rigney just a few moments ago, if you had continued using mercury at the rate of 1,040 pounds a quarter, how long would your inventory on December 31, 1942 have lasted?

A. About a year and a half.

Q. At that time you would have had a zero inventory except for the material in the circuits, is that correct?

A. Yes.

Q. You could not have continued operations after that date without adding material to the material in the circuit, is that correct?

A. Yes. As I said previously, we could have installed mineral jigs which could have been built in our shop, which are simple machines, built largely of wood, with a small amount of metal parts, and they could have made a high-grade ore concentrate.

By the Commissioner:

Q. How would that have taken place with the use of that mercury? That was not clear to me.

A. We would run the pulp, which was the finely ground [fol. 1017] ore and water, through these jigs, and the jig is a concentrator that would have retained a substantial part of the gold and some of the sulphides and made a high-grade concentrate.

Q. How would the use of this affair that you mentioned compare with respect to the result achieved?

A. Substantially the same. The gold would have been extracted from that quality of concentrate by cyanidation, and the remainder of any gold that was not caught in the jigs would pass on to the cyanide plants, the same as it does now after amalgamation.

The Commissioner: I see. All right.

By Mr. Barnes:

Q. It would then have required a greater use of cyanide because you would have had to use the cyanide treatment on all of your concentrates; is that right?

A. A somewhat higher consumption of cyanide, yes.

Mr. Barnes: That is all.

Mr. Barnett: Your Honor, may I ask a question?

The Commissioner: Yes.

Redirect examination.

By Mr. Barnett:

Q. Mr. Bjorge, you stated that you spent approximately fifteen-odd years in San Francisco, and during that period of time you had occasion to visit the Mother Lode country in California?

[fol. 1018] A. Yes, I visited the Mother Lode and Grass Valley area several times up to the late 20s.

Q. Would you say that gold mining in the Mother Lode country of California is conducted on the same general plan as that you have described here as being conducted at Homestake?

A. There are, of course, a great many similarities, the sinking of shafts, the development work to drive to the ore bodies, develop them and make them ready for mining, and the haulage of ore to the shaft, hoisting, crushing, and a large part of the milling would be very similar. The mining methods would be generally designed to fit the particular ore body.

Q. Now, in describing the use of quicksilver as you have just described it, and your improvising by these jigs, that

goes more or less to the amount of gold actually recovered from the ore, is that not true?

A. Yes.

Q. So that it is highly possible that under certain restrictions your improvising would mean a lesser recover, is that true?

A. A very slightly lower recovery.

Mr. Barnett: That is all, your Honor.

Recross-examination.

By Mr. Barnes:

Q. Are soil conditions in the Mother Lode or in the Grass Valley areas substantially identical with those described [fol. 1019] at Homestake?

A. Well, soil is only a matter of a few feet deep at the surface.

Q. I thought you used the phrase that your method of mining would be dependent upon soil conditions. If you used some other phrase I misunderstood you.

A. No, I think I said that it would depend on the type of ore body and closing rocks.

Q. Are the types of ore bodies identical in the two locations?

A. The ore bodies on the Mother Lode are vein deposits, tabular deposits, dipping at steep angles, angles of, my recollection is, 60 to 70 degrees. The wall rocks are not as strong as at Homestake, so that timber support is required to a greater extent.

Q. Do you know whether or not they use the same general methods of stoping that you described?

A. I was through a number of stopes in several mines up there that were mined by the square set method.

Q. Do they have to mine by square set entirely, do you mean?

A. No, I don't think so. I think they did some open work. There were places where the walls were very much better than in other places.

Q. And they could operate a shrinkage stope there sim- [fol. 1020] ilar to the method you described at Homestake?

A. I don't recall that I saw a shrinkage stop in the mines that I visited.

Mr. Barnes: That is all.

By the Commissioner:

Q. How do you explain the absence of the use of shrinkage stoping?

A. Shrinkage stoping is a method that requires strong walls, so that the walls will stand while you are drawing the ore out of a stope. The broken ore supports it to a considerable extent while you are mining, but when you have finished mining and draw all that ore out, the walls have to stand, and if they are not strong enough to stand for the size of the opening that you want to mine, then you won't be able to mine by the shrinkage method.

Q. Is there any further explanation that might explain the absence of the use of the shrinkage stoping?

A. They may have used it, but I don't recall seeing any in the visits that I made there.

Q. Are the ore bodies as massive?

A. They are not as large, they are relatively narrow. I think probably the widest stope I remember seeing in the mines in the area of Central Eureka were possibly 30 feet.

Q. Would that be another reason?

A. No. You could mine a narrow vein by shrinkage if the [fol. 1021] walls are strong enough.

Redirect examination.

By Mr. Barnett:

Q. They are both hard rock mines, aren't they, Mr. Bjorge?

A. Yes. The Mariposa slates on the Mother Lode are not as hard as they are at the Homestake mine by any means.

Q. By your statement as to shrinkage stopes you do not mean to convey the impression they did not use it, but you have just no recollection?

A. I don't recollect seeing shrinkage stopes in the visits I made.

Q. But from your knowledge and experience, it is your opinion that they may have used them?
A. They may have used them.

By Mr. Orick:

Q. Mr. Bjorge, have you ever been in the Idaho Maryland mines?
A. I have never been in Idaho Maryland.
Q. You know where it is located?
A. I have been in the other two mines in that district.
Q. What is that district known as?
A. The Grass Valley District.

Mr. Orick: Thank you.
Mr. Barnes: I have no further questions.
[fol. 1022] Mr. Rigney: There is just one matter that is susceptible of mathematical proof, if we can get the necessary papers together, and I wanted to check Mr. Bjorge's testimony on it because I think there may be a correction required. I may be in error, and it may not be necessary to put him back on, but I thought it would be more expeditious to put our next witness on, and if we determine in checking at lunch that any correction is needed we can make it after lunch, with your Honor's permission.
Mr. Barnes: I have no objection.
The Commissioner: Very well.

(Witness excused.)

Mr. Rigney: Mr. Jones?
The Commissioner: Will you be sworn, Mr. Jones?

Whereupon, W. E. Jones, a witness produced on behalf of the plaintiffs, having been first duly sworn by said Commissioner, was examined, and, in answer to interrogatories, testified as follows:

Direct examination.

By Mr. Rigney:

Q. What is your full name, Mr. Jones?
A. W. E. Jones.

Q. By whom are you employed, sir?

A. By Climax Molybdenum Company.

[fol. 1023] Q. What is your position there?

A. Personnel Manager.

Q. How long have you been in that position?

A. Since 1948.

Q. How long have you been employed by Climax all together?

A. Since 1936.

Q. What are your duties in your present position as Personnel Manager?

A. I am in charge of all of the phases of their industrial relations program, which includes the keeping of all the records of any employees that we may hire, recording such things as the dates they were hired and when they were separated.

Q. Have you produced here, pursuant to the request of Homestake Mining Company, certain of your personnel records relating to employees hired in 1942 by Climax?

A. Yes, I have.

Q. And have you prepared a compilation based upon your original personnel records with respect to employees hired by Climax in October and November, 1942, in Lead, South Dakota?

A. I did.

Q. May I see it?

(The witness produced a document.)

Q. Now, do you know whether or not Climax was recruiting labor in Lead, South Dakota, in the months of October [fol. 1024] and November, 1942?

Mr. Barnes: I object, unless the source of the witness' knowledge is shown. The present position dates back only to 1948.

The Commissioner: Sustained.

By Mr. Rigney:

Q. Where were you in 1942?

A. I was in Climax, Colorado.

Q. Working for the Molybdenum company?

A. That is right.

Q. Do you have any knowledge about whether or not Climax was recruiting labor in Lead in those months, October and November of 1942?

Mr. Barnes: Your Honor, I think the witness should be instructed that that question should be answered with a yes or no answer.

The Commissioner: Yes, it should be answered yes or no.

By Mr. Rigney:

Q. Do you have that knowledge, that is?

A. Yes.

Q. And what is the fact as to whether or not Climax was recruiting labor in October and November of 1942?

Mr. Barnes: I still object unless the source of the witness' knowledge is shown.

Mr. Rigney: This man worked for Climax since 1936. [fol. 1025] He has been the Personnel Manager since 1948. He has original records here with him by his own testimony, your Honor, from his employment files. It seems to me that——

The Commissioner: That would be a reason for having the source of his information explained. I will sustain the objection.

By Mr. Rigney:

Q. Tell us what the source of your information is in this regard, Mr. Jones, about this recruiting. How do you come to know about it?

A. In 1942 I held the position of Director of Safety and Industrial Hygiene for the Climax Molybdenum Company. Part of our program at that time was to give safety examinations to all employees who were placed on the payroll. And at that time many employees came from Lead, South Dakota, where a recruiter was sent to obtain them, and they all came through my office and I talked to each one of them, probably personally.

Q. And did they say anything about whether or not they had been recruited in Lead, South Dakota, by somebody representing Climax?

Mr. Barnes: I object on the ground that would be hearsay.

The Witness: I am sorrry, I cannot recall that.

Mr. Rigney: Your Honor, all I am trying to do is shorten the examination here now. If we have to take up each one [fol. 1026] of these people individually, this man is here with cards of 51 employees that were recruited in Lead, South Dakota, original cards pertaining to their employment and recruitment by Climax Homestake people. If we have got to go through each one of these individually we can't do it. It does not seem as though the Government is going to insist upon us doing that. I cannot for the life of me imagine that there should be such an objection interposed.

Mr. Barnes: I have done some strange things.

The Commissioner: We are here to receive evidence as it is presented.

Mr. Rigney: All right.

Let this be marked Plaintiffs' Exhibit No. 155.

(Said document was marked for identification as Plaintiffs' Exhibit No. 155.)

By Mr. Rigney:

Q. Mr. Jones, look, please, at Plaintiffs' Exhibit No. 155 for identification, and tell us what that document is.

A. This document is a list of employees hired by our recruiter in Lead, South Dakota, during October and November of 1942.

Q. And can you tell us from what was this prepared?

A. That was prepared from the original files of each em-
[fol. 1027] ployee that our recruiter obtained up there, the original employment cards that were made out at the time the employee was placed on the payroll.

Q. And who prepared it?

A. It was prepared under my supervision.

Q. Do you have those cards here now?

A. Yes, I do.

OFFERS IN EVIDENCE

Mr. Rigney: I offer this in evidence.

Mr. Barnes: Do you intend to offer the cards in evidence?

Mr. Rigney: Not unless I have to.

Mr. Barnes: Your Honor, I object on the ground that this is not the best evidence.

The Commissioner: Sustained.

Mr. Rigney: The man wants to take the cards back with him. I don't know how long he can leave them here.

By Mr. Rigney:

Q. What is the situation about that, Mr. Jones? If these cards which you have produced can be photostated here, would you be able to leave these originals long enough for us to obtain photostats?

A. Yes.

Mr. Rigney: Then, under those circumstances, we will offer the originals with the understanding that photostats of them will be actually substituted for the originals.

Mr. Barnes: I have no objection to that.

The Commissioner: You have no objection to what?

Mr. Barnes: I have no objection to the substitution. I [fol. 1028] haven't seen one of the cards.

Mr. Rigney: May we see the cards, Mr. Jones?

(The witness produced some documents.)

Mr. Rigney: Let this be marked Plaintiffs' Exhibit 156 for identification.

(Said document was marked for identification as Plaintiffs' Exhibit No. 156.)

By Mr. Rigney:

Q. I show you Plaintiffs' Exhibit No. 156 for identification, and ask you if that is a typical employment card which you produced here in connection with these Homestake employees?

A. This is the card that was used at that time for all employees placed on our payroll, including the ones recruited at Homestake or at Lead, South Dakota.

Q. In addition to the card for each employee of the 51 listed on Plaintiffs' Exhibit 155, is there also a slip of paper accompanying it which reflects the time his employment ended?

A. Yes. With each employee whose name appears in

this list I have brought a slip showing the date on which he was separated from the company.

Q. And whose slips are also kept in the regular course of your business as well as these cards, is that right?

A. That is right.

Q. Is it true that in connection with some of the cards [fol. 1029] you also have a slip which is headed "Climax Molybdenum Company, Employment Notice"?

A. That is correct.

Q. Is it the fact that in connection with some of these employees this slip "Employment Notice" is missing?

A. In one or two cases it is missing.

Q. But is it the fact that in all cases the date of their commencement of employment is reflected on the card?

A. That is true.

Q. So that your records as reflected in the cards and these slips which are headed "Time Order", of which you say you have one for every one of the 51 employees, they reflect completely the date of commencement of employment and the date of conclusion of employment; is that right?

A. That is right.

Mr. Rigney: I offer Plaintiffs' Exhibit No. 156 for identification in evidence.

The Commissioner: I think that they should be marked A, B, and C since there are three items there bearing the same number.

Mr. Rigney: Yes, your Honor.

Mr. Barnes: Your Honor, with respect to Plaintiffs' Exhibit No. 156, it seems to me the basic question is that it reflects something that is not at issue in this case. The issue in this case is whether L-208 was arbitrary at the [fol. 1030] time it was issued, which was October 8, 1942. These documents reflect transactions at a date subsequent to that, and it seems to me they can have no relevance and materiality. They can not, obviously, have been known to WPB officials on October 6, when the decision was made to issue the order, and on October 8 when the order was issued. I do not see how they can be binding on the Government, or on the issues as the Court has delineated the issues before us here. I object to the reception of this and to all the other documents which, I assume, are going to be offered along that same line on that basis.

The Commissioner: Overruled. It will be received.

(Said employment card, marked Plaintiffs' Exhibit No. 156, admitted in evidence and made a part of the record.)

Mr. Rigney: I wonder, your Honor, if perhaps we could have these marked in the light of your Honor's suggestion as to the marking of the cards, with the accompanying papers as 156-A, B and C. I think it would be well to mark the card, perhaps, 156-A, the Employment Notice 156-B, and the Time Order 156-C.

The Commissioner: The reason I made that suggestion was because I thought there was going to be some more extended discussion concerning them, and I wanted them to be identified. But if will not be necessary to mark each one of the additional cards if you are going to offer them. [fol 1031] Mr. Rigney: I see, sir. Then we can just mark the cards in normal sequence with the assumption that the appropriate accompanying papers will be attached to the particular card.

The Commissioner: I think that will be all right.

Mr. Rigney: I should like at this time to renew the offer of Plaintiff's Exhibit 155.

Mr. Barnes: Your Honor, on the understanding that the balance of the time records that are reflected in 155 are going to be marked——

Mr. Rigney: Yes, the remaining 50 cards.

Mr. Barnes: —I have no objection to letting it be received subject to verification against the original document.

The Commissioner: Then the other cards may be all marked at one numbering.

Mr. Rigney: As one number, sir?

The Commissioner: Yes.

Is there any possibility of avoiding the necessity for photostating that bundle of cards? Can you compare it with the list?

Mr. Barnes: I have not seen the list or a copy of it yet, sir.

The Commissioner: You saw what it looks like. I saw it from the bench.

Mr. Barnes: I don't know what information is reflected on it. There was a great deal of information which I think

[fol. 1032] may be material on the cards, which obviously is not reflected on this, this list, your Honor.

The Commissioner: Then you do not think that there is any way that we can avoid the necessity for photostating?

Mr. Barnes: Your Honor, the point I had in mind is this: looking at Plaintiffs' Exhibit 156, which shows on the back the previous employment of the individual, that he worked for Walter Schultz Company, Casper, Wyoming, and I cannot be sure whether it is five or six years; for the Police Department in Lead for six months; for the Homestake mine for six weeks, and for the Kelley Distributing Company in Rapid City, South Dakota, for two months.

He first reported at Climax apparently on October 18, 1942. There is grave doubt in my mind as to whether he was an employee of Homestake on October 8, on the basis of the information shown on this card, who was displaced by the order. If Plaintiff is offering this to reflect that, I think the information appearing on the back of the card showing his previous employers, and the order of sequence of them, the length of time he worked for them, may be very material. That is not reflected in any way in Plaintiffs' Exhibit 155.

The Commissioner: All right.

Are you going to further examine the witness?

Mr. Rigney: Just to have these identified, your Honor. Just this batch of cards.

[fol. 1033] Mr. Barnes: With respect to Plaintiffs' Exhibit No. 155, your Honor, I had just seen the sentence at the bottom of the page, which seems to me to be incompetent, and I think it should be stricken before the document is received under any circumstances. It obviously is not a digest of any of the employment records that are being produced here.

Mr. Rigney: Well, further examination might make that admissible with that on it, I don't know. But if your Honor wanted to suspend now for lunch we might be able to determine that fact by the time we resume.

The Commissioner: All right, we will suspend until two o'clock.

(Thereupon, at 12:32 o'clock p. m., a recess was taken in the hearing until 2:00 o'clock p. m.)

[fol. 1034] AFTERNOON SESSION

(The hearing was resumed, at the time above-mentioned, pursuant to the recess previously taken.)

Mr. Rigney: I would like to ask Mr. Bjorge to resume the stand a moment, Your Honor, to straighten out the matter I mentioned before lunch.

GUY N. BJORGE, resumed the witness stand and was examined and testified as follows:

Re-direct examination.

By Mr. Rigney:

Q. Mr. Bjorge, I show you a copy of Plaintiffs' Exhibit 137, being a letter of the War Production Board dated November 25, 1942, to the Homestake Mining Company, and bearing the name of Ernest Kanzler, Director General for Operations, at the bottom of the letter. In connection with this exhibit my recollection is that Mr. Barnes asked you with reference to the notation appearing at the bottom of Exhibit 137, in parenthesis: "This order subsequently modified to show that the 60 men are in addition to the 730."

My recollection is that the question was then asked you if that 730 was the number of men on Homestake's payroll at that time. Assuming that that question was asked you, what is the fact?

A. The fact is that the figure of 730 is an estimate arrived [fol. 1035] at during the appeals hearing as the number of men who would be required on a shutdown basis. The reduction in force after L-208 became effective could not be accomplished as rapidly as that, and the average number of men on the payroll, which in September had been 1868, in October was 1382, in November 1206, and in December 916. These are all 1942.

Q. So if the record does reflect that in answer to any question of Mr. Barnes you stated that the 730 figure appearing here at the bottom of Exhibit 137 was the number of men on the payroll at the time in question, that was an inadvertent or erroneous answer?

A. Yes, that would be an erroneous answer.

Mr. Rigney: That is all.

Re-cross examination.

By Mr. Barnes:

Q. From what source did you read those figures you just gave *gave* as to average employment in the months of October, November, and December?

A. That is the statement of the average number of employees on our payroll submitted to me by the employment office every year, a tabulation of the number of men.

Q. Does this cover just the year 1942?

A. This covers the year 1942.

Mr. Barnes: No further questions.

(Witness excused.)

[fol. 1036] Mr. Rigney: Mr. Jones, will you resume the stand, please?

W. E. Jones, resumed the witness stand and was examined and testified as follows:

Direct examination (resumed).

The Commissioner: It is my recollection that there was an objection raised just before we recessed, and you were going to ask some further questions to see if you could dispose of the objection.

Mr. Barnes: That relating to the sentence that appears at the foot of Plaintiffs' Exhibit 155.

Mr. Rigney: Yes.

By Mr. Rigney:

Q. Do you know from any conversations that you had in your official capacity with Climax in October and November, 1942, any conversations you had at that time with newly hired Climax employees who came there from South Dakota, whether or not a recruiter from Climax had interviewed those people in Lead, South Dakota, before they came to Climax?

Mr. Barnes: I object to that as calling for hearsay on the part of the witness.

The Commissioner: Sustained.

Mr. Rigney: I don't think it is important, Your Honor. We will physically excise this notation at the bottom here, and with that proviso, may the Exhibit 155 be received, with [fol. 1037] the further understanding that we are going to offer in evidence photostats of these 31, I guess there are, employees' record cards.

Mr. Barnes: I have the basic objection which I expressed to Plaintiffs' Exhibit 156 when it was offered this morning, which I still wish to reserve, and also the right to verification of Plaintiffs' Exhibit 155 against the employment cards when they are received.

The Commissioner: Exhibit 156 is in evidence, and I had thought you had already indicated that you didn't have any objection to 155 as long as it would bear the scrutiny of comparison with the exhibits to be offered.

Mr. Barnes: Your Honor, I expressed an objection to 156 which you overruled this morning.

The Commissioner: That is correct.

Mr. Barnes: To the extent that this is a tabulation of 156, I want to reserve that same objection.

The Commissioner: If you have any objection to 155, state it. I thought it was already in evidence.

Mr. Rigney: I thought so, too, Your Honor.

Mr. Barnes: The objection which I stated to 156 was——

The Commissioner: I know what that objection is. You don't need to repeat it.

Mr. Barnes: This is a tabulation of 156 and similar cards. I am preserving the same objection that I stated to [fol. 1038] 156 with respect to this: that I think it is immaterial because it relates to a period of time subsequent to the issuance of L-208.

The Commissioner: Since we have a new reporter here, I don't suppose this reporter was present or has what took place before we recessed for lunch, but I don't think you stated that objection when it was received in evidence before that time, before we recessed.

Mr. Barnes: I don't think it was received in evidence, because I also raised the objection with respect to the note at the bottom of the page.

The Commissioner: You did that later. And I was considering the suggestion with respect to the note after you had waived any objection to the admission of the document.

Mr. Barnes: If there is any misunderstanding and 155 has been received, I now move to strike it on the ground stated with respect to 156: that it relates to a period of time subsequent to the issuance of L-208 and is therefore irrelevant and immaterial.

The Commissioner: Overruled.

(Said list of employees hired by Climax Molybdenum Co. in Lead, S. D., in October and November, 1942, marked "Plaintiffs' Exhibit No. 155," admitted in evidence and made a part of this record.)

Mr. Rigney: 156 has been received in evidence, I believe. [fol. 1039] The Commissioner: Yes.

Mr. Rigney: May this be marked Plaintiffs' Exhibit 157 for identification.

(Said document was marked for identification as Plaintiffs' Exhibit No. 157.)

By Mr. Rigney:

Q. Mr. Jones, I show you Plaintiffs' Exhibit 156 in evidence, and ask you if that card is the employment record card of one Elmer E. Maki?

A. It is.

Q. Is that the same man whose name appears first on this list here which is Plaintiffs' Exhibit 155?

A. That is right.

Q. Now, I show you Plaintiffs' Exhibit 157 for identification, and ask you to look at those employment cards and to tell us if those are the cards of the remaining 50 people whose names appear on that list? I believe you have them in the order in which they appear here on this list. Isn't that correct?

A. That is correct.

Q. Would you like to have the question read which was addressed to you?

A. Please.

(Thereupon, the question and answer were read by the [fol. 1040] reporter.

Mr. Rigney: When he said "That is correct," I think he was addressing himself only to the last portion of the question, that he had them in order.

By Mr. Rigney:

Q. Now, are these cards which constitute Plaintiffs Exhibit 157 for identification, the cards of the 50 persons whose names appear on the list, Plaintiffs' Exhibit 155, beginning after the name Elmer E. Maki?

A. That is true, with the exception of the two cards that we did not include in this group because of the fact that we had no evidence that they ever worked for the Homestake Gold Mining Company.

Q. Do you have the cards of those two people?

A. Those are the two people whose cards are not in this group.

Q. Can you find for me their names and their number on this list, Exhibit 155?

A. No. 43, Berle L. Brooks, and No. 26, A. F. Peterson.

Mr. Rigney: Then let these two cards be marked Plaintiffs' Exhibit 158 for identification.

(Said cards were marked for identification as Plaintiffs' Exhibit No. 158.)

By Mr. Rigney:

Q. Do I understand that Plaintiffs' Exhibit 157 for [fol. 1041] identification, this quantity of cards, covers 48 of the 51 employees listed on Plaintiffs' Exhibit 155?

A. That is right.

Offers in Evidence

Mr. Rigney: I offer Plaintiffs' Exhibit 157 for identification in evidence, Your Honor.

Mr. Barnes: I make the same objection I did with respect to Plaintiffs' Exhibit 156, Your Honor.

The Commissioner: It will be received.

(Said cards, 48 in number, Records of Employment with Climax Molybdenum Co., marked as "Plaintiffs' Exhibit

No. 157," admitted in evidence and made a part of this record.)

By Mr. Rigney:

Q. Showing you Plaintiffs' Exhibit 158 for identification, being two of your employment cards relating to employees Berle Brooks and A. F. Peterson, I ask you where those men were recruited?

A. They were recruited in Lead, South Dakota.

Q. I believe you just said that their cards do not reflect prior Homestake employment?

A. That is correct.

Mr. Rigney: I offer these in evidence merely by way of completing the story with respect to the recruitment of these people.

Mr. Barnes: I make the same objection that I did with [fol. 1042] respect to 156, Your Honor.

The Commissioner: It will be received.

(Said cards, Records of Employment with Climax Molybdenum Co., of Berle L. Brooks and A. F. Peterson, marked "Plaintiffs' Exhibit No. 158," admitted in evidence and made a part of this record.)

Mr. Rigney: That is all, Mr. Jones.

Cross-examination.

By Mr. Barnes:

Q. Mr. Jones, how was it possible for you to sort this group of 51 cards out of your file? How were they filed which made it possible to separate them?

A. During the time covered by the discussion with these people here, which was in October and November of 1942, the Employment Office, which was then called the Personnel Department, wrote a monthly report, and in this monthly report they put down the names of the people who were hired during the month and where they were hired, because at that time there was considerable interest in trying to determine where we could obtain the greater number of employees.

Q. So you looked at those reports for those two months, took the names of the employees who were reported there

as having been employed in Lead, and pulled out their cards; is that correct?

A. That is right.

[fol. 1043] Q. Do you know whether or not Climax may have employed in Climax some people who were former employees of Homestake?

Mr. Rigney: Other than these, you mean?

By Mr. Barnes:

Q. Other than these?

A. I couldn't quote any names, but I am sure that that would be true to a limited extent.

Q. Do you know whether or not Climax employed any people who had formerly been employed in gold mines other than Homestake?

A. I can't say. I don't know.

Q. Do you know whether or not Climax employed any men who had formerly been employed by Homestake at a period of time subsequent to November, 1942?

A. There again I can't give you any definite names, but I am sure that we employed them both before and after that date.

Q. I take it from examination of these employment cards that each of your new employees had to have a physical examination; is that correct?

A. That is true.

Q. Do you know whether or not you recruited any employees in Lead who were rejected on physical grounds when they reported to Climax?

A. No, I don't.

[fol. 1044] Q. Attached to Plaintiffs' Exhibit 156, for example, is the slip which you said showed the termination of the man's employment, which is headed "Time Order." Where were these filed?

A. Each man who has worked for Climax Molybdenum Company has just an ordinary manilla folder, and in that folder is everything that we have accumulated relative to the man while he was in our employ or even since he left our employ. They came out of that folder.

Q. Are these folders in your custody in your present position?

A. Yes, they are.

Q. Do you know whether or not Climax reemployed any of the men whose names appear on Plaintiffs' Exhibit 155 after the date when they left your employ?

A. Offhand, I don't know. It would be necessary to check the records to find out.

Q. Do you know whether or not during, let's say, the last three months of 1942, Climax employed any people in California?

Mr. Barnett: You mean from California?

Mr. Barnes: Yes.

The Witness: We had a recruiter out in that area, but I can't recall exactly what months he was there.

[fol. 1045] By Mr. Barnes:

Q. Do you know whether or not you employed any persons in or from the State of Nevada?

A. I can't mention specifically, but I am sure that we had, because at that time we were hard pressed for men, and wherever we could find someone to work for us, we put him on the payroll.

Q. Do you know where you had recruiters working at that time, on the basis of these monthly reports which you said you examined?

A. We had the one in Lead, which we have discussed already. We had our representative in Denver, also. The representative in Denver also toured a great part of the State of Colorado, the smaller towns.

Q. At some point, you had one in California, but you are not sure when, is that correct?

A. That is right.

Q. Do you know whether you had one at approximately this period of time at any other locality?

A. The same gentleman who was in Lead also went to several Army camps in various parts of the country, both before and after the period he was in Lead.

Q. Do you know whether or not you ever had one in the State of Montana?

A. I don't know.

[fol. 1046] Q. Do you know whether you had one in Idaho?

A. I don't know.

Q. What about Arizona?

A. I don't know.

Q. Utah?

A. Mr. Doepke went to an Army camp in Utah, I believe, to recruit some military personnel.

Q. You referred to the fact that Climax was short of employees. Was that limited to underground employees, or were they short of all types of employees?

A. It was largely underground employees.

Q. Was there any shortage of employees above the ground?

A. Some.

Mr. Barnes: That is all.

By the Commissioner:

Q. How many additional people did you hire within the last quarter of 1942?

A. I only have records for two months with me. I could refer to them. That is the closest I could come to answer your question.

Q. With respect to those two months, how many would there be? What months are they, by the way?

A. These are October and November of 1942.

Q. That is good enough.

A. In October of 1942, we hired 251 employees; and in [fol. 1047] November of 1942, we hired 311 employees.

The Commissioner: Any further questions?

Redirect examination.

By Mr. Rigney:

Q. Do you know how many people left your employment during those two months, October and November, 1942?

A. Yes.

Q. What was that number?

A. In October, the number of separations was 162; and in November, 187.

By Mr. Barnes:

Q. Did that include draft, and everything else?

A. That is any reason for separation.

Mr. Rigney: That is all, sir.

The Commissioner: You may step down.

(Witness excused.)

Mr. Rigney: Now, as I understand it, Your Honor, we are going to undertake to photostat these employment cards and substitute those photostats for the original cards. May we have permission to do that in New York sometime in the next day or two? We will get a better rate there.

The Commissioner: Just furnish to the reporter within the next few days the photostats, so he can include them with the record.

Mr. Rigney: Thank you, sir.

[fol. 1048] Mr. Davis!

Jim C. Davis, a witness produced on behalf of the plaintiffs, having been first duly sworn by said Commissioner, was examined, and in answer to interrogatories, testified as follows:

Direct examination.

By Mr. Rigney:

Q. May I have your full name, Mr. Davis?

A. Jim C. Davis.

Q. What is your employment?

A. I am Personnel Manager with the Anaconda Copper Mining Company in Butte, Montana.

Q. How long have you held that position?

A. I have been with them five years.

Q. Would you give us a description of the duties of your position there?

A. I have charge of all the personnel records for the Anaconda Copper Mining Company for the Butte operations, over 112,000, all the records since December 2, 1912.

We keep the tabulations of all starts and quits for the full Butte operation, the seniority on all crafts, the vacations for all the ACM employees—Anaconda Copper Mining employees—and now we have just taken over the pensions.

Q. The records with respect to pension rights of these employees?

[fol. 1049] A. Right.

Q. Who held the position in 1942 which you now hold as Personnel Manager?

A. George Lentz. He held it from 1912 until about six years ago, I would say, when he died.

Q. As a result of a request made to your company on behalf of Homestake Mining Company, you had occasion to examine the records kept in your office with respect to the employment of former Homestake employees after October 8, 1942?

A. I went through about 6,000 records to pick out the men who were employed or showed employment at Homestake on or after October 8, 1942.

Q. Did you sort out from these records which you say you examined, the employment cards of those employees of Anaconda who showed that prior Homestake employment that you just referred to?

A. Yes.

Q. Do you know the total number of such cards which you found?

A. It was 114 who showed their last employment at Homestake for the Butte operations.

Q. Right there, perhaps I should ask you to describe briefly what your situation is so far as Anaconda is concerned. You refer to the Butte operations. What does that consist of?

A. I have the records for the Butte operations, the [fol. 1050] Anaconda Smelter operations, which is 26 miles from Butte, the same company, and the Defense Chrome Account, which is out at Billings. The company operated that for the Government during the war. And also the International Smelting and Refining Company at Tooele, Utah. There are four ACM records that I have.

[fol. 1051] The Commissioner: Are they all included in your term, "the Butte operations"?

The Witness: Butte and Columbus is the Anaconda smelter which is twenty-six miles from Butte. I went over there and got those records. I got the personnel officer to send them to me.

By Mr. Rigney:

Q. You were referring to a total of 114, I believe, which related to the Butte operations?

A. To the Butte operations.

Q. All right.

A. Then there were twenty-one with the Anaconda Reduction Works. There were thirty-seven for Columbus——

Mr. Barnes: What do you mean by "Columbus"?

The Witness: The Columbus Chrome Account. — and twelve for Tooele. I believe that totals up 184, is that correct?

By Mr. Rigney:

Q. Right.

Mr. Rigney: May this be marked Plaintiffs' Exhibit No. 159 for identification?

(Document entitled "Anaconda Copper Mining Company employees hired during October, 1942—January, 1943, listing Homestake Mining Company as last employer," was marked for identification as Plaintiffs' Exhibit No. 159.)

[fol. 1052] By Mr. Rigney:

Q. I show you Plaintiffs' Exhibit No. 159 for identification and ask you, Mr. Davis, if you prepared this document.

A. Yes, sir.

Q. Was that prepared from your employment cards and records to which you referred?

A. From the personnel cards and records.

Q. Was the information which appears in this exhibit assembled by you from those cards and records?

A. Absolutely.

Q. You have those cards here with you?

A. Yes, sir.

Q. Does this exhibit, Exhibit No. 159 for identification, contain the names of those persons hired by Anaconda Copper Mining Company during the period October, 1942, through January, 1943, who listed Homestake Mining Company as their former employer?

A. Yes, sir.

Mr. Rigney: Plaintiff offers this summary in evidence, Your Honor.

Mr. Barnes: Your Honor, we come back to the same best evidence objection. I was going to make the suggestion to counsel that since the basic records from which this was prepared are here, if an oportunity can be given to us at some reasonable time to compare this against those records, [fol. 1953] I am willing to waive the best evidence objection, because it seems to me it is a burden to take 180-odd personnel cards that we are now talking about here and put them all in. Unless that can be done I am going to have to press the objection.

Mr. Rigney: I think it might be possible to work out something along that line if it could be done fairly soon. Mr. Davis is not in a position to leave the cards and records here with us. If it would be possible, Mr. Barnes, for some one of your associates in the department to do that within the next twenty-four hours so Mr. Davis could be released to take his records and return to Anaconda, that is perfectly all right.

Mr. Barnes: I was going to suggest that I understood that because of Mr. Herrington's continued illness, Idaho-Maryland would 't be able to go on this afternoon and there was a possibility that we might finish somewhat before four thirty and we might be able to spend the time right then doing that.

The Commissioner: Do you want to take a look at one of the cards and see if any particular problem presents itself?

Mr. Barnes: That might be helpful.

(Discussion off the record.)

By Mr. Barnes:

Q. Mr. Davis, you produced two papers here relating to an employee named Stephen J. Champeau, one of which is [fol. 1954] marked "Anaconda Copper Mining Company—Service Record." Would you tell me what this represents so far as your files are concerned?

A. That shows the different jobs that he had in the Butte operations. You will notice he worked at—I don't know how many mines there, four or five different mines. We have about twelve mines in operation there. He may work

at Leonard today and quit at eleven o'clock and be hired between twelve and one by a mine foreman and go out and work again. That is the start date, quit date, the mine he worked at, the name of the boss that he worked for, the job held for the last shift, and the reason for termination.

Q. Do your foremen compete against each other in taking men from one mine to another?

Mr. Rigney: I think that is objectionable, Your Honor, as facetious.

By Mr. Barnes:

Q. Looking at this particular entry, I take it that this man was first employed on January 5, 1943, is that correct?

A. Correct.

Q. He was employed at the Anselmo Mine, is that correct?

A. Yes.

Q. He stayed there until February 3, 1943?

A. Yes.

Q. At which time he quit, giving as his reason that he [fol. 1055] had another job, is that right?

A. That is quite common.

Q. Is that what your records show?

A. That is quite common.

Q. Then he started working at another one of your mines the following day?

A. The following day. That happens quite often. It doesn't necessarily mean that he contacted that foreman. These are contract miners. He may have talked to a miner at the other mine that needed a partner and it was a good contract and he made the move.

Q. Then he stayed at the other mine for a matter of some five years?

A. That is possible.

Q. This other document is marked "Application for Recommendation" and bears the heading, "Butte Mutual Labor Bureau." What is that?

A. That is the personnel office.

Q. That is your personnel office?

A. Yes, the employment office at Butte, Montana.

Q. Is this the application that is filed by the individual miner, by the individual applicant for a job?

A. Yes. The applicant fills out the front side of it. That is in his own handwriting. The backside is filled out by the clerk in the employment office.

[fol. 1056] Q. So what appears here for example under "Employment Record" on the back is something the clerk filled in?

A. Yes, from information from the man, from the applicant.

Mr. Barnes: On the basis of these two documents, Your Honor, I would anticipate no substantial difficulty in checking this form against the documents. I would like it to be clear, however, that with respect to Plaintiffs' Exhibit No. 159 I am preserving exactly the same objection I have previously stated to Plaintiffs' Exhibit No. 156; in other words, that it relates to a period of time subsequent to October 8, 1942, and is therefore immaterial and irrelevant to any of the issues involved in this case, but on the understanding that we may be able to verify it perhaps this afternoon against the original records.

The Commissioner: We will withhold ruling on it until we meet tomorrow.

Mr. Rigney: Did you want to have a beginning made on that, Mr. Barnes, now, and you remain here so that we can go ahead and put in documents that we want to offer?

Mr. Barnes: I think that can be arranged. Mr. McGrail might be able to start on that now.

Mr. Rigney: There are no further questions at this time of Mr. Davis.

Mr. Barnes: I would like to ask Mr. Davis one or two [fol. 1057] questions.

Cross-examination.

By Mr. Barnes:

Q. Does Anaconda have any copper mining operations other than in the Butte area?

A. Not that I know of right now.

Q. Did they in 1942 have any non-ferrous mining operations other than the ones that are included in Plaintiffs' Exhibit No. 159?

A. Yes. They operated in Nevada.

Q. Where else, do you know?

A. They have had prospects all over the West. That would be a hard question for me to answer because I am not connected with that. I am in the Butte operations, not with the general staff.

Q. My other question is this: I take it from what you said that you examined all cards of employees who were hired at these four locations, starting with October 8, 1942, is that correct?

A. I didn't say that I examined the cards of International Smelting and Refining at Tooele. I called them and had their personnel man go through his records there.

Q. And he sent you the cards that he pulled out, is that correct?

A. That is correct.

[fol. 1058] Q. But you started with October 8 and went through to the end of January, did you?

A. Towards the end of February.

Q. Did you include only those employees who had shown Homestake as their last place of employment?

A. They had been working at Homestake on 10/8/42 or after because from looking at these records—I don't know the Homestake operations, but from looking at these records they did not terminate all their men on 10/8 or 10/9. I found a few who had worked a few days over. When they showed their last employment as of 10/8 or up to 10/20 I took them.

Q. Did you make any investigation as to the number of employees who may have been hired by these operations from any other gold mines other than Homestake?

A. What is that again?

Q. Did you look for employees who may have been obtained from gold mines other than Homestake?

A. Yes.

Q. Did you find any?

A. A few.

Q. How many, if you know? Do you have any record with respect to them?

A. Eight from Cripple Creek.

Q. Any others?

A. No.

[fol. 1059] Q. Do you have their cards here?

A. Cripple Creek?

Q. Yes.

A. No.

Q. You received none from any of the California mines?

A. No, sir.

The Commissioner: I don't guess there is very much dispute between the parties that there was a great need for copper miners on or about October 8, 1942.

Mr. Rigney: No.

The Commissioner: If there was, we have a good man here to fill in the gap.

The Witness: We were seriously short then.

By Mr. Barnes:

Q. Were you short of employees other than underground men?

A. Underground men was it.

Q. Did you have any other shortages?

A. Very few. I am talking about the Butte operations again, because when you go over to Anaconda and the Smelter you have another picture. You go to Tooele and Columbus and it was surface as well as underground. I am talking about the Butte operations now.

Q. I know, but you have included these others here.

A. But that last statement was to cover Butte.

[fol. 1060] Q. Did the Smelter need men?

A. Oh, yes.

Q. Did Tooele need men?

A. Yes, and Columbus needed men.

Q. Those were not underground men?

A. Partly. Columbus was partly underground and surface both, and smelters also.

Mr. Barnes: That is all I have.

Mr. Rigney: I think, Mr. Davis, if you would perhaps take these cards and records that you have outside, there is a table out there, and maybe Mr. McGrail is ready to proceed.

Mr. Barnes: Do you have an extra copy of this exhibit that we can check on, which we can mark to see where we are going? Here is one here.

(Witness excused.)

Mr. Barnett: May I ask Mr. Jones one question, please?

W. E. Jones, resumed the witness stand and was examined and testified as follows:

Direct examination.

By Mr. Barnett:

Q. Mr. Jones, you stated that your firm employed some 562 people during October and November of 1942, and listed a certain number of them as coming from Homestake. [fol. 1061] Did you examine the list to ascertain whether any of those 542 came from California?

A. Yes, I looked down the complete list of both monthly reports to see where those particular employees came from.

Q. Did you find any from California?

A. There were none mentioned on that list as having come from California.

Q. Or from the Central Eureka Gold Mining Company?

A. No, none from there, either.

Mr. Barnett: Thank you.

Cross-examination.

By Mr. Barnes:

Q. Do you have that list here?

A. Yes.

Q. Could I see it, please?

A. This is the list of the hired, and this is the separations on this side. This shows the location where the men were hired.

Q. What does "Army S. L." stand for?

A. S. L. means Salt Lake. In fact I know Mr. Doepke was there recruiting part of the time.

Q. I see the word "Nearing." What is that?

A. That is Emil Nearing, who was recruiting for us at that time, mainly in various parts of Colorado.

Q. You did, however, during that month, which is what— [fol. 1062] the month of November?

A. Yes.

Q. —hire certain people both at Climax and in Denver, did you not?

A. That is correct.

Q. Referring to this report, which is for the month of October, 1942, does it show where the people were employed?

A. Not in every case.

Q. Looking at the first page where we have forty-five names that appear, with respect to eight of them it shows where or by whom they were hired, is that right?

A. That is right.

Q. On the second page, only four names show where or how they were employed?

A. Right.

Q. On the third page no information of that type is given as to where or how the men were employed?

A. That is right.

Q. And the same thing is true on the fourth page?

A. No. We assumed when we went through these reports that the "L" stood for Lead, so we pulled these names out of the file, and the record which you have already taken as evidence substantiated the fact that they were hired at Lead.

Q. Where a pencil "L" appears?

A. That is right.

[fol. 1063] Q. That is true of ten on this page?

A. Yes.

Q. Then on page 5 there are fifteen that show the "L," is that correct?

A. Yes.

Q. Then there are some down here. What is that first abbreviation, that word "Rana"?

A. That is Earle Rana. He was also recruiting for us, largely in Colorado.

Q. Then the next one is "Denver bix." What does that stand for?

A. No, I don't know what that means.

Q. Then on page 6 there are indications with respect to all of the employees as to where or by whom they were recruited, is that correct?

A. Yes.

Mr. Barnes: No further questions.

Mr. Rigney: Nothing else.

Mr. Barnes: I have just one question, Mr. Jones.

By Mr. Barnes:

Q. Do you know whether or not there were any gold mines in the State of Colorado?

A. Would you repeat that, please?

Q. Do you know whether or not there were any gold mines in the State of Colorado in 1942?

[fol. 1064] A. Yes.

Q. Were there?

A. There were.

Mr. Barnes: That is all.

The Commissioner: That is the Cripple Creek operation?

The Witness: Yes.

Mr. Rigney: Nothing else.

The Commissioner: The witness may step down.

(Witness excused.)

Mr. Rigney: I am going to offer some exhibits now, Your Honor.

The Commissioner: Yes. Go ahead.

OFFERS IN EVIDENCE

Mr. Rigney: Plaintiff now offers in evidence, Your Honor, Exhibit No. 41 for identification, being the letter of May 24, 1943, from Senator McCarran to Donald Nelson, Chairman of the War Production Board.

Mr. Barnes: I assume this is being offered for the same purpose as some of these other congressional letters, not to show the truth of the statement made in the letter but merely to show that it is a communication to the Board.

Mr. Rigney: That is correct.

Mr. Barnes: I object to this, Your Honor, on the ground it relates to a period of time in May, 1943, which is some seven months after the issuance of L-208 and has no relevance or materiality with respect to the circumstances at [fol. 1065] the time of the issuance.

The Commissioner: It may be received.

(Said document, entitled "Letter of May 24, 1943, from Senator McCarran to Donald Nelson," admitted in evidence and made a part of this record.)

Mr. Rigney: Plaintiff now offers, Your Honor, Exhibit No. 42 for identification, being a letter of May 24, 1943, to

Donald Nelson, Chairman of the War Production Board, which letter is signed by a considerable number of senators, thirty-five in number, I believe.

Mr. Barnes: I make the same objection as with respect to the preceding exhibit, Your Honor; it is dated exactly the same day.

The Commissioner: The exhibit will be received.

(Said document, entitled "Letter of May 24, 1943, from thirty senators to Donald Nelson," admitted in evidence and made a part of this record.)

Mr. Rigney: Plaintiff now offers in evidence, Your Honor, Exhibit No. 13 for identification, being a report on gold mine Order L-208, its effect and accomplishments, by Edward H. Rott, May 24, 1943, with a covering letter from Mr. Rott to Mr. A. S. Knoizen, War Production Board, dated May 26, 1943.

Mr. Barnes: Your Honor, my objection to that goes only to the ground that the attachment is incomplete in that [fol. 1066] Appendices 1, 2, and 3 to it are not attached to the copy which has been offered. I have here a complete copy in the original file folder of the War Production Board which I would be glad to tender to counsel if they desire to use it in lieu of the incomplete copy.

Mr. Rigney: We will hold this, then, for the time being until we can check the Appendices and renew the offer at a later time.

May this exhibit be marked the next in numerical order, Plaintiffs' Exhibit No. 160.

(Said document was marked for identification as Plaintiffs' Exhibit No. 160.)

Mr. Rigney: We now offer Plaintiffs' Exhibit No. 160 for identification, being a letter of May 28, 1943, from Howard I. Young, director, Mineral Resources Coordinating Division, to Mr. Donald M. Nelson, War Production Board.

Mr. Barnes: Your Honor, I object to this on the ground that the enclosures referred to do not accompany the exhibit. One of them I am willing to concede for purposes of the offer is the document which plaintiff tendered as its Exhibit No. 13. The other, however, is described in the open-

ing paragraph as a copy of amended Order L-208, which I take it was a draft because there had been no amendment to L-208 issued as of about this date. It does not accompany the document which plaintiff is offering as Exhibit No. 160.

[fol. 1067] Mr. Rigney: In going over these the other evening, Your Honor, and deciding to offer this, we assumed that Exhibit No. 13 would be in evidence by the time we offered this.

The Commissioner: That still doesn't make it complete.

Mr. Rigney: No. It needs the other which was the proposed amendment. So in view of Your Honor's ruling on similar objections, I will have to hold this for the time being and may renew the offer later.

The Commissioner: All right.

Mr. Rigney: May this be marked Plaintiffs' Exhibit No. 161 for identification?

(Said document was marked for identification as Plaintiffs' Exhibit No. 161.)

Mr. Rigney: Plaintiff offers in evidence Exhibit No. 161 for identification, being a letter of June 4, 1943, from Mr. Donald M. Nelson to Mr. Paul V. McNutt, chairman of the War Manpower Commission.

Mr. Barnes: May I ask the purpose of this offer?

Mr. Rigney: It is a part of what the situation was in 1943, at a time when consideration was being given by the War Production Board to rescinding or modifying Order L-208. It constitutes a part of that picture.

Mr. Barnes: Your Honor, this is the first evidence that any such consideration was being given in the War Production Board, to the best of my recollection. I don't recall its [fol. 1068] being within the allegations of the petitions in any of the six cases which are here involved. I fail to see how it comes within the scope of the court's opinion. I therefore object on the ground that it is irrelevant and immaterial.

The Commissioner: It may be received.

(Said letter dated June 4, 1943, from Donald Nelson to Paal V. McNutt, marked "Plaintiffs' Exhibit No. 161," admitted in evidence and made a part of this record.)

Mr. Rigney: Plaintiff now offers in evidence Exhibit No. 43 for identification, being a memorandum of June 7, 1943, from M. Creditor to Mr. Donald M. Nelson.

Mr. Barnes: I object on the grounds previously stated with respect to the preceding exhibit, Your Honor.

The Commissioner: It may be received.

(Said memorandum of June 7, 1943, from M. Creditor to Donald Nelson, marked "Plaintiffs' Exhibit No. 43," admitted in evidence and made a part of this record.)

[fol. 1069] Mr. Rigney: Plaintiff now offers in evidence Exhibit No. 40 for identification, being a memorandum of June 8, 1943, from Donald D. Davis, Operations Vice-Chairman, to Mr. Donald M. Nelson, Chairman of the War Production Board.

Mr. Barnes: I object on the grounds of incompleteness, your Honor. The opening paragraph refers to the fact that a file containing reports and recommendations accompanies the memorandum. It does not accompany the copy which was offered by the plaintiff.

Mr. Rigney: I do not think that is a correct observation. It says, "I am returning herewith your file containing reports and recommendations respecting the above order." That is in a different category than these other documents that we have had which carry with them an enclosure or an appendix, or something of that sort. He is sending back a file, he is not transmitting an enclosure to this letter in the sense that we have had that problem before. I do not think there is anything in the body of the letter which is incomplete, or where the meaning is in doubt by reason of the fact that this file is mentioned.

The Commissioner: No, but at the same time, it would seem to me that the contents of the material returned may have a bearing upon the subject matter of this letter. I think the objection is good.

Mr. Rigney: I would that perhaps the Government could [fol. 1070] come forward with that. Mr. Barnes would have easier access to that than we would, your Honor. This file which is referred to, I should imagine, would not be filed in the same place that this document is anyway. And if it would throw further light on it, Mr. Barnes could offer

that. But I would like to ask your Honor to reconsider and receive this.

The Commissioner: Well, I think counsel knows that I have been extremely liberal in letting evidence in. I just feel that the court wants to have everything where it is apparent that it could throw light on the problem. But at the same time, if only part of the story is offered over objection, I do not think I can allow it to be received.

Mr. Rigney: May this be given the next numerical number in the new exhibits?

(Said document was marked for identification Plaintiffs' Exhibit No. 162.)

Mr. Rigney: Plaintiff offers in evidence now, your Honor, Exhibit No. 162 for identification, being a letter of June 13, 1943 from Robert P. Patterson, Under-secretary of War, to Mr. H. O. King, Director of the Copper Division of the War Production Board.

Mr. Barnes: Your Honor, in view of the last remark you made, I would like to read a portion of a sentence from the court's opinion in the Idaho Maryland Mine Corporation case which is the basis upon which I have been asserting my [fol. 1071] objection to these documents subsequent to October 8, 1942. What the court said there was:

> "The question raised by the facts alleged in the amended petition and which we have authority to consider and decide is whether or not on the facts so alleged the order in question went beyond what was required by the exigency of the situation existing in October, 1942."

I do not see how what the situation may have been in June of 1943 when Secretary Patterson wrote that letter to the head of the Copper Division can have any bearing on the issue delimited by the court as the issue for consideration here. And I object to the receipt of that document on this basis.

The Commissioner: It may be received.

(Said memo, dated June 13, 1943, from Secretary Patterson to Mr. H. O. King, marked "Plaintiffs' Exhibit

No. 162," admitted in evidence and made a part of this record.)

Mr. Rigney: May this be marked Plaintiffs' Exhibit No. 163 for identification?

(The document referred to was marked for identification Plaintiffs' Exhibit No. 163.)

The Commissioner: I might agree with counsel at a later time, but I do not know now, and it would certainly be improper for me to exclude evidence and be found by the court to be in error and require another trial, and require these people from great distances to return for another trial.

[fol. 1672] I do not want to imply by that that I have any feeling one way or the other.

Mr. Rigney: I do not deem it proper for me to ask your Honor to hear me on it in view of your Honor's ruling.

Plaintiff offers now Exhibit No. 163 for identification, your Honor, being a memorandum of June 14, 1943 from Gustav Peck to Mr. Donald M. Nelson.

Mr. Barnes: I seem to be full of objections, your Honor. I now have a new one to this document and to the preceding documents, which is along these lines: the record will show that on June 15, 1943 the entire question of the gold order was again presented to the full War Production Board, as appears from the minutes of that meeting, and was decided by it. Various recommendations by staff members prior to that time on bases which were not adopted by the War Production Board at that meeting can have no relevance or significance unless it is shown that those conditions were communicated to the Board at the time of that meeting and were before it. I object to the receipt of this document on that basis.

The Commissioner: It will be received.

(Memorandum dated June 14, 1943 from Mr. Peck to Mr. Donald Nelson, marked "Plaintiffs' Exhibit No. 163", admitted in evidence and made a part of this record.)

Mr. Rigney: Plaintiff offers Exhibit No. 48 for identification in evidence, being a memorandum of September 7,

[fol. 1073] 1943 from Gilbert J. Brown to Hugh C. Porter on the letterhead of the War Production Board.

Mr. Barnes: May I ask the purpose of this offer?

Mr. Rigney: This offer is made in conformity with certain allegations in one or more of the petitions here with reference to the exportation of mining machinery abroad.

Mr. Barnes: If it is being offered to prove those allegations of the petitions I have no objection to it, your Honor.

Mr. Rigney: I would not want to be confined to that statement as to any use that it might serve generally in support of our cause insofar as a later brief is concerned or findings. But I state that as among the reasons that it is offered.

Mr. Barnes: I fail to see that it has any possible relevance or materiality to the issues here involved except for that limited purpose, your Honor, and if it is being offered for any other purpose I object to its receipt.

The Commissioner: I seem to be a little confused. Did I understand the purpose as stated by counsel that it was to prove the allegations of the petition?

Mr. Barnes: With respect to certain foreign transfers of mining machinery to foreign countries.

Mr. Rigney: There are certain allegations in one or more of the petitions of the plaintiffs here with respect to the [fol. 1074] exportation of mining machinery to foreign countries during the period of the shut down here, and this is particularly pertinent on that point, your Honor, and is offered primarily for that purpose.

The Commissioner: It may be received.

(Memo dated 9-7-43 from Mr. Gilbert Brown to Mr. Hugh Porter, marked "Plaintiffs' Exhibit No. 48", admitted in evidence and made a part of this record.)

Mr. Rigney: Plaintiff now offers in evidence Exhibit No. 51 for identification, being a memorandum of October 30, 1943 from Mr. A. S. Knoizen, Director of the Mining Division, to three gentlemen within the War Production Board, Mr. Batcheller, Mr. Hall and Mr. Young.

Mr. Barnes: I object to this, your Honor, on the ground that it is too remote from October 8, 1942 and does not have any relevance or materiality. The record shows that the War Production Board on June 15, 1943 had reached

a decision with respect to the continuance of the order and that none of the addressees of this memorandum were members of the War Production Board.

The Commissioner: It may be received.

(Said memo dated 10-30-43 from Mr. Knoizen to Messrs. Batcheller, Hall and Young, marked "Plaintiffs' Exhibit No. 51", admitted in evidence and made a part of this record.)

[fols. 1075-1083] Mr. Rigney: May this be marked as the next exhibit in order, please.

(Said document was marked for identification as Plaintiffs' Exhibit No. 164.)

Mr. Rigney: Plaintiff now offers in evidence Exhibit No. 164 for identification, your Honor, bearing the date of May 4, 1945, headed "Order Clearance Committee Meeting 902."

Mr. Barnes: May it please the court, this is a document that has the clear appearance of being an excerpt from the minutes. It does not give any indication of the opening of the meeting, any indication of the persons present and any indication of a signature on the minutes. I object to it on the ground of incompleteness.

Mr. Rigney: I do not see anything that indicates it is incomplete.

The Commissioner: It may be received.

[fol. 1084] IN THE UNITED STATES COURT OF CLAIMS

[Title omitted]

Transcript of testimony — February 4, 1953

TESTIMONY FOR PLAINTIFFS (Resumed)

The hearing was resumed, at the time above indicated, pursuant to the recess previously taken.

Present: (The same appearances as previously noted.)

The Commissioner: You may proceed.

Mr. Herrington: At this time, Mr. Commissioner, Idaho Maryland will call Mr. Allan.

CHARLES L. ALLAN, a witness produced on behalf of the plaintiffs, having been first duly sworn by said Commissioner, was examined, and in answer to interrogatories, testified as follows:

Direct Examination.

By Mr. Herrington:

Q. What is your name?

A. Charles L. Allan.

[fol. 1085] Q. You are employed by Idaho Maryland Mines Corporation, one of the plaintiffs in this case?

A. Yes, I am.

Q. Who is the president of the corporation?

A. Mr. Albert Crase.

Q. How old is Mr. Crase?

A. He was 73 in November of last year.

Q. How long have you been connected with the corporation?

A. Since August of 1935.

Q. What is your present title?

A. Secretary Treasurer and Comptroller.

Q. Do you exercise any supervisory duties?

A. I have the over-all responsibility of conducting the corporation's affairs.

Q. What departments are there in the management of the company?

A. The Underground, Surface, the Mill, Geologic, and Engineering Departments.

Q. Do these departments make regular reports?

A. They make regular reports at varying periods.

Q. How often?

A. The Underground makes daily reports, and a monthly summary of their operations. The Surface Department will make reports weekly or bi-weekly. A daily report from the [fol. 1086] Mill. The Engineering Department is constantly making maps for our reference. And the Geologist, of course, is keeping a constant record of his findings and recommendations.

Q. What is the function of the Underground Superintendent?

A. The Underground Superintendent has direct charge of all the underground operations, the mining and maintenance. He has the responsibility for producing the ore.

Q. What is the function of the Surface Superintendent?

A. The principal activity of the Surface Department is servicing and supplying the Underground. The Service Superintendent is responsible for that work.

Q. What is the function of the Geologist?

A. The Geologist examines the mine, analyzes the diamond drill cores, makes recommendations based on his technical knowledge as to what mining should be done underground.

Q. Do you consult with the president of the corporation in connection with these reports that you mentioned?

A. Yes, I am constantly in consultation with the president.

Q. Do you attend meetings of the Board of Directors?

A. I do.

Q. Do you take part in the discussions?

A. I take active part in all the discussions.

[fol. 1087] Q. How long have you been connected with the Idaho Maryland Mines Corporation?

A. About 17½ years; since 1935.

Q. In what various capacities?

A. I was first a cost accountant; and then a senior accountant; personnel manager; chief accountant; and I became Secretary-Treasurer in 1949. In October, 1950, until March of 1951, I was General Manager.

Q. During the time you were General Manager of the mine, what were your duties?

A. I was in full charge of all operations, production, milling, and all the corporate activities.

Q. Mr. Allan, where is the Idaho Maryland Mine located?

A. The Idaho Maryland Mine is about a mile east of the Grass Valley city limits.

Q. In what county?

A. In Nevada County, California.

Q. What is the principal industry of Nevada County, California.

A. Gold mining.

Q. How long has that been true?

A. Since 1848.

Q. Since gold was discovered in California?

A. Since gold was discovered in California.

Q. Is the mine located in a definitely well-known mining [fol. 1088] district?

A. The Grass Valley Mining District of California is well known.

Q. What other city is adjacent to Grass Valley?

A. Nevada City, the county seat of Nevada County.

Q. What is the principal occupation of the inhabitants of these communities?

A. Gold mining.

Q. Has that been true for many years?

A. It has been true since the towns were founded.

Q. Have the inhabitants gone through the occupation of gold mining for many generations?

A. Yes, they have. The majority of the miners in Grass Valley were originally Cornish tin miners who were brought to this country for the purpose of operating shaft mines.

Mr. Herrington: Will you mark this as an exhibit?

(Said document was marked for identification as Plaintiffs' Exhibit No. 165.)

By Mr. Herrington:

Q. I show you Plaintiffs' Exhibit for identification No. 165, and ask you if this is a map of the Idaho Maryland Mines holdings in Grass Valley?

A. Yes, this is a map of the Idaho Maryland Mine Corporation's holdings in Grass Valley.

[fol. 1089] Mr. Herrington: I will introduce that as Plaintiffs' Exhibit next in order.

Mr. Barnes: May I ask the purpose of the offer?

Mr. Herrington: Just to indicate the description of the mine; for no other purpose. We can have it marked only for identification, if you choose.

Mr. Barnes: For that limited purpose, I have no objection. The point I had in mind at the opening of these hearings, when I stipulated, for the limited purpose of the liability hearings, with respect to ownership, was that we would not get into detailed evidence of this type which might, if it is

admitted generally, have an effect on subsequent damage hearings if we have to get into that point. I don't think from that standpoint, for example, that this witness is competent to identify this, probably. If it is being offered only for descriptive purposes, I would have no objection to its being received for that limited purpose.

OFFERS IN EVIDENCE

Mr. Herrington: The map is offered only for descriptive purposes, Your Honor.

The Commissioner: It may be received on that basis, then.

(Said map of Idaho Maryland Mines Corporation holdings in Grass Valley, Cal., marked as "Plaintiffs' Exhibit, No. 165," admitted in evidence and made a part of this record.)

[fol. 1090] By Mr. Herrington:

Q. Mr. Allan, will you describe generally the nature of the Idaho Maryland Mine at Grass Valley?

A. The Idaho Maryland Mine has an incline shaft 2850 feet in length, which extends to the 2,000 foot level vertically. Levels have been turned off this shaft at approximately every 100 feet.

Q. Have you marked on the map the location of the Idaho shaft?

A. Yes, it is marked. The Idaho shaft is here (indicating). It is where this small circle appears. That is the Idaho shaft.

Q. Is the Idaho Mine older, in point of use, than any of the other portions of the property?

A. Yes, it is much older.

Q. Is there another shaft called the Brunswick shaft?

A. Yes.

Q. Where is that located?

A. That is located a mile and a half southeast of the Idaho shaft.

Q. Have you located the New Brunswick shaft on the map?

A. The New Brunswick shaft is here (indicating).

Q. I believe you said the New Brunswick Mine is more recent in date of operation than the Idaho?

A. That is right.

[fol. 1091] Q. Are the two units operated as one at the present time?

A. At the present time they are operated as one unit.

Q. Are there other openings into the mine in addition to the Idaho shaft and the Brunswick shaft?

A. There is a circular shaft called the Idaho No. 2 shaft, located east of the Idaho shaft and extending down to the 1000-foot level of the Idaho Mine.

Q. What other shafts are there?

A. The Old Brunswick shaft. It is located south and east of the Idaho No. 2 shaft, and it extends to the 1100-foot level of the Old Brunswick Mine, but it is really a part of the New Brunswick workings.

Q. I believe you described generally the character of the Idaho shaft. Will you now describe the Brunswick shaft, the New Brunswick shaft?

A. The New Brunswick shaft is a vertical, three-compartment shaft, 3400 feet deep. The lowest level on that shaft is 3280, which is about 120 feet from the bottom of the shaft.

Q. When was that shaft erected?

A. The Brunswick shaft dates from the early 20's.

By Mr. Barnes:

Q. Mr. Allan, since you have Old Brunswick and New Brunswick, would you indicate which you are referring to [fols. 1092-1096] when you refer to the Brunswick shaft?

A. The New Brunswick shaft dates from the early 1920's.

By Mr. Herrington:

Q. Is the Old Brunswick shaft being used for operating purposes at the present time?

A. Not at the present time. It is used as a second exit.

Q. You mean as an escapeway?

A. It has, however, a steel headframe, and a hoist house.

Q. Is it capable of being used for operating purposes?

A. It could be used, and up to probably a year ago it was used occasionally for hoisting ore.

Q. What is the character of the frame equipment at the New Brunswick Mine?

A. There is a modern steel headframe, with concrete bins built into the headframe; a very large hoist capable of hoisting ore from a 5,000 foot depth; and the mill and the shops, the change house and storehouse, are all new buildings in the vicinity of the shaft.

[fol. 1097] By Mr. Herrington:

Q. Mr. Allen, you were describing the New Brunswick shaft. Can you tell us when it was constructed?

A. The New Brunswick shaft was started in the early 1920's. The New Brunswick new headframe was completed in 1941.

Q. What is the character of it? Of what materials is it constructed?

A. It is a steel headframe, a very modern headframe, with very modern hoisting equipment, one of the most efficient hoisting layouts in the United States.

Q. What other surface equipment did the Idaho Maryland Mine have by October, 1942?

A. They had mills, shops, automotive equipment, all the necessary equipment to carry on mining and servicing of the underground.

Q. Did you have a machine shop?

A. We had machine shops, electric shops, welding shops, blacksmith shop, carpenter shop, and a small sawmill.

Q. Will you describe generally the nature and extent of the underground workings of the Idaho Maryland Mine?

A. The Idaho Maryland Mine on the incline shaft reaches the 2,000-foot level. It has been developed to the 2700-foot level by winzes on the west side from the 2,000-foot level to the 2300; and on the east side, from the 2300 to the 2700. [fol. 1098] There are levels, of course, between the 2000 and the surface at possibly every 100 feet. On these levels are drifts, cross-cuts, raises, winzes, stopes. There are possibly 55 miles of underground workings in the two mines.

Q. Has the company had any policy with respect to keeping up its equipment?

A. The company has always tried to maintain its equipment in the most efficient working order. It has purchased new equipment when needed. We had a lot of new equipment and very good equipment in October 1942.

Q. What is the general nature of the gold-bearing ore in the Idaho Maryland Mine?

A. It is quartz. The Idaho Mine is slightly different from the current Brunswick Mine. The geologist could explain that. Both mines are quartz mines.

Q. Is that commonly referred to as free gold?

A. There is free gold in the quartz.

Q. What is the color of quartz?

A. Usually white, not always.

Q. Where a gold vein is discovered, can you see gold in the quartz?

A. Yes, you can see free gold particularly. Anyone who is familiar with gold can recognize it in any color, but the free gold is quite noticeable in our quartz.

Q. What has been the company's policy with respect to [fols. 1099-1105] exploration for the purpose of developing proven ores?

A. We have never had a serious program of developing ores, having large blocked-out ore reserves.

Q. Is the company operated continuously without having blocked out proven ores?

A. Yes, it has always operated in that manner.

Q. The Grass Valley Mining District is a well-known mineralized area, is it not?

A. Yes, it is very well known.

Q. Can you tell us anything about the depths of the mines in the Grass Valley area?

A. The Empire Star and North Star Mines of the Numont Company in Grass Valley are almost twice or over twice as deep as our mines. In the Empire Star, they have a 9600-foot level on their incline shaft, which is over 10,000 feet long.

Q. What is the deepest working at the present time in the Idaho Maryland Mine?

A. In the Idaho Maryland Mine, 2700-level is the deepest working.

Q. And Brunswick?

A. Brunswick, 3280 level.

[fol. 1106] By Mr. Herrington:

Q. Did Idaho Maryland Mines Corporation actually operate prior to October 8, 1942, for a number of years prior to that date?

A. Yes, it had been operating since 1926.

Q. Has it been operating subsequent to June 30, 1945, continuously up to the present date?

A. Yes, it has.

Mr. Herrington: I will withdraw these exhibits.

By Mr. Herrington:

Q. On or about October 8, 1942, did Idaho Maryland Mines Corporation have on hand a supply of material?

A. Yes, we had an inventory of material.

The Commissioner: Are you physically withdrawing those that you had marked?

Mr. Herrington: Yes, I am. In view of the objection there is no point of introducing them.

Mr. Barnes: I thought they were received in evidence subject to the right of verification.

Mr. Herrington: They were received in evidence subject to verification? I thought you objected to them.

The Commissioner: I don't understand the objection.

Mr. Herrington: I don't understand the objection.

The Commissioner: In view of that statement you are going to leave them in evidence?

[fol. 4107] Mr. Herrington: We will leave them in evidence. I don't understand the objection, either, Your Honor, but I am not going to argue with it.

Mr. Barnes: I haven't had an opportunity to look at these myself at all. I don't know whether the oral testimony of the witness is going to be in conformity with those documents or not. We have the documents in subject to the right of verification. Why do we have to have oral testimony? The fact that we have questions on something covered by documents immediately makes me suspicious.

Mr. Herrington: I can explain it, Mr. Barnes. All I want to do is to show for the purpose of the record that in the years preceeding October, 1942, Idaho Maryland had operated at a very substantial profit.

Mr. Barnes: If the documents prove it, and if the documents are verified, counsel has that in the record.

Mr. Herrington: For the purpose of the record, I might at least identify the documents and ask Mr. Allan to tell us what they are.

By Mr. Herrington:

Q. Mr. Allan, I show you Plaintiffs' Exhibits Nos. 166 to 171, inclusive, and ask you if you will identify the exhibits.

A. These documents are reports of examination by the auditing firm of McLaren, Goode & Company, of our books [fol. 1108] and accounts as of December 31 of the years 1937 to 1942, inclusive.

Q. Do you know of your own knowledge whether the books of Idaho Maryland Mines Corporation are identical with the audit reports?

A. The books are identical with the audit reports.

Mr. Herrington: Will you mark this?

(Said document was marked for identification as Plaintiffs' Exhibit No. 172.)

By Mr. Herrington:

Q. Mr. Allan, I think you stated that Idaho Maryland Mines Corporation had on hand on October 8, 1942, a supply of mining materials, and I show you the inventory which has been marked as Plaintiffs' Exhibit No. 172 for identification and ask you whether or not to your knowledge that is the inventory of materials and supplies which were on hand on the date shown by the inventory.

A. Yes, this is a physical inventory, an actual physical count of materials and supplies on hand at the date of inventory, October 31, 1942.

Q. Does the inventory show that a large amount of critical materials at that time were held by Idaho Maryland Mines Corporation and available for use by it?

Mr. Barnes: I object to the form of the question as being leading, Your Honor.

[fol. 1109] The Commissioner: Sustained.

By Mr. Herrington:

Q. With respect to the inventory can you tell us in general what it consisted of?

A. Supplies and materials necessary for operating the mine, particularly large items of pipe and rail, steel, drill steel, building machine repair parts, tires, tubes, repair parts for the milling machinery, valves, pipe fittings, and miscellaneous supplies.

Q. How about mercury?

A. It shows an inventory of mercury. There is no index to this, and I cannot find it readily. There is mercury on this

inventory of 42,089.89 ounces, which is approximately thirty-seven flasks of 76 pounds each.

Q. I don't think you told us the general process of extracting ore. Would you mind describing that briefly for the Idaho Maryland mine?

A. When ore is extracted from the heading or working, principally from stopes, it is dropped from the shafts into cars by rail being hauled by small locomotives. At the shafts it is dumped into chutes or ore pockets, then drawn into skips in the shaft, hoisted to the surface and dumped from the skips into ore bins. From the ore bins it is fed to a sorting belt, where waste and foreign matter, such as pieces of copper wire or wood, sometimes hammer handles or even [fol. 1110] hammers, parts of shovels which get into the rock. Then it is crushed to an inch and a half or less and fed into ball mills for pulverizing.

From the ball mill it goes over tables through flotation cells in the amalgamation process. About two thirds of our gold is recovered in the amalgamation process. The residue is in the form of sulphide concentrates that are treated at a cyanidation plant. The amalgam and the cyanide concentrates are finally melted in a refinery at our own plant into the form of bullion bars and delivered to the United States Mint.

The Commissioner: Do you have stamps?

The Witness: We have no stamp mill. In 1942 we did have a stamp mill operating, a twelve stamp mill, which has since been torn down.

By Mr. Herrington:

Q. Did the company have at all times its own cyanidation plant, amalgamation plant?

A. It has always had a cyanidation plant and a smelting plant.

Q. You stated that approximately two thirds of the gold was recovered in the amalgamation process. Is any gold recovered prior to the amalgamation process?

A. Some of the free gold, five to ten per cent, depending of course on the amount of free gold in the ore, in the material, is recovered from the table, the first operation, [fol. 1111] the jig.

Q. Is that due to the peculiar nature of the ores in the Idaho Maryland mine?

A. Yes, it is due to the fact that we have quite a bit of free gold in our ore.

Q. Is it necessary in the operation of the mine to operate the cyanidation plant? Is that an essential part of the operation?

A. It is not absolutely essential. Concentrates can be smelted. In fact, at the present time we are smelting our concentrates, sending them to the American Smelting & Refining Company smelter at Selby, California.

Q. Are you operating a cyanidation plant at all?

A. No. It has been closed for perhaps six weeks.

Q. What is the reason for that change in operation, Mr. Allan?

A. We are mining shrinkage stopes in what is known to the miner as black slate, a form of quartz. We ran into carbon difficulties, making cyanidation rather difficult, so we thought we would try to get greater recovery by sending the concentrates to the Selby smelter.

Q. The Selby smelters were operating during the war period, to your knowledge, from 1941 to 1945?

A. Yes, it operated all during the war.

Q. Now tell us what the situation was with respect to [fol. 1112] the availability of timber in 1942.

A. We were purchasing timber from small saw mills in Nevada County. There are a large number of small saw mills. They supplied our timber and have done that for years.

Q. Does the company operate its own saw mill?

A. At that time we had a small saw mill used only for framing our timbers or preparing rough lumber when lumber was needed around the mine. At the present time there are two commercial saw mills in operation.

Q. Let's go back to October, 1942. The saw mill that you had in use then was used solely for the purpose of cutting lumber into appropriate lengths for the mine, if I understand your testimony correctly.

A. That is correct.

Q. Does the company have any timber of its own on its properties?

A. There is timber on practically all of the property, except right around the mine shafts and the buildings.

Q. What is the character of that timber? Is it capable of being used in the mine?

A. It can be used as mine timbers.

Q. To what extent does the Idaho Maryland mine require timbering?

A. The Idaho Maryland mine requires considerable timbering. The Brunswick mine, practically no timber com- [fol. 1113] pared to the Idaho Maryland mine.

Q. What is the character of the timbering? Can you describe it for us?

A. It is in the square set stopes we are using posts and caps in the drifts.

Q. What is the difference between square set and posts and caps?

A. Square set is four posts are laid 8 by 8, 10 by 10 timber, with a square frame connecting the posts at the top. Posts and caps are just two posts set up on either side of the drift with a cross piece connecting the two against the roof. That is the hanging wall.

Q. Where did the company obtain its power in 1942?

A. Pacific Gas & Electric Company.

Q. Approximately what was the monthly requirement of power for the operation of the mine?

A. In October, 1942, we were using a million and a half to two million kilowatts a month.

Q. Did you continue to use power throughout the period of the shutdown?

A. Yes, we used power throughout the period of the shut down.

Q. Approximately what was the average cost per month?

A. Nine—

Mr. Barnes: I object to this as being immaterial to any [fol. 1114] issue involved here. It goes to the question of damages.

Mr. Herrington: I will withdraw the question.

Mr. Herrington:

Q. How much power was used per month during the period of the shutdown?

A. From a million to a million and a half kilowatts.

Q. What was that power used for?

A. Principally for pumping. Some hoisting had to be done with men underground, lighting and operating the shops.

Q. At any time during the period of the shutdown were you curtailed in power?

A. No, we were not.

Q. Was there any allocation of power?

A. No, no allocation.

Q. Was power always available to you during that period of shutdown?

A. Yes, it was.

Q. Mr. Allan, what was the situation October 8, 1942, with respect to manpower available for the operation of the mine?

A. We had a little over two hundred men, 213 to 215 men on the payroll. Two hundred thirteen, I believe, is the correct figure.

(Document was marked for identification as Plaintiffs' Exhibit No. 173.)

[fol. 1115] By Mr. Herrington:

Q. I show you Plaintiffs' Exhibit No. 173 for identification and ask you if this is a list of the employees of Idaho Maryland Mines Corporation as of October 8, 1942.

Mr. Herrington: In this connection I may state to Your Honor that this list was furnished to the government and I believe it has been checked by the government as being accurate except that the heading is erroneous. We have a heading here as of October 1-15, which is not correct. There are a half dozen names here who appear on this list as being employed October 8, 1942, whereas the list shows that the men had been released either a day or two or some weeks prior to that time. As to those I am going to ask the witness to make the necessary corrections.

Mr. Barnes: Is that the same list? You seem to have some lines drawn through here.

Mr. Herrington: Those are the ones we have corrected, and I will ask the witness to do that.

By Mr. Herrington:

Q. I show you Plaintiffs' Exhibit No. 473 for identification which will now be introduced in evidence and ask you if that is a correct list of the men who were employed at the Idaho Maryland Mines Corporation on October 8, 1942.

A. Yes, it is a correct list of the men who were employed by the Idaho Maryland Mines Corporation on [fol. 1116] October 8, 1942.

Q. Have you made some corrections on that list in ink at my request?

A. Yes, I have made some corrections.

Q. Will you explain what those corrections are?

A. These corrections are men whose names—

Q. Start at the top first.

A. These corrections are men—

Q. No, the heading, please. Start at the top and tell us each correction that you have made on the list.

A. I deleted the words "as of October 1-15, 1942" so that the heading now reads Idaho Maryland Mines Corporation Employees.

Q. What other corrections?

A. Then I deleted the names of those men who, according to the dates shown here in the column Employment Record were not actively employed as of October 8, 1942.

Mr. Barnes: Will you read those names?

The Witness: On page one the first name is Bustillos, Joseph. My next deletion is the name, I believe, of Dale Butler; it is the next name following Bustillos. The next name is Joseph Chisholm.

On page two, Charles Goudge, William Henry Harvey, Letcher K. Jesse, John Alexander Johnson, John Lee, and Swan Nelson.

[fol. 1117] There are no deletions on page three.

On page four, one deletion, William Henry Carey.

On page five, one deletion, Elmer Lloyd Patton.

On page six, Conrad Stroh, Walter H. Weege, and Patricia O. Wilson.

On page seven, Elmer Oscar Williams, Sefe Abas, Charles Baftista, Dennis Edward Colvin, Arthur Frick Erickson, Glen Furman, and Francis Grenfell.

On page eight, John Hoskin, Cecil Jones, Clifford Morgan, and Royal Widener.

On page nine, Philip Angove, Irving Carnegie, Howard Dennis, Thomas Hall, William Meals, and Garville Sparks.

Mr. Barnes: Mr. Allan, will you look back at the first name on page one?

The Witness: Joseph Bustillos?

Mr. Barnes: Selo Ali. Didn't he leave the company's employ on October 1, 1942, and not return until February 11, 1943?

The Witness: Yes, according to this record, he did.

Mr. Barnes: Shouldn't he similarly be eliminated?

The Witness: Yes, he should also be eliminated.

Mr. Herrington: In that case I suggest you make the corrections now so the list will be correct.

Mr. Barnes: Turning to page seven, the name of Paul Dovell appears. You didn't cross his name out, did you?

[fol. 1118] The Witness: What is the name?

Mr. Barnes: Dovell, the seventh name from the bottom on page seven.

The Witness: He should be deleted.

Mr. Barnes: Those are the only questions.

Your Honor, I might state this list has been checked against the employment records. We are prepared to agree that this is a correct copy of those records.

The Commissioner: Very well.

Mr. Herrington: I am not sure that I introduced the inventory in evidence. I will offer the inventory, Plaintiffs' Exhibit 172, in evidence.

Mr. Barnes: Your Honor, with respect to the inventory I would like to ask the witness a few questions with respect to it. I don't know whether you would like to have me do it or go into the cross examination. It makes no difference as far as I am concerned.

Mr. Herrington: Whatever Your Honor wishes.

The Commissioner: I will do that. I will defer ruling on it until later.

Mr. Herrington: Then I will introduce in evidence the Plaintiffs' statement of employees, Plaintiffs' Exhibit No. 173 for identification. It is now offered in evidence.

The Commissioner: I take it there is no objection.

Mr. Barnes: Just one minute to be sure. No, there is [fol. 1119] no objection to its receipt, Your Honor.

The Commissioner: It may be admitted.

(Said document, being a list of Idaho Maryland Mines Corporation employees, marked "Plaintiffs' Exhibit No. 173," admitted in evidence and made a part of this record.)

By Mr. Herrington:

Q. Mr. Allan, will you tell us generally what the company's experience has been with respect to the availability of employees in the early part of 1942 or, we will say, commencing from Pearl Harbor Day, December 7, 1941?

A. In December of 1941 we had over eight hundred employees. In January of 1942 we still had eight hundred. By July of that year employment had dropped to three hundred, slightly over three hundred. Then the separations leveled off somewhat until October 8, 1942, when we had 240 employees.

Q. Was the mine in operation on October 8, 1942, with that number of employees?

A. Yes, it was operating.

Q. How many men are shown on your list as being workers underground on October 8, 1942?

A. One hundred sixteen.

Q. How many of the employees were workers above ground or clerical workers?

A. Clerical workers are not included in this list. There [fol. 1120] were ninety-four above ground on this list.

Q. Do you know the average age of the employees of the corporation as of October 8, 1942?

A. For the division it is figured at 47.7 years of age.

Mr. Barnes: Those are the employees that are shown on Plaintiffs' Exhibit No. 173, is that right, sir?

The Witness: That is right.

By Mr. Herrington:

Q. How many men are shown on your list as having been employed underground who were over the age of fifty years?

Q. Forty-three men underground over the age of fifty.

Q. What percentage of the total number of men underground were fifty years or more of age?

A. That would be about 40 per cent.

Q. When limitation Order L-208 was issued on October 8, 1942, what steps did you take to close the mine?

A. We immediately notified the employees that the mine was being closed, and we discontinued any development work that was going on. There was very little of it at that time, and we went ahead with the idea of getting out all the rock we possibly could before October 15, which was the last day we were allowed to have any production.

Q. Did the mine close down on October 15, as far as production was concerned, completely?

A. Yes. There was no production after October 15.

[fol. 1121] Q. Mr. Allan, I show you Plaintiffs' Exhibits in evidence Nos. 104, 105, 106, 107, 108, 109, 110, and 111, which for purposes of convenience I am going to refer to collectively as the first appeal of Idaho Maryland Mines Corporation. Do you recall that following the limitation Order L-208 that Idaho Maryland Mines Corporation filed an appeal with the War Production Board asking relief under that order?

A. Yes, I recall that appeal.

Q. Will you tell us what the primary purpose of the appeal was at that time and what the situation was with respect to the mines?

A. The primary purpose of this appeal was to be allowed to continue the drift to make a second exit between the Idaho Maryland mine and the Brunswick mine. This second exit was required by the California state law for any shaft or excavation 300 feet deep or more. We had not finished that connection at the time of the shutdown. We asked to complete it.

Q. The appeal was granted, I believe?

A. The appeal was granted.

Q. Did you complete the second exit?

A. We completed the second exit between the Idaho 2700 level and the New Brunswick 3280 level by a raise from the latter level to the 2700 level.

Q. Following the completion of the second exit, to what [fol. 1122] extent did you endeavor to maintain the mine?

Mr. Barnes: Your Honor, I object to this. It seems to me this goes to the question of damages rather than to the question of liability, which is the issue here presented.

By Mr. Herrington:

Q. How many men were employed by the company for maintenance only following limitation Order L-208?

Mr. Barnes: Your Honor, I make the same objection.

Mr. Herrington: I think it is pertinent, Your Honor, in view of the allegations, that we had to maintain the mine, to show at least what the facts were in so far as what was done in regard to that maintenance.

Mr. Barnes: My feeling, Your Honor, is that there may be allegations in the petition, but they are allegations relating to damages rather than allegations relating to liability.

The Commissioner: How does it bear on liability?

Mr. Herrington: It bears on liability, to this extent, Your Honor, that it is alleged in the petition that Order L-208 permitted the employment of a sufficient number of men to maintain the mines in working order and condition. Our allegations are that it would have taken all of the available men to maintain the mines, and that is what we intend to show by this line of questioning. So even had the order been intended to release men for work from the gold mines to [fol. 1123] copper mines, it could not have operated in that way in so far as Idaho Maryland is concerned because all the men who were there were necessary for maintenance only.

The Commissioner: Overruled.

By Mr. Herrington:

Q. Following limitation Order L-208 and following the work that was done pursuant to the first appeal, what steps were taken to maintain the mine in good order and condition?

A. With the number of men remaining we were able only to maintain the pumping stations, the more important drifts where drainage was involved or where ventillation was necessary.

Q. How many men did you employ during the period of the shutdown for maintenance only?

A. I would say between forty and fifty men.

Q. How many men would have been required in order to maintain the mine in good order and condition throughout all of this period?

Mr. Barnes: I object, Your Honor. No qualification of the witness has been shown to express an opinion on that subject.

Mr. Herrington: He was general manager of the mine and operated it.

The Commissioner: Overruled.

The Witness: It would take 150 or 200 men to maintain all [fol. 1124] the workings of the mine.

The Commissioner: Suppose we recess for five minutes at this point.

(Thereupon, at 11:15 a.m., a five-minute recess was taken in the hearing.)

By Mr. Herrington:

Q. I think when we finished, Mr. Allan, the last question had to do with the number of men who were employed underground in the operation or in the maintenance of the mine at that time following Order L-208 and following the completion of the second exit to the mine which was permitted under the first appeal.

A. We reduced our force to between forty and fifty men underground at that time.

Q. Were you able to maintain the mine during that period of the shutdown?

A. We maintained only the pump stations and the part of the drifts where drainage and ventilation were involved, and we maintained the shafts.

Q. I now call your attention to Plaintiffs' Exhibits in evidence Nos. 112 to 119, inclusive, which for convenience I am going to refer to as the second appeal of Idaho Maryland Mines Corporation, which was filed on or about December 13, 1943, and finally acted upon by the War Production Board on March 31, 1944.

[fol. 1125] Do you recall the circumstances under which this second appeal was filed? Also included, for the purpose of the record, in the so-called second appeal were Exhibits Nos. 30 and 31 which were introduced at the pre-trial, and that is the reason that they do not run in consecutive order with the other numbers.

A. I recall the appeal. It was made over the signature of Mr. Crase, the general manager at that time.

Q. Have you had occasion yourself to go underground and see the actual conditions in the mine following the shutdown?

A. I was underground a number of times, at least once a month, all during the shutdown.

Q. In the files of the War Production Board there are certain photographs referred to which were introduced for identification as Plaintiffs' Exhibits Nos. 124-A through 124-S. Will your look at those photographs and tell me, if you know, what they represent?

A. They are photographs of locations in the mine where it was possible to take photographs of the damage which had been done during the shutdown period since October 8, 1942.

Q. Are those photographs fair representations of the conditions that they purport to portray?

A. Yes, they are typical of conditions throughout the mine. In fact, there were much worse conditions than this [fol. 1126] in some places not available for photographing. I saw those myself.

Mr. Barnes: Are there any of those photographs that are duplicates?

The Witness: Yes. This is a duplication (indicating).

Mr. Barnes: By "this" he is referring to 124-D and 124-E.

The Witness: Nos. 124-A and 124-B are duplications; 124-F and 124-G are duplications; 124-H and 124-J are duplications; 124-M and 124-N are duplications.

Mr. Herrington: I offer the photographs in evidence as Plaintiffs' Exhibits Nos. 124-A to 124-S inclusive.

Mr. Barnes: No objection, in view of the testimony of the witness.

The Commissioner: Is there any objection at all?

Mr. Barnes: If they are being offered other than to illustrate the testimony of the witness, Your Honor, I don't think a proper foundation has been laid and I object on that basis. In other words, we don't know when they were taken, by whom they were taken or the locations where they were taken.

Mr. Herrington: We offer it to illustrate the testimony of the witness and the fact that they were filed with the War Production Board, that is all.

The Commissioner: There is no dispute about where they [fol. 1127] came from, is there?

Mr. Barnes: No, sir. They were taken from the files of the War Production Board.

The Commissioner: They will be received on that basis.

(Said photographs of interior of Idaho Maryland Mine, marked "Plaintiffs' Exhibits Nos. 124-A to 124-S," admitted in evidence and made a part of this record.)

By Mr. Herrington:

Q. What action was taken by the War Production Board upon your appeal?

A. We were allowed to resume operations on a limited basis, producing 7800 tons of ore a month and hiring not over two hundred men over forty years of age. The restrictions on the hiring of these men were that they were not to be drawn from war industries or any like activity?

The Commissioner: When was this?

The Witness: March 3, 1944, we were allowed to resume operations.

By Mr. Herrington:

Q. Then you endeavored to obtain men meeting those qualifications?

A. Yes, we did.

Q. How long did it take you to build up your force to approximately two hundred men?

A. We were not up to two hundred men before the end of [fol. 1128] the year.

Q. The end of 1944?

A. The end of 1944.

Q. How long did it take to get up to a production of 7800 tons a month?

A. In 1942 we never reached that 7800 tons. We came close to it, but we didn't get to it.

Q. 1944?

A. I meant 1944. We never reached 7800 tons.

Q. That was with the force which was available at that time?

A. With the available force, yes. It took a long time to prepare for that production, to open up the necessary

country underground to get that available ore. In fact, we were unable to put the men on as fast as we expected because of difficulty in making room for the men underground due to the destruction which had occurred.

The Commissioner: Did you say the destruction?
The Witness: That is right, destruction.

By Mr. Herrington:

Q. Just for the purpose of the record, I call your attention to Plaintiffs' Exhibits Nos. 120 to 123 in evidence, which for purposes of convenience I will call the third appeal and ask you if you recall the circumstances under which this appeal was filed, commencing on or about Novem-
[fol. 1129] ber 24, 1944, until sometime in December of 1944 or later. Do you recall the circumstances under which the third appeal was filed?

A. I recall this appeal. This appeal was to continue hiring men after we had reached our goal of two hundred which was granted in the appeal of March 10, 1944.

Q. The second appeal?

A. The second appeal.

Q. The third appeal was denied, was it not?

A. It was.

Q. Mr. Allan, go back for a minute to October 8, 1942, you say the mine was closed on October 15, 1942, seven days after the order went into effect?

A. All production stopped on October 15, 1942.

Q. Were you contacted by any agency of the United States Government at that time with respect to the employment of displaced miners?

A. No, we were not contacted by any government agency.

Q. Was there any notice posted on the property by the United States Employment Agency or any other agency of the United States?

A. No, there was not.

Q. Did the United States Employment Service or any other agency of the United States Government open an office in or about the mine premises?

A. Not on mine property or anywhere near it.

[fol. 1130] Q. Do you know of your own knowledge of any efforts that were made by the United States of America or

any of its agents to place any of the employees of Idaho Maryland Mines Corporation in copper mines or elsewhere?

A. I have no knowledge of their having made any effort to place men in copper mines in the Grass Valley District.

Q. Did you yourself take any action to endeavor to get jobs for any of the displaced men?

A. I referred a number of them to the Hall Scott Motor Company in Berkeley, California. These were surface employees.

Q. Have you formed an opinion as to whether or not Idaho Maryland Mines Corporation could have operated during the shutdown period from October 8, 1942, to June 30, 1945, had it not been for limitation Order L-208?

A. Yes, I have formed a definite opinion.

Q. What is your opinion?

A. That we could have continued to operate throughout that period.

Q. Tell me whether or not in your opinion it would have been necessary to make any changes in the regular method of operation.

A. The additional changes had already been made that were necessary. Due to the loss of men we had curtailed our operations and were resorting to shrinkage stoping.

[fol. 1131] Q. When did you commence shrinkage stoping in the Idaho Maryland mines?

A. That must have been early in 1942, when we lost several hundred men the first of the year.

Q. Is that method of operation continued under present circumstances?

A. Yes, we are continuing shrinkage stoping. In fact, we have only one square set slope operating at the present time.

Q. How about development work?

A. In 1942?

Q. Or during the period 1942 to 1945.

A. There had been very little development work, no development work for the purpose of blocking out ore; the necessary development in connection with preparing for stoping operations that were necessary.

Q. You mentioned sometime ago that the mining communities of Grass Valley and Nevada City had been populated to quite an extent by Cornish tin miners who came from England in the early days.

A. That is right.

Q. Do you know the term "tribute money" or "tribute pitch"?

A. Tribute mining or tribute pitch, as the Cornish men call it, is a system of leasing parts of the underground [fol. 1132] workings to a group of miners; the company furnishing the tools and supplies and the miners doing the work of extracting ore, the company handling their ore, and the proceeds from this production are split usually on a 50-50 basis. That practice had been used in the Grass Valley District for years.

Q. Is it a system which is still being used in the Grass Valley Mining District?

A. It is being used at the moment in the Numont properties there, the Empire Star and North Star mines. We discontinued it in June of 1952. We had been leasing or using the tribute method of mining in parts of our mine from October, 1948 to June of 1952.

Q. It was a well-known method of mining operation in the Grass Valley Mining District, was it not?

Mr. Barnes: I object to any further testimony along this line which appears to relate to a period subsequent to the resumption of operations in the mines, in 1948. It has no bearing whatsoever to anything which relates to the period from October, 1942, to June, 1945.

The Commissioner: That was not the testimony of the witness.

Mr. Barnes: He said they had been doing it in their mine from some date in 1948 to June, 1952.

The Commissioner: Is that your testimony?

[fol. 1133] The Witness: That is correct.

Mr. Herrington: He tesified it is an old mining method in the Grass Valley District. It is a method that we ourselves have used in recent years. It is a method that goes back many, many years in other mines.

The Commissioner: Overruled.

Mr. Barnes: I fail to see any relevance or materiality whatsoever, Your Honor. There is no evidence that any plaintiff here used that method at or about the time, no evidence that anything pertaining to it was brought to the attention of the War Production Board.

The Commissioner: The plaintiff is offering the evidence to show that it is something that could have been used.

Mr. Herrington: That is correct, Your Honor.

By Mr. Herrington:

Q. Was the tribute pitch method of mining in current use in Grass Valley prior to October 8, 1942?

A. Yes.

Q. And also subsequent to June 30, 1945?

A. Yes.

Q. In your opinion, was it a method which could have been used during the shutdown period had it not been for Order L-208?

A. It could have been used. There was no reason why it could not.

[fol. 1134] The Commissioner: In the use of such a method does it apply only to portions of the operation?

The Witness: It is usually employed where the company has gone as far as it can economically operate an underground working. The company operates within the restrictions of the Industrial Accident Commission and the methods of operating by large companies. In these places the tribute miners are able to go in and, you might say, scratch around for the better grades of ore.

It is a sort of clean-up operation. They can make money that way for themselves where the company could not afford to pay men on an hourly basis to go in and make such a selective production of ore. Also, it overcomes the manpower shortage when wages are not an inducement to miners to work at company pay. They make considerably more on the average in the long run than the day's pay miner will make.

The Commissioner: I gathered from your testimony that some operations were conducted by the company separate and apart from the operations under this method.

The Witness: Yes, the operations of the company and the tribute miners are going on in the same mine at the same time.

By Mr. Herrington:

Q. Just for purposes of illustration, while the company was operating on the tribute mining basis, approximately how much gold ore was recovered by the tribute miners and [fol. 1135] how much by the company?

A. That varied from year to year. The first tribute mining, the first year in 1949, the leases produced more ore than the company. In 1948 about an equal amount of ore was produced by the company and by the leases. Then we began to run out of places where we could allow leases to work without interfering with the company's operations and the lease production gradually dropped off.

Q. I asked you about the equipment and the machine shop and the blacksmith shop of the Idaho Maryland Mines Corporation. What were those shops available for?

A. They were for the maintenance and repair of mining and milling machinery.

Q. Were they capable of mass production?

A. No, they couldn't have produced anything in mass production. There was a lathe in each shop, a drill press, power hacksaw, one or two other machines.

Q. During the period of actual shutdown were the properties of Idaho Maryland Mines Corporation devoted to any other use?

A. No, they were not.

Q. In your opinion are they capable of being used for any use other than the production of gold?

A. No. They are gold mines, nothing else.

Q. Has Idaho Maryland Mines Corporation to your [fol. 1136] knowledge transferred or assigned the claim which is the subject of this present action?

A. No.

Q. Has any compensation been paid to Idaho Maryland Mines Corporation by the United States with respect to the subject matter of the petition in this case?

A. No.

Q. To your knowledge has any action been taken by the Congress of the United States or any agency or department with respect to the claim which is the subject matter of the petition in this case?

A. Not to my knowledge.

Mr. Herrington: You may take the witness.

Mr. Barnett: May I ask a question, Your Honor?

The Commissioner: Yes.

By Mr. Barnett:

Q. Mr. Allan, do you know how far Sutter's Creek is from the location of the Idaho Maryland mine, approximately?

A. I would say ninety or one hundred miles. I have been there, but I don't remember the miles.

Q. You speak of tribute mining. Is that known by any other name?

A. Leasing is the name.

Q. Has the word "contract" mining been used?

A. Contract mining in our experience is another type [fol. 1137] of mining.

Q. Could you describe just what that is?

A. In contract mining the miner is on the company payroll and he is paid so much a foot for advance in headings, in drifts, cross cuts, raises or whatever he happens to be working.

Q. Was that type of mining in general use, if you know, in and about the Mother Lode country as well as where your mine is located?

Mr. Barnes: I object to a statement of the understanding of the witness.

By Mr. Barnett:

Q. If you know.

Mr. Barnes: I object until the source of the witness's knowledge is shown.

The Commissioner: The objection is sustained.

By Mr. Barnett:

Q. Do you know whether or not there was a custom among the ore mines, that is, in and about Grass Valley, of lending or borrowing materials from one another?

A. Yes.

Mr. Barnes: I object to the form of the question as being leading.

The Commissioner: Overruled.

Mr. Barnes: I further object to the question in so far as [fol. 1138] it relates to the Mother Lode area until the source of the witness's knowledge has been known.

By Mr. Barnett:

Q. Central Eureka mine, then.

A. Yes, we exchange material. Anything that one mine needs and the other one can spare at the moment, we exchange.

Q. Was that custom in general use on October 8, 1942?

A. Yes, it had been in general use for a long time at the Idaho Maryland mine.

Mr. Barnett: Thank you. That is all.

Mr. Herrington: I might ask just another question.

By Mr. Herrington:

Q. Mr. Allan, there are numerous gold mines in California, are there not?

A. Yes, there are many hundreds of them, large and small.

Q. Is there a recognized secondhand market for making machinery in California?

A. Yes. There is secondhand machinery scattered all over California in the vicinity of mines, I would say from one end of California to the other.

Q. Do you know whether or not on or about October 8, 1942, there was a market in secondhand machinery?

A. Yes, there was a large amount of secondhand machinery on hand at that time.

[fol. 1139] The Commissioner: That wasn't the question. The question was, Was there a market?

The Witness: There was a large amount of secondhand machinery in the secondhand market at that time.

By Mr. Herrington:

Q. My question was whether there was a market. My next question is whether there was any considerable quantity of second hand machinery available.

A. There was a considerable quantity of secondhand machinery available. That was due, I believe, to the small

mines not having manpower enough to operate. By small mines I mean those which have a half dozen men. Their machinery would become available on the secondhand market.

Q. Do you know whether or not the secondhand mining machinery was ever rationed during World War II?

A. Not to my knowledge.

Q. Was it freely obtainable on the open market?

A. Yes, it was.

[fol. 1140] Cross-Examination.

By Mr. Barnes:

Q. Mr. Allan, what was the date of your first employment by Idalio Maryland?

A. August 1935.

Q. In what capacity were you employed?

A. I began as a cost accountant.

Q. What had been your prior training and experience?

A. I had been with the Colorado Fuel & Iron Company in their coal mines for 14 years.

Q. In what capacity?

A. I was Chief Mine Clerk of the Fuel Division. I had also qualified for the superintendency.

Q. Had you ever acted as superintendent?

A. I had acted as superintendent on a number of occasions when the superintendent was away.

Q. Had you had any professional training in any field whatsoever?

A. Not in mining. I graduated from Denver University in 1921.

Q. What had been your major there?

A. Liberal Arts.

Q. What were your successor positions with Idaho Maryland?

A. Cost accountant. I became senior accountant in 1937. [fol. 1141] In 1942, the duties of Personnel Officer were added. In 1944 ——

Q. At what point in 1942?

A. Early in 1942. I don't remember exactly the date. The Personnel Manager that we had went to another industry, and I succeeded him.

In 1944, August 1, 1944, I became Chief Accountant. In December, 1949, I was made Secretary-Treasurer. As I stated, from October, 1950, to 1951, I was General Manager and a member of the Board of Directors. That was in addition to my Secretary-Treasurer duties.

At the end of March, 1951, my title was lengthened to "Comptroller"; Comptroller in addition to Secretary-Treasurer.

Q. During the period from October 8, 1942, to June 30, 1945, what was your title?

A. Until August 1, 1944, I was senior accountant. I had no title. I was senior accountant in the office, and I was Personnel Officer. I had that title.

Q. To whom did you report in that capacity?

A. As Personnel Officer, I would report to the Manager. There was a Chief Accountant present at all times, but the full responsibility of the accounting department rested on me. Of course, I had to report to the Chief Accountant as a matter of form.

Q. Who was the Chief Accountant?

[fol. 1142] A. Justin McCarthy.

Q. Who was General Manager?

A. Albert Crase.

Q. Was there a Mr. William MacNider connected with the company in that period of time?

A. William MacNider appeared to my knowledge early in 1944. His connection with the company is not clear to me. I would say he was not connected with the company in any official capacity.

Q. When did you secure knowledge of the issuance of Limitation Order L-208?

A. It was received in San Francisco on October 8, 1942. That was our official notification, by telegram to Mr. Mannington, who was then Secretary of the corporation.

Q. Do you have that telegram here?

A. I don't have it.

Q. Do you know who sent it?

A. It was sent by the War Production Board. I don't remember the signature.

Q. When did you last see that telegram?

A. Probably two months ago.

Q. Where?

A. In the files. I believe the counsel has the files.

Mr. Herrington: We haven't got it, Mr. Allan. We asked you for it.

[fol. 1143] The Witness: I have a vivid memory of it, but I don't have it. It is probably still in the files, then.

By Mr. Barnes:

Q. How did you personally secure knowledge of the issuance of L-208, do you recall?

A. It was telephoned to the Grass Valley office.

Q. Was that telephone call received by you or by someone else?

A. It was not received by me. It was received by Mr. Crase.

Q. When did you personally first hear of L-208?

A. I first heard personally about L-208 unofficially on the radio, and I went to the office and was informed that notification had come in from San Francisco.

Q. Was that on the 8th or the 9th, do you recall?

A. It was on the 8th, the night of the 8th.

Q. The night of the 8th, you say?

A. I might have heard of the order over the radio on the night of the 7th, but it was on the 8th that I heard of the telegraphic order.

Q. Did you ever hear of a project undertaken by Idaho Maryland Mines Corporation to secure magnesium metal from serpentine?

A. Yes.

Q. When was that?

[fol. 1144] A. The project started, as I recall, in 1937 or 1938. The project was pretty well along before I knew just what was going on. When the charges began to come in on it, I had to being to find out what it was. It was a patented magnesium process.

Q. Do you recall whether or not in 1943 permission was given by the War Production Board to establish a pilot plant for the operation of that process?

A. I recall that a pilot plant was established. I don't recall permission having been necessary or having been secured.

Mr. Barnes: Will you mark that Defendant's Exhibit 21 for identification?

(Said document was marked for identification as Defendant's Exhibit No. 21.)

By Mr. Barnes:

Q. I will show you this document which has been marked Defendant's Exhibit 21 for identification, which is a copy of a letter from Mr. C. K. Leith, Chief of the Metals and Minerals Branch of the Office of Production Research and Development, to Mr. William MacNider of Idaho Maryland Mines Corporation, and ask you whether that ever came to your attention before?

A. No, I have not seen this letter before.

Mr. Barnes: Mr. Herrington, are you willing to have this [fol. 1145] received in evidence, or shall I serve notice to produce the original?

Mr. Herrington: I have no objection. It is not the best evidence.

Mr. Barnes: I can serve notice to produce the original.

The Commissioner: Is it offered?

Mr. Barnes: It is offered.

The Commissioner: Admitted.

(Said copy of letter dated 3-1-44, from C. K. Leith to William MacNider of Idaho Maryland, marked "Defendant's Exhibit No. 21," admitted in evidence and made a part of this record.)

By Mr. Barnes:

Q. Turning to the inventory, Mr. Allan, Plaintiffs' Exhibit 172, what part did you play in the preparation of that inventory?

A. I had no part in the actual preparation of the inventory.

Q. Did it come to your attention at that time?

A. It came to me after it was completed.

Q. For what purpose was it delivered to you?

A. For the purpose of adding up the pages and making a total of the inventory, and balancing that out with the company books and the company stock records.

Q. Under whose supervision was the inventory prepared? [fol. 1146] A. It would have been taken at that time under the supervision of the Chief Accountant, Mr. McCarthy.

Q. Do you know anything about the manner of its preparation other than as disclosed in the document itself?

A. I know how inventories are taken and were taken at that time.

Q. Your answer would be based upon only on your general knowledge of the manner of the taking of inventories, and not any particular knowledge of the taking of this inventory?

A. Not this specific inventory.

Q. Do you have any personal knowledge as to why this inventory was taken at this particular time?

A. Our inventory is always taken in October and November, and the month in which it is completed is used in dating the inventory. This was completed on October 18, 1942. Therefore, it was dated October 31, 1942.

Q. That was the next question I was going to come to. On the first page of the inventory it indicates the count was started on September 15 and completed October 18, 1942. Yet the inventory is dated as of October 31, 1942. Is it possible that between the date of October 18 when the count was completed, and October 31, there had been either additions to or withdrawals from inventory?

A. It would be possible, but those additions to and withdrawals from are on record, and were not included in the [fol. 1147] physical count of the inventory as appears here.

Q. When is an adjustment made for those additions or withdrawals if the count is completed on October 18?

A. They are made as they occur. If the material is received after inventory, but before the date of October 31, after the 18th, it would not be placed in this inventory. It would be placed in a stock record subsequent to October 31. If material is taken out of the inventory, a record is kept of that. The same thing occurs to the end of the year.

Q. If we look, for example, at page 2 of the inventory, I think it will serve to illustrate the question I have in mind. What is the information that appears in the extreme left-hand column?

A. That is a code number used in connection with International Business Machine operations.

Q. Did you keep your stock records on IBM cards?

A. We did. We had a stock record book in addition to that, but we used the cards, and the cards were used in the charging out of supplies.

Q. I notice, for example, the third item of that page, there is a number appearing in the extreme left-hand column, and then no entry beside it under the heading "description." What does that indicate?

A. That would be a code number set up for some article that would come in that place. The number had not been [fol. 1148] assigned. There was nothing received to which that number had been assigned. In coding for the IBM machines, there have to be spaces left for articles that might come in after the original code is set up.

Q. Looking at the first item on that same page, it refers to a 10 amp, 125 volt snap switch, and I notice that in quantity there is no entry at all. What does that indicate?

A. These inventory sheets are typed up before this information in pencil is put on, and all items that appear on the stock records as having been in stock at any time during the year are on here. Those items which are not on the inventory when a physical count is made would not have any entries opposite them on these pages.

Q. If we look down to the first item on that same page, under Switches (Miscellaneous); I see there are two numbers entered there under "Quantity," 24 and 4; and then beside that someone has put the figure 28. Does that mean that that inventory was located in two different places?

A. Yes. Inventory was taken in the Brunswick warehouse and the Idaho warehouse. The Idaho warehouse was the principal warehouse for most of the supplies. The Brunswick warehouse had some of the articles that were also in the Idaho Maryland warehouse. The total of this is 28, with 4 apparently in the Brunswick warehouse and 24 in the Idaho [fol. 1149] warehouse.

Q. Is it possible to tell which is which when two figures appear here?

A. No. To my knowledge, the lower figure would be the Idaho Maryland warehouse where the inventory was first taken, and the first information. The Brunswick warehouse information would follow, and that figure would be set in above. There might be instances of a duplication in report-

ing items, In that case they would also put in the figure without making any erasure. They would take in an additional figure. In the majority of cases, it indicates two locations for the supplies.

Q. Turning over to page 30 and looking at the first item on that page, for illustration, I see that the information which was typed on there was changed by somebody in the process of making the inventory. What is the nature of that change, first?

A. The typed information states Marcy Mill.

Q. What does that mean, do you know?

A. That is part of the ball mill. These liners, Code 5-201, apparently were found to be part of the tube mill, which is part of the cyanidation plant. They changed that to the tube mill.

Q. Then what is the entry under "quantity" that appears opposite that item?

[fol. 1150] A. One set, 20 pieces. That would be the explanation of item 20.

Q. What about the one immediately below that, the shell liners?

A. The liners show 5 sets, 84 pieces.

Q. Then what has been put in there?

A. Entered there in pounds, 88,200 pounds, shell liners.

Q. Do you know whether shell liners are customarily inventoried on the basis of weight?

A. They are inventoried usually on the basis of weight. They are received and handled as sets. We are billed by the foundry that provides those on the basis of weight.

Q. Looking on down that same page, your stock No. 5-253, cresylic acid, I see it says 101 barrels. Then somebody has put in the quantity column the figure of 5353. What does that indicate?

A. 5353 would indicate pounds.

Q. Would that indicate pounds or gallons; in all likelihood?

A. There is pounds above it. I would understand that to be pounds, but it should be gallons.

Q. A barrel is approximately 53 gallons, under normal circumstances, isn't it?

A. About 50 gallons.

Q. What was that used for, do you know?

[fol. 1151] A. That was used in the mill, in the process of treating ore.

Q. In what part of the process? Are you familiar with that?

A. That would be used on the table at that time, I believe, the pick tables.

Q. For what purpose?

A. For separating gold from quartz.

Q. Directing your attention to page 99 now, against a number of the items on that page, somebody has put in a question mark. What does that question mark indicate to you?

A. It doesn't mean anything to me. Apparently there was no change made. It might have been, probably was, and I will say it was an item that they wanted to recheck.

Q. Do you know who put those question marks in?

A. No. They are not my question marks. I have one or two question marks on this inventory, but these are not mine. They could have been by one of the clerks who were working on the inventory at the time.

Q. Then looking at page 103, under the general heading "belt lacing"; there was an entry made apparently as a result of the physical inventory. Someone crossed it out and then wrote "5 boxes," with a question mark beside it. Do you know what that means?

A. Belt lacing comes in boxes, I know that. I don't know [fol. 1152] just what quantity is in a box.

Q. Although the quantity has been physically stricken out, the extension and the price have not been stricken out, is that correct?

A. I don't think that light line through the bottom figure is intended to be a strike-out.

Q. There is one heavier line that goes through the figure 119½ which apparently represented the total, and through the figure of 67, did it not?

A. Yes.

Q. Then a lighter line through the 52½, which is underneath that.

A. The 52½ and the 67 total 119. For some reason it was determined that there were only 52½, so they scratched out the total of item 67.

Q. What process was used, if you know, in checking this inventory?

A. Considerable checking was done, as you noted on the first sheet, and of course the auditors spot-checked it. They made a very thorough check, in fact, of these items. You notice red checkmarks all the way through. Those are items that the auditors have checked and found correct.

Q. Looking at page 93 just as an illustration here, and following these columns across, we have first the column headed "quantity," and then beside that a column headed [fol. 1153] with a checkmark. What is the purpose of that column?

A. This column?

Q. Yes.

A. It indicates that one of the processes of this inventory has been completed; one of these processes over here.

Q. Listed on the first page?

A. Yes.

Q. What process would that be?

A. It would probably be this process, "prices posted to" —no, it wouldn't be that. Those checkmarks look like mine. It might have been due to some difficulty in balancing, and therefore we had to recheck the inventory. That happened almost every year.

Q. I notice you have turned here for illustration to page 53. Checkmarks have been made in that same column opposite items where no inventory appears, is that correct?

A. Yes. I don't know why that is.

Q. But not with respect to all of those items.

A. No.

The Commissioner: We will recess until 2:00 o'clock.

(Thereupon, at 12:30 o'clock p.m., a recess was taken in the hearing until 2:00 o'clock p.m.)

[fol. 1154] AFTERNOON SESSION

(The hearing was resumed, at the time above-mentioned, pursuant to the recess previously taken.)

Mr. Herrington: I am going to ask permission at this time to withdraw Mr. Allan for just a moment in order that Congressman Clair Engle may testify. The Congressman has some important engagements this afternoon.

Is that agreeable to you?
Mr. Barnes: That is satisfactory.
Mr. Herrington: Congressman Engle:

HONORABLE CLAIR ENGLE, a witness produced on behalf of the plaintiffs, having been first duly sworn by said Commissioner, was examined, and in answer to interrogatories, testified as follows:

Direct examination.

By Mr. Herrington:

Q. Will you state your full name, please, for the record?
A. My full name is Clair Engle.
Q. You are a Representative in the Congress of the United States?
A. Yes, sir, from the Second District of California.
Q. Will you describe generally the Second District of California?
A. The Second District of California runs from the [fol. 1155] Oregon line to Death Valley along the Sierra Nevada Mountains, covering 19 mountain counties in California, an area of approximately 65,000 square miles, or approximately one-third of the total area of the State. Geographically, the District covers all of the Sierra Nevada Mountains from the Oregon line to the Death Valley-Mount Whitney area.
To visualize the District, it is approximately 100 miles in width and 600 miles in length on the eastern border of California contiguous to Nevada, from the Oregon line to about 25 miles north of the southern intersection of the California-Nevada line at Boulder Canyon.
Q. Has the mining industry in California been an important industry within your District?
A. It is one of the most important and has been in the past one of the most important industries in my District. As a matter of fact, Mr. Herrington, the gold produced from the District which I represent, together with the gold produced in adjacent Nevada, practically built San Francisco, and initiated the commercial dominance of San Francisco as a

great port in the West following the Gold Rush of 1848-49.

Gold was discovered at Coloma in my District by Marshall at Sutter's Mill in 1848, and that, of course, started the vast migration of people which commenced the industrial development and population of California.

Q. Do you know of your own knowledge that California [fol. 1156] has always been a great gold-producing State?

Mr. Barnes: I object to the form of the question as leading.

The Commissioner: Overruled.

The Witness: California has been the gold-producing State of the Union.

By Mr. Herrington:

Q. I show you the Minerals Yearbook for 1941 of the United States Bureau of Mines, and ask you to read into the record from page 10 the mineral products of the United States and the principal producing States in 1940 with respect only to gold, which appears on the last line.

A. Reading from page 10 of the Minerals Yearbook for 1941, the chart entitled "Mineral products of the United States and principal producing States in 1940," under "Gold," in order of quantity the order is as follows: California, first; Alaska, Second; South Dakota, third; and Nevada, fourth.

Q. With respect to the production in California, will you read into the record from page 225 of the Minerals Yearbook for 1941 the 25 leading gold-producing mines in the State.

A. Reading from the point indicated by Mr. Herrington, the leading mines, gold-producing mines in California in 1941, in order of their rank: 1st—Idaho Maryland-Brunswick. 2nd—Natomas. 3rd—Empire Star—Mr. Herrington, [fol. 1157] do you want me to give the locations of those mines? They are given here. Just for clarity of the record, Idaho Maryland-Brunswick are at Grass Valley.

Q. The names and the locations.

A. Natomas is at Folsom. Empire Star at Grass Valley-Nevada City. Yuba Unit—its location is given as the Yuba River. Lava Cap, Grass Valley-Nevada City. Butte Unit—Oroville. Central Eureka—the district is the Mother Lode.

Its location is at Sutter's Creek. That is not in this item here.

No. 8 is Capital Dredges, at Folsom; No. 9 is Golden Queen at Mojave; No. 10 is Carson Hill, at Mother Lode; 11, Argonaut, Mother Lode; 12 is Alabama, Ophir; 13 is Cactus Queen at Mojave; 14 is Sliger at Mother Lode; 15 is Sheepranch, at East Belt in Calaveras County; 16 is Snelling at Snelling; 17, Original Sixteen to One, at Alleghany; No. 18 is Iron Mountain at Flat Creek (Iron Mountain); No. 19 is Walker at Genesee, Plumas County; 20 is Ohio Point (Virgilia) in the Rich Bar District of Plumas County; 21 is Keystone in the Mother Lode; 22 is Surcease at Yankee Hill, Butte County; 23 is Merced Dredge at Snelling, Merced County; 24 is Putnam Property, at Camanche in San Joaquin County; and 25 is Siskiyou Unit, at Callahan in Siskiyou County.

All of those mines, with the exception of three or four, are in my District.

[fol. 1158] Q. Congressman Eagle, will you look at the table which appears at page 227 of the Minerals Yearbook of 1941, showing the mine production by counties, and tell me which was the leading county producing gold in California in 1941?

A. The leading county, according to this table, was Nevada County.

Q. What was the total production in dollar value of gold?

A. $9,872,275. That, of course, is the county in which the Idaho Maryland is located.

Q. Does this table show the total number of mines operating in California at that time?

Mr. Barnes: I take it the question relates to gold mines.

Mr. Herrington: Gold mines, that is correct.

The Witness: Yes. The table shows the total gold mine production broken down in terms of lode and placer mines.

By Mr. Herrington:

Q. What are the figures shown on the table as the total number of gold mines operating in California at that time?

A. One thousand thirty gold-producing lode mines.

By Mr. Barnett:

Q. Will you read what it says about Amador County, the Mother Lode, the richest lode in the State of California? Mr. Pittman says to read for Central Eureka, too.

[fol. 1159] A. Amador is third on the list, $3,499,300 in annual production.

By Mr. Barnes:

Q. Is that in your District, too?

A. Yes, sir.

By Mr. Herrington:

Q. Congressman Engle, are you familiar with War Production Board Limitation Order L-208?

A. Yes, sir.

Q. When did you become Congressman from the Second California District?

A. On September 1, 1943, at a special election, succeeding my predecessor, Mr. Harry L. Englebright, who died the preceding May.

Q. What, if any, action did you take with respect to Order L-208 after you were elected to Congress?

A. I introduced a bill to abolish it, and I importuned every Federal agency that had anything to do with it to repeal it. I did that continuously for two and a half years.

Mr. Herrington: Will you mark this?

(Said document was marked for identification as Plaintiffs' Exhibit No. 174.)

By Mr. Herrington:

Q. I show you Plaintiffs' Exhibit 174 for identification, and ask you if this is the bill or resolution which you intro[fol. 1160]duced in Congress to repeal Limitation Order L-208?

A. That is the bill.

Q. That copy is taken from your files, is it, Congressman?

A. That is correct.

Mr. Herrington: I ask that Plaintiffs' Exhibit 174 be introduced in evidence.

Mr. Barnes: May I see it, please?

Mr. Herrington: Excuse me.

(Document examined by Mr. Barnes.)

Mr. Barnes: This slip of paper that is clipped on here gives, I take it, the Resolution Number that was assigned to this in the 78th Congress, 1st Session, is that correct?

The Witness: That is true. I thought my file contained a copy of the printed bill as it came from the House, but I do not seem to have it. However, it would be available.

Mr. Barnes: I have no objection.

The Commissioner: Admitted.

(Said typewritten copy of H. R. 3682, To rescind Limitation Order L-208, introduced by Congressman Engle, marked as "Plaintiffs' Exhibit No. 174," admitted in evidence and made a part of this record.)

By Mr. Herrington:

Q. What was the Congressional action upon the resolution?

[fol. 1161] A. The bill was not passed.

Q. Did you take any other action in Congress, conduct any hearings, with respect to Limitation Order L-208?

A. Yes.

The Commissioner: Just a moment.

By The Commissioner:

Q. Before you go past the action with respect to this bill, you say the bill wasn't passed, Congressman. Was it reported out of committee?

A. No, no action was taken on the bill. That would be a more correct and precise answer.

By Mr. Barnes:

Q. To what committee was it referred, do you recall?

A. I would have to check that. The bill itself would show, not this copy, but the copy that came from the House would show. It seems to me, though, it went to Banking and Currency. I would have to check that. I can supply it for the record.

Mr. Barnes: That can be easily checked.

By Mr. Herrington:

Q. During the period from 1943 on, after you became Congressman from your District in California, did you have any consultation with members of the War Production Board with respect to Limitation Order L-208?

A. Yes, I did, many times.

[fol. 1162] Q. In general, do you recall what the representations to the War Production Board were that you made with respect to Limitation Order L-208?

Mr. Barnes: Your Honor, I object unless the person to whom the representations were made and the dates are specified.

By Mr. Herrington:

Q. Do you have any independent recollection now of the specific dates, or the specific people that you talked to?

A. Yes. Senator Millikin and I had a conference with Secretary Krug—I call him Secretary Krug; at that time he was head of WPB, which was prior to the time he became Secretary of the Interior—and Paul V. McNutt, who then was head of the War Manpower Commission, and a representative of Judge Vinson's office, Judge Vinson then being Economic Stabilizer. I can't recall definitely who that was, but I think it was Robert Nathan, who was the economic adviser to Judge Vinson.

That conference took place in what I think they call the Federal Security Building just below Capitol Hill, in May of 1945. Senator Millikin and I went to this conference with the purpose of discussing with Mr. Krug, head of the WPB, Mr. McNutt, head of War Manpower, and the representative from Judge Vinson's office, the repeal of Order L-208.

Q. Do you recall what you said with respect to Order L-208 and its effect upon the community which you represent?

[fol. 1163] Mr. Barnes: Your Honor, I object on the ground it is irrelevant and immaterial, being too remote from October 8, 1942, the date here in question.

The Commissioner: Overruled.

Mr. Barnes: May it be understood that my objection continues to this entire line of examination?

The Commissioner: Yes.

The Witness: The presentation made to Mr. Krug and Mr. McNutt and the representative from Mr. Vinson's office was that Order L-208 was a mistake to begin with, and was doing incalculable harm to the gold mining industry, in fact ruining it, with no compensating benefits to the war effort. That, in substance, was the nature of our presentation.

By Mr. Herrington:

Q. Do you recall when Order L-208 was actually revoked?

A. July 1, 1945, I believe.

Q. What, if anything, did you have to do with respect to its revocation?

A. I was in on the conferences which brought about termination of WPB Order L-208 following this discussion that I referred to in which Senator Millikin and I plead with Paul McNutt and Captain Krug and the representative from Mr. Vinson's office to take that order out. They promised us some action on it, and the case got balled up in Judge Vinson's office. I followed it up with conferences with Judge [fol. 1164] Vinson, and I also discussed it personally, prior to the actual issuance of the revocation order, with Robert Nathan, who was the economic adviser to Judge Vinson as Economic Stabilizer. Finally, the actual revocation of the order rested on clearance with Paul V. McNutt as Manpower Commissioner. I have the date, I think, in this memorandum. I can refresh my recollection as to the date.

We got the case finally cleared with Paul V. McNutt, and he called me on a Saturday morning and told me that he was going to wash his hands of the whole business, and in plain English, tell Judge Vinson's office that he had no objection whatsoever, on the basis of manpower considerations, to the revocation of this order. That was the Saturday preceding June 22, 1945.

Q. Congressman, did you conduct some hearings in the House of Representatives on legislation which was designed to reimburse mine owners for losses incurred by reason of Limitation Order L-208?

A. Yes, sir. I introduced a bill, and the hearings were held before a subcommittee of the Committee on War Claims, of which I was chairman.

Q. Is the report of your committee printed in any official document of the Congress of the United States?

A. It is printed in the Report on S. 45 of the United States Senate, that being Senator McCarran's bill for the [fol. 1165] same purpose.

Mr. Herrington: Will you mark this, please?

(Said document was marked for identification as Plaintiffs' Exhibit No. 175.)

By Mr. Herrington:

Q. I show you Plaintiffs' Exhibit 175 for identification, being Report to Accompany Senate Bill 45 of the 81st Congress, and ask you whether or not the report of your committee is correctly set forth appearing on pages 2 and following?

A. Yes, the report appears there.

Mr. Herrington: It is rather a long report, but for the purpose of the record I would like the Congressman to read just a few lines of the conclusions reached by the committee.

Mr. Barnes: Your Honor, I have no objection to his reading the document. I do object to reading from a document which is not in evidence.

Mr. Herrington: I will offer the document in evidence at this time, then, as a published report of a committee.

The Commissioner: Is that similar to the one which was marked for identification at pre-trial?

Mr. Herrington: I don't think this has been marked.

Mr. Barnes: No. The thing which was marked at pre-trial were hearings.

[fol. 1166] The Commissioner: Do you have any objection to the offer?

Mr. Barnes: No objection.

The Commissioner: It may be received.

(Said document, Report No. 79, to accompany S. 45, 81st Congress, 1st Session, marked "Plaintiffs' Exhibit No. 175," admitted in evidence and made a part of this record.)

Mr. Herrington: May we read into the record just three or four lines of the committee's conclusions?

The Commissioner: All right. I don't think we ought to read extended portions, but if you just want to point up a little bit of it, that will be all right.

Mr. Herrington: Just the four points of the committee's conclusions, please.

The Witness: The committee report states, reading from page 2 of Report No. 76, Calendar No. 65, Senate Document, 81st Congress, 1st Session:

"In the opinion of your committee the evidence presented, both oral and documentary, overwhelmingly supports the following contentions.

"1. WPB Order L-208 was unique in that it was the only Government order closing a productive industry.

"2. Issuance of the order was an administrative error, based upon a statistical misconception, and may, further- [fols. 1167-1171] more, have been illegal.

"3. The net results of the order in accomplishing its avowed primary purpose of channeling manpower to 'essential' mines were negligible.

"4. The economic loss to the gold-mining industry has been great and in some cases the damage may be irreparable."

By Mr. Herrington:

Q. Congressman Engle, I show you a pamphlet introduced as Plaintiffs' Exhibit No. 2 for identification. It consists of hearings before the Committee on War Claims on House of Representatives Bill 4393, and I ask you whether or not you conducted the hearings?

A. I conducted the hearings in the sense that I presented the case to the subcommittee. The subcommittee was chairmanned by Congressman Ellis Patterson of California, who was a member of the House Committee on War Claims at that time.

Mr. Herrington: At this time, Your Honor, we will offer Plaintiffs' Exhibit No. 2 for identification, in evidence.

[fol. 1172] By Mr. Herrington:

Q. Congressman Engle, are you familiar personally with the conditions that existed in the California gold mines and communities in your District following Order L-208?

Mr. Barnes: Your Honor, I object to this on the ground that it goes to the question of damages rather than to the question of liability.

The Commissioner: Overruled.

The Witness: Yes, sir.

By Mr. Herrington:

Q. Will you state what the conditions were, to your knowledge?

Mr. Barnes: Your Honor, I further object on the ground that there has been no showing of knowledge of these being brought to the attention of the War Production Board to influence any decision to revoke the order at any date subsequent to October 8, 1942.

The Commissioner: Overruled.

The Witness: I have traveled the District which I represent constantly since 1943 when I first ran for office. The effect of the gold closing order, L-208, was disastrous upon many of the communities in that District, and adversely affected the economy of the whole area. Grass Valley, where the Idaho Maryland Mine is located, went into a period of [fol. 1173] economic stagnation from which it has never recovered even to this time.

The same thing is true with reference to other parts of the District, the Central Eureka at Sutter Creek and the Argonaut Mine at Jackson, and others, all of them great producers up to the time of the closing. The Idaho Maryland Mine produced enough revenue in 1940 or '41 to pay $220,000 in Federal taxes. That was reduced to absolute zero in 1943.

Grass Valley is the only community in California that lost population during the last Census. It is the only place in my District today where there is a real economic problem at the present time, all stemming from the fact that these gold mines were closed and have never recovered. The population in the high school at Grass Valley is actually less than it was ten years ago.

Mr. Barnes: Your Honor, I move to strike the answer on the ground it represents a conclusion on the part of the witness rather than the fact. He has used the terms "disastrous" and "economic stagnation."

The Commissioner: To the extent that it contains conclusions, I will keep that in mind at the proper time.

By Mr. Herrington:

Q. Congressman Engle, did you bring those conditions to the attention of the War Production Board in 1943 and following?

[fol. 1174] A. Just as vigorously as I could; and as a matter of fact, I prepared a letter and sent it down to Julius A. Krug, then head of the WPB, signed by not only myself but 30 other Members of the House of Representatives. The letter clearly and explicitly defined——

Mr. Barnes: I object to oral testimony as to the contents of a written document.

The Commissioner: Sustained.

By Mr. Herrington:

Q. Do you have a copy of the letter which you filed with the War Production Board, Congressman Engle?

A. I made a copy available to you, Mr. Herrington, out of my files.

(Said document was marked for identification as "Plaintiffs' Exhibit No. 176.")

The Witness: It is a two-page document, Mr. Herrington. The list of the signators is on the second page.

By Mr. Herrington:

Q. I show you Plaintiffs' Exhibit 176 for identification, and ask you if this is the letter you referred to, addressed to Mr. Krug?

A. This is the letter, Mr. Herrington, that was sent by me personally to Mr. J. A. Krug, then Chairman of the War Production Board, on May 9, 1945, the date it bears.

Mr. Herrington: I offer Plaintiffs' Exhibit 176 in [fol. 1175] evidence.

Mr. Barnes: May I see it, please?

(Document handed to Mr. Barnes.)

(Here followed discussion off the record.)

Mr. Barnes: I object on the grounds that it relates to a period of time subsequent to October 8, 1942, and therefore is irrelevant and immaterial.

The Commissioner: It will be received.

(Said copy of letter dated 5-9-45, to J. A. Krug, Chairman, WPB, from Congressman Engle and other Congressmen, marked as "Plaintiffs' Exhibit No. 176," admitted in evidence and made a part of this record.)

Mr. Herrington: That is all, Congressman.

You may cross-examine.

The Commissioner: Any further questions?

Mr. Barnett: No questions as far as Central Eureka is concerned. I believe the witness has covered it in his testimony.

Mr. Barnes: No questions.

Mr. Herrington: Thank you, Congressman.

(Witness excused.)

[fol. 1176] Mr. Herrington: Mr. Allan, will you resume the stand?

Charles L. Allan, resumed the witness stand and was examined and testified as follows:

Cross-examination (Resumed).

Mr. Barnes: Your Honor, with respect to Plaintiffs' Exhibit No. 172 on which you were asked to reserve ruling, the inventory, I think the record now shows that it is a document prepared in the regular course of Plaintiff's business and it would be admissible as such. I think my cross examination to date or any subsequent cross examination would go to the weight of it, and I therefore have no objection to its receipt.

The Commissioner: All right, it may be received.

(1942 Physical Inventory of Idaho Maryland Mines Corporation, marked "Plaintiffs' Exhibit No. 172," admitted in evidence and made a part of this record.)

By Mr. Barnes:

Q. Mr. Allan, what maintenance was required in the Idaho Maryland mine after October 8, 1942?

A. It was necessary to maintain the station levels and the pump stations.

Q. What do you mean by "station levels," to begin with?

A. At each level where there is an excavation off the shaft for men and materials to be removed from the escapes [fol. 1177] and skips, the level itself goes beyond the station.

Q. What has to be done to maintain the station level?

A. In the Idaho mine it has to be timbered, the shaft is constantly in the need of timber, and the stations are in the same kind of rock as the shaft.

Q. Why does it have to be retimbered?

A. To keep it from caving in.

Q. What happens to the timbers you have up there initially?

A. They gradually dry and rot and break.

Q. How long does it take a timber—you say these are 8 by 8's or 10 by 10's?

A. They might be even larger in a station level.

Q. How long does it take them to rot?

A. No definite time for that. Some timbers will last much longer than others. It depends upon the conditions of the timber underground, the conditions of air and humidity in the station.

Q. Does timber rot in a year, two years, five years? For a layman can you give us some idea of what we are talking about?

A. It might rot in any of those periods, in a year, or it might last five years.

Q. Aside from the station levels, what maintenance is required?

[fol. 1178] A. On those levels where we had drifts through which ditches for drainage had been made we would have to keep those open so the water would continue to flow down the drifts.

Q. What is required as far as keeping those drifts open?

A. Timbering would be required.

Q. What type of timbers are those? The same type?

A. The same type.

Q. Does the same situation with respect to retimbering exist there, that it can be anywhere from one to five years that timbering might be required?

A. Yes.

Q. How many feet or miles of such drifts were you required to maintain? Do you recall that?

A. From five to ten miles.

Q. Out of how many miles in the mine?

A. Approximately fifty-five.

Q. What else had to be maintained, other than the two items you have discussed so far?

The Commissioner: With respect to this timbering that you speak of, what was the extent of the timbering?

The Witness: That would depend again on the rock conditions. The timbers might be spaced closely together, they might be right together, or they may not have to be put in for eight or ten or maybe even a further distance apart.

[fol. 1179] By Mr. Barnes:

Q. Do I understand that in some places you had the timbers solidly set one right against the other?

A. That is right.

Q. And in other places the timbers might be as much as ten feet apart?

A. That is right, and in some places even farther. In some places the timber might be further apart than that.

Q. What is the criterion that determines that fact?

A. The action of the rock. If the rock needs timber to be supported, it is indicated by the movement of the rock and timbers are set in accordingly.

Q. Aside from these two elements that you have referred to, what else in the mine required maintenance?

A. The ditches would have to be kept open. The ground swell and the movement of the earth would block the flow of water and close the ditches.

Q. If you were in an area that didn't require extensive

timbering, would you have much ground swell or other movement of the earth?

A. Probably not.

Q. If you had timbering, wouldn't the timbering tend to protect the ditches?

A. It would.

Q. What else had to be maintained?

[fol. 1180] A. The pumps would have to be maintained.

Q. Where were the pumps located physically?

A. They were located on pumping stations near the shaft.

Q. At how many levels, do you recall?

A. At that time I believe in the Idaho mine, five levels.

Q. What were those? Do you recall that?

A. One on the 2,000 level, one on the 1660 level, one on the 1400 level, and one on the 900 level. There might have been one other in there.

Q. What was required so far as the maintenance of those pumps was concerned? What had to be done?

A. They had to be lubricated, of course, and occasionally some repair made.

Q. How frequently were repairs required, do you know?

A. Not very frequently. There is not much wear on the pumps.

Q. Were those electrically driven pumps?

A. Electrically driven pumps.

Q. What else had to be done in the way of maintenance?

A. Outside of keeping these drifts and raises necessary for drainage and ventilation open and the maintenance of the pumps, I can't think of anything else right now that was necessary. There probably is something, but I can't think of it.

[fol. 1181] Q. You had to do all this same maintenance work while the mine was operating, didn't you?

A. Yes.

Q. How many employees did you say you had on October 8, 1942?

A. Two hundred twelve or two hundred thirteen, one hundred sixteen of them underground doing underground work.

Q. You said that you referred some of the men at the plant to Hall Scott Motors. Do you know of your own knowledge how many of them went there?

A. I know of two of them who went there. I referred five or six after the shutdown.

Q. One of those two had actually left your employ on October 1, hadn't he?

A. I don't know that.

Q. I was referring to Plaintiffs' Exhibit No. 173. There are only two men listed there beside whom there is any reference to Hall Scott Motors, and one of them left your employ on October 1.

A. These might not have been the men that I referred to. I am not sure who they were, but I remember referring men to Hall Scott after the shutdown. These men were apparently referred before the shutdown.

Q. To your knowledge had the Idaho Maryland lines ever employed the tribute mining system prior to October 8, 1942?

[fol. 1182] A. Not to my knowledge.

Q. Do you know whether or not consideration had ever been given prior to that date to employing the tribute mining system?

A. I do not know that. It is possible that prior to the company's operation of the Idaho Maryland mine tribute mining was used, because that was a very common practice in that district.

Q. Mr. Allan, looking at Plaintiffs' Exhibit No. 173, it appears that eighty-five of the men listed there left the employ of your company between October 9 and the end of October, but during November and December terminations were twenty-one and nineteen respectively. Then they went along at a very small level until June of 1943 when you had forty-five terminations. Did something particular happen in June of 1943 to cause that?

A. We had completed the second exit at that time.

Q. That was the one that you had been granted an appeal on, is that right?

A. That is right.

Mr. Barnes: That is all.

Mr. Herrington: I have no questions. That is all.

Mr. Barnett: No questions.

(Witness excused.)

Mr. Herrington: Will you mark this document as Plain-
[fol. 1183] tiffs' Exhibit No. 177 for identification.

(Said document was marked for identification as Plaintiffs' Exhibit No. 177.)

Mr. Herrington: Your Honor, I would like to introduce in evidence at this time as Plaintiffs' Exhibit No. 177 Senate Subcommittee Preliminary Report pursuant to Senate Resolution 66. Only a portion of it refers to the gold mine closing order, and I have through the courtesy of Mr. Connor photostatic copies of that portion which relates to the gold mining order. Have you any objection to introducing the entire document, Mr. Barnes?

Mr. Barnes (examining document): I have no objection to the receipt of this as a congressional report, Your Honor.

Mr. Herrington: It is offered for that purpose.

The Commissioner: It may be received.

(Preliminary Report of the Subcommittee on Mining and Minerals Industry, pursuant to S. Res. 66, 78th Congress, 2nd Session, marked "Plaintiffs' Exhibit No. 177," admitted in evidence and made a part of this record.)

Mr. Herrington: I also have a photostat of a report from the 82nd Congress, Second Session, Report No. 1605, which is a report to accompany Senate Bill 3195. I am sure that this is a correct photostat of the original print. If there is any objection to it on the ground that it is not a copy from the United States Government Printing Office, we will have [fols. 1184-1185] to obtain one.

Mr. Barnes (examining document): Subject to verification, I have no objection to Document 178.

The Commissioner: It may be received.

Mr. Herrington: That will be Plaintiffs' Exhibit No. 178 and it will be subject to verification.

[fol. 1186] Mr. Herrington: While I think of it, there is one other point, Your Honor. There are certain resolutions that were adopted by the State of Colorado, and the Territory of Alaska, and the State of Nevada which should be introduced in evidence. I do not have the official reports here. I believe the court takes judicial notice of the official reports of those states, does it not?

The Commissioner: I don't think they do. Here again, if

you have a copy, we have a provision whereby copies are just as good as originals, and subject to verification.

Mr. Herrington: We have copies of some of the resolutions: The laws of Nevada of 1943, the laws of Alaska of 1943, and a second resolution of Nevada of 1943. The Nevada resolutions are Nos. 28 and 21 respectively and the Alaska resolution is House Joint Memorial No. 3. I will offer all three in evidence subject to verification and have them marked the next Plaintiffs' exhibit number in order.

(Said documents were marked for identification as Plaintiffs' Exhibits Nos. 179, 180, 181 and 182, respectively.)

The Commissioner: Off the record.

(Discussion off the record.)

Mr. Herrington: Have you looked at all these, Mr. Barnes?

[fol. 1187] Mr. Barnes: Yes, I object to these resolutions, Your Honor, adopted by various state legislatures, on representations not shown on the record as to what facts before them. It is not shown that they had any binding effect whatsoever, and I don't see how they can possibly have any relevance or materiality here.

The Commissioner: They will be received.

Mr. Herrington: They will be Plaintiffs' Exhibits Nos. 179, 180, 181 and 182, all subject to verification.

(Assembly Joint Resolution No. 28, Laws of Nevada, 1943, marked "Plaintiffs' Exhibit No. 179," admitted in evidence and made a part of this record.)

(House Joint Memorial No. 3, Laws of Alaska, 1943, marked "Plaintiffs' Exhibit No. 180," admitted in evidence and made a part of this record.)

(Senate Joint Resolution No. 21, Laws of Nevada, 1943, marked "Plaintiffs' Exhibit No. 181," admitted in evidence and made a part of this record.)

(Senate Joint Resolution No. 18, Colorado, marked "Plaintiffs' Exhibit No. 182," admitted in evidence and made a part of this record.)

Mr. Barnes: I might also point out, Your Honor, although I think it goes to the question of weight, that there is no evi-

dence that copies of any of these were transmitted to the War Production Board or to any official of the War Pro-
[fols. 1188-1190] duction Board.

The Commissioner: What is the time, generally?

Mr. Barnes: 1943, generally.

Mr. Herrington: There is no date on the Colorado one. I will have to get that for you.

Mr. Barnes: Mr. Herrington, would you have any objection to the receipt of these two documents?

Mr. Herrington (examining documents): No objection.

Mr. Barnes: Your Honor, these two documents consist of a telegram from the War Production Board to Idaho Maryland dated July 19, 1943, and a telegraphic reply dated July 21, 1943, and I am offering them.

The Commissioner: They may be received.

[fol. 1191] COLLOQUY BETWEEN COURT AND COUNSEL

Mr. Connor: One other question we had yesterday was, I think, Exhibit No. 13 for identification which was incomplete in that it did not have the three appendices attached to it. We meant to offer it yesterday with the appendices but I took it back to the hotel with me. I would like now to offer Exhibit No. 13 for identification with the three appendices to it. We can either handle that by withdrawing the original and substituting this or just attaching photostats of the three appendices to it.

Mr. Barnes: Wouldn't it be easiest, because of the confusion we might have on the document, to leave the original Exhibit No. 13 and make this No. 13-A and have them both there, with the understanding in the record that it is a complete copy?

The Commissioner: I think that might be well.

Mr. Barnes: I have no objection on that basis, both 13
[fol. 1192] and 13-A on that basis.

The Commissioner: They may be received.

(Report on Gold Mine Order L-208, Its Effect and Accomplishment, marked "Plaintiffs' Exhibit No. 13," was admitted in evidence and made a part of this record.)

(Report on Gold Mine Order L-208, Its Effect and Accomplishment, with attached Appendices 1, 2, and 3, was marked

for identification as "Plaintiffs' Exhibit No. 13-A," and was admitted in evidence and made a part of this record.)

Mr. Herrington: We have one problem in connection with our inventory and that is the copy in evidence is the only copy available. We had one photostat made for Mr. Barnes and I was wondering if it would be possible to substitute the photostatic copy which was furnished to Mr. Barnes and that we may withdraw the original.

The Commissioner: Yes.

Mr. Barnes: That is satisfactory.

Mr. Herrington: I will withdraw the original and substitute the copy.

The Commissioner: Anything else from Idaho Maryland or Homestake?

Mr. Connor: Not at this time.

The Commissioner: We will recess for a few minutes before we take up Central Eureka.

(Thereupon, a short recess was taken in the hearing.)

[fol. 1193] STIPULATION BETWEEN CENTRAL EUREKA MINING COMPANY AND THE UNITED STATES

Mr. Barnett: If Your Honor please, in behalf of Central Eureka Mining Company, we would like to put into the record at this time the following stipulation between this plaintiff and the defendant, the United States of America:

1. Central Eureka Mining Company was incorporated on October 29, 1894 in the State of California, and ever since that date has been and now is a corporation duly organized and existing under the laws of the State of California, with its principal places of business located at Sutter Creek, Amador County, California, and San Francisco, California. That on October 8, 1942, the date of the issuance of Order L-208, the Central Eureka Mining Company had shareholders, and the shares of stock of said company were listed with and traded upon the San Francisco Stock Exchange. That on said date the said company had 600,000 shares of capital stock authorized to be issued.

2. Central Eureka Mining Company is now, and at all times mentioned herein and in its petition, as amended, on file herein, has been the owner in fee and in possession of the real and personal property known and described as

the Central Eureka Gold Mine, consisting of approximately 641 acres of gold-bearing land, all located at Sutter Creek, Amador County, California, and mining plant and equipment located on said land.

3. On October 8, 1942, the date of the issuance of Order [fol. 1194] L-208, the Central Eureka Mining Company employed a total of 117 men, of whom 73 men were classified as underground workers. The average age of the total number of employees was 41.74 years and 74.36% of said employees were married and had an average of 2.64 dependents. That the aforesaid employees had resided in the community wherein the mine is located for an average of 4.26 years, and 31 of said employees own their own homes in said community.

4. Immediately following the issuance of Order L-208, the 117 men employed by Central Eureka Mining Company were displaced as follows:

(a) 64 men were retained to maintain the mine until January of 1943, at which time the National War Labor Board ordered that henceforth the company would not be authorized to employ more than 42 men in the maintenance of its mine.

(b) 5 men volunteered or were drafted to the military service.

Then we skip (c).

5. The wages or salaries paid to employees of Central Eureka Mining Company during the period October, 1942, through December, 1942, totaled $46,158.60. In the year 1943, the total salaries amounted to $116,019.49. In the year 1944, salaries and wages paid were $84,467.12. In the year 1945, salaries and wages paid were $82,284.81. Salaries and wages paid to employees during the period October 8, 1942 [fol. 1195] to and including December 31, 1945, were $328,930.02.

6. All materials used in the operation of gold mines, including all materials deemed critical for the war effort, were subject to allocation and restriction by virtue of preference rating order P-56. The Central Eureka Mining Company was issued serial numbers 56-213 and 31-281 by the War Production Board, pursuant to said mine's application for serial numbers, and in accordance with the rules

and regulations promulgated by Preference Rating Order No. P-56.

Then we skip down to No. 8.

Prior to October 8, 1942 Central Eureka Mining Company was engaged in a successful operation and development of its gold mining property at a profit. That in the five-year period immediately preceding the issuance of Order L-208, the company herein paid in excess of $355,414.04 in Federal and State taxes. That during the same period of time, as above mentioned, the company herein paid to its shareholders dividends in the amount of $1,182,000.

Mr. Barnes: Mr. Barnett, in connection with that statement in respect to taxes, in view of the fact that we put in the exact amount of taxes, the phrase "in excess of" should now be eliminated.

Mr. Barnett: That is right, the taxes paid were $355,414.04.

Mr. Barnes: That is right.

[fol. 1196] Mr. Barnett: 9. The Central Eureka Mining Company's mine is located within the city limits of Sutter Creek, California, and the population of said city on October 8, 1942 was approximately 1,500.

Mr. Barnes: Your Honor, that stipulation is satisfactory to the defendant with one qualification. With respect to the paragraph which Mr. Barnett read, which is No. 2, relating to ownership of the property, that is subject to the same qualification I stated at the opening of these hearings, and we are making that stipulation only for the purposes of the proof with respect to liability, and that in the event it becomes necessary to take testimony with respect to damages, the question of ownership and whether the lands are gold bearing, and so forth, will have to be a matter of independent proof. Otherwise, all of the statements read have been verified against the books and records of the company, or against independent documentation furnished by counsel for the plaintiff, and the stipulation is satisfactory to us.

Mr. Barnett: I want to assure counsel, if he comes out there, we will show him gold.

The Commissioner: Is the stipulation acceptable with the qualification put upon it by the defendant?

Mr. Barnett: I did not quite get it.

The Commissioner: The reporter will read it back.

Mr. Pittman: Your Honor, I do not see, in the absence of [fol. 1197] any explanation from defendant's counsel, why it should be acceptable for the question of the liability issue and not acceptable on the question of damages.

The Commissioner: We are not trying the question of damages here anyway. It seems to me that if the Court should find that the Government is to be held liable to the plaintiffs at the close of this case, then all matters with respect to damages will have to be established, and it would seem that those, including ownership, would be a part of the damage question.

Mr. Barnes: I was afraid, your Honor——

The Commissioner: You wanted to be sure.

Mr. Barnes: I wanted to be sure of that, yes sir.

Mr. Barnett: There are many questions that Mr. Pittman and I thought were not necessarily appropriate at this hearing, and for that reason our proof has been somewhat limited to what we think are the main issues on the question of liability. And, of course, we adopt the evidence produced by Homestake and by Idaho Maryland as far as its affects that direct issue.

Now, we have lists here, your Honor, of 100-some-odd employees and what they do, and so forth, but I cannot see at this moment that it is particularly relevant. If counsel for the Government wants them in we will put them in, but I just feel that as long as we have this stipulation showing the number at the time and subsequent, I think that is the ger- [fol. 1198] maine part.

The Commissioner: I would like a statement from you with respect to the qualification put on the stipulation by the Government.

Mr. Barnett: I really think that counsel is correct, and we too may have other evidence to put in that would affect the question of damages. I think that goes to the quantum rather than what we are talking about here.

The Commissioner: All right.

Mr. Pittman: If it please your Honor, are we to take from that that if liability is established, all other matters in evidence here, without such a reservation that is herein made, will be accepted in the other trial, or will we have a trial de novo?

The Commissioner: If liability is established it would seem to me there is only one other question, and that is: how much. But with the qualification placed upon the stipulation with respect to ownership, as I understand it, the Government takes the position that you are still going to have to show that you own the lands which you say you do as a part of your proof of damages.

Mr. Barnett: Your Honor, I gather that the burden of showing that we do not own it may be pursued by the Government.

Mr. Pittman: They reserve the right.

Mr. Barnett: They reserve the right to do that. I cannot [fol. 1199] see any objection to that.

Mr. Barnes: That was not the statement that I made.

The Commissioner: I did not think it was. In other words, you have submitted certain information concerning the ownership to the Government. He has made such a check as convinces him that he can make the representation which he did. For the purpose of liability he will accept it, but if liability is established you are going to have to prove with more particularity the question of ownership.

Mr. Barnett: I do not see any serious objection to that, your Honor. We are satisfied with it. And I think that counsel will be too, after he digs into the deeds, if he wishes to.

Mr. Connor: I might state for the record now that we feel on the question of damages, the proof that we will have to show as to title is the proof that we would have to show in an ordinary ejectment suit, and then the burden would shift to the Government to show that we are not rightfully in possession.

The Commissioner: We will get to that at the proper time.

Mr. Barnes: I hope we never come to it, your Honor.

Mr. Barnett: Your Honor, as far as we are concerned, our live witnesses will be here tomorrow, as I informed you.

The Commissioner: I thought if you had any documents that you did not need the witnesses for we could use this [fol. 1200] time for that.

Mr. Barnett: I do not have any other than these photographs here that we might dispose of.

OFFERS IN EVIDENCE

We will offer in evidence as Plaintiffs' next exhibit in order, No. 183, a photograph of the mill; another photograph showing a picture of the shaft and shops, as Plaintiffs' next in order, No. 184; a photograph showing the old Eureka shaft and head frame as Plaintiffs' Exhibit 185; a photograph showing the 2300 sub-station, which I think your Honor might recognize, as Plaintiffs' Exhibit 186; a photograph of the ventilation fan on the 3000-foot level as Plaintiffs' Exhibit 187; a photograph of the north skip-way from the 300-foot level as Plaintiffs' Exhibit 188; a photograph of the 3000-foot level of the north drift is Plaintiffs' Exhibit 189; a photograph of the Old Eureka Shaft as Plaintiffs' Exhibit 190; a photograph of the pump station on the 2300-foot level as Plaintiffs' Exhibit 191; the sheave wheel on the head frame as Plaintiffs' Exhibit 192; and a photograph of the 500-foot level pump station as Plaintiffs' Exhibit 193.

That is as far as we can go now, your Honor.

Mr. Barnes: I have no objections to those as generally representative of the mine. There is no indication as to the date of the picture between 1942 and 1952, but as generally representative of the mine I have no objection to the receipt.

Mr. Barnett: We will connect that up, but they are offered [fol. 1201] for that purpose, to show the general representation.

The Commissioner: They may be received on that basis.

[fol. 1202] IN THE UNITED STATES COURT OF CLAIMS

[Title omitted]

Transcript of testimony—February 5, 1953

TESTIMONY FOR PLAINTIFFS (Resumed)

The hearing was resumed, at the time above indicated, pursuant to the recess previously taken.

Present: (The same appearances as previously noted.)

The Commissioner: You may proceed.

Mr. Pittman: May it please Your Honor, I would like to call as our first witness, Mr. Slater.

THOMAS CALVERT SLATER, a witness produced on behalf of the plaintiffs, having been first duly sworn by said Commissioner, was examined, and in answer to interrogatories, testified as follows:

Direct Examination.

By Mr. Pittman:

Q. Mr. Slater, will you give your full name to the [fol. 1203] reporter?

A. Thomas Calvert Slater.

Q. Where are you presently employed?

A. Calaveras Cement Company

Q. In what capacity?

A. Geologist.

Q. Were you ever employed by the Central Eureka Mining Company.

A. Yes.

Q. At what time?

A. From the middle of 1939 to about the middle of 1948.

Q. In what capacity, Mr. Slater, were you employed by the Central Eureka?

A. As geologist and Underground Superintendent, and finally, General Superintendent.

By Mr. Barnes:

Q. Were those simultaneous or successive?

A. I beg your pardon?

Q. Did you hold those jobs simultaneously or successively?

A. Successively.

Mr. Pittman: Will you mark this for identification?

(Said document was marked for identification as Plaintiffs' Exhibit No. 194.)

[fol. 1204]. By the Commissioner:

Q. What was the final date you mentioned?

A. It was about the middle of 1948 when I left the company.

By Mr. Pittman:

Q. Mr. Slater, are you familiar with the Annual Report of the Central Eureka Mining Company for the year 1940?

A. Yes.

Q. Did you prepare the inventory as shown in that report?

A. I had some responsibility in that, yes.

Q. I would like to show you the Annual Report of Central Eureka Mining Company, marked for identification, and ask you to look at that and see if you prepared the inventory as shown in that report?

A. Yes.

Mr. Pittman: I would like, Your Honor, to introduce this in evidence.

Mr. Barnes: I would like to ask the witness a question about it, if I could.

By Mr. Barnes:

Q. Where is the inventory shown in this document which has been marked Plaintiffs' Exhibit 194 for identification?

A. Where is what?

Q. Where is the inventory, the one that you said you [fol. 1205] prepared?

A. Stores and Supplies on Hand.

Q. In other words, you are referring to the balance sheet under the heading "Assets," the item "Stores and Supplies on Hand," which gives a total dollar amount, is that correct?

A. That is right, yes.

Q. What responsibility, if any, did you have for preparing the inventory for the year 1940?

A. In a general way: The storeroom actually did the counting, and I was assistant to the General Superintendent at that time and was there when it was going on, and exercised some foreign judgment in seeing that they were getting the figures and helping get them, and so forth. It wasn't actually my sole responsibility.

Q. I take it that the item you have referred to in the balance sheet which is in Plaintiffs' Exhibit 194 for identification, was taken from a list of the stores on hand, is that correct?

A. That is right, yes.

Mr. Barnes: I object, Your Honor, on the ground that it is not the best evidence.

Mr. Pittman: Your Honor, may I ask another question of the witness?

By Mr. Pittman:

Q. Do you know whether or not the list which this was [fol. 1206] taken from was certified by certified public accountants?

A. They checked our figures, yes.

Mr. Pittman: I submit, Your Honor, this is an Annual Report subject to certification. It has been certified, and the Assistant Superintendent has testified that he has personal knowledge of it.

The Commissioner: It is not the best evidence. It is not the inventory that was prepared. It is figures taken from it.

By Mr. Pittman:

Q. Mr. Slater, do you have personal knowledge as to the inventory of Central Eureka Mining Company for the year 1940?

A. Generally speaking, yes.

Q. What is it?

A. What is that?

Q. What was it in dollar value?

Mr. Barnes: Your Honor, I object, in the first place, on the ground that the dollar value of the inventory is not relevant or material here, since I assume this is being laid as a foundation for testimony similar to that given in other cases as to whether or not the inventory would have lasted the company over a period of years, which means an unbalanced inventory, 90 per cent in one item, would give a large dollar total but doesn't help at all; plus the fact that the [fol. 1207] recorded inventory of the company is the best evidence as to what it had, made by a physical count.

The Commissioner: Answering your last objection first, unless the absence of the original inventory which was taken can be shown, I must sustain that objection.

As to the first objection by the Government, the question did not limit itself to the dollar figure. Since the objection

is sustained on the second ground, I merely point that out to counsel.

Mr. Pittman: I would like to have this marked for identification purposes.

(Said document was marked for identification as Plaintiffs' Exhibit No. 195.)

By Mr. Pittman:

Q. Mr. Slater, I am showing you a list of materials supposed to be in inventory, compiled and on hand at the Central Eureka Mining Company as of the date shown. Do you know who prepared that inventory?

A. Yes.

Q. Would you state it?

A. The accountant for the mine prepared this, and it was taken from records of the mine that were prepared by the storeroom man, and so forth, the actual records of the mine, an actual count of the pieces. That is how they were arrived at.

[fol. 1208] Mr. Pittman: I would like to endeavor to introduce that exhibit in evidence, Your Honor.

Mr. Barnes: I would like to show you the document, Your Honor, as a preface to my objection. The document is in the form of a letter dated February 1, 1953, to the President of Central Eureka, and signed by a Mr. Whitmore at the Sutter Creek plant. That perhaps makes my objection even clearer than the witness' testimony, but in any event I think from the witness' answer it is clear that this is not the best evidence but is a secondary tabulation prepared from other sources. I object on the ground of the best evidence rule.

Mr. Pittman: May it please Your Honor—pardon me, do you wish to make your ruling?

The Commissioner: Unless you have something to add.

Mr. Pittman: I would like the record to show that counsel for the Government has been in conference with us back as far as early December on a stipulation, and we submitted an inventory to him which was checked, I must say, rather superficially. Our best records, which we are trying to introduce a substitute for here, were at the mine at a different location than we advised the counsel, and when he was out there he was unable to check our inventory. I would

like to stipulate with counsel for the Government at this time that we can introduce our inventories, as we have [fol. 1209] endeavored to do prior, subject to verification.

Mr. Barnes: May it please the Court, this is the situation we are faced with in this case: Mr. Pittman is entirely correct in saying they submitted to me in the early part of December a draft stipulation which included certain material with respect to inventory. That was referred to the FBI agents for verification at the site of the mine. As I told Mr. Pittman, the report that I received back from the FBI agent stated that Mr. Whitmore, who is the writer of that letter, and Mr. Robertson, who is an associate of Mr. Barnett, were present at the mine with the agent. They advised him that they were unable to locate any of the original material from which the figures submitted to me had been prepared. They thought that Mr. Barnett might have that material here with him.

Mr. Barnett has subsequently produced and shown to me one document (exhibiting the document) which is here, a retained copy of a form allegedly filed with the War Production Board. (Document handed to Mr. Pittman). That is the only document that has been shown to me at any time in connection with this. We have had certain discussions about it.

My own calculations, based on that form, indicate that whoever prepared the data from which the draft stipulation was prepared which was submitted to me, made certain mathematical mistakes, and I pointed them out to counsel [fol. 1210] for the plaintiff. But the situation is that there were not present at the mine any records that could be pointed to by the officials in charge of the mine from which the allegations of the draft stipulation could be verified. There has not been any cursory check as Mr. Pittman indicated at all. There was nothing to verify.

Mr. Barnett: Just one thing in reference to what counsel said, Your Honor. We received a report. Among the documents inspected out there, there was one missing; and that is the one to which Mr. Barnes referred that I had here. But my office assures me that they did check out there. What they checked, I don't know, but the only document I had was the one I gave Mr. Barnes when he called it to

our attention that that particular document was missing among the other papers.

I might say that the unfortunate part is that the offices of the company have just been changed, and the agent of the Government did not go down to the new office. He probably could have found much there if he had.

Mr. Barnes: May I state in that connection, Your Honor, that the agent of the Government went to the office that had been stated by plaintiff when it submitted the documents as the location where the material could be checked. He went in company with an associate of Mr. Barnett, and was never told at that time, according to the report that I received, that there was any other source of documents that could be checked.

[fol. 1211] The Commissioner: I am prepared to rule now on the offer as made, and the objection is sustained.

If the original inventory is in existence, that should be produced, if you are trying to get evidence with respect to the inventory in the record. In the absence of the original, if the absence is satisfactorily explained, then secondary evidence may be received as to what the inventory consisted of.

By Mr. Pittman:

Q. Mr. Slater, will you explain why the original inventory cards, index system, purchase orders, or however you arrived at your inventory, are not produced in court this morning?

A. I would say the evidence is bulky, for one point; and, as he mentioned, a change in the offices of the company has upset them somewhat. I would feel that that information is there at the company. It may be that they just were not able to locate it at the time.

Q. Do you have an inventory book? By that I mean one volume that lists the inventory of the company.

Mr. Barnes: Your Honor, I object to the form of the question, because the witness has not been employed by the company for some four or five years. We are interested in what the company did.

Mr. Pittman: For the year 1942, then.

[fol. 1212] The Commissioner: In what form was the in-

ventory? I will ask the question: In what form was the inventory recorded?

The Witness: They went through, as I remember, and made a count of the various items in each bin, and tabulated it on yellow sheets with a number. The prices were looked up and they were extended. They were grouped into various groups of material, and totals were arrived at.

By the Commissioner:

Q. Where are those?

A. Those sheets are some of them (indicating).

Mr. Pittman: For identification purposes, may I mark Physical Inventory, March 1942?

(Said document was marked for identification as Plaintiffs' Exhibit No. 196.)

By Mr. Pittman:

Q. Mr. Slater, I hand you Exhibit 196 for identification, Physical Inventory, March 1942, and I will ask you by whom that was prepared?

A. I would say Mr. Oliver, looking at the writing and all; and the prices and the totals are by Miss Provis, who was the accountant for the company. Those are the sheets they actually had with them when they were counting the material.

Q. Can you testify whether or not that reflects the true inventory of Central Eureka as of March 1942?

[fol. 1213] A. To the best of my knowledge and to the best of the knowledge of the people who took the inventory, yes, the actual people who were doing the counting. They were making an honest effort to do a job.

Q. Is that the only record that Central Eureka has indicating the inventory of Central Eureka for 1942?

A. There may be additional recaps when these are totaled and combined. There are probably other records, yes.

Q. What sheet would that be taken from?

A. They would be taken from this (indicating).

Q. From this here?

A. From this material, yes. This was going through the bins, counting the bolts and various pieces of equipment.

Q. And it was prepared during the actual counting of the inventory?

A. That is right, yes.

Q. This does not include what was actually in the mine?

A. Not at all, no. This is in the warehouse, the stores that hadn't been used.

OFFERS IN EVIDENCE

Mr. Pittman: I would like to introduce this in evidence, Your Honor.

(Document handed to Mr. Barnes.)

Mr. Barnes: Could I ask a question or two?

The Commissioner: Yes.

[fol. 1214] By Mr. Barnes:

Q. How often was inventory taken by Central Eureka, do you know?

A. As I remember, once a year.

Q. Was that taken at any particular season of the year?

A. Along towards the end of the year, as I remember it.

Q. These pages which have been handed me, Plaintiffs' Exhibit 196, are headed March 1, 1942. Do you know why an inventory was taken as of that date?

A. I can't just recall offhand, but there was probably some reason at the time. I don't just remember that.

Q. Do you recall whether or not an inventory was taken later on in 1942?

A. At the end of the 1942—I am not sure. It has been quite a few years. I don't remember the details. I know that was the practice of the company, to keep a good inventory of their equipment.

By Mr. Pittman:

Q. Do you have figures on the amount of dollar value, showing what the inventory was at the end of 1942?

A. Yes.

Q. Taken from a certified public accountant's statement?

A. Yes.

Q. What is that?

Mr. Barnes: Again I object to that, on the ground it is [fol. 1215] not the best evidence.

The Commissioner: Let us dispose of this offer first.

Mr. Barnes: Your Honor, it doesn't seem to me that this has been established as being a record made or maintained in the regular course of business. It seems to have been made for some special purpose which the witness is not aware of. I object to it on that basis.

The Commissioner: It will be admitted.

(Said Physical Inventory, March 1942, of Central Eureka Mining Company, marked "Plaintiffs' Exhibit No. 196," admitted in evidence and made a part of this record.)

Mr. Barnes: May I ask the witness one additional question?

By Mr. Barnes:

Q. I notice inside this book but not physically stapled into it is a page which is headed, "Inventory of Mill Supplies, in Pounds," and bears the date May 11, 1942. Do you know what that relates to?

A. Just talking to them, I understand that sheet——

Mr. Barnes: I object to a statement of the understanding of the witness.

The Commissioner: Sustained. You can testify if you know.

[fol. 1216] By Mr. Pittman:

Q. Do you know, Mr. Slater?

The Commissioner: Of your own knowledge.

By Mr. Barnes:

Q. Not what somebody told you, but do you know of your own knowledge?

A. That the actual totals—no, I didn't prepare the totals. I wasn't there when they prepared the totals for them.

The point I was going to make, as I remember the inventory was made on hand January 1, 1942, and then it was made on months afterwards; and there was a period later on, July, August, and September, where they were figured

on the basis of the previous months. That is just the best of my knowledge. I can't go back and remember all——

Mr. Barnes: Your Honor, I am uncertain as to whether this document was included within your prior ruling, but I object to its receipt on the ground that there has been no satisfactory identification of it.

Mr. Barnett: That is part of the mill inventory, Mr. Barnes. One is the general inventory, and that is the mill inventory, which is part of the general inventory. It so states up in the corner.

Mr. Barnes: It bears a different date. It is not part of the document "Physical Inventory of March 1942." It is [fol. 1217] not physically attached to it.

Mr. Pittman: Is this the sheet to which you are directing your objection?

Mr. Barnes: That is right. The Commissioner has allowed that in over my objection.

Mr. Pittman: You are objecting to the Inventory of Mill Supplies, in Pounds—Quicksilver——

The Commissioner: It will be received also. Mark the "Pounds" sheet as 196-A.

(Said sheet, headed "Inventory of Mill Supplies, In Pounds—May 11, 1942," was marked as "Plaintiffs' Exhibit No. 196-A," and was admitted in evidence and made a part of this record.)

By Mr. Pittman:

Q. Mr. Slater, are you familiar with the inventory practices and policies of the Central Eureka Mining Company on the dates you were employed there, from 1939 to 1945, as to stocking inventory supplies?

A. Yes.

Q. Would you tell the Court what that practice was in maintaining inventories?

A. As I remember, at inventory time the storeroom was notified, and sufficient manpower was made available to him, and they just started in and started counting, and went through the inventory, the stores of the company. They [fol. 1218] counted them and made the records, and the records were then taken down to the office of the mine and they were priced, and totals were made.

Q. In so far as the quantities kept on hand in the years 1939, '40, '41, and '42, did your company have any plan or policy of maintaining inventory?

Mr. Barnes: I object, unless the source of the witness' knowledge is shown, Your Honor. He was first employed by the company as geologist. He has testified he was next Underground Superintendent. In neither case would he have had anything to do with the aboveground inventory, as far as the record indicates to date.

The Commissioner: I think the objection is sound.

By Mr. Pittman:

Q. Mr. Slater, is it a fact that as Underground Superintendent you must of necessity draw from those inventories?

A. That is right.

Mr. Barnes: I object to the question as being leading, Your Honor.

The Commissioner: Overruled.

By Mr. Pittman:

Q. Do you know what the inventory of Central Eureka was in the year 1939?

Mr. Barnes: I object, Your Honor, on the ground that the recorded inventory is the best evidence.

[fol. 1219] The Commissioner: Sustained.

Mr. Pittman: If the Assistant Superintendent knows, Your Honor, can't he testify to it?

The Commissioner: Not in view of the objection.

By Mr. Pittman:

Q. Are you familiar with the ore deposits of Central Eureka?

A. Yes.

Q. Do you know what the reserve deposit of the Central Eureka Mine was as of October 8, 1942?

A. Somewhere in the neighborhood of 100,000 tons, or more.

Q. Approximately how many tons was the normal mining capacity of Central Eureka?

A. Between 4,000 and 5,000 tons a month.

Q. In your opinion, what period of time would Central Eureka, under normal operation, be permitted to continue mining with the reserves as shown on your map?

Mr. Barnes: Your Honor, I object to the form of the question. The question uses the word "permitted." It doesn't seem to me as though that is something within the scope of the witness' knowledge in any way. In any event, we have the witness' statement that there were ore reserves of 100,000 tons, and that it milled 4,000 to 5,000 tons a month. It is simple to see that means they had a supply of [fol. 1220] 20 to 25 months of recorded reserves.

The Witness: That would——

The Commissioner: Maybe he can throw some light on it. Overruled.

By Mr. Pittman:

Q. Do you want the question read back?

A. I might say there that the figure I gave you was blocked-out ore, and then there is inferred ore and probable ore that increases those figures.

The Commissioner: What do you mean by "blocked-out"?

The Witness: That is on four sides, where it has been exposed on four sides.

By Mr. Pittman:

Q. Are you familiar with the practice of borrowing tools and inventory from other mining companies in the vicinity of Central Eureka at Sutter Creek?

A. Yes. We cooperated and exchanged back and forth. We tried to help one another. That has been the practice in the Mother Lode country. It still is today.

Q. Are you familiar with the Argonaut Mine?

A. Yes.

Q. How far is that from Central Eureka?

A. About four miles.

Q. Do you know whether or not it was closed down during the year 1942?

[fol. 1221] A. Yes, I remember that it was closed down.

Q. Do you know whether or not it had any inventory?

A. Yes, they did.

Q. Did you see it personally?

A. I was through the property and saw it, yes.

Q. Did you know that they were closed down long before L-208 was issued?

Mr. Barnes: I object to the form of the question, Your Honor.

The Commissioner: Sustained.

By Mr. Pittman:

Q. In the event it was necessary to continue mining operations, could Central Eureka have borrowed any materials and inventory from Argonaut Mines?

Mr. Barnes: Your Honor, I object unless the source of the witness' knowledge is shown. That requires the concurrence of two parties, the officials of the Argonaut Mine as well as the officials of Central Eureka.

Mr. Pittman: Your Honor, I submit that the record is already replete with the custom in both Idaho and Homestake, and by the present witness, that it was customary among the mining industry there to borrow and lend among them their inventory. Our witness has testified that he is familiar with the mine, that he has checked the inventory, and I am asking if, to his knowledge, any of the Argonaut [fol. 1222] inventory could have been made available, or was it promised to be made available to Central Eureka. He says he has knowledge of it. I just want the record to show if we could get it.

The Commissioner: I think your question is bad in form. I think you can get the evidence that you desire, but you have to ask the question in such a way that you get it properly. I will sustain the objection.

By Mr. Pittman:

Q. Did we buy anything from the Argonaut Mine?

A. Yes.

Q. Were we ever refused any materials from the Argonaut Mine that we requested?

A. No, not to my knowledge.

Mr. Pittman: I would like to offer this for identification.

(Said document was marked for identification as Plaintiffs' Exhibit No. 197.)

By Mr. Pittman:

Q. I hand you the Annual Report of Central Eureka Mining Company for the year 1941, and I would like to ask you by whom that was prepared, if you know?

A. The auditor, the certified public accountant for the company. The details were prepared by the accountant at the mine, and the various other individuals at the mine whose work is described here: the President of the company, [fol. 1223] the accountant, the engineers and geologists, and the General Superintendent of the company, whose names are all on here.

Q. Does that show the supplies on hand?

A. It shows the total dollar value of supplies on hand.

Mr. Pittman: Your Honor, I would like to offer this in evidence.

Mr. Barnes: I object on the same basis, Your Honor, as not being the best evidence.

The Commissioner: Sustained.

Mr. Pittman: May I have the record reflect, Your Honor, that I note my exception.

The Commissioner: Yes.

Mr. Pittman: Your Honor, may I make an offer of proof of the facts as shown in this statement?

The Commissioner: Of course, that will go along with the record, though not in evidence, so if your offer was merely as to what is contained in the paper, that in itself is an offer.

Mr. Pittman: I would like to show from this witness, if I could, whether of his own knowledge he knew that the supplies of what we claimed were in inventory were on hand.

The Commissioner: If you want to make any further offer of proof, go ahead. I have only excluded this document. You haven't offered anything beyond the document yet.

[fol. 1224] Mr. Pittman: I asked him about the supplies being on hand, and there was an objection to his statement on it. I would like to get that offer of proof in evidence.

The Commissioner: Go ahead.

Mr. Pittman: I believe, Your Honor, that the objection

was sustained, wasn't it? I want to make an offer of proof as to the supplies on hand at the end of the year 1941.

By Mr. Pittman:

Q. Do you know what the supplies on hand were at the end of 1941?

A. I know to the best of my knowledge and the understanding of the people who did the work, and all, that that figure is correct, yes.

Q. Mr. Slater, have you an opinion as to whether or not, with the inventory on hand and the ore deposits that we had, Central Eureka could have continued in operation after the issuance of Order L-208?

A. Yes. They were built up for the purposes in the event of war or trouble.

Q. You mean the inventory was built up?

A. Yes, early, before we went to war.

Q. You say they could continue. How long could they have continued, in your opinion, to operate?

A. My estimate is two or three years.

Mr. Pittman: That is all.

[fol. 1225] Cross-examination.

By Mr. Barnes:

Q. Mr. Slater, at what point in 1939 was it that you went with Central Eureka?

A. About the middle of the year. I would say it was in June.

Q. And you went with the title of geologist, is that correct?

A. That is right.

Q. Who was your immediate superior?

A. Mr. Norman.

Q. What was his position?

A. He was Assistant Superintendent.

Q. How long did you remain as geologist?

A. Until 1942.

Q. What time in 1942, do you recall?

A. July or August.

Q. What did your position become then?

A. I took over the underground in addition to my work as geologist.

Q. Who did you succeed as Underground Superintendent?

A. Mr. Clinton Knox.

Q. Who did you report to in that capacity?

A. Mr. Norman.

Q. How long did you continue as Underground Superintendent?

[fol. 1226] A. I think it was in January 1944.

Q. What was your title then?

A. After that time, I was General Superintendent.

Q. Was the Central Eureka Mine engaged in any mining operation at that time?

A. No.

Q. Did your title continue as General Superintendent until 1948?

A. Yes.

Q. On this question of ore reserves, did you prepare any kind of written report or other document showing your estimate of those reserves?

A. Yes.

Q. Do you have a copy of that here?

A. No, I don't, other than that copy. (Document handed to witness.) This is a copy of that statement that I had.

Q. This is an ore estimate, October 1942, is that correct?

A. That is right.

Q. Table 1 covers what type of ore? You referred to "proven ore," I think, as one class; and was "indicated" the other?

A. Yes. I have listed them here as "proven ore" and as "measured ore." In other words, that is another term for the same ores.

[fol. 1227] Q. On the first page which you have in front of you, you have two totals, one of 22,600 tons of measured ore and one of 26,900 tons of measured ore, is that correct?

A. That is correct.

Q. What about the second page? Is that still measured ore?

A. No. The next one is indicated ore.

Q. What is the total shown there for indicated ore?

A. 61,100 tons.

Q. And is the 12,200 also part of the indicated ore?

A. Yes.

Q. So that makes a total of 73,300 of indicated ore?

A. That is right, yes.

Q. What do you mean by "indicated ore"?

A. I mean—that is a definition used by the USGS.

Q. By USGS, you mean United States Geological Survey?

A. That is right. I remember I used those headings following their pattern, their procedure.

Q. Generally, what does it refer to as distinct from measured ore?

A. It isn't as well exposed. Where measured ore is on four sides, indicated ore would be on two sides. Inferred ore would be maybe on one side with diamond drilling, rather than laterals or drifts in the ore.

Q. Is inferred ore the material referred to at the bottom [fol. 1228] of the second page of this document?

A. That is right, yes.

Q. How much inferred ore do you show?

A. I don't show that in terms of tons. I show it in tons per vertical foot, of 252 tons.

Q. Then you are basing that on the difference between the 3800 level and the proposed 4000 level, aren't you?

A. That is right, yes.

Q. So you get a total of 44,100 tons of inferred ore, is that right?

A. That is right, yes.

Q. What about the third page of that document? What does that cover?

A. This is the ore mined in the Eureka Mine in the years 1948, 1949, '50, '51, '52, and '53.

Q. From what source did you get that information?

A. That is from the monthly and yearly compilation of tonnages from various stopes. Those records are all kept, and this is merely taken as a summary of those records.

OFFERS IN EVIDENCE

Mr. Barnes: Your Honor, I would like to offer this in evidence as Defendant's Exhibit 27.

Mr. Pittman: Do you want to attach this to it (indicating sheet).

Mr. Barnes: Counsel ha e handed me a facing sheet dated

February 1, 1953, being an Engineer's Report signed by [fol. 1229] T. Fong, Mining Engineer. I am perfectly willing to have that accompany the document, since counsel said the two came together, but all that I am offering and wish to be bound by is the estimate, three pages, identified by the witness, which is described as being Table I, consisting of three pages, and attached to this document.

Mr. Pittman: Does the letter tell what is being transmitted?

Mr. Barnes: I didn't even read it, Mr. Pittman.

Mr. Pittman: That is the only reason I offer it to be attached. That is the only reason I ask that it be attached and placed in evidence.

The Commissioner: We will mark them. It has not received a number?

Mr. Barnes: Neither of them has received a number.

The Commissioner: The table will be marked 27; and mark the facing sheet the next Plaintiffs' number.

(Said documents were marked for identification as Defendant's Exhibit No. 27 and Plaintiffs' Exhibit No. 198.)

The Commissioner: You say you have no objection. So both of them are admitted.

(Said table headed Ore Estimate, October 1942, Central Eureka Mining Company, marked as "Defendant's Exhibit No. 27," admitted in evidence and made a part of this record.)

[fol. 1230] (Said letter dated February 1, 1953, Estimate of Ore Reserves, October 1942, Engineer's Report of T. Fong, Mining Engineer, marked as "Plaintiffs' Exhibit No. 198," admitted in evidence and made a part of this record.)

[fol. 1231] By Mr. Barnes:

Q. Mr. Slater, who were the officers of the Central Eureka Mining Company in October, 1942, to your knowledge?

A. Mr. Spiers was the general superintendent. Mr. Prior, C. C. Prior, was the president of the company. (Referring to document) To my knowledge, Mr. Stadfeld was secretary of the company. There is a list of the officers and directors.

Q. Was the president physically located at Sutter Creek or was his office there?

A. His office was at San Francisco.

Q. Mr. Slater, do you recall that in November, 1942, following the issuance of limitation Order L-208 the Central Eureka Mining Company leased certain mining equipment to Mr. Kellogg Krebs and Mr. Richard Krebs? Do you know for what purpose they leased that equipment?

A. They used it for mining, milling tungsten ore, as I remember it.

Q. Their tungsten mine was in Tulare County, is that right?

A. That is right.

Q. That is in California?

A. Yes.

Q. Do you recall how much improvement was leased to them?

A. I believe it was flotation machines and feeder, reagent feeders.

[fol. 1232] Q. What about agitators?

A. Agitators, yes.

Q. Classifier?

A. Classifier, yes.

Q. Sand pumps?

A. Yes.

Q. Filter, duplex pan filter?

A. I think so. Yes, I remember them bringing the compressor for that.

Q. Did you ever have any knowledge of a copper mining operation that Central Eureka undertook in Battle Mountain, Nevada?

A. Yes.

Q. When was that?

A. 1943 as I remember?

Mr. Barnes: Your Honor, I have here the application by Central Eureka for a serial number under Preference Rating Order P-56 for the copper mine at Battle Mountain, Nevada, dated November 23, 1952, and I would like to offer that in evidence as Defendant's Exhibit No. 28.

Pittman: No objection.

The Commissioner: It is admitted.

(Application for serial number under P-56, dated November 23, 1942, of Central Eureka Mining Company was marked for identification as "Defendant's Exhibit No. 28," and was admitted in evidence and made a part of this record.)

[fol. 1233] By Mr. Barnes:

Q. Do you know, Mr. Slater, whether or not any mining equipment was transferred to the Battle Mountain operation?

A. Yes.

Q. Do you know whether any personnel was transferred from Sutter Creek to the Battle Mountain operation?

A. Just myself.

Q. Were you the only one?

A. Yes.

Mr. Barnes: That is all.

Redirect examination.

By Mr. Pittman:

Q. Mr. Slater, would you have leased this material that you just stated to this other mine had not Order L-208 been issued?

A. Yes.

Q. I say would you have leased the material had Order L-208 not been issued.

A. Oh, no, no.

Q. Was this eppper mine which defendent's counsel just spoke about an experimental mine?

A. Explorations, yes, exploring copper deposits.

Q. Do you know how long that exploration took place?

A. As I remember, it was just a matter of a few months. I think it ended, I would say, around the 4th of July, if my [fol. 1234] memory is right. We were all finished and on our way back to Sutter Creek. Both Mr. Norman and I took care of that deposit, that property, and we alternated back and forth. Toward the end I spent a good deal of time there, most of the time, at Battle Mountain.

Q. Did it result in any material amount of recovery of copper?

A. What is that?

Q. Did your exploration for copper result in any material recovery of copper?

A. No. We did produce some ore that I think was later shipped. We did not exercise our option on the property, and referred it to the owners. The ore that we took out was shipped as I remember it.

Mr. Pittman: That is all.

Mr. Barnes: No further questions.

The Commissioner: The witness may be excused.

(Witness excused.)

Mr. Barnett: Mr. Smith, Your Honor.

There is certain evidence here about plates. We have them here, but I think it will just encumber the record, so we will not introduce it.

DONALD D. SMITH, a witness produced on behalf of the plaintiffs, having been first duly sworn by said Commis- [fol. 1235] sioner, was examined, and in answer to interrogatories, testified as follows:

Direct examination.

By Mr. Barnett:

Q. Mr. Smith, where do you reside, please?

A. In Palo Alto, California.

Q. What is your present business or occupation?

A. I am the president of the Central Eureka Mining Company.

Q. Will you describe generally the property of Central Eureka Mining Company?

A. The Central Eureka Mining Company—you are talking now about physical——

Q. That is correct.

A. —is very much the same in principle as any of the Mother Lode mining companies. It consists of two shafts with various connecting drifts, cross cuts. It has two complete hoists, of course, two sets of compressors for air-conditioning the mine. It has a complete assay office, a complete mill from the time of the primary crush to the cyanida-

tion of the precipitate tanks. It has a very modern change house, a large supply room, complete woodworking facilities, blacksmith shop, electrical shops, and various things that go with that type of mine.

Q. You say it has a sawmill or lumber shop?

A. Yes.

[fol. 1236] Q. It has a machine shop?

A. Yes.

Q. Blacksmith shop?

A. Right.

Q. Would you say that it is more or less self-sustaining?

A. Yes. We have very little work done on the outside.

Q. Do you have any sources of lumber?

A. Yes.

Q. Of what does that consist?

A. At the moment when it is opportune, we buy our lumber cut and finished, depending on market conditions, from outside lumbering interests. When lumber becomes short and is difficult to get, we buy poles and trim them and create our own timbers.

Q. Do you have a source of timber on your property?

A. Not any more, no.

Q. Did you in 1942?

A. Yes.

Q. Had you been up in that country in 1942?

A. Oh, I have been going up in that country since I was a child. My grandparents were interested in gold mining, and being a Californian it is a sort of natural inclination to want to go to look. It has held a great fascination for me.

Q. More particularly the Mother Lode, is that right?

[fol. 1237] A. That is right.

Q. In reference to the shafts that you have described, am I correct in saying that they consist of two separate mines?

A. That is right. There is the Central mine and the Eureka mine which were consolidated some years back.

Q. Describe the Central shaft, please.

A. The Central shaft goes down to the 3200 foot level. To go deeper into the mine to our lowest workings, which today is 4250 feet, you cross over on a drift and go down into the 4100 foot level via a winze which in layman's terms is a shaft with no entry into the surface.

Q. Recently, I had the experience of going down in the

shaft. Which shaft do we go down, The Central or the Old Eureka?

A. You went down the Old Eureka.

Q. How deep is that?

A. The shaft—it is as deep as 3200 feet from the standpoint of effective usefulness. It goes deeper than that, but it is not in state of repair so that it can be used. This is the Old Eureka shaft.

Q. Referring to Plaintiffs' Exhibit No. 184, would you show to His Honor the shops and the location of the sawmill and the other parts?

A. The lumber working building, Your Honor, is behind [fol. 1238] this head frame (indicating). It doesn't show very well in this picture. This is the supply room and this is the double change room (indicating). This, of course, is the hoist building (indicating). This is an electrical shop (indicating). This is the blacksmith shop and this is a limited foundry capacity machine shop (indicating).

Mr. Barnes: May I point out that the record is going to establish absolutely nothing about that picture?

By Mr. Barnett:

Q. Mr. Smith, you are now identifying objects on Plaintiffs' Exhibit No. 184, is that correct?

A. Yes.

Q. Have you pointed the storeroom out?

A. This is the storeroom here, one of them (indicating).

Q. Was that the same situation as existed in October, 1942?

A. Yes.

Q. For what purpose is the Eureka shaft used at the present time?

A. The Eureka shaft is used for the transportation of men and materials into the mine and waste out of the mine.

Q. And the Central shaft, what is it used for?

A. It is used for the hoisting of ore, mainly.

Q. Will you describe the process by which that ore is extracted up to the time it reaches the mill?

[fol. 1239] A. It is extracted by drilling into the face, loading the holes with powder and blasting it. Then with automatic or mechanical mucking devices it is mucked into cars

and trammed to ore chutes. Ore reserve storage bins is what it amounts to. From there it is hoisted up to the Central shaft to the coarse ore bin where it gets its primary crush. It is then conveyed over to the mill on a conveyor belt into bins and from there by gravity flow it goes into the stamp mill and through the flow of the mill and comes out in two forms; either in the form of amalgam or as the end result of the cyanide plant as precipitates.

Q. Do you have a locomotive that assists in that procedure?

A. We have two locomotives that are used in the transportation of ore from the Old Eureka side of the mine to the Central side from the pumps of the hoisting.

The Commissioner: What is the distance?

The Witness: Would Your Honor permit me to ask Mr. Slater the exact distance? I really couldn't tell you. I can give you an estimate.

The Commissioner: All I had in mind, I just wondered how far apart the two shafts were.

The Witness: I would say about 4,000 feet.

By Mr, Barnett:

Q. These dump cars go that distance from one mine to the [fol. 1240] other?

A. That is correct, yes, sir.

Q. After it finally reaches the mill it goes through the process of stamping, and so forth, which has been described?

A. That is right.

Q. Has the Central Eureka Mining Company adopted a policy with reference to its equipment?

A. Would you ask that question again, Mr. Barnett?

Q. I have in mind the maintenance of its equipment. Do you know the condition of the equipment?

Mr. Barnes: Your Honor, I object to the form of the question as not relating to the period in question here.

Mr. Barnett: I withdraw that.

By Mr. Barnett:

Q. Directing your attention to October, 1942, you had occasion at or about that time to observe the equipment, is that correct?

A. That is correct.

Q. At that time you had no official identification with the mine, is that correct?

A. That is correct.

Q. Your official identification commenced when?

A. In May of 1948.

Q. In 1942 did you have the opportunity of observing [fol. 1241] the condition of the equipment?

A. Yes.

Q. That was at a time when you visited the mine?

A. That is correct.

Q. What did you observe?

A. I observed that the equipment was in very good shape. As a matter of fact, it always has been, apparently, the policy of the Central Eureka Company in prior days as well as current days to maintain the equipment in very excellent condition.

Q. You say that you became identified in 1948?

A. Correct.

Q. Did you have occasion to have any connection or identification with the inventory of the mine?

A. Nothing other than what I observed from passing through the mine. We, of course, were interested in the condition generally of that mine as well as the Mother Lode mines, and as we would travel through the country we generally would go through the supply room and the head of the hoist rooms and see the whole layout.

Q. Do you know whether or not in 1948 when you became identified with the mine there were any items in the inventory that had been there in October, 1942?

A. Yes. As a matter of fact, we were still working on plate steels and bolt stocks and things of that sort that were [fol. 1242] there at that time.

Q. Are you acquainted with the Idaho Maryland mine?

A. Yes.

Q. Are you familiar with any custom existing in the Grass Valley section as well as the Mother Lode section that permits the lending and borrowing of equipment?

A. Yes, I am. The gold mining business being a non-competitive business, we have no secrets. It has always been the custom in the gold mining fraternity from the days, I believe, of the prospector with a mule and a tin pan. Some-

body was always helping him, loading him with equipment and material, grub staking him and so forth. It seems to have grown up with the industry. If Idaho Maryland needs something that we have that we can let them have, we immediately do it, and they do the same for us, as the case of the other mines in the vicinity, the Kennedy and the Argonant.

Q. By hours, how far would you say the Kennedy and Argonant are from the Central Eureka?

A. About five or six minutes at the outside.

Q. How far is Idaho Maryland, the Grass Valley?

A. About three hours, two and a half or three hours.

Q. Is this Central Eureka mine an old mine?

A. Yes. It is one of the oldest in the area.

Q. Could you give His Honor some historical background of Central Eureka?

[fol. 1243] A. Very briefly, Central Eureka is kown as the Hetty Green mine. That was one of the starts of Hetty Green's fortune. She took $12,000,000 out, I believe, in 500 feet of mining. The mine started from that with respect to any substantial production. It has been in operation off and on ever since. As is the case with the Mother Lode mine, you do hit barren areas and if you hit it at the time when you are not adequately financed, you generally end up with new owners who do have adequate financing to get you to different ore.

Q. As to the difference between Mother Lode ores as compared with other gold bearing ore, that is to say, Homestake or Idaho Maryland, can you explain to His Honor what the difference, if any, may be?

A. Yes. Your ore deposits are more limited in the Mother Lode, but they are of greater value, much greater value. Your Homestake obviously is the largest mine, I guess, in the world. They do a tremendous volume. They mill per day what we would mill in a month, but their ore values, that is, per ton of ore, are considerably less than you will find, generally speaking, in the Mother Lode.

Q. In the Central Eureka mine it is quartz, is it, hard rock?

A. That is right.

Q. I show you what purports to be——

[fol. 1244] The Commissioner: You used that word "value." I suppose it means the amount of gold per ton.

The Witness: That is correct.

By Mr. Barnett:

Q. I show you what purports to be a booklet, "Operations at the Old Eureka Mine." It is a technical publication, No. 1136-A-1112, American Institute of Mining, written in 1939 by L. A. Norman, Jr., which describes technically the operations of the Old Eureka mine. Are they referring to the Central Eureka mine there?

A. Yes.

Q. That pamphlet describes generally the technical features of the mine, is that correct?

A. Our mining operations for the last, probably, twenty years have been in this area that is described in this particular brochure.

Mr. Barnett: Could we mark this for identification as Plaintiffs' next exhibit number in order, please?

(Said pamphlet was marked for identification as Plaintiffs' Exhibit No. 199.)

By Mr. Barnett:

Q. Will you look at Plaintiffs' Exhibit No. 199. It describes generally the technical features of the mine, does it not?

A. Yes, it is a very good account.

[fol. 1245] OFFERS IN EVIDENCE

Mr. Barnett: We will offer this as Plaintiffs' Exhibit No. 199.

Mr. Barnes: Your Honor, I object on the ground it is incompetent, the witness not being produced for examination. It purports to be a speech or paper prepared by the former assistant superintendent of the mine and he obviously has not been produced here for cross examination and this is hearsay.

Mr. Barnett: It is only a scientific paper showing scientific phases of the mine and is descriptive of the testimony given by this witness. It has no other purpose as proof of any facts other than a descriptive bearing as far as the testimony is concerned. It is offered for that limited purpose.

Mr. Barnes: Your Honor, if the witness testified to it, we don't need this document in. The document is being offered as independent proof of some fact contained in it not specified by counsel. I object to its being offered as independent proof of any facts.

Mr. Barnett: It is merely a description of his testimony in general. Besides, if you will read it, you will learn a lot.

Mr. Barnes: I did read it.

Mr. Barnett: It might go to the weight rather than to the admissibility.

The Commissioner: I will let it in.

[fol. 1246] (Booklet, "Operations at the Old Eureka Mine," by L. A. Norman, Jr., marked "Plaintiffs' Exhibit No. 199," was admitted in evidence and made a part of this record.)

Mr. Barnett: That is all, Your Honor.

The Commissioner: Suppose we take a five minute recess.

(Thereupon, a brief recess was taken.)

[fol. 1247] Cross-examination.

By Mr. Barnes:

Q. Mr. Smith, what had your background been before you went with Central Eureka?

A. Immediately prior to going with Central Eureka, I spent about three and a half years in the Navy.

Q. Have you had any professional training in geology or mining?

A. Nothing other than a lifelong interest. I certainly don't profess to be a geologist, but I have studied mining and mining problems for some years.

Q. Have you ever been an officer of any other mining company?

A. No, sir.

Q. Prior to going in the Navy, what had you been doing?

A. Prior to going into the Navy, I was in the glass container manufacturing business.

Mr. Barnes: That is all.

Mr. Barnett: No questions, Your Honor.

The Commissioner: The witness may step down.

(Witness excused.)

Mr. Barnes: Your Honor, I have here what is the only appeal file that has been found by counsel for either party, pertaining to Central Eureka. It is not an appeal in the [fol. 1248] sense that the other files are, but so that the record will be complete, I would like to offer these documents in evidence. They have been examined by counsel for the plaintiff.

The first is a letter from Central Eureka signed by Mr. L. A. Norman, to Dr. Marcellus H. Stow, Deputy Director of the Mining Division, dated December 9, 1943.

Mr. Barnett: No objection.

The Commissioner: Admitted.

(Said letter, dated 12-9-43, from L. A. Norman, Jr., to Dr. Marcellus H. Stow, WPB, was marked as "Defendant's Exhibit No. 29," and was admitted in evidence and made a part of this record.)

Mr. Barnes: The second, which I am offering as Defendant's Exhibit 30, is the reply to that letter, dated December 17, 1943, signed by Henry W. Erickson, Deputy Administrator of Limitation Order L-208.

Mr. Barnett: No objection.

The Commissioner: Admitted.

(Said copy of letter, dated 12-17-43, from Henry W. Erickson, Deputy Administrator, Limitation Order L-208, to Central Eureka, was marked as "Defendant's Exhibit No. 30," and was admitted in evidence and made a part of this record.)

Mr. Barnes: And third, which I offer as Defendant's Exhibit 31, is a further letter from Mr. Erickson, dated December 22, 1943.

[fol. 1249] Mr. Barnett: No objection.

The Commissioner: Admitted.

(Said letter, dated 12-22-43, from Mr. Erickson to Central Eureka, was marked as "Defendant's Exhibit No. 31," and was admitted in evidence and made a part of this record.)

Mr. Barnes: That is all defendant has with respect to Central Eureka.

Mr. Barnett: Your Honor, I would like to make an offer of proof that if the Witness Slater were to testify, he would testify substantially to this offer of proof which has been objected to. I would like to make the offer that the inventory——

The Commissioner: So that there is no misunderstanding about it, put Mr. Slater back on the stand and ask the question so that we will know just what this offer relates to.

Mr. Barnett: Mr. Slater, will you take the stand?

THOMAS CALVERT SLATER, resumed the witness stand and was examined and testified as follows:

Direct Examination.

By Mr. Barnett:

Q. Mr. Slater, you have made, at the request of Mr. Pittman and Mr. Smith and myself, a computation of inventory showing the gradual build-up from 1937 to 1942, is that [fol. 1250] correct?

A. That is right.

Q. You stated some time ago in your examination that in view of the imminence of war, Central Eureka were building up their inventory?

A. That is right.

Q. You have the dollar value of the inventory on this memorandum?

A. That is right.

Q. Was this prepared by you?

A. Yes.

Q. And prepared from the financial statements that you have referred to previously?

A. Yes.

Q. And any other documents?

A. These are basically from those statements, the annual reports of the company, and my knowledge of what transpired. The mine was informal. It wasn't a big organization. We would get together in the morning and talk over the operations, what we planned, and what our thoughts were at the time. I imagine others do the same thing. It

was at that time that we talked about building up our inventories——

Mr. Barnes: Just a moment. I object to this conversation, Your Honor.

[fol. 1251] By Mr. Barnett:

Q. In 1937, the dollar value which was put down here was how much?

Mr. Barnes: Your Honor, I object to this as not being the best evidence.

The Commissioner: Sustained.

Mr. Barnett: Now I will make the offer of proof, Your Honor, without asking repetitious questions.

The Commissioner: Yes. I wanted to be sure that the offer was related to a particular question.

Mr. Barnett: Yes, Your Honor.

We expect the witness to testify that in 1937, the inventory was $5,992.68; in 1938, $8,653.90; in 1939, $13,839.50; in 1940, $28,725.82; in 1941, $51,751.33; and in 1942, that is, December of 1942, $50,321.41.

The Commissioner: You said you expect him to testify. You mean he would have testified?

Mr. Barnett: He would have so testified; and we make that in the form of an offer of proof.

That is Central Eureka's case, as far as the liability issue is concerned, Your Honor.

Mr. Barnes: Just one additional point. Could I have that PD-275, that pencil copy which was retained?

Mr. Barnett: What was that?

Mr. Barnes: That War Production Board report.

[fol. 1252] Mr. Barnett: This? (Indicating.)

OFFERS IN EVIDENCE

Mr. Barnes: I would like to offer in evidence as Defendant's Exhibit 32, Central Eureka's retained copy of a Form PD-275, which shows the inventory on December 31, 1941, of various types of materials, the quantities received by the company during the first quarter of 1942, the amount used or put into production during that quarter, the inventory on March 31, 1942, at the end of the quarter, and an estimate

as to the quantity required to be put into production during the third quarter, the quarter ending September 30, 1942.

Mr. Barnett: We are going to object to that, Your Honor. First, a proper foundation hasn't been laid. Second, it is irrelevant, incompetent and immaterial. Third, it is not proper cross-examination. This is one of the documents from which we attempted, without success, to prove certain facts, and many questions were raised. We feel that it is not the best evidence. The inventory itself is.

Secondly, the so-called anticipated needs was used for a purpose different from what we are concerned with here.

Mr. Pittman: May it please Your Honor, I wanted to offer the same thing in evidence, and under the theory that it wasn't the best evidence——

The Commissioner: You didn't offer that.

Mr. Pittman: This is comparable to the inventory that we offered because you said, as I understood Your Honor's [fol. 1253] ruling, it wasn't the best evidence. This is not the original. This was taken from other facts and figures, and that is the best evidence.

The Commissioner: Obviously it is being offered for a different reason by the Government than it would have been offered by the plaintiff. In other words, that may possibly be an admission against the plaintiff.

Mr. Connor: It may very likely be also that the figures on here are incorrect. I should think the Government should produce the original of this as filed, as being the best evidence of what the document is.

The Commissioner: The plaintiff turned it over to Government counsel in my presence. I saw them.

Mr. Pittman: That is what brought about the dispute in the early stages, Your Honor. This computation was made from figures, and we didn't have the inventories available at the plant. Now we have come back in court today with a CPA's report of the inventories, a man who was personally available at the mine and can swear to the correctness of the inventory. We were unable to get that in evidence; and if we are unable to get that in evidence, I certainly think the source of this is not shown, and I don't think this should be put in evidence, although I will say it is practically the same as our other inventory.

The Commissioner: I have made my ruling. I don't see [fol. 1254] any basis for changing it.

(Said pencil copy of Form PD-275 filed by Central Eureka, dated 5-11-42, was marked as "Defendant's Exhibit No. 32," and was admitted in evidence and made a part of this record.)

Mr. Barnett: Let me ask you a question here. I think I anticipate the future argument of counsel on this exhibit, that is, counsel for the defendant.

By Mr. Barnett:

Q. There is a statement here about anticipated need, or something of that sort. Are you familiar with that? Just the general heading?

A. When was this document made?

Mr. Barnes: May 11, 1942, it was signed.

By Mr. Barnett:

Q. They have an inventory for 1941, and then an anticipated need for the next quarter. Do you know anything about the figures that appear on the exhibit?

A. Yes. I don't know definitely.

Q. I don't mean the figures themselves, but did you have any policy, when you anticipated what you would require for a future period, as to whether you exaggerated the amount or minimized the amount?

A. We were conservative as to our operation, yes. We figured an estimate that we had ample to take care of our needs.

[fol. 1255] Q. Would it be more or less than you would require?

A. You would figure your contingencies, yes. We always do it. That is an engineering practice, yes.

Q. You always tried to get what, more or less?

A. More.

Q. So in this so-called document, if you stated to these priority boards you anticipated using so much, you would always exaggerate, is that correct?

A. Yes.

Q. That is typical of engineering companies?
A. That is right. It is engineering practice.

Mr. Barnett: That is all.

Mr. Barnes: I would like to ask the witness one question with respect to that.

Cross-examination.

By Mr. Barnes:

Q. Looking at the document, Mr. Slater, and referring under the general heading "Carbon Steel" to the item which is called "Wire rope and strand," I notice that that indicates that during the first quarter of 1942, you used 4.3 tons of material——

Mr. Barnett: Just a moment, Your Honor. We object to that. That is only a statement of some type. It is not proof of the fact stated.

The Commissioner? Whose statement is it?

[fols. 1256-1305] Mr. Barnes: Just a minute. Let me ask the witness the question.

Mr. Barnett: It is not signed by this witness at all.

By Mr. Barnes:

Q. Do you recognize the signature that appears on there?
A. Yes.
Q. Whose signature is that?
A. Mr. L. A. Norman, Jr.
Q. What was Mr. Norman's position at the time?
A. General Superintendent.

[Title Omitted]

[fol. 1306] In the United States Court of Claims

Transcript of testimony—February 9, 1953

Testimony for Plaintiffs (Resumed)

The hearing was resumed, at the time above indicated, pursuant to the recess previously taken.

Present: (The same appearances as previously noted.)

Mr. Rigney: Your Honor, since last Wednesday I have had an opportunity to go over the record in some detail and consider a good number of the exhibits which have been put in, and have come to the conclusion that it is unnecessary for us to call Mr. Howard Young as the plaintiffs' witness. He didn't come to the WPB until 1943, so his testimony would necessarily be confined to the period after that, and I am satisfied in my own mind that it would be merely cumulative of evidence already in. For that reason, I have decided not to call him.

[fol. 1307] There are just one or two items concerning the exhibits that need to be straightened out.

May this be marked Plaintiffs' Exhibit 36B for identification.

(Said document was marked for identification as Plaintiffs' Exhibit No. 36B.)

OFFERS IN EVIDENCE

Mr. Rigney: I might say, Your Honor, that Exhibit 36B for identification is a memo of November 24, 1941, which is headed, "Department of State, Memorandum of Conversation."

Plaintiff now offers in evidence this exhibit, which in my judgment will then make admissible 36 for identification and 36A for identification. This item was an attachment referred to in those exhibits, and because this was not readily available for offer, the other exhibits were not received.

Mr. Barnes: Do you have 36?

Mr. Rigney: Yes. Exhibit 36 is the memo of December 2 from Mr. George to Mr. Nelson, and refers to Mr. Livermore's memo of November 27, 1941, which is 36A for identification. That in turn refers to this November 24 memo, which I have asked to be marked Exhibit 36B for identification. I think that that completes the documentation in connection with these exhibits.

Mr. Barnes: Subject to verification that this is the enclosure, Your Honor, I have no objection.

The Commissioner: Then 36, 36A and 36B may all be [fol. 1308] admitted in evidence. I took it that your offer was of all three.

Mr. Rigney: Yes, Your Honor, that is correct.

(Said memo of 12-2-41 from Mr. George to Mr. Nelson, memo of 11-27-41 from Mr. Livermore, and memo of 11-24-41 headed "Department of State, Memorandum of Conversation," marked as "Plaintiffs' Exhibit Nos. 36, 36A and 36B," respectively, admitted in evidence and made a part of this record.)

Mr. Rigney: Now, Your Honor, with the admission in evidence of this November 24 memo as Exhibit 36B, I should like to reoffer Exhibit 69 for identification, which was the letter of Donald M. Nelson to Mr. Milo Perkins dated December 3, 1941. That letter of Mr. Nelson's also referred to this November 24 memo which has been received as 36B, and for that reason it was not received at the time it was offered.

Mr. Barnes: My recollection isn't too clear on this. Has the first enclosure referred to in Exhibit 69 been marked?

Mr. Rigney: Yes. That is the memo from Lauchlin Currie of November 18, and I will get you the exhibit number.

Exhibit 68 is the exhibit number of the November 18 memo. It has the Joint Economic Committee's resolution attached.

Mr. Barnes: Subject to verification, no objection.

The Commissioner: Admitted.

(Said letter dated 12-3-41, from Donald Nelson to Milo Perkins, marked as "Plaintiffs' Exhibit No. 69," admitted in evidence and made a part of this record.)

[fol. 1309] Mr. Rigney: I think, Your Honor, that Exhibit 78 must be reoffered, Exhibit 78 for identification. That was the memorandum from President Roosevelt of August 31, 1942, to Paul V. McNutt, attaching a copy of a telegram from Senator B. K. Wheeler of Montana to the President, of August 30, 1942, and at the time this was offered, as I recall, objection was raised that there had been no showing up to that time that Mr. McNutt had had anything to do with this situation.

I think the record now, with testimony from several witnesses about Mr. McNutt's participation in certain conferences, and also the documentary evidence which has since been offered, lays sufficient foundation for the admission of that exhibit.

Mr. Barnes: Your Honor, with all due respect to counsel, there is no record to date which shows Mr. McNutt's personal participation in any of the conferences as to which there has been testimony. There is no testimony that ties this document up to show that notice of its contents was brought to any official of the War Production Board. The War Manpower Commission was an entirely separate and distinct organization.

Mr. Rigney: Your Honor will recall the testimony that Mr. McSherry, who was the No. 3 or No. 4 man in the War Manpower Commission, sat in on meetings prior to the issuance of L-208, participated in the discussions preceding [fol. 1310] the issuance of the order. There is correspondence now in evidence and documents in evidence in which Mr. McNutt's name appears prominently.

The Commissioner: Let me see the record where this was first offered.

Mr. Barnes: Page 406, I believe, Your Honor.

The Commissioner: It may be received.

(Said memo from President Roosevelt to Paul V. McNutt, dated 8-31-42, with attached copy of telegram to the President from Senator B. K. Wheeler dated 12-30-42, marked "Plaintiffs' Exhibit No. 78," admitted in evidence and made a part of this record.)

Mr. Rigney: Your Honor, I think that completes the offer of documents that we wanted to straighten out, and I believe that all the documents which we have offered which are properly admissible have been received. Plaintiff Homestake now rests.

The Commissioner: Very well.

Let's call on Idaho Maryland.

Mr. Orrick: Idaho Maryland rests.

The Commissioner: Central Eureka?

Mr. Barnett: Yes, Your Honor, with the inclusion of the testimony which just went in as part of our case. I think we rested the other day, subject to this testimony.

The Commissioner: This evidence would apply to any of [fol. 1311] the plaintiffs.

I see no one from Alaska-Pacific. Accordingly, proof is closed as to Alaska-Pacific.

In line with our discussion of Friday, proof is not closed as to Oro Fino or Bald Mountain, and further evidence will be expected from those two plaintiffs at the conclusion of the Government's presentation.

Mr. Barnes: Your Honor, is there any indication of or limitation on the scope and nature of the testimony that may be produced by those two companies?

In other words, the thought I have in mind is that we are going to be calling to the stand certain Government officials. If testimony is to be allowed to be introduced by them as to conversations with Government officials, we may be faced with the necessity of recalling at a subsequent time some or all of that group of officials, many of whom are going to have to come from distances to testify, and at considerable inconvenience. I therefore hesitate to proceed with the presentation of the Government's proof if we are going to be faced with a situation of that type at some subsequent date.

The Commissioner: I think the record will show quite clearly that any evidence to be adduced by those two plaintiffs would be limited to ownership on the one hand, and then possibly some evidence with respect to the actual closing of the mines concerned, and the receipt of the Limitation [fol. 1312] Orders by the mines.

Mr. Barnes: Plus testimony of the type that has been offered by some of the plaintiffs here, if they desire to do it, as to their inventory materials, and as to what happened to their employees.

The Commissioner: Yes.

Mr. Barnes: Which would, of course, not in any way affect the testimony I intend to offer now.

The Commissioner: I should not think it would, and we can proceed on that basis. After all, those two plaintiffs had just as much time to get ready for trial as the plaintiffs who are before the Court.

Testimony for Defendant

Mr. Barnes: Your Honor, before I proceed with my case, I would like to outline very briefly the type of testimony which the Government intends to produce here. I am doing that principally for this reason: Because of the fact that some of the witnesses are coming from out of the city and it

has been necessary to suit the schedule to their convenience to a certain extent, we are not going to be in a position to present our testimony in the most orderly fashion possible.

The Government's case in general is going to cover two points, and I might say two points that I believe are indicated by the opinion of the Court of Claims in the Idaho Maryland Mines Corporation case as being the issue in [fol. 1313] volved here. One is going to relate to the exigency of the situation existing in October, 1942, so far as it related to the manpower situation of the other nonferrous mines. Perhaps somewhat as a corollary to that, the second point will also deal with the exigency of the situation existing in October 1942 so far as it related to supplies of critical materials, demands on those critical materials, and potential savings that might be realized and were realized by virtue of the closing of the gold mines.

Those are the two principal points upon which the Government's case will rest. As I say, some witnesses will cover both points. We will not be able to develop either point fully at one time because of the fact that some witnesses will cover two points and because of the other fact, that to a certain extent we are not going to be able to take the witnesses in what we would have considered to be the optimum arrangement so far as their sequence of appearance on the witness stand is concerned.

We anticipate at the present time calling nine or ten witnesses, and I will indicate the order in which we expect to have them on the stand, their names, and what their official positions were.

The first one is Richard A. Lester, who was head—I think the title was changed two or three times. It was Priorities Section of the Labor Division or Labor Production Divi [fol. 1314] sion at one time, in the War Production Board.

The second witness will be I. N. P. Stokes, who was Assistant General Counsel for Orders and Regulations of the War Production Board.

The next two witnesses will be Mr. Ernst Hergenroether, who is presently head of the Ferro-Alloy Section of the NPA, who was during World War II connected with the Conservation Division of the War Production Board. Mr. Erwin Vogelsang, who during World War II was head of the Tin and Lead Division of the War Production Board.

The next witness will be Mr. John Lord O'Brian, General Counsel of the War Production Board.

We then intend to call Mr. Harvey A. Anderson, who was connected with the Conservation Division of the War Production Board. Again because of the fact that titles changed so rapidly, of several of the witnesses, as indicated, I hesitate to indicate his exact title.

Mr. Samuel Lipkowitz, who was in the Labor Division.

Mr. Robert R. Nathan, who was at that time Chairman of the Planning Committee of the War Production.

Mr. John Ohley, who was, I believe, connected with the Office of the Secretary or Under Secretary in the Department of the Army. I believe it was the War Department at that time.

We anticipate that that group of witnesses under normal cross-examination will carry us approximately through [fol. 1315] Thursday. Our schedule that we have made up indicates that.

There are two additional witnesses that we have been in contact with and whom we may desire to call. Frankly, we had originally, for other reasons, decided not to call Mr. Batt, whose name has been mentioned here several times. Your Honor indicated at one point during the presentation of plaintiffs' proof perhaps an interest in having Mr. Batt appear and testify. We immediately got in touch with Mr. Batt, and discovered that he is at the present time in Mexico, where he has been sent for reasons of health by his doctor, and he will not return to the East Coast of the United States until about April 1st. He will be available in Mexico City, and says that he would be glad to testify by deposition there between the 20th and 27th of this month, or on the West Coast during the month of March.

It is not the defendant's intention to request that the hearings be held open to take Mr. Batt's testimony either of those times. I am advising you of that fact because of the interest which you expressed, and we would be very glad to make Mr. Batt available as a witness at any or all of those times that might be satisfactory to you, if you feel that his testimony is material or necessary to the presentation of the case. You probably won't want to express an opinion on that until you have heard all of the Government's proof.

The Commissioner: That is true.

[fol. 1316] Mr. Barnes: The other witness—

The Commissioner: If we should go out to the West Coast, I understand Donald Nelson is out there and we might hear from him, too, if that should be indicated.

Mr. Barnes: In that connection, Your Honor, I don't know what the plaintiffs' reactions have been from Mr. Nelson. We have been in touch with him, and find that Mr. Nelson has very little recollection of specific details on this, even after refreshing or attempting to refresh his recollection by referring him to certain documents. I would be very glad, if that situation eventuates, to arrange to have Mr. Nelson appear for such testimony as he may be able to give and such light as he may be able to throw on the matter. Frankly, after our correspondence and discussions with Mr. Nelson, we felt that probably he would be able to add very little to the case, but it may be that under actual examination and cross-examination he might be able to throw greater light on some of the issues.

The other witness, though, that we desire to call is Brehon Somervell. I have been in touch with General Somervell just this morning. He is at the present time with the Koppers Company in Pittsburgh. General Somervell states that it will not be possible for him to come to Washington any time this week. He will be available in Pittsburgh for the taking of his deposition, and I was going to request that we take his testimony in Pittsburgh on Friday.

[fol. 1317] The Commissioner: I think we ought to have General Somervell's testimony.

Mr. Barnes: Yes, sir.

I might say also that General Somervell advised me that he is leaving on a Florida vacation on Saturday, so Friday becomes about the only day. He indicated that Friday was as inconvenient to him as any day this week would be so he would be available on Friday.

Mr. Lester, will you come around, please?

RICHARD ALLEN LESTER, a witness produced on behalf of the defendant, having been first duly sworn by said Commissioner, was examined, and in answer to interrogatories, testified as follows:

Direct examination.

By Mr. Barnes:

Q. Will you state your full name, please?

A. Richard Allen Lester.

Q. Where are you employed at the present time?

A. At the present time I am Chairman of the Department of Economics and Social Institutions at Princeton University.

Q. Would you indicate briefly for us your academic background?

A. After graduating from Yale University in 1929, I came to Princeton in 1929. I received an A.M. Degree from Princeton in 1930, spent a year thereafter in Germany as a [fol. 1318] German-American exchange fellow. I then subsequently came back to Princeton and received a Ph.D. Degree there in 1936.

I was instructor in Princeton in 1931 to 1932, and from '34 to '38. In 1938, I went to the University of Washington as Assistant Professor, in Seattle, Washington, and was there two years as Assistant Professor.

In 1940, I went to Duke University as Assistant Professor, subsequently became Associate Professor, and was nominally connected with Duke University until the fall of 1945.

In the fall of 1945, I came to Princeton University as Associate Professor, and in 1948 I became a full Professor and Chairman of the Department at Princeton University.

Q. Has your work been in any special phase of economics?

A. It has been largely in the industrial relations phase.

Q. Was there a period during the war when you were connected with any Government agency?

A. Yes. Either in late May or early June, I became connected with the Office of Production Management, the Labor Division.

Q. What year was that?

A. In 1941, I am sorry.

At that time Mr. J. Douglas Brown, who was then Professor of Economics at Princeton University, brought me there. He had just assumed the headship of this Priorities [fol. 1319] Branch of the Labor Division of the Office of Production Management.

Q. Dean Brown was then head of the Institute of Industrial Relations at Princeton, is that right.

A. Yes, Industrial Relations Section.

Q. He is now——

A. Dean of the faculty and head of the Industrial Relations Section.

Q. How long did you continue in that employment, Mr. Lester?

A. I continued in that employment officially, according to my records, until the end of August, when I was transferred——

Q. Was that 1942?

A. At the end of August, when I was transferred to the Manpower Commission as of September 1.

I went back to Duke University in the fall of 1942, so I apparently officially was on the record of the War Manpower Commission only until late September, plus whatever accumulated leave I had. But actually, during part of the period of July and August, I was serving with the War Manpower Commission, although nominally I was on the staff of the War Production Board.

Q. What positions did you hold in the Priorities Section of the Labor Division?

A. I was shortly after coming there made Associate Chief of the Branch. When J. Douglas Brown left in late January [fol. 1320] or early February, I was made Acting Chief of the Priorities Branch of the Labor Division, as it was then called. Subsequently the title was changed to something like the Industry Consultant Branch, although that may be the title that was in the Manpower Commission. I became Acting Chief of that until I was transferred to the Manpower Commission, the War Manpower Commission, where I was Chief of the Industry Consultant Service, I think it was called, of the War Manpower Commission.

Q. What were the functions of the Priorities Section of the Labor Division of the Office of Production Management in the War Production Board?

A. Our functions were of this sort: They were primarily to devise programs in each of the industry branches where we had a consultant on our staff. A member of our staff was in each of the industry branches of the War Production Board. The purpose was to work out programs for the utilization of labor in those industries.

Another function was in order to be in contact with the working groups in those industries to see how the limitation orders would apply to them and to work out arrangements where the application of limitation orders to those industries would be most effective in terms of the utilization of the services of the working forces in those industries.

We did some other things. We certified distressed areas.

Q. What do you mean by "distressed areas"?

[fol. 1321] A. Areas that were affected by priorities on employment. When a limitation order or conservation order was put out closing down or partially closing down operations because of taking away materials from that particular type of operation, unless they could raise substitute materials it involved layoff of workers. We certified a number of areas: First, those that were affected by the aluminum curtailment order at Manitowoc, Wisconsin; then those that were affected by the copper order, such as the Talon Zipper firm in Meadville, Pennsylvania; and in the end, we even certified a whole industry, the washing machine industry. We took the initial action in connection with it. Upon certification, these firms in those areas were given special treatment in terms of the placement of war orders, that is, war orders didn't have to go to the lowest bidders in those cases. They could be given to these concerns which were affected adversely by limitation orders.

Our purpose there was to conserve, in so far as possible, the organization of those firms, and to get them as soon as possible into war work.

Q. Other than the certification of these distress areas, what other activities were carried on by your Section or Division?

A. We participated in all orders that were issued under priorities, and one of our staff, first J. Douglas Brown and [fol. 1322] later I myself, were on the Clearance Committee through which all priority orders nominally passed. We worked out programs for the concentration of production

in various industries, beginning with the stove and bicycle industry, in order to release manpower and to get the larger firms in those industries into war work; in order to release manpower so that the large firms or those most able to do war work would get into war work, and those that were least able to would have whatever civilian operations were still remaining.

Q. Does your phrase "concentration of industry" refer to geographic concentration, or some other kind of concentration?

A. First, concentration of civilian production. The concentration of civilian production was designed in a relatively small number of firms. Suppose we were to cut back civilian production 50 per cent. Then we would want to get that 50 per cent in the companies least able to get into war work, and also in order to utilize fully the capacity of those companies that remained or plants that remained in civilian production.

Q. Did you have any experience with the application of a 50 per cent, or any other percentage, reduction across the board to all plants in an industry?

A. You mean did any order provide for that?

Q. Yes.

[fol. 1323] A. Yes, I believe the automobile orders did.

Q. What effect did that have on the conversion of those facilities and manpower to war work?

A. The companies were reluctant in industry after industry to take on war orders that would interfere with their civilian work, because they were afraid of being influenced in their normal market relationships. I remember particularly the typewriter industry. We had a great deal of difficulty in getting the typewriter industry to move very fully into war work until they were completely closed down. Much the same was true to some extent of the washing machine industry, even though they were certified as a distressed industry and got a gunmount contract under that. They tended continually to be in with appeals to piece out materials for little rubber, little this metal, little that metal, in order to continue on in production.

I recall that in the end we even had to arrange with the labor people in industry to bring pressure on the War Production Board to shut down completely the washing machine

industry when the branch had proposed to continue it on beyond April, 1942.

Q. Do you recall having your attention directed to the situation in the non-ferrous mining industry at some point?

A. Yes. Our attention was directed to the non-ferrous mining industry for two reasons.

[fol. 1324] Mr. Rigney: If Your Honor please, I object. I think he has answered the question, and counsel should put another question. Otherwise, it is difficult to interpose objections.

The Commissioner: Sustained.

By Mr. Barnes:

Q. Do you recall how that came about? Do you recall how your attention came to be directed to the non-ferrous mining industry?

A. Yes. The non-ferrous mining industry came to be called to my attention in three connections: One, there was a shortage of copper particularly, although zinc also. In the early days when I first came with the War Production Board —that was in July——

Q. Of 1942?

A. '41.

I recall, although I don't have the exact date of the meeting, Mr. Church, who was then head of Copper and Zinc, Mr. John Church, called a meeting in which the question was raised as to how much copper and zinc we would send to the Chinese Nationalists. I recall that we did not send more than a half or a third what the Chinese Nationalists requested because it was claimed by Mr. Church that we were so short of copper, and to some extent zinc.

Then we were preparing shortly thereafter a limitation order on the use of copper which would shut down the use of [fol. 1325] copper for a large variety of civilian types of production—jewelry and various other less essential uses in civilian operations.

Also, we were participating at the same time in conferences with the Office of—then called Office of Civilian Supply, which was really the price end of it, with respect to arrangements to increase copper production. We were very strongly pushing for a two-price system of copper produc-

tion under which the production over a certain quota would be paid for at a higher rate in order to induce increased output in the way of opening up mines or in the way of utilizing lower grade ores than would be utilized normally, say, under a 12-cent copper price. So we were proposing a two-price system so that copper above quota would be paid for at a price more than 12 cents.

Q. Was that the program that eventually became known as the premium price plan?

A. I think it was.

Q. Do you have any recollection as to when that went into effect?

A. I have here before me a notice of a meeting on July 16—the meeting was not on July 16. The memo was on July 16. The meeting was on July 17, apparently, of 1941—no, June, rather. There is something wrong here. There is a misstatement of dates. The memo is dated July 16, and it gives the [fol. 1326] agenda for an OPACS meeting with copper producers on June 17, 1941. I am sorry, the memo itself is mistaken. Down here below it says the meeting will be held in Room D, Washington Hotel, 10 o'clock, July 17. So it really was July 17.

At that meeting apparently the two-price system was in contemplation to some extent, because I notice from my notes——

Q. Were you present at the meeting?

A. I was present at the meeting, and took about 7 or 8 pages of notes.

I notice that Mr. Stannard, of Kennecott Copper, said he thought the two-price system or a multiple price system would be unfair, and I recall personally that Kennecott was strongly opposed to the two-price system.

Q. Do you have any recollection now as to how long after that the premium price plan went into effect?

A. I am sorry, I do not, but I think that it went into effect shortly after the time of Pearl Harbor, but that is simply a guess. I couldn't recall.

Q. Do you have any knowledge as to whether or not it applied to non-ferrous metals other than copper?

A. I don't recall whether it did apply to other metals than copper or not. I rather think it did, but most of my recollection is with respect to copper.

Q. Incidentally, you referred to work on the preparation of an order which would cut down the use of copper. Did [fol. 1327] that eventually come to be known as M9C? Do you recall?

A. Yes, I think that is the number, M9C. Yes, I am sure it is.

Q. Did your interest with the non-ferrous mining activities remain constant, or were there other matters which came to your attention?

A. A great many other matters. We had representatives of our branch in each of the industry branches of the War Production Board, so we were dealing with automobiles, consumer durable goods of various kinds, bicycles, all kinds of items. In each of the industry branches in the War Production Board, presumably, we had someone representing the Labor Division.

Q. Incidentally, who was the Labor Division man in the Mining Branch, as you recall?

A. Allen Buchanan initially, and then we subsequently employed Bela Low, who was a mining engineer, and Samuel Lipkowitz. I think those were the three who were in the Non-Ferrous Mining Branch. We did have also at one time someone in the Aluminum Branch, from the beginning actually. If you include aluminum with non-ferrous metals, then we had someone else in the Aluminum Branch.

Q. Were those three individuals whom you mentioned simultaneously or consecutively employed?

A. Consecutively employed. Buchanan was with us, I presume, I would guess, six months before Lipkowitz and [fol. 1328] Low were brought with us. I am not certain, but I think Lipkowitz was with us a little before Low, but I may be wrong on that.

Q. Do you remember at some point at approximately the middle of 1942, having your attention again directed to the situation in the non-ferrous mining industry?

A. Yes. At this meeting of OPM-OPACS in 1941, I notice that I took notes on the number of places, the number of mines claiming to have shortages.

Mr. Rigney: If Your Honor please, I think it is not responsive to the question.

The Commissioner: Sustained.

Mr. Rigney: And I move to strike.

The Commissioner: Granted.

The Witness: Do you want to ask the question again?

By Mr. Barnes:

Q. I was asking whether something occurred at approximately the middle of 1942 to again direct your attention to the non-ferrous mining operation.

A. Yes, apparently from the record that I have here——

Mr. Rigney: If Your Honor please, I think the witness should either testify from his own recollection or, if he needs to have it refreshed, indicate that he is refreshing his recollection and then testify. I object to his reading from memoranda that he has before him.

The Commissioner: Yes. The witness may use any notes [fol. 1329] that he made of any of these meetings of the department, but his testimony should be from his recollection and not what is on the paper that he is using to refresh it. By that I don't mean to limit your use of the paper, but your answer should not be a reading from the paper.

The Witness: All right.

By Mr. Barnes:

Q. May I ask as a preliminary question there, this: Have you, in preparation for testifying here, reviewed any documents?

A. Yes, I have reviewed the documents that I have here before me, being copies of memoranda that I have prepared.

Q. Where did they come from? I mean, were those from your own files?

A. Yes, they are my own files, and they are my own memoranda. We made a great many copies, and when I left I took some of the last carbon copies.

Q. Now, going back to the question that I had asked, do you recall whether or not something occurred about the middle of 1942 to again direct your attention to the non-ferrous mining industry?

A. There was a shortage of miners reported in the Bureau of Employment Security Reports, and we at that time in the Labor Division were at work on some kind of program to overcome that shortage. That was part of our

[fol. 1330] duty as members of the Labor Division in the War Production Board.

Q. Incidentally, what was the Bureau of Employment Security?

A. It was then the U. S. Employment Service. It consists of the employment services of the various States, which were early in the war, right after Pearl Harbor, brought under Federal jurisdiction.

Q. What action, if any, did you take when this matter came to your attention?

A. I prepared a series of memoranda for different officers in the War Production Board, and also in the War Manpower Commission.

Q. Let me show you this document, which has been marked Plaintiffs' Exhibit 130, and ask whether that is a copy of one of the memorandas to which you refer?

A. Yes, this is one of the memoranda to which I refer. It is not the first one, but it is one of them.

Q. I notice in the opening sentence of that there is reference to an earlier memorandum of July 7, which would have been 1942. Do you have in your possession a copy of that memorandum?

A. I do not. I have in my possession a copy of a memorandum of July 7 to General McSherry, but not a memorandum of July 7 to Mr. Alex Henderson.

Mr. Barnes: Will plaintiffs' counsel agree with me that [fol. 1331] a diligent search of Archives fails to reveal the memorandum of July 7?

Mr. Rigney: I don't think I can go that far. We didn't find it. That is about as far as I could go.

Mr. Barnes: You aren't going to say that Mr. Misslbeck wasn't diligent, are you?

By Mr. Barnes:

Q. Do you have any independent recollection at this time as to the nature of the memorandum that you sent to Mr. Henderson on July 7?

A. The only basis on which I can reconstruct it would be the memorandum to General McSherry as of the same date.

Q. Could I see the copy that you have of your memorandum to General McSherry?

(Document handed to Mr. Barnes.)

The Commissioner: Who was Alex Henderson?

By Mr. Barnes:

Q. Who was he?

A. He was assistant to Mr. Batt, but I am not sure of his exact title.

Q. Incidentally, who was General McSherry?

A. General McSherry was head of the Labor Supply Branch of the War Production Board initially, and then when the War Manpower Commission was set up, I am not sure of his exact title but he was sort of Executive Director [fol. 1332] or in charge of operations.

Mr. Rigney: Is this July, 1942, that you are speaking of?

Mr. Barnes: July 7, 1942.

By Mr. Barnes:

Q. Can you tell us why you wrote to him on July 7, 1942? Were you then in WPB or were you in the War Manpower Commission?

Mr. Rigney: I object to "why," if Your Honor please.

Mr. Barnes: All right. I realized the question was objectionable. I probably should have stricken it.

By Mr. Barnes:

Q. Were you, on July 7, in WPB or in the War Manpower Commission?

A. I was technically in WPB; but what happened, when the War Manpower Commission was set up, the Labor Supply Branch of the Labor Division of the War Production Board was shifted into the War Manpower Commission. So, so to speak, part of our functions were shifted into the War Manpower Commission. That is the reason I would have been writing to General McSherry, because he was in charge of the Labor Supply functions at that time, and had the U. S. Employment Service and other labor supply operations under his jurisdiction.

Mr. Barnes: Could this be marked Defendant's Exhibit 33 for identification?

[fol. 1333] (Said document was marked for identification as Defendant's Exhibit No. 33.)

By Mr. Barnes:

Q. Showing you Defendant's Exhibit 33 for identification, Mr. Lester, is that the copy of the memorandum to General McSherry that appeared in your own files, and of the enclosures that accompany it?

A. Yes, it is.

OFFERS IN EVIDENCE

Mr. Barnes: I offer this in evidence as Defendant's Exhibit 33.

(Plaintiffs' counsel examining document.)

Mr. Rigney: If Your Honor please, I object to the admission of Defendant's Exhibit 33 for identification upon several grounds. In the first place, it seems to me there has been no adequate showing that the original of this document can not be produced. The fact that we didn't find it in Archives wouldn't mean that it could not be found. The Government certainly has—and I know from having been on both sides of the table—better facilities than we have for getting documents out of Archives.

The Commissioner: Let us dispose of that objection first. We agreed at pre-trial that a copy was just as good as an original for the purposes of use as an exhibit.

Mr. Rigney: But I would assume that there would have to be some showing that the original could not be produced.

[fol. 1334] The Commissioner: Not at all.

Mr. Barnes: That was not the pre-trial understanding.

Mr. Rigney: My next objection is that these documents here appear to be drafts. For example, there is one marked "second draft, 7-8-42." Another one is marked "earlier draft." Another one is marked "latest draft." I don't think there is any showing that this is a final document at all. I therefore object most seriously to the admissibility of these papers, because they are merely drafts. There is no

showing that they ever went to General McSherry or in what form they went.

Mr. Barnes: We have the testimony of the witness.

The Commissioner: He didn't testify that any of them went to McSherry.

Mr. Rigney: That is my recollection of his testimony.

Mr. Barnes: Would you go back and read the last question I asked the witness before the objection by plaintiffs' counsel?

(The record was read by the reporter as requested.)

The Commissioner: He hasn't testified that the original was sent, or what was sent.

By Mr. Barnes:

Q. Do you know whether or not the original of this memorandum was sent to General McSherry?

A. I am sure that the original of the first page was, but I can not be sure that the enclosures that were sent to him [fol. 1335] were exactly as they are there. I assume that they were, but I can't be sure.

Mr. Barnes: I reoffer Defendant's Exhibit 33 for identification, Your Honor.

Mr. Rigney: My objection continues, Your Honor.

The Commissioner: Sustained.

Mr. Barnes: I ask that it be marked Defendant's Exhibit for identification, and make an offer of proof, Your Honor.

By Mr. Barnes:

Q. Had you prior to that date written a memorandum to General McSherry on the same subject?

A. Yes, I had.

Mr. Barnes: Will you mark this Defendant's Exhibit 34 for identification.

(Said document was marked for identification as Defendant's Exhibit No. 34.)

By Mr. Barnes:

Q. Let me show you Defendant's Exhibit 34 for identification and ask you what that is?

A. It is a memorandum to General Frank J. McSherry dated July 4, 1942, from me, on the subject: Critical Shortage of Labor in Non-Ferrous Metal Mining and Employment in Nearby Gold and Silver Mines.

Q. Do you know whether or not the original of that Memorandum went to General McSherry?

[fol. 1336] A. Yes, I am sure that it did.

Q. From what source did that copy come?

A. This came from my files.

Q. I notice that in the concluding paragraph there is reference to an attachment. What was the nature of that attachment?

Mr. Rigney: I object. We ought to know whether the attachment is available or not and is to be offered. I would object to his testifying to what the attachment was.

Mr. Barnes: I am not asking for the contents of it. I am asking him to describe it.

The Commissioner: Do you withdraw that objection?

Mr. Rigney: Yes.

The Witness: It was a report by the U. S. Employment Service for May on the non-ferrous metals mining labor condition. At least that was included within it. I am not sure that that was all it contained.

By Mr. Barnes:

Q. Do you have a copy of that report in your files?

A. I do not. I assume that you can get that easily enough.

Mr. Barnes: I now offer Defendant's Exhibit 34 for identification, and I wish to state, Your Honor, that the first time I saw this memorandum was this morning. We are going to make a search in Archives for the attachment, and [fol. 1337] I will consent that the document be stricken if we do not supply a copy of the enclosure.

(Plaintiffs' counsel examining document.)

Mr. Rigney: Your Honor, I shall not raise the objection that the attachment to the document is missing. I shall not stand on that objection, but I do not mean by that that on a later offer in a similar situation, I might not stand on that objection.

The Commissioner: It may be received.

(Said memorandum dated 7-4-42, from R. A. Lester to General McSherry, marked "Defendant's Exhibit No. 34," admitted in evidence and made a part of this record.)

The Commissioner: I want to be sure that all counsel have full opportunity to state their positions, if they have any objections.

Mr. Rigney: I am sorry, Your Honor. That is my fault.

(Here followed discussion off the record.)

The Commissioner: All right.

By Mr. Barnes:

Q. Mr. Lester, what were the sources of your information as to employment in the non-ferrous mining industries?

A. They were largely the reports of the U. S. Employment Service, although to some extent we had reports from the Mining Branch and at one time we sent out Mr. Low on a trip to the different mining operations. I don't remember [fol. 1338] how many he visited.

By Mr. Rigney.

Q. Do you know when it was, approximately?

A. It was before the gold closing order. I would say it was approximately in the spring of 1942. I would have to get the date on which he was employed. He went out shortly after he was employed.

Q. You mean went out on the trip?

A. That is right, went out on a trip to some mines in the West. I don't remember the date.

By Mr. Barnes:

Q. Could you describe for us what the U. S. Employment Service was, generally?

A. And still is?

Q. And still is.

A. The State Employment Services——

Mr. Rigney: If I may suggest that the witness confine it to 1942, immediately preceding that.

Mr. Barnes: Yes.

The Witness: The U. S. Employment Service in 1942 con-

sisted of a Washington headquarters and the State Employment Services with their local offices that had been incorporated by an Executive Order into the U. S. Employment Service. I don't know how many local offices they had, but I would assume they ran up into the thousands.

[fol. 1339] By Mr. Barnes:

Q. Can you recall now whether or not the U. S. Employment Service issued periodic reports on the employment situation in 1942?

A. Yes. They had what was known then, if I recall the number correctly, as Ex. S. 260, which was compiled this way: They went around to the different war plants and defense operations particularly, and asked them what their current labor shortages were, and what their prospective hirings were over the next, I guess it was six months. Then they made each month a report based largely on that, plus whatever other data they acquired through their local offices.

Q. Generally, referring back to the middle of 1942, what was the employment situation in defense plants in the United States?

A. What was the employment situation in the United States during the middle of 1942?

Q. Yes.

Mr. Rigney: I think that is objectionable, Your Honor. The question is so broad, I don't see how he can answer it unless he has personal knowledge of each one of these industries. I don't see how he could have.

The Commissioner: Overruled.

Mr. Barnett: Your Honor, the thought occurs to me that apparently he is testifying from these various reports sub-[fol. 1340] mitted by some agent; that he has no knowledge, but he is interpreting what he believes those reports are, if I understand the testimony. It would be objectionable from that point of view unless the proper foundation might be laid. He has not been there, and he doesn't have personal knowledge.

The Commissioner: Can you point out where the foundation is lacking?

Mr. Barnett: He said from the various reports, Your Honor, he assembled certain data. I submit that the best

evidence would be the reports themselves. He has acquired some knowledge through other means than his own. Unless the proper foundation is laid as to where he got that knowledge, it would appear that it might be objectionable.

The Commissioner: Overruled.

Mr. Barnes: Will you read the question back, please?

(The question was read by the reporter.)

The Witness: I would say, basing my information largely on reports that I did not make personally, that it was beginning to be tight in certain areas. Particularly by then, the priorities unemployment had begun to disappear, and our program of certification of distressed areas, if I recall correctly, didn't continue beyond the middle of 1942.

By Mr. Barnes:

Q. What other sources of information did you have, other than these reports that you just referred to?

[fol. 1341] A. We also got reports from the Bureau of Labor Statistics, and we also had advisory committees. There was an advisory committee from the industry which met occasionally in Washington. We also had reports from the labor groups in those industries, the different unions.

Q. By advisory committee, you refer to a group representing the concerns in that industry, is that correct?

A. That is correct.

Q. With respect to all of the information you obtained from these sources, did you take action upon that information?

A. I took action in the way of sending memoranda to Mr. Henderson, Alex Henderson, who was nominally over the Industry Branches, particularly the Mining Branch, and I also wrote these memoranda to General McSherry. We prepared what we considered to be a program for curtailment for the gold, and initially it included some silver operations.

Q. In preparing that program, who did you work with? You used the "we." Was that an editorial "we" or did it refer to specific people?

A. In the first place, in my branch the working out of a program of that sort would be done in collaboration with the three men that I mentioned, Allen Buchanan, Bela Low,

and Samuel Lipkowitz. Secondly, I was in consultation and presented before the staff of General McSherry early in July, a statement with respect to the closing of the gold [fol. 1342] mines and the need for non-ferrous metal miners in the West.

Q. Was that something you presented orally?

A. I presented that orally.

Q. Did you consult with any representatives of the War Manpower Commission in connection with the development of this initial program?

A. I do not recall that I did.

We also, I might add, were in consultation with a group in the War Department about this time in the Services of Supply, I believe it was called the Industrial Personnel Division, under James P. Mitchell.

Q. Let me show you this document, which has been marked Plaintiffs' Exhibit 76, and ask you if you recognize that?

A. Yes, I do.

Q. That refers to a committee. Can you tell us, first, if you know, who appointed that committee?

A. I think it was an ad hoc committee, which I believe was initially called together by Mr. Mitchell's group in the War Department. I think it had no official standing, as such.

By Mr. Rigney:

Q. Could I ask you what you mean by an ad hoc committee?

A. I mean they were just a group called together. I think that the people in Mr. Mitchell's division decided, after we had been working on this a little while—two of the people [fol. 1343] in Mr. Mitchell's division, Mr. Harbison and Mr. Orr, I believe the other fellow's name is, Frederick Harbison and Orr, were initially in my division, in my branch, and subsequently, sometime in the spring of 1942, they went over into the War Department. They were active in the War Department in connection with the same sort of thing. They were aware of the operations that we had been carrying on in the Labor Division, and it is my recollection that someone in the War Department took the initiative in calling this group together.

By Mr. Barnes:

Q. Did you participate as a member of that group or committee?

A. Yes, I did.

Q. Do you recall who else participated in that?

A. I recall some of them, but I wouldn't recall all of them.

Q. Would you tell us, so far as you can, if you recall at the present time, who the members were?

A. I am sure that they included Frederick Harbison, whom I have mentioned, and undoubtedly included Allen Buchanan, but I could not swear that it did. I can not be positive.

Q. Do you recall whether or not there was any representative there of the War Manpower Commission?

A. No, I don't. I don't recall. I would presume that I [fol. 1344] would represent the War Manpower Commission.

Q. Do you recall whether or not there was anybody there representing Selective Service?

A. No, I do not. I know that the group was picked to be widely representative of the various branches in the Government that would be interested in the problem. They tried to get someone from the War Labor Board, from Selective Service, from the various branches of the service, from what we called War Production Committees. There was a man from Publicity whose name I don't recall, of the War Department or the Navy Department.

The Commissioner: We will recess for five minutes.

(Thereupon, a five-minute recess was taken in the hearings.)

[fol. 1345] By Mr. Barnes:

Q. Mr. Lester, going back to this committee report, Plaintiffs' Exhibit 76, do you recall what was done physically with that document? I mean, what distribution was made?

A. It was distributed at least to all those who participated in the meeting, and I presume much more widely, since it was mimeographed.

Q. Did you call it to the attention of any of your superiors, do you recall?

A. Not that I recall.

Q. And whom did you report to, directly?

A. At this time, if I recall, I reported directly to Wendell Lund, who had succeeded Mr. Sidney Hillman as head of the Labor Division, or whatever it was called, at that time.

Q. What was the hierarchy above Mr. Lund?

A. Mr. Lund was under Mr. Nelson.

Q. Donald Nelson?

A. I would assume so, yes. I think there were four or five divisions, and he was head of the Labor Division.

Q. Now, in your capacity as a representative of the War Manpower Commission, do you recall whether or not you called the recommendations of this committee to the attention of any of your superiors?

A. I do not recall that I did.

Q. Whom did you report to in the War Manpower Commission?

[fol. 1346] A. General McSherry.

Q. Did this committee meet on more than one occasion, to your recollection?

A. My recollection is that it did not meet as a group more than once, but that there were subsequent meetings of parts of the group, for example, the part that involved the working out of morale, that group met separately, as I recall it. We all were putting pressure on the War Labor Board for an increase in the wage rates in the copper mines, and I know that I was active there. I don't know the material, but I know I was active in connection with pressuring for a wage increase in the War Labor Board.

Q. Did that occur before or after the issuance of this document, Plaintiffs' Exhibit 76, do you recall that?

A. I would not know. It was sort of a continuing matter. I would suspect that it was both before and after.

Mr. Rigney: I am not clear, now. You mean the pressuring of the War Labor Board?

Mr. Barnes: Yes, the further activities.

The Witness: Yes, I am sure that we are acting before, and probably we did after.

By Mr. Barnes:

Q. I notice in here on page 2 of this document a reference to selective service deferments for mining occupations. Do

you know what action, if any, was taken with respect to that?

[fol. 1347] Mr. Rigney: I want to say that I think the witness could just answer that yes or no, and then only testify if he has personal knowledge about selective service. I have not seen any showing yet that he would have.

The Commissioner: Read that question, please.

(The pending question was read by the reporter.)

The Witness: I did not participate personally in any action.

The Commissioner: All right.

The Witness: I do know that General McSherry and others were active in that capacity.

Mr. Rigney: We do not want any hearsay. That is the reason for my objection.

Mr. Barnes: I explained to the witness and gave him a brief dissertation on the hearsay rule this morning.

The Witness: Perhaps too brief.

By Mr. Barnes:

Q. Mr. Lester, going back to this meeting you refer to which took place in July of 1941, you had some notes that you yourself had made at that meeting. Do you recall whether or not there was any implication at that meeting of a shortage of men in the non-ferrous mining industry?

A. Yes. A number of companies reported a shortage at that time.

Q. Were there representatives of individual companies [fol. 1348] present at that time?

A. Yes. They were the ones that reported it, the representatives of individual companies. It was a meeting of the representatives of the individual companies with the people in the Price Administration and the people in the War Production Board.

Q. In your memorandum of July 31 to Mr. Henderson, Plaintiffs' Exhibit No. 130——

A. I have a copy.

Q. ——you made reference to a proposed limitation order on gold mining. What did you mean by the phrase "limitation order"?

A. What I meant was the same kind of limitation orders that we had been putting on various industries such as the automobile industry, the refrigerator, the washing machine, and so on, and various metal-using industries that had a civilian outlet. And prior to the date when we finally closed them down in each instance—and some of them we did not close down completely like the agricultural implement industry—orders were put out restricting their production on a certain percentage of some base period, and that was what I had in mind.

Q. Were you aware at the time of the preference ratings that were accorded industry for maintenance, repair and operating supplies?

A. Yes. In a general way I was aware that the gold and [fol. 1349] silver mines were receiving certain amounts of material for maintenance, repair and operating supplies.

Q. Can you tell us whether or not you gave consideration to the possibility that an adequate control could be imposed by that priority method?

Mr. Rigney: Now, if your Honor please, I do not think this witness is competent to testify on that. His functions were in the Labor and Production Division. He has testified the control of materials were in an entirely different branch of the WPB. That was not within the orbit of his office.

The Commissioner: Sustained.

By Mr. Barnes:

Q. What would have been the effect on the manpower in the gold mines if all priority assistance had been withdrawn?

Mr. Rigney: Don't answer that. Objection if your Honor please. It is hypothetical and speculative, what would be the effect. I object to the form of the question.

There is no basis [illegible], no foundation in the testimony of this witness to show that he is even competent to answer the question if it were otherwise unobjectionable.

The Commissioner: Sustained.

Mr. Barnes: The objection was based on two grounds. Are you sustaining it on the first ground stated or on the form of the question? May I ask you that?

The Commissioner: Well, I had in mind primarily the [fols. 1350-1351] ground relating to the failure to lay the proper foundation. The witness does not have the necessary information to properly answer the question.

[fol. 1352] By Mr. Barnes:

Q. Mr. Lester, did the Labor Division of the War Production Board give any consideration at all, in making its studies and recommendations, to usages of critical materials by industries?

A. Yes, it did. We were repeatedly attempting, in the various industry branches, to prevent further use of critical materials to keep civilian production going. In the appeals that were made, for example, under the M-9-c order we were objecting to the continuing use of copper on appeal to permit civilian production of refrigerators, washing machines, and so on.

Q. Was your division represented on the so-called appeals board?

A. Yes, we were.

Q. Who was the representative on that; do you recall?

A. At first I was; subsequently, I am not certain. But I remember being active, very active, right after Pearl Harbor in insisting that too many appeals were being granted to eke out the civilian production of different items.

[fol. 1353] Q. Did you, in connection with your studies of gold mining, give any consideration to the use of critical materials by gold mines?

A. Yes, we did.

Q. And what information did you have; do you recall?

A. I had the information that was supplied to me by people in the branch as to the extent to which materials were being used by gold mines for repair, maintenance, and operating supplies, and it also came, as I recall, before the Clearance Committee as well.

Q. Did you at any time, in discussing the possibility of a limitation order affecting the gold mines, discuss the question of the use by the gold mines of critical materials?

A. Yes.

Q. Can you tell us when that occurred?

Mr. Rigney: And with whom.

By Mr. Barnes:

Q. And with whom. I was taking one point at a time.

A. It occurs in this exhibit that I have just testified with respect to.

Q. Which one is that?

A. The memorandum to Mr. Henderson dated July 31, 1942.

Q. That is Plaintiffs' Exhibit 130.

A. The second part of the first paragraph says: "To save critical materials for which priorities are now being granted for maintenance, repair and operating supplies."

[fol. 1354] That was one of the bases upon which the Curtailment Order was requested, the other basis being in order to release labor and facilities for non-ferrous metal mining.

The Commissioner: What was the date of that?

The Witness: July 31.

By Mr. Barnes:

Q. 1942?

A. 1942.

Q. I think you mentioned that you had an oral discussion of this with the staff of the War Manpower Commission at some point in July, 1942. Do you have the notes that you used for that oral presentation?

A. Yes, I have the notes.

Q. Looking at those to refresh your recollection, can you tell us whether or not you made any reference to the use of critical materials in that?

A. Yes.

Q. And directing your attention to Defendant's Exhibit 33 for identification, and looking at that to refresh your recollection, can you tell me whether or not you made any reference to the use of critical materials at that time?

A. I would have to refer to the document to make sure. (Witness refers to document.)

Yes.

Q. What contacts, if any, did you have with the Limita-

[fol. 1355] tion Order on gold mining, the proposed limitation order on gold mining, after about July 31, 1942, the date of Plaintiffs' Exhibit No. 130?

Mr. Rigney: I am sorry, I did not hear the first part of that and I would like to have the question read back.

(The pending question was read by the reporter.)

Mr. Rigney: All right.

The Witness: So far as I know, I never participated in any drafting of any order. I met with various people with respect to it, but I never participated in any drafting of it.

By Mr. Barnes:

Q. Whom did you meet with, to the best of your recollection?

A. I have a memorandum here that indicates that I met with the manager of the Homestake Mining Company.

Q. Was that Mr. Guy Bjorge?

A. That is correct. The memorandum is dated August 25, 1942.

Q. What was the subject matter of that discussion, if you can tell us?

A. In general, the question was what would happen if the gold mines were closed down, and what the company was already doing in the way of utilizing some of its people on gold operations in other operations of the company, and the possibility that it could do more if it could acquire some other properties.

[fol. 1356] Q. What action, if any, did you take following that discussion with Mr. Bjorge?

A. I sent a memorandum to General McSherry with respect to it.

Q. Did you make any recommendations of any type?

Mr. Rigney: Could I inquire if that memorandum is going to be produced, the memo to General McSherry.

Mr. Barnes: The witness has been using it to refresh his recollection, but I can put it into evidence if counsel desires it.

Mr. Rigney: I inquired whether it was here so we can see it.

Mr. Barnes: There are two, so I will separate them. You can see this too, by the way.

(Document handed to Mr. Rigney.)

The Commissioner: There is a question pending, is there not?

Mr. Barnes: I think there was, sir.

The Commissioner: Will you read it, please?

(The pending question was read by the reporter.)

The Witness: I did not make any recommendations. Attached to this memorandum there is a summary of data on curtailment program for gold mining which apparently summarized for General McSherry the action until that time that had been taken.

Q. Is that something you prepared?

[fol. 1357] By Mr. Barnes:

A. Yes, I prepared it.

Mr. Barnes: Will you mark this Defendant's Exhibit 35 for identification?

(Said document was marked for identification as Defendant's Exhibit No. 35.)

By Mr. Barnes:

Q. And this document, which is now marked Defendant's Exhibit 35 for identification, was the copy of that memorandum to which you just referred, is that correct?

A. It was attached in my file to the memorandum to General McSherry, and it summarizes the situation with respect to the action that had been taken by various groups up until that time.

Mr. Barnes: I offer this in evidence, your Honor, as Defendant's Exhibit 35.

By Mr. Rigney.

Q. This memo, Mr. Lester, which has been marked Defendant's Exhibit 35 for identification, is this a copy of the memo which you sent to General McSherry? I mean, did the original of this go to General McSherry?

A. I haven't the positive proof that it did. All I know is that in my file it was attached to this memo that I did send to General McSherry. Whether it actually in practice [fol. 1358] went to General McSherry, I assume that it did,

but I have no memory. There is no reference here to that document.

Mr. Rigney: I have no objection to the admissibility of Defendant's Exhibit 35 for identification, but I think both papers should go in, the memo of August 25 to which it was attached.

Mr. Barnes: That is entirely satisfactory, and I am willing to expand my offer and put the two together as they were originally and offer the two documents together as Defendant's Exhibit 35.

Mr. Rigney: That is splendid.

The Commissioner: They may be received in evidence.

(Said memo, dated August 25, from Mr. Lester to General McSherry with attached data sheet, marked "Defendant's Exhibit No. 35," admitted in evidence and made a part of this record.)

By Mr. Barnes:

Q. Did you have any contact with operations under Limitation Order L-208 after it was issued on October 8, 1942?

A. No, I had no contact. I left the Government before that order was issued. I mean, I left the War Production Board and the Manpower Commission. I subsequently was connected with the War Labor Board.

Q. Referring now to Defendant's Exhibit 35 for a moment, I notice that there is a statement in here that it is [fol. 1359] estimated that there are between 8,000 and 10,000 persons working in gold mining and milling operations in the United States at the present time. Can you tell us the basis of that statement, if you recall?

A. I cannot be certain as to the basis of it. I would assume that it came from the statistics of the U.S.E.S., the United States Employment Service, and the statistics of the Bureau of Labor Statistics.

By Mr. Rigney:

Q. Mr. Lester, I do not mean to be captious, but when you say you assume that it came, do you mean by that that it is your best recollection that it came, or that it is a pure assumption?

A. We got information from both of those groups. They were a steady source of information. Now, it may be that it came from other sources. It may be that it came from the Mining Branch itself. But I simply say that we normally got steady information from both of those sources. We were in contact with both of those sources.

Mr. Rigney: Thank you.

By Mr. Barnes:

Q. You have listed your sources of information as being those two organizations, the branch concerned, which in this case would be the Mining Branch, and what other sources would you have?

[fol. 1360] A. I couldn't answer you offhand, but I think that there is in one of these earlier memoranda a statement of what the source of some of the figures was.

Mr. Barnes: That is all I have of Mr. Lester.

Cross-examination.

By Mr. Rigney:

Q. As I understand it, Mr. Lester, there was a serious copper shortage by the summer of 1941; is that correct?

A. That is correct.

Q. So that whatever shortage of copper existed in the summer or autumn of 1942 was not a situation which had suddenly come into existence, was it?

A. No, it did not suddenly come into existence.

Q. Now, would you explain to me a little more about this program for the concentration of production that you spoke of on your direct examination? When was that inaugurated or instituted?

A. Could I just refer to my documents here?

Q. Surely, anything you have there.

A. I thought I had a document that would show that. I haven't the material to answer that question specifically, but that would be done in preparation in my branch right after Pearl Harbor.

Q. What industries were you considering at that time?

A. The people in my branch were active, first, in the stove

[fol. 1361] and bicycle industries, in which a concentration order was issued. We were also active in the agricultural equipment industry.

Q. The stove and bicycle industries were the first that were affected, is that right?

A. That is right, in terms of orders.

Q. Yes. And could you tell us now approximately when the order with respect to the stove industry was issued? I do not speak of precise dates now.

A. It was issued in the spring of 1942.

Mr. Barnes: I may be able to help you. I have an index here that gives some of that information, if you want it, Mr. Rigney.

Mr. Rigney: If it will assist the witness I have no objection to his using it.

By Mr. Barnes:

Q. Let me hand you a copy of Priorities for June, 1943. You will find that an index of priority orders, and you may be able to place it. The table of contents is in the front, incidentally.

A. Can you tell me how to use this?

Q. Yes.

A. L-79 is one of the orders. Apparently it was first issued in June of 1942.

Q. Bicycles or L-52?

[fol. 1362] A. L-52. Bicycles came first. I do recall that bicycles came first. That was issued in March of 1942.

By Mr. Rigney:

Q. In the bicycle industry?

A. Yes, March 12.

Q. Could you tell us briefly the extent of that order, what that order provided?

A. Roughly, what it provided was this: there may have been, let us say, seven producers of bicycles. It provided that the bicycle production would be concentrated in, let us say, the plants of three producers. Also, in addition, it provided for certain standard kinds of bicycles.

Q. That was to save critical materials that went into the manufacture of those bicycles?

A. The second part of it was to save critical materials and to cut down on the varieties so that you would save on all kinds of items, machine tools, and what not. But the first part of it was in order to release facilities and manpower fully in some areas. We concentrated the production in the areas where the manpower was most available. We took it out of the critical areas. We took it out of Dayton, as I recall it, and Springfield, Massachusetts, and concentrated it in areas where we thought the labor supply was much more plentiful.

Q. And those bicycle manufacturers who were relieved of their production activities as a result of this order were [fol. 1363] given war contracts, is that right?

A. They got war contracts, but we did not certify them. We got them in the normal procedure.

Q. Yes.

A. That is right.

Q. Now, the stove industry, can you tell us approximately when that was?

A. Apparently that was in May of 1942.

Q. 1942. And how effective would you say the concentration was in the stove industry percentage-wise, if you can answer it that way?

A. Well, there were a large number of producers, and, as I recall, we tried to take some of the production out of California where the aircraft industry and the other industries were badly in need of manpower. But I cannot answer that in terms of the percentage of curtailment. It may have been about 50%.

Q. Would you say that your concentration program, insofar as the stove industry was concerned, was a success? Did you consider it a success or not?

A. We considered it successful, but we did not make any real study of it.

Q. Others considered it less successful, I mean, there was a considerable difference of opinion, wasn't there?

A. There was some difference of opinion, before the order [fol. 1364] went into effect. I was not in contact with it much after it went into effect.

Q. There again in stoves they embodied in the end product of a stove foundry or factory, or whatever you may call it, critical materials, didn't they?

A. That is right.

Q. What about these stove manufacturers whose production was stopped? They were given contracts, war contracts, weren't they?

A. We stopped them in part in terms of whether they would have facilities that were available for war contracts. That is, those that would be likely to have the most facilities were likely to be the ones that were to be stopped. That was one of the considerations, the other consideration was man power.

Q. You also considered this concentration of production with respect to farm machinery, didn't you?

A. That is correct.

Q. And you did not get very far with that, insofar as putting it into effect, is that right?

A. In the end it was not put into effect.

Q. Something like this was done in England, wasn't it?

A. That is correct.

Q. And was the practice which was followed in England in this regard something of a model for you people here?

A. That is correct. We studied the English experience [fol. 1365] and had reports on the English experience.

Q. Now, is it not a fact that in England, when this program was put into effect, those people who were put out of business by it were paid compensation by the government?

A. You mean the producers?

Q. Yes.

A. Not to my recollection. The issue of compensation did come up in some of our discussions.

Q. I am confining it now to England, if you know.

A. Not that I know of.

Q. Well, is it your testimony that to your best knowledge no compensation was paid under the program in England, or are you just lacking knowledge on the subject?

A. I just lack complete knowledge on the subject. I think, if I may answer that, there was some pooling of the resources, some pooling of the funds, but I am not certain.

Q. Do you mean that you are completely lacking in knowledge of the question of compensation in England?

A. That is right, at the present time.

Q. Now, the question of compensation received considera-

tion within the War Production Board in this program that you have been testifying about, didn't it?

A. That is correct.

Q. And isn't it a fact that it was on the question of whether or not compensation should be paid that the pro-
[fol. 1366] gram floundered and eventually died?

A. No.

The Commissioner: Which program?

By Mr. Rigney:

Q. The concentration program in the United States.

A. No. That is not correct, according to my knowledge It floundered because we picked the—the third one was the agricultural implement industry, and the agricultural implement industry was strong politically, because of the contact with the farmers through their agents, and the large companies were the ones that objected to it, the six large companies. They were able to defeat the program, partly because—also, it was accompanied by a very sharp cut, too sharp a cut actually, in the production of farm equipment.

Mr. Rigney: Now, may this be marked the next plaintiffs' exhibit for identification?

(Said document was marked for identification as Plaintiffs' Exhibit No. 217.)

By Mr. Rigney:

Q. Now, Mr. Lester, let me show you Plaintiffs' Exhibit 217 for identification, being a report by the Historical Reports Agency on the concentration of civilian production by the War Production Board, September, 1941 to April, 1943, and I invite your attention to the third paragraph on page 125 which reads:

"It was in the matter of compensation, the principal
[fol. 1367] specific factor in the failure of the concentration program in the United States, that American respect for competitive business forced consideration of the most difficult and, in the end, unanswerable questions."

Would you consider that and tell us now if it was not the question of compensation or a consideration of it within the WPB that caused the end of the program?

A. No. According to my personal information and knowledge, the only time that compensation came up was within my own division with Mr. Sidney Hillman; it really came up forcefully. And in the meetings that I had in the Agricultural Equipment Branch it was really the other thing.

Q. When would you say your plans or program with regard to concentration had come to an end, for all practical purposes?

A. It came to an end, for all practical purposes, when the order was defeated, so to speak, within the War Production Board for agricultural equipment.

Q. That was in the summer of 1942?

A. That was in the summer of 1942. It was after the bicycle and stove orders.

Q. Whatever orders were issued with respect to the automobile industry had nothing to do with this program of concentration of production, did they?

A. No; that was separate.

Q. Now, I want to read a statement to you from an ex- [fol. 1368] hibit that has been received in evidence, and ask you whether or not that this was a fair statement of the situation which existed in the summer of 1942 with respect to copper mines: "The present critical situation developed when copper, lead, zinc, mercury, and other miners left their jobs and went to the west coast on shipbuilding and on aircraft jobs and to the mountain areas in new war industries work."

Would you say that that was a fair statement of the principal reasons for the shortage of copper miners in the summer of 1942?

A. It was a good part of the reason, but not, I would say, anything like the whole reason.

Q. I was reading to you from Plaintiffs' Exhibit 16 in evidence.

Well, the shipbuilding and aircraft industries were paying substantially higher wages than the copper mines; isn't that true?

A. I am not certain at that time. We got the copper mine wages raised by the War Labor Board at about that time.

Q. When did that raise go into effect?

A. I cannot testify as to the exact date.

Q. Could you by season and year say——

A. It was sometime around the middle of 1942.

Q. Wasn't it into the autumn, about the time of the issuance of L-208? That raise came about, did it, as a result [fol. 1369] of the War Labor Board action?

A. Yes.

Q. Is that the item you refer to?

A. That is right. But in the memorandum, which is Exhibit—whatever it is—the July 8 interdepartmental committee——

Q. Yes, the Services of Supply program.

A. Yes, Services of Supply program. — reference is made to this very case, and I assume that action was taken on that by the War Labor Board shortly thereafter.

Q. In any event, you would agree that it was either in the summer or autumn of 1942?

A. That is right.

Q. How much was the increase?

A. I cannot tell you.

Q. A dollar a day, wasn't it?

A. I think it was.

Q. And after the increase had gone into effect, isn't it a fact that wages being paid in the aircraft and shipbuilding industries and other war industries were substantially higher than in the copper mines?

A. To answer that question is difficult for two reasons: one is you have a question of how much overtime they were getting in each industry, because it is the take-home pay that may be important; another factor that makes it very [fol. 1370] difficult to answer that, is it depends on what level of classification the fellow went into, the job in aircraft or shipbuilding. If he went in at the bottom, no; but if he became considered quite skilled, it might be. I don't think you can make any direct generalization. I think it is very difficult to compare wages in the copper mines for comparable work with wages in the other two industries, on an hourly earnings basis.

Q. Take the lowest weekly wages, from your knowledge, that were being paid in the aircraft and shipbuilding industries and tell me if it is not a fact that such wages were substantially higher than the wages being paid the copper miners in the summer of 1942.

A. I could not testify to it. I would have to see the figures.

Q. Now, this continuing deficiency in the number of copper miners was going on all during 1942, was it not?

A. As far as in the War Production Board and War Manpower Commission, during that period.

Q. Up to October, say?

A. Yes, up until October.

Q. Where were they going to? Did your studies disclose anything on that?

A. Well, there were two or three things that our studies indicated. In the first place, the intake into the copper mines [fol. 1371] of people was quite high. There was a very high turnover. So that they were moving in and out. Sometimes they were moving to the west coast, and sometimes during the summer they would move into agriculture, when it was hot, particularly in the deep mines like around Butte. Some of it was moving from one mine to another. And shortly before I left we put in a program for both the non-ferrous metals and the lumber industry to attempt to freeze them in the occupations that they were in. That was done partly because of this terrific turnover. I don't think we know really the extent to which they went to the west coast, and some of them may have come back, the extent to which they were moving into agriculture, and the extent to which they were moving from employment out of employment temporarily and back into employment. To some extent, they were still going into the armed services, either on their own volition or by drafting.

Q. Did your studies disclose that they were leaving the copper mines in order to better their conditions of employment, regardless of where they were going in other work?

A. I don't think that I personally had enough knowledge of various reasons why they were leaving. I have some speculation on that, but it is only speculation.

Q. What is your best judgment now of the reasons why they were leaving the copper mines in such large numbers in 1942?

[fol. 1372] A. I think the attraction of finished military equipment, whether it was aircraft or possibly even shipbuilding, had much more of an attraction than working on raw materials. It seemed closer to the direct war effort. Secondly, I think there was a desire for people, if they could, to move to the west coast from mountain areas. I lived

on the west coast and I know there is quite a desire to get on the west coast in the mountain areas. There may be a number of other reasons of that sort which were tied up in it.

Q. Well, you would not exclude from it the appeal of the mighty dollar, would you?

A. No, but I think some of them went there to the west coast, I think we had evidence that some of them went to the west coast and earned quite a bit and then came back, partly because of the problem of maintaining families on the west coast, and other problems, housing and what-not.

Q. Did your studies cover the living conditions in the areas of the copper mines? Did you look into that?

A. I personally didn't. Maybe some of the U. S. Employment Service studies did. There were proposals for paying transportation of people to the copper mines, there were proposals for arranging for housing, and what-not.

Q. Housing conditions were not good, were they, in the principal copper areas, taking Butte for example?

A. No, not particularly.

[fol. 1373] Q. They were not good, you would agree with that, would you not?

A. Yes, I would agree with that.

Q. Would you also agree that the Anaconda mine at Butte, for example, is considered in the mining industry a hot mine in which to work?

A. That is absolutely correct.

Q. Now, you have referred to Mr. Buchanan and Mr. Lipkowitz as being in your division, I believe.

A. And Mr. Low.

Q. And Mr. Low. Mr. Buchanan came from the Tariff Commission, is that correct?

A. That is correct. He came there first.

Q. About when was that?

A. Donald Wallace, who went——

Q. Excuse me, just let me say this. When I say "about when" I am not asking you to give it precisely.

A. It was probably in the middle or late 1941. Let me explain it. Dean Brown went to the War Production Board. Isador Lubin was in the position that Dean Brown subsequently took. Mr. Lubin had a number of people from the Bureau of Labor Statistics and others in these branches. We either took over those people or they went elsewhere.

And Donald H. Wallace, who is now on the faculty at Princeton University, was the one Lubin had in non-ferrous metals. And when OPACS was established, or even before that, [fol. 1374] Wallace left. So we were looking around almost from the time I got there, or shortly after I got there, for somebody to fill Wallace's position. So I assume Buchanan was brought in by the fall of 1941.

Q. And he subsequently brought Mr. Lipkowitz over, is that correct?

A. Yes.

Q. They had served together in the Tariff Commission?

A. That is correct.

Q. When would you say Mr. Lipkowitz came with you?

A. To the best of my recollection, it was probably after Pearl Harbor.

Q. You have referred in your direct testimony to your interest in saving critical materials. You do not have any doubt, do you, that there was power in the War Production Board to cut gold mines off completely from obtaining critical materials?

A. The power existed.

Q. So that it was not necessary to issue a shut-down order in order to prevent gold mines from obtaining critical materials, was it? May I have a yes or no on that?

A. The power existed to cut off priority orders for them, that is correct. But as we knew from other experience, people were getting copper without priority orders, or even in violation of priority orders.

[fol. 1375] Q. You are not in possession of any information to the effect that Homestake was getting any?

A. No, I am not charging that to the gold mines.

Q. I am just asking the question.

A. No, I have no knowledge as far as gold mines are concerned, but I do have knowledge of certain other civilian industries.

Q. Other than gold mining?

A. That is right.

Q. Now, would you look, please, at Plaintiffs' Exhibit 130 in evidence, which is this memorandum of July 31, 1942. You did not write that yourself, did you?

A. Yes, I dictated that myself.

Q. Oh, you did?

A. Yes sir.

Q. Do you have a clear recollection of that now?

A. Yes. And here were the people that it was sent to (indicating).

Q. I see.

A. I am sure if my name was on it I dictated it.

By Mr. Barnes:

Q. You have your own copy that shows your name on the bottom as the dictator?

A. Yes, and the names of the people to whom it was sent.

By Mr. Rigney:

[fol. 1376] Q. Do you remember me interviewing you in your office on December 19?

A. Yes.

Q. Do you recall I showed you at that time a copy of that memorandum?

A. I think you did.

Q. And I don't mean to infer anything by my question now other than the fact, and isn't it your recollection, that you told me at that time that you did not write this memo but that either Allen Buchanan or Samuel Lipkowitz did?

A. That may be that I told you that, I wouldn't deny it, but essentially what happened is they prepared the material, and even prepared a document off of it, but I would take that document and prepare it in my own way. All of the documents that have my name on, in other words, I am pretty nearly positive I prepared. That does not mean that I started from scratch on it. I may have used paragraphs from something they prepared.

Q. In other words, it was a staff operation?

A. That is right.

Q. And Mr. Buchanan and Mr. Lipkowitz would furnish you basic material from which you would write the finished product?

A. That is correct, absolutely correct.

Q. Do you remember from where you got the data that you refer to in Exhibit 130?

[fol. 1377] A. You mean all of these statistics?

Q. Yes, specifically on page 2, Mr. Lester, at the bottom, or toward the bottom of the page.

A. These all came from the staff. Now, where they got them, I would not be certain.

Q. The paragraph that I invited your attention to at the bottom of the page, page 2, says that it is estimated that 221 mines that will be subject to curtailment employed between 15,000 and 20,000 men in the year 1941. The suggested basis of curtailment would probably freeze initially between 4,000 and 5,000 men.

Would you recall where you got that data? Was that from Mr. Lipkowitz perhaps?

A. No, undoubtedly I got it from Buchanan and Lipkowitz, but undoubtedly they got it from somewhere else, other sources that I mentioned such as the Bureau of Labor Statistics and the U. S. Employment Service. I think also I might add the publications of the Bureau of Mines. As a matter of fact, they went over to the Bureau of Mines to get material.

Q. Mr. Lipkowitz and Mr. Buchanan?

A. Yes. They were in contact with some people in the Bureau of Mines.

Q. When was that? Do you recall, approximately?

A. No.

Q. The summer of 1942?

[fols. 1378-1381] A. I cannot recall the exact date, but it was certainly in preparation for these memoranda.

Q. Now, you refer in that memoradum, in your first paragraph of the memoradum, to "I explained the need for a curtailment order in gold mining in order to release labor and facilities for non-ferrous metal mining and to save critical materials, for which priorities are now being granted for maintenance, repair, and operating supplies."

I would like to show you Defendant's Exhibit 35, which is the memorandum that I believe you said you sent to General McSherry, and ask you to look at that memorandum that you sent to General McSherry and tell us if anywhere in there you refer to the desire for saving critical materials by the issuance of this order (handing).

A. No, I did not. Normally, I would not.

Mr. Rigney: You answered it, sir.

[fol. 1382] Cross-examination (continued).

By Mr. Rigney:

Q. Mr. Lester, there has been received in evidence here Plaintiffs' Exhibit No. 33, which is a letter of September 1, 1942, from Donald M. Nelson to Senator McCarran, in response to a letter which Senator McCarran had written to Mr. Nelson. In this letter appears the statement, to which I direct your attention now, in paragraph 4:

"We quite agree that no legal power exists today by which workers may be forced to transfer to other mines. This accentuates the mine labor problem which faces us today."

I should like to ask you if you agree that that was the situation at the time this letter was written on September 1, 1942?

A. Yes, I would agree that there was no power on the part of the Government to force people to move from one job to another job.

Q. It was purely a voluntary proposition with them as to whether or not they wanted to go?

A. That is correct, with one exception, that those who were released from the Armed Services were required to stay where they were released; under the freezing orders, but there was no power on the part of the Government, as far as I know, to force a man to move from one job to another job.

[fol. 1383] Q. My question was only about civilians, not about people in the Army.

A. That is right.

Q. So, isn't it the fact that the extent of the power possessed by the War Manpower Commission was simply a power to request or to plead or to urge, but they couldn't order or compel?

A. That is correct.

Q. In your studies which you made on this problem in the summer of 1941 or at any time during the year 1941, did you or any of your staff go to any of the gold mines and talk to any of the gold miners about the proposition of transferring to the copper mines?

A. To the best of my knowledge, we did not.

Q. From your own experience and background, you have no special knowledge of the mining industry, have you?

A. Not any special knowledge. I was never an employee, for example, of the mining industry.

Q. If any of the gold miners had been induced to move from their place of residence and employment into copper mines for employment, they would presumably be taking the places of former copper miners who had left the copper mines for whatever reason?

A. Not necessarily. Sometimes it was a question of the expansion of the copper mines.

[fol. 1384] Q. As far as the labor situation in the copper mines, wasn't it a constantly leaking bucket, so to speak?

A. To some extent, but some new copper needs were coming in or some expansion in certain mines. My point would be that it wouldn't necessarily be just a matter of replacement.

Q. But you have already testified, I believe, that there was a terrific turnover, a large turnover of labor in the copper mines.

A. That is right.

Q. Let me ask you this: Did you have any particular reason to believe that there was anything peculiar to gold miners as such, which would induce them to stay in the copper mines if they had ever gone there when copper miners themselves had left? I mean, did you have any higher hope that the gold miner would stay permanently in the copper mines or would even go there?

A. No, except there were some instances that we had in which companies that owned both gold and non-ferrous metal mines had been able to transfer some people.

Q. Transfer their own employees from one job to another?

A. That is correct.

Mr. Rigney: That is all.

The Commissioner: Any further questions on this side of [fol. 1385] the table?

Mr. Barnett: Just one moment, Your Honor.

(Plaintiffs' counsel conferring.)

Mr. Rigney: Nothing else, sir.

By the Commissioner:

Q. Were you ever in attendance upon a War Production Board meeting at which this gold matter was discussed?

A. No, I was not in attendance.

The Commissioner: All right.

Mr. Barnes: By that, are you referring to meetings of the whole War Production Board, Your Honor?

The Commissioner: Yes.

Redirect examination.

By Mr. Barnes:

Q. Mr. Lester, in the questions that Mr. Rigney has asked you, he has been discussing almost exclusively the situation in the copper mines. Were there any other non-ferrous metal mines where manpower shortages existed during this period?

A. Yes, they existed in zinc, molybdenum, and others.

Q. Was copper any more or less a problem than the other metals, so far as manpower shortages were concerned?

A. I would say copper in terms of volume was more a problem.

Q. What do you mean, "in terms of volume"?

A. In terms of the volume of men needed.

[fol. 1386] Q. Did you have any information as to the essentiality of copper in the war program?

A. Yes. We had been troubled by the shortage of copper ever since the fall of 1941, and we had closed down the use of copper in a great many civilian lines. As I indicated earlier, even that early we were restricting the shipments of copper to about half the requests of the Chinese Nationalist Government. We had eliminated the use of copper in all kinds of domestic items, refrigerator trays, venetian blinds, a whole lot of other normal commercial uses of copper, as your taking copper out of your money indicates. We even took it out of use for pennies.

Q. I thought I might have—I do have a war substitute penny here. Do you know what metal was used as a substitute for copper in that coin?

A. I don't know specifically.

Mr. Rigney: That would be hearsay.

Mr. Barnes: I will have the man who did it state what it was.

By Mr. Barnes:

Q. What were some of the other non-ferrous metals that you mentioned a few moments ago where labor shortage existed, to your knowledge?

A. Zinc, lead, molybdenum. Without referring to the list here, I would have difficulty in mentioning some of the [fol. 1387] others. Cadmium was one.

Q. Tungsten?

A. Yes.

Q. Chrome?

A. Yes. I think mercury, also.

Q. Did you have any information as to what their wartime uses were?

A. Yes. We had information, because we were putting out these limitation orders on the use of each of these different metals.

Q. Did you have any information at all as to any wartime uses for gold?

A. No, so far as we knew there was no wartime use for gold. As an economist, I knew there were some $20 billion worth of gold already in the monetary supply of the Government, most of which at that time was at Fort Knox.

Q. As an economist, can you tell us whether or not the continued production of gold during the war would have been essential to support our monetary system?

Mr. Rigney: I take it this is just an expression of his opinion, is that right?

Mr. Barnes: That is right. We have had several expressions of opinion on the same subject before, Mr. Rigney.

Mr. Rigney: I just wanted to be sure.

The Witness: In my opinion, we needed no more gold, and [fol. 1388] additional gold was of no value, and it was of disadvantage in a certain sense because the Government would be paying out money to buy it.

By Mr. Barnes:

Q. In your opinion, was additional gold to that at Fort Knox required during the war for the purpose of meeting unfavorable trade balances?

A. So far as I know, there was no need for it for that purpose.

Q. You referred to the fact that the copper shortage started in 1941. Did the shortage in supply of copper remain constant thereafter, or did it change down to 1942, about the date of the issuance of this order?

A. In one sense copper was increasingly short. In another sense that wasn't quite so true. As we cut off the civilian uses, the demand that was permitted was reduced, so to speak, and consequently it may not have seemed as if it was so short, but it was continued short all during this period. I know that it was so short that they considered and utilized, I believe, steel for shell casings.

Q. On the basis of the information you were receiving in your position, had the labor situation in the copper mines changed during the period from the time you came with OPM in 1941 until the summer of 1942?

A. I would say it became—it was worse in the summer [fol. 1389] of 1942, the spring and summer of 1942, than it was in the summer and fall of 1941.

By the Commissioner: In any of the conferences that you participated in within the War Production Board or any of their subordinate activities, did any express opposition to the issuance of this gold closing order come to your attention?

A. Yes. The Mining Branch in general was opposed to it.

By Mr. Barnes:

Q. And the Mining Branch spoke through what individual?

A. Wilbur Nelson in particular.

Q. To your knowledge, was there any support for the issuance of the order in these same discussions?

A. Yes. I would say that the Copper Branch, of course the various Services—the War Department—the War Manpower Commissioner, General McSherry and the War Manpower Commission, and I also think that in general, Alex Henderson, at least in the conferences that I had with him, was in favor of issuing the gold closing order.

Q. Mr. Rigney referred to a conference which he had with you I think during last December. Do you recall that?

A. Yes, I do.

Q. Did you know before Mr. Rigney came to see you what he wanted to discuss?

[fol. 1390] A. I don't believe that I did. I had no preparation.

Q. Did you have available at the time you discussed this matter with him, the various documents from your own file that you have used to refresh your recollection?

A. No. My files were at home, and he visited me at my office.

Q. Do you recall how your appointment with Mr. Rigney was arranged?

A. As I recall, I received a telegram from Mr. Archibald Gulick asking me if I would see someone in his firm, and I agreed on the date.

Q. Mr. Archibald Gulick is one of the charter trustees of Princeton University, is that correct?

A. I think he is emeritus now, yes.

Q. He is also a member of the firm of Alexander & Green in New York?

A. I presume so.

Mr. Rigney: I think we will stipulate that.

By Mr. Barnes:

Q. Mr. Rigney asked you certain questions as to whether or not it would be possible for the War Production Board to cut off materials from the gold mines. What mechanism existed for the War Production Board to cut off materials from the gold mines, or from any other user of materials.

Mr. Rigney: I think we should be very accurate. My [fol. 1391] question was: Didn't the WPB possess the power; not whether it was possible, but did they possess the power to do it.

By Mr. Barnes: I will accept that amendment. The question is: Mechanically, what means were available to the War Production Board to cut off materials from the gold mines or any other user of materials?

A. The War Production Board had the priority power which would permit them to issue priorities, and those who did not have the priority then would have to, so to speak, scratch for what was available, or the War Production

Board could issue Limitation Orders forbidding the use of materials for certain purposes.

And the "M" orders, as well, the Material Orders. Both the "L" orders and the "M" orders could be issued.

Q. But the mere absence of a priority order wouldn't necessarily cut a firm off from materials?

A. No. A firm could have, as some firms did, a large supply of materials on hand which were partly processed. I remember there was one firm, a pencil firm, that had already processed nine years' supply of copper ferrules, which they continued to use throughout the war, so far as I can recall. We had the problem with the Talon Zipper Company——

Mr. Rigney: I am going to object now to his volunteering about these other things which are not responsive to the question. I think he has answered the question.

[fol. 1392] Mr. Barnes: I submit; Your Honor, they were illustrative of the point he was making, that is all.

The Commissioner: I think that is true. Overruled.

By the Commissioner:

Q. Was there any power in the War Production Board to deprive a company of these inventories that you speak of?

A. Yes, there was power if they had acquired those inventories in violation of, I think it was called, Regulation 1; that is, if they had built up abnormal inventories, the War Production Board had the power to go in and take it away, had the power initially to take it away, but most of these people were in violation of Priority Regulation No. 1, I believe it was called.

Q. My question didn't go to inventories that they had built up in violation of any law, necessarily. My question went to the inventory generally, whether they were acquired properly or otherwise.

A. I am not a lawyer, but it is my understanding that they had the power to go in and take those inventories.

By Mr. Barnes:

Q. Did you ever have any contact with the programs established, one of which was called the Copper Recovery Program?

A. Yes, I do recall it, but I never had any close contact with it.

[fol. 1393] Q. A few minutes ago, in referring to the transfer of men, you referred to men released from the Armed Services as being in a special category. Were you referring to men who may have been furloughed?

A. That is correct.

Q. Furloughed for what purpose.

A. To go back into the copper mines and other non-ferrous metal mines, for purposes of increasing the labor supply there.

Q. Do you have any recollection as to when that occurred?

A. I don't have a recollection as to the exact date, but it occurred either in the summer or fall of 1942, and I think, as a matter of fact, there were two different instances in which it occurred. I think there were 4,000 at one time, and the other number runs in my mind as 7,000, but I am not certain as to that.

Q. What was your understanding as to the status of those men who were so furloughed to work in non-ferrous metal mines? You said they were in a different position from others with respect to their freedom to transfer.

Mr. Rigney: If he knows.

The witness: I wasn't in direct contact with this program, but my understanding, from having been subsequently in the office of the Secretary of War in the summer of 1943, I believe it was, was that they were released subject to re-[fol. 1394] maining in the positions to which they were released. If they did not remain there, they would then be called into the Armed Services.

Mr. Barnes: That is all.

Recross-examination.

By Mr. Rigney:

Q. These men who were released, furloughed as it were, to work in the copper mines—they were former copper miners who had ben inducted into the Services?

A. In general that was the case. I would say any metal miners. I think the order was for metal miners.

Q. Yes.

A. They wouldn't necessarily have been former copper miners.

Q. Not restricting it necessarily to copper; any non-ferrous metal?

A. I suppose also former gold miners.

Q. They were former miners who had been inducted into the Army generally from the non-ferrous metal mines?

A. In general, yes.

Q. Then they furloughed them back to work in the copper mines in September of 1942?

A. What they did, as I recall it, was to go through the records and see whether this person had worked at any time in metal mines. In other words, he might not have been [fol. 1395] inducted from the metal mines initially, but if he had in his background metal mining experience, they would permit him, if he wished to, to be released back into the mines.

Q. But you know that many of them had been inducted directly from the metal mines into the Army, don't you?

A. That is right, some of them were undoubtedly.

Q. There were other non-essential industries—when I say "other," I mean other than gold mines—which received maintenance, repair and operating supplies throughout the war years and were never closed down, isn't that true?

A. It may be. I don't to my knowledge recall any that I would define as non-essential. I doubt, for example, that the confetti industry or the race track industry or some of these industries would have received supplies for maintenance, repair and operating purposes.

Q. Isn't it a fact that under Order P-100 and subsequently under CMP No. 5, many businesses and industries in this country which were not deemed essential war industries in any sense, received MRO supplies and continued to operate?

A. If they were considered essential civilian industries, that is correct.

Q. Was there any definition of that anywhere, of what was an essential civilian industry?

A. We attempted to arrange orders of essentiality when we shut off certain civilian industries, for example, from the [fol. 1396] use of metals. In doing that, we had to classify the order of essentiality in a sense.

Q. But there was no over-all definition of what an essential war industry or an essential civilian industry was anywhere laid down, was there, as a standard?

A. I don't recall any one that was adopted universally, but we did the same thing in the War Manpower Commission. We tried to work out the order of essentiality of various occupations.

Q. For the purpose of issuing a specific order?

A. For the purposes, also, of recruitment and other operations in connection with labor supply.

Q. How about breweries? They continued to operate, didn't they, during the war?

A. Yes, we——

Q. How about nurseries, flower growers and shrubbery growers? They continued in business, didn't they?

A. I don't——

Q. I mean, there was no order shutting them down?

A. There was no order shutting them down, no.

Q. How about soft drink establishments, Coca Cola, Pepsi-Cola, Seven Up—they continued to operate, didn't they?

A. Yes. We had orders that affected them, though, in terms of closures.

Q. There was never any order issued which closed them [fol. 1397] down?

A. No, because they didn't use much in the way of materials, particularly metals.

Q. How about bobby pins? They continued to operate, didn't they? I am not being facetious. I am serious.

A. I believe that they did. I didn't participate in any discussions of that matter, but I believe they continued to produce them.

Q. Does the state of your knowledge enable you to testify with respect to whether or not at any time during the war there was any substantial pool of unemployed in the City of New York?

A. Yes, there was.

Q. When was that most acute?

A. That was most acute shortly after the founding of the War Manpower Commission, around the spring and summer of 1942, I would say.

Q. Do you know what were the best estimates of people

within the Government concerned with that problem, as to the total number of unemployed in New York City at that time?

A. No, but I participated in a conference at which Mayor LaGuardia, Donald Nelson, and a great many others in Mr. McNutt's office, discussed this whole matter, and the question was up for certification of New York City as a distress area.

[fol. 1398] Q. A very serious situation, wasn't it?

A. Temporarily, it was, yes.

Q. Would you agree that perhaps as many as 400,000 people were unemployed in New York City in the summer of 1942?

A. That is entirely possible.

Q. About this visit that I made to Princeton to see you, did you or Mr. Gulick have any discussion about what I was coming down to see you about?

A. I don't recall that we did.

Q. You don't recall his saying anything to you about what it was about?

A. No, I don't recall that he did, because I made no preparation for your coming.

Q. He didn't ask me what I was coming down about?

A. I don't remember that he did. I think he just said, "Will you see someone?" And I said, "Yes," I would be glad to.

Q. He didn't mention that we represented Homestake?

A. He may have said that he represented Homestake. I think, as a matter of fact, he did, but I don't think I knew the reason for it. It is entirely possible that I did, but I made no preparation for it.

Q. Be that as it may, would it be fair to say that at the outset of our meeting I told you that I did represent Homestake?

[fol. 1399] A. That is absolutely correct.

Q. And that this suit was pending in the Court of Claims, and that I was working in preparation for the trial of the action?

A. Yes.

Q. I made it clear to you before I asked you anything about this what our situation was, didn't I?

A. Yes, sir.

Q. You referred a few moments ago to the power of the WPB to requisition inventories, and I don't know for sure whether you were confining that to inventories which had been accumulated in violation of governmental orders——

A. I think they had the power also to accumulate any inventory.

Q. To requisition inventory?

A. That is right, they had requisition power.

Q. No knowledge ever came to you in your official capacity that any inventory held by Homestake, any part of it, was accumulated in violation of any Government order?

A. Not to my knowledge, no.

Q. Isn't it the fact that the War Production Board never requisitioned any materials or supplies from Homestake at any time during World War II?

A. Not to my knowledge, they never did.

Q. Did you ever discuss this gold closing order with Mr. [fol. 1400] W. L. Batt?

A. I think I was at a meeting, if my recollection is correct, with General McSherry and Mr. Batt with respect to this gold closing order at one time.

Q. Let me ask you if it isn't the fact that as late as October 1, 1942, Mr. Batt personally and officially was opposed to the issuance of the order?

A. My recollection is that Mr. Batt was at different times on different sides.

Q. Do you recall which side he was on on October 1?

A. No, I think I was out of the Government at that time, but he varied. My information was that his position varied depending on what pressures had been brought to bear and what arguments.

Q. Was there considerable pressure brought to bear from the War Department, specifically Secretary Patterson's office?

A. That was my understanding, that considerable pressure was brought to bear from the War Department, although again, I was not directly involved, and don't know it by personal experience.

Q. I want to ask you about this, Mr. Lester. There was a meeting of this Interdepartmental Committee on Non-Ferrous Metals, which was held on September 15, according to the minutes, which are in evidence as Plaintiffs'

Exhibit 82, and they reflect that you were in attendance at [fol. 1401] that particular meeting. I have checked your name there. I would like you just to look at that and see if you can recall having attended that meeting?

A. I don't specifically recall the exact circumstances or the exact location of the meeting, but everything here would indicate that I was present.

Q. Very well. I would like to direct your attention to this paragraph in the middle of page 3, which says:

"It was suggested that even if the gold miners were not directly transferred to other essential mines they still would be serving a more useful function in the aircraft or shipbuilding industries than they would in gold mining."

Do you recall any discussion out of which this conclusion grew?

A. I recall that we did have some discussions as to whether all of them could be, so to speak, channeled into the non-ferrous metal mines, and the argument that was made by some people was that even if they were not to be channeled into the non-ferrous metal mines, even if they went to the West Coast into aircraft and shipbuilding, it would be a net gain, since we were short of people in aircraft and shipbuilding on the West Coast.

Q. Wasn't the question raised whether it would be possible to channel any considerable number of them into the [fol. 1402] non-ferrous metal mines?

A. Yes. From an early memorandum that I produced, I emphasized that. And the Employment Service was fairly sure that they could do it. They were more certain of what they could do than I myself was certain of what they could do. They were sure if they brought their own people and had the companies also bring their people to the employment offices right in the companies that were being closed down, they could channel them.

Q. You turned out to be nearer right than they, based on hindsight?

A. I have not seen the exact figures, but I have a memorandum——.

Q. In any event, is it fair to say that you personally shared the view that even if no considerable number of them could be transferred or could be induced to go into non ferrous metal mines, it still was a wise move to close the

gold mines down in order to get their labor into more essential war activities?

A. That is right.

The Commissioner: Just a minute.

Had you completed your last answer?

The Witness: I think so.

Yes, I would say it would be my own personal opinion that they would be more valuable in aircraft and shipbuilding [fol. 1403] and in the construction activities in that area, defense plant construction and what not, than they would to continue in the gold mines.

By Mr. Rigney:

Q. In connection with the question I asked you a moment ago about Homestake's inventory situation, co-counsel representing Idaho Maryland Mines and Central Eureka have asked that I inquire of you whether you had any knowledge of any of their inventories having been improperly acquired?

A. No. The knowledge that I had with respect to inventories was in terms of end items that were being produced for civilian purposes primarily.

By Mr. Orrick:

Q. Mr. Lester, did you have any knowledge that the War Production Board ever attempted to requisition any of the inventory of Idaho Maryland Mines Corporation?

A. No, I have no knowledge that they ever attempted to requisition the inventory of any particular mining company.

By Mr. Barnett:

Q. That applies to gold mines?

A. To all gold mines and other mines.

Q. Have you ever been in a gold mine?

A. No, I have never been in a gold mine.

Q. Have you ever been at Sutter Creek or Grass Valley, California?

[fol. 1404] A. No, I have not.

Q. You don't know anything about how close they are or the economic dependence upon the mines?

A. I have been in areas like Montana, but I have not been to the mines in California. We relied to some extent on

Mr. Low, who was a mining engineer, for some of our information, and then, of course, we relied on our own Mining Branch.

Q. He is the one who went out about a week after he got into the Government service, is that correct?

A. I think that is correct. That was our reason for bringing him in, because we wanted someone who was an engineer with particular experience in non-ferrous metal mining.

Mr. Barnett: That is all.

By Mr. Rigney:

Q. I would like to ask just one more question. Were arguments advanced by persons within the War Production Board during the summer and autumn of 1942 against the order, on the grounds that it would not be possible to get any substantial number of the gold miners to go to the non-ferrous metal mines? Did you hear those arguments advanced?

A. Yes, I heard those arguments advanced, and I think Wilbur Nelson was one, for example, who was fearful that they would not; that the bulk of them would not go.

Q. And there were others, too, in the War Production [fol. 1405] Board?

A. There may well have been. I don't recall them, but I do recall Wilbur Nelson.

Q. How about Miles Smith?

A. He may have, but I don't recall him right offhand.

Redirect examination.

By Mr. Barnes:

Q. Dr. Lester, did I understand you to say that the U. S. Employment Service had represented to you that it felt that it would be able to transfer these people from the gold mines to the other non ferrous metals mines?

A. They felt that they could set up a machinery which would enable them to make a direct offer at the time, and to use considerable influence in channeling them, yes.

Q. When, in point of time, did they make those representations, do you recall?

A. I would say they made those representations begin-

ning with this discussion in July, and at these meetings for which memoranda have been indicated here, this Interdepartmental Committee meeting; and I might add, incidentally, that some of those people who appeared there for the War and Navy Departments, at least one of them was a former employee of the Employment Service.

Q. Who was that?

A. Garlock, as I recall the name. There may have been [fol. 1406] others. They were people who had been officials in the Employment Service and were commissioned in the Armed Services.

Q. Was there any relationship between War Manpower Commission and USES?

A. Oh, yes. USES was made part of the Manpower Commission set-up.

Q. There has been extensive discussion here about the justifications advanced for this order from the standpoint of savings of materials and redistribution of manpower, if you want to call it that. Do you recall at any time any other considerations being advanced in connection with the issuance of this order?

A. There was this consideration present in the discussions, and that was that if we permitted the gold mines to continue operating, we would have very little basis for coming to any other industry and saying, "We are limiting you or closing you down." It was sort of in that sense a test of the extent to which the country was willing to go all-out on war production.

Q. Did you hear that point specifically discussed?

A. Yes, that was mentioned; that if we could not close down the gold mines, it would be very difficult for us to face other industries with real restrictions. To that extent, it was something of a test case, I would say, because we were going through with these programs of concentration of [fol. 1407] production. We were cutting all kinds of end uses of materials and metals, and to that extent it was something of a factor as to how far we would go.

Mr. Barnes: That is all.

Mr. Rigney: I have nothing further, sir.

The Commissioner: The witness may be excused.

(Witness excused.)

Mr. Barnes: Your Honor, I would like to offer in evidence as Defendant's Exhibit 36, the document which was marked Plaintiffs' Exhibit 9 for identification at the pre-trial conference, being War Manpower Commission Directive No. XIII.

Mr. Rigney: That is already in evidence, I believe, Your Honor, as part of Exhibit No. 8. I wouldn't think we would need it twice. If my information is correct, a copy of that was attached to the WPB letter of October 13, 1942.

Mr. Barnes: I haven't compared the two documents, Your Honor. As a matter of fact, I didn't see that the two were there. This was a document which was offered by Plaintiffs and marked at pre-trial, and it has not been offered in evidence since that time.

Mr. Rigney: We didn't offer Exhibit 9, Your Honor, because the directive had already gone in as a part of Exhibit 8.

The Commissioner: I presume you question it because [fols. 1408-1409] you don't want to rely upon the comparison of the documents.

Mr. Barnes: Without taking some time to do it.

The Commissioner: Let's let it in, then.

[fol. 1410] Mr. Barnes: I offer as Defendant's Exhibits 38 and 38A, B, C, and D, the documents which at pre trial convereince were marked for identification as Plaintiffs' Exhibits 35 and 35A, B, C, and D, being the report of Donald M. Nelson to the Supply Priorities and Allocation Board of December 23, 1941, with respect to gold mining equipment, and the four attachments to that, being communications to [fols. 1411-1446] Mr. Nelson from the Department of State, the Federal Reserve Board, the Department of the Treasury, and an additional document which accompanied that, being a copy of a letter from the Secretary of the Treasury to the Ambassador of the South African Legation.

The Commissioner: I have a question here. You have indicated you are offering three documents, 38A, B, and C——

Mr. Barnes: No, 38, A, B, C, and D. I am offering all five that were marked at pre-trial as Plaintiffs' Exhibit 35, 35A, 35B, 35C, and 35D.

The Commissioner: Do you have "D" there?

Mr. Barnes: There was a "D" marked at pre trial, yes, sir.

The Commissioner: All right.

Mr. Barnes: I am offering the whole group.

[fol. 1447] **Transcript of testimony—February 10, 1953**

TESTIMONY FOR DEFENDANT (Resumed)

OFFERS IN EVIDENCE

MR. BARNES: Your Honor, I would like to offer in evidence as Defendant's Exhibit 42, a letter from the Assistant General Manager of Homestake Mining Company to Mr. Merle Guise, dated January 13, 1942, and the schedule appended to that.

(Plaintiffs' counsel examining document.)

(Here followed discussion off the record.)

Mr. Rigney: No objection, Your Honor.

The Commissioner: It may be received.

(Said letter, dated 1-13-42, from Homestake to Merle Guise, with attached schedule, was marked as "Defendant's Exhibit No. 42," and was admitted in evidence and made a part of this record.)

[fol. 1448] Mr. Barnes: I would like to offer in evidence as Defendant's Exhibit 43, a document entitled, "Status of Gold Mining," being the minutes of the Supply Priorities and Allocation Board of November 18, 1941, and marked Document 12-D.

Mr. Rigney: Hasn't that been admitted? It is Exhibit No. 10, I think, SPAB minutes of November 18, 1941.

Mr. Barnes: My records showed that it was not put into evidence.

The Commissioner: Yes, it was offered the first day. It is in.

Mr. Barnes: It is still marked for identification, Your Honor.

The Commissioner: It is in evidence. It was received on the first day.

Mr. Barnes: I will withdraw that offer, then.

I offer, then, as Defendant's Exhibit 43, a memorandum from Mr. R. J. Lund to Mr. A. I. Henderson, dated September 9, 1942, entitled "Gold Mining Order."

Mr. Rigney: This one, Your Honor, refers to enclosures which are missing, but I shan't press that objection in this instance. I would not want to waive it at some future time if I deemed it an appropriate objection.

The Commissioner: If you wish to make an objection, state it now.

[fol. 1449] Mr. Rigney: I say I have no objection to this document. I just didn't want my waiving it to be construed as a waiver at any future time with respect to another document.

The Commissioner: It may be received.

(Said memorandum, dated 9-9-42, from R. J. Lund to A. I. Henderson; Subject: Gold Mining Order, was marked as "Defendant's Exhibit No. 43," and was admitted in evidence and made a part of this record.)

Mr. Barnes: I offer as Defendant's Exhibit 44, a memorandum dated July 31, 1942, from Mr. A. I. Henderson to Mr. J. A. Krug and Mr. C. H. Matthiessen.

Mr. Rigney: No objection.

The Commissioner: Admitted.

(Said memorandum, dated 7-31-42, from A. I. Henderson to J. A. Krug and C. H. Matthiessen, was marked as "Defendant's Exhibit No. 44," and was admitted in evidence and made a part of this record.)

Mr. Barnes: I offer as Defendant's Exhibit 45, a memorandum dated September 11, 1942, from Wilbur A. Nelson to W. L. Batt.

Mr. Rigney: No objection.

The Commissioner: Admitted.

(Said memorandum, dated 9-11-42, from Wilbur A. Nelson to W. L. Batt, was marked as "Defendant's Exhibit No. 45," and was admitted in evidence and made a part of this record.)

Mr. Barnes: I offer in evidence as Defendant's Exhibit [fol. 1450] 46, a memorandum dated September 11, 1942, from Mr. J. M. Scribner to Donald M. Nelson, and the attachment referred to in that memorandum.

Mr. Rigney: No objection.

The Commissioner: Admitted.

(Said memorandum, dated 9-11-42, from J. M. Scribner to Donald M. Nelson, with attachment, was marked as "Defendant's Exhibit No. 46," and was admitted in evidence and made a part of this record.)

Mr. Barnes: I offer as Defendant's Exhibit 47, a copy of the minutes of the Planning Committee of the War Production Board for its meeting on September 17, 1942.

Mr. Rigney: No objection.

The Commissioner: Admitted.

(Said Minutes of Planning Committee of WPB for meeting 9-17-42 was marked as "Defendant's Exhibit No. 47," and was admitted in evidence and made a part of this record.)

Mr. Barnes: I offer in evidence as Defendant's Exhibit 48, a document taken from the Policy Documentation File of the War Production Board in the National Archives, entitled "Summary of Proposed Gold Curtailment Order."

Mr. Rigney: There is no objection to this. I wonder if you are able to fix the date at all by reference to any other documents?

Mr. Barnes: Not on the basis of anything I have here. [fol. 1451] The contents of the document indicate that it relates to an order that is substantially identical, at least, with the order that was issued, so it places its time as being probably at least in September of 1942.

Mr. Rigney: That is good enough, if we could stipulate that it was undoubtedly——

Mr. Barnes: Do you have any better information than that?

Mr. Misslbeck: No.

Mr. Rigney: I refer it to our document expert.

(Mr. Misslbeck examining document.)

Mr. Rigney: So we agree that it is September, 1942?

Mr. Barnes: I would be willing to agree that that indicates the approximate date of its circulation.

The Commissioner: Why don't you write it on there as an agreed date?

Mr. Barnes: All right.

The Commissioner: Then I won't have to look at the record to see what it is.

Mr. Barnes: I have written "September 1942" on the head of this document in ink. Because it is a photostat, it isn't as legible as it might be, but I think you will be able to read it.

The Commissioner: Received as Exhibit 48.

(Said document, entitled "Sumary of Proposed Gold Curtailment Order," with agreed date of September 1942, was marked as "Defendant's Exhibit No. 48," and was ad [fol. 1452] mitted in evidence and made a part of this record.)

Mr. Barnes: I offer in evidence as Defendant's Exhibit No. 49, a memorandum from Mr. Edward H. Rott, Deputy Administrator, Order L-208, to Mr. Edward T. Dickinson, Jr., Executive Director, Planning Committee, dated April 24, 1943.

Parenthetically, Your Honor, I think that this is the document that Dr. Nelson was referring to in the course of his testimony when he said that he had seen one of Mr. Rott's reports that used a $15 million figure, but that the one which was in his possession was not that one. This does at least use that figure.

Mr. Rigney: We would have no objection to the admissibility of this document on the proviso that it is not offered as proof of the fact of the allegations made in the letter or of the figures set forth in the letter, but merely that such a letter or memorandum passed from Mr. Rott to Mr. Dickinson.

Mr. Barnes: It is being offered as a supplement, if you wish, sir, to the report of Mr. Rott's that had previously been marked by the Plaintiffs as their Exhibit 13 and 13A. This is another document that he prepared at approximately the same date as that, giving slightly different information. If 13 and 13A have been offered as proof of their contents, it seems to me that this is similarly admissible on the same

basis. If they haven't been, I am perfectly willing to have [fol. 1453] this offered only as a document in the same standing that they stand on.

Mr. Rigney: The difficulty with this sort of thing, Your Honor, is that Mr. Rott refers to the fact that these are rough estimates, and so on. He has a lot of figures in there which are assumptions and estimates and guesses, perhaps. So I would have no objection to agreeing, as far as Plaintiff Homestake is concerned, that Exhibit 13 in evidence has been offered with the same limitation that I would like to place upon the admissibility of this document, namely, that the statements in there, in so far as statistics, figures, and so on, are concerned, are not proof of those facts.

Mr. Barnes: That is satisfactory to me, sir.

The Commissioner: All right. It is admitted.

(Said memorandum, dated 4-24-43, from Edw. H. Rott to Edw. T. Dickinson, Jr., was marked as Defendant's Exhibit No. 49," and was admitted in evidence and made a part of this record.)

Mr. Barnes: I should like to offer in evidence as Defendant's Exhibit 50, Document 228 of the War Production Board, entitled "Gold Mining Order L-208, Executive Secretary's Note, June 15, 1943."

In connection with that offer, I think it might be well to state, Your Honor, that the next exhibit I intend to offer [fol. 1454] is the minutes of the War Production Board meeting of June 15, 1943, where gold mining was considered, and those minutes start with the statement, "The Chairman referred to the Executive Secretary's Note on the question whether the present closing order. . . ." And this is being offered as an element of completeness so there can be no objection to the next exhibit.

The Commissioner: Very well.

Mr. Rigney: I have no objection, Your Honor, if this document can be received under the same reservation that I indicated for the previous document. This also contains a lot of statistics, figures, and what-not. There is no way to cross-examine. There is no indication, in many instances, of the source.

There again, I don't think that it is of the quality of

evidence which should be received as proof of the facts contained therein. With that proviso——

Mr. Barnes: It is being offered, Your Honor, as evidence of the information which was before the War Production Board when it took action on the question of the possible revocation of Order L 298 at its meeting of June 15, 1943.

Mr. Rigney: As to the fact that this document was circulated, if it was, within the War Production Board, we raise no objection; but we don't want to be bound by these figures as being proof of the facts to which they relate, and I don't think that it should be received in that category. It is like [fol. 1455] those letters that we offered from Senator McCarran and other members of the Senate, in which they set forth various statements. We don't offer them as proof of the fact of those statements or the figures that they might have contained, but only that those arguments were submitted to the War Production Board.

The Commissioner: I think that is true. Do you have any objection now with respect to the purpose for which counsel states that he is offering this document?

Mr. Rigney: If it is for that limited purpose, it is all right.

The Commissioner: It may be received.

(Said Document 228 of WPB, entitled "Gold Mining Order—L-208, Executive Secretary's Note, June 15, 1943," was marked as "Defendant's Exhibit No. 50," and was admitted in evidence and made a part of this record.)

Mr. Barnes: I now offer in evidence as Defendant's Exhibit 51, the minutes of the War Production Board meeting of June 15, 1943. The next to the last item on the agenda of that meeting was Gold Mining.

Mr. Rigney: It wasn't so important by then.

Mr. Barnes: I might say, Your Honor, that if it had not been for the fact that you permitted receipt into evidence of numerous documents circulated within the War Production Board during the period antedating this, I would have [fols. 1456-1461] felt that it was not material to the issues involved here. However, since you have received those documents, I feel that the final action of the War Production Board, which was the culmination of the various reports

and recommendations and memorandums which have been received in evidence, is likewise material.

The Commissioner: All right.

Mr. Rigney: This document seems to contain at least some of the figures which are set forth in the Executive Secretary's Note, the previous exhibit, and I have no objection to the admissibility of these June 15, 1943, minutes, provided it can be limited in the same fashion as the previous exhibit, Exhibit 50.

Mr. Barnes: Your Honor, this is being offered to show the action taken by the Board and the discussion within the Board pertaining to the possible revocation of the order. That is the only purpose of the offer.

Mr. Rigney: I think that is satisfactory.

The Commissioner: It may be received.

[fol. 1462] Samuel Lipkowitz, a witness produced on behalf of the plaintiffs, having been first duly sworn by said Commissioner, was examined and, in answer to interrogatories, testified as follows:

Direct examination.

[fol. 1463] By Mr. Barnes:

Q. Will you state your full name, please?

A. Samuel Lipkowitz.

Q. Mr. Lipkowitz, what has been your formal education?

A. I was graduated from the public schools in New York City, both grammar school and high school. I then attended New York University for six years in the evening and was graduated in June, 1934.

Q. What subject or subjects did you specialize in at that time?

A. Economics.

Q. And have you had any graduate work since that time?

A. Yes. I attended American University here in Washington from 1937 to 1939, and was graduated with an M.A. degree, and then I received a fellowship to the Littauer School of Public Administration at Harvard and attended that school from September, 1939 until June, 1940.

Mr. Rigney: What school was that?

The Witness: Littauer School of Public Administration.

By Mr. Barnes:

Q. Is that L-i-t-t-a-u-r?

A. L-i-t-t-a-u-e-r.

If I may say, that school is conducted jointly with the Graduate School at Harvard University and courses that are given are interchangeable. So that in effect it is the [fol. 1464] graduate school at Harvard University.

Q. Did your work at American University cover economics also?

A. Yes sir.

Q. What has been your practical experience? What work have you been doing?

A. Well, my practical experience in the field of economics has been entirely in the government service, or in an international agency with which I am now—well, we will get to that chronologically. I came here as a clerk in 1936 with the U. S. Employees Compensation Commission and transferred to the Security and Exchange Commission and worked as a statistical clerk.

By Mr. Rigney:

Q. Would you give us the years as you go along that you changed?

A. I came to Washington in April, 1936, and was first employed at the United States Employees Compensation Commission. In December, 1936, I transferred from that Commission to the Securities and Exchange Commission. In June, 1937, I transferred to the National Labor Relations Board, Division of Economic Research.

By Mr. Barnes:

Q. What was your position at that time there, do you recall?

[fol. 1465] A. I cannot remember the exact Civil Service classification, but in effect I was a research analyst, and later economist and assistant economist. The latter two are the Civil Service classifications. I don't recall the first Civil

Service classification, but in effect the work was economic research.

Q. And how long were you with NLRB?

A. I was with NLRB from June, 1937, until January, 1941, except for the interlude that I referred to earlier for the graduate work at Harvard University, when I was on an official leave of absence.

Q. And where did you go from NLRB?

A. I was transferred to the United States Tariff Commission, where I was employed in the Division of Economic Research until December 15, 1941.

Q. What was your position in the Tariff Commission?

A. Assistant and Associate Economist.

Q. When you left there where did you go?

A. I was transferred to the War Production Board, Labor Division, which changed its name frequently, but in a sense did the same job continuously.

Q. What were your duties there?

A. My duties there were in the Raw Materials Branch of the Labor Division, and our concern was with the labor problems arising in raw materials, and in my particular case [fol. 1466] particularly with non-ferrous metals.

Q. How long were you with WPB?

A. Until August of 1944.

Q. Where did you go from there?

A. I was transferred to the Department of State, Commodities Division, where I became Chief of the Section on Metals and Minerals.

Q. How long did you remain with the Department of State?

A. Until February, 1947.

Q. And where did you go then?

A. Then I resigned to join the International Bank for Reconstruction and Development, commonly known as the World Bank.

Q. Are you still employed there?

A. Yes, I am.

Q. Has your employment there been continuous since that date?

A. Well, yes, except for a brief period early in 1951 when, at the request of the Office of Price Stablization, and, later, the National Security Resources Board, I was given a leave.

of absence to work for the United States Government in the field of non-ferrous metals.

Q. What type of work have you been doing with the World Bank?

A. My task has been to be economic adviser on metals [fol. 1467] and minerals, and more recently the scope of that job has been expanded to include all non-agricultural industries.

Q. During the period of your employment with the War Production Board, did you have contact, among other divisions, with the Mining Division?

A. Yes sir.

Q. Do you have any recollection of discussions relating to a proposed order to close the gold mines?

A. A very good recollection.

Q. Do you recall approximately when you first came in contact with that matter?

A. Well, I would be very hesitant to set a particular time, because it is now about eleven years and I am not sure as to the precise timing, but it must be somewhere around June or July, at least in any active sense. Perhaps on looking at the document that counsel referred to earlier I might perhaps refresh my——

Q. By June or July you mean 1942?

A. Yes. It might have been slightly earlier, but I am not sure of the precise time.

Q. And the document to which you are referring now is the——

A. Closing of the Gold Mines, August, 1941, to March, 1944, Special Study No. 9, which was referred to earlier.

I could date it in this way, broadly speaking: the serious- [fol. 1468] ness of the labor problem which would have brought us into the picture, that is, the mine-labor shortage in non-ferrous metal mining, attained a certain amount of prominence, in the sense of getting repeated requests from mine operators, particularly in the west, about June, as I remember now. That is when it came to our notice. It may have been critical in some other people's minds, and to some other people's knowledge earlier, but I am only speaking for myself now.

Q. You say approximately June of 1942?

A. Approximately.

Q. What action, if any, did you take when this shortage of men in the non-ferrous mines came to your attention?

A. Well, we immediately began to try to find out how many people were being lost, what were the causes of their leaving, and trying to determine what devices or expedients might be used to stop this flow of manpower out of the mines because the copper mining, particularly, was considered extremely vital.

Q. What sources of information were available to you on the manpower in these mining enterprises?

A. Well, there were several. We were receiving from the Bureau of Labor Statistics the figures on the individual mining establishments on a confidential basis, of course, to indicate the employment at the mines by mines so that we could measure the change from month to month. We were—I am [fol. 1469] not sure exactly when we began receiving the War Manpower Commission forms. I think those came somewhat later, but I cannot place the precise time. Then we began to receive a form which the War Production Board had been issuing to, I believe, all establishments, but variants of that form were issued to the mining companies. I think it is WPB 732, and the initial, I believe is, B, but I am not sure of that. It is quite a long time now. But this basic 732 form was issued to all establishments.

Then there were variants for different types of enterprise so that a count of the peculiarities of an industry could be taken into account. For example, as I remember it, in one of the revisions of that form we wanted the information more precisely on production in mine, mill, smelter, underground, on the surface. Well, obviously, you would not ask for underground employment in a steel mill or a rubber factory. So that we had to ask for variations in that form.

There were many discussions with the Budget Bureau and the statistical people in WPB where all forms had to be cleared.

Q. Let me ask you this: in the course of your examination of this manpower shortage in the non-ferrous metal mines, do you have any recollection as to whether or not you began looking some time at the gold mines and the potential source of supply?

A. I know we began, and I cannot place the date. I know

that it was before the end of July because, as I have re-
[fol. 1470] freshed my memory in reading this, I notice that it stated that a memorandum was sent from our Division dated July 31 in which proposals were made, and I know that I participated in assembling some of that data and discussing various alternatives. And it is a fair presumption that I began before that time, but I cannot place the precise date.

Q. Is this document which has been marked Plaintiffs' Exhibit No. 130 the memorandum to which you refer?

A. Yes sir.

Q. Looking at that document, Mr. Lipkowitz, can you tell me whether you had any part in assembling any of the material that is incorporated into that? That is, factual material?

A. I am sure that I had a good deal to do with the assembling of the statistical information which went to make up the summary statement on page 2 talking about 50% of average monthly ore production in 1941 and 70% and 90%, that reference.

Q. What about the paragraph below that, "According to hastily gathered data"—is that any material which you had assembled?

A. Yes. That, I believe, was taken from the annual issues of the Minerals Yearbook.

Q. Issued by the Bureau of Mines?

A. That is right.

Q. Did you have any information at that time as to the number of employees in the gold mines?

[fol. 1471] A. Well, at that time I would say this: we had at that time a relatively limited amount of information based on generalizations from overall statistics of the BLS, of the War Manpower Commission, of the Bureau of Mines, for an earlier period, and we were beginning to get data on individual mines in some quantity which would enable us to analyze a problem more precisely. And by that I mean this: that the classification of a gold mine differed with each agency which made the classification. The Bureau of Mines had one classification, the Bureau of Labor Statistics had apparently another. I am not sure that I know what the Manpower Commission classification was, but I know that on occasion afterwards we checked some of the lists of the

mines included in one or the other and they were quite different.

As a result, we insisted on getting the data for individual mines so as to be able to make a more precise estimate of which mines came into which categories. You could not possibly do it from an overall tabulation of the type that appears, for example, in the Minerals Yearbook, because of the question of the classification for the purposes of the Minerals Yearbook as against the purpose, let us say, for a gold mine closing order.

The Commissioner: Just a second. The question as propounded asked about you, and in reply you used the pronoun "we". I am going to suggest that where your activities were a part of a group activity you try to delineate [fol. 1472] where you left off and somebody else picked up.

Mr. Rigney: Could we have the time fixed now when he says that "we insisted that some other figures be furnished". As I recall your testimony, you were saying that you were getting figures from various sources and various definitions of a mine, and that there came a point when I think you said "We insisted upon" something or other, and I was wondering if you could fix the time of that.

The Witness: Well, I would say at about this time, the date of the memorandum, July 31, 1942.

By Mr. Barnes:

Q. And when you used the word "we" in answering that question what group were you including?

A. Excuse me, I meant the people in the Labor Production Division, particularly Mr. Buchanan who was my superior, and I don't know that there was anybody else at that time in the shop. There may have been—Well, there were secretaries. I don't think there was anybody else. I am not sure. There were later, but not at that time.

Q. Were you and Mr. Buchanan working on the Raw Materials Branch or were you working on the non-ferrous metals together?

A. Non-ferrous metals.

Q. Incidentally, do you have any recollection now as to the figures shown by the Bureau of Mines, or available to you at that time from the Bureau of Mines, as to the employment in gold mines?

[fol. 1473] A. Well, it was a very substantial figure, if I remember, something of the order of 40,000 to 50,000 for the year 1941. I could check that if a Minerals Yearbook is available here, in the Employment and Accidents chapter, where usually the figures are given. But as I said earlier—I am going to qualify this—these figures related to the Bureau of Mines classification of gold and silver mines; and that was one of the difficulties, as I said earlier, in that the classifications served different purposes.

Q. Now, referring specifically to this memorandum, Plaintiffs' Exhibit No. 130, there is a statement in the next-to-the-last paragraph on the second page, "The suggested basis of curtailment would probably free initially between 4,000 and 5,000 men."

Do you recall whether or not that is based on any estimate that you had prepared?

A. Well, it was based on the assumptions in the preceding part of this memorandum that the schedule of limitation be 50, 70, 90, depending on classifications, and on the basis of the statement that 221 mines which would be subject to curtailment employed between 15,000 and 20,000 men in the year 1941.

Q. Was that an estimate which you made on those bases? Do you recall that?

A. Well, I am sure that I participated with Mr. Low, Bela Low, the engineer who worked on it, and probably Mr. [fol. 1474] Buchanan did too. But I don't recall at this time what precise data we had in addition to what is specifically stated here to go on. But, whether we had enough of a breakdown, let us say, by size categories, to make a precise estimate or merely a round estimate as is indicated here, it is, as I say, eleven years since that was done, and I don't remember the basic data.

Q. Did you, after July 31, participate in discussions with members of the Mining Division and other employees of the War Production Board with respect to the proposed gold curtailment order?

A. Yes. There were innumerable meetings, I guess. It would be very difficult to place any number on them. But some of these meetings were recorded in minutes of interdepartmental committees, and intra WPB meetings. Others may have been purely informal discussions of two or three

individuals, which probably were not recorded in any memoranda.

Q. Do you recall making any estimates during that time as to the number of employees who might be released from the gold mines by a gold mine closing order?

A. I have refreshed my memory by reading this in the last few days.

Q. By "this" you are referring to Study 9 again?

A. Excuse me, Special Study No. 9. And I came across the statement on page 42 of that document that someone accused me of having said at one time that 20,000 men would [fol. 1475] be released by the closing of the gold mines, and that I denied this, offering reports to show that the figure was about 5,000.

Now, I recall quite vividly the offering of the documents because that occurred in a meeting which was held in the War Production Board, of officials of the War Production Board and other Government agencies, and representatives of large gold mining firms—and I believe the date was October 1st, but the record would show that here—yes, October 1st—and at that meeting, as the text of this special study indicates, after some discussion as to the advisability of issuing such an order, I believe it was Mr. Batt who suggested that Dr. Nelson and others stay with the gold mining representatives to get the precise figures, or as precise figures as could be gotten, as to how many people could be released from gold mines if such an order were put into effect. And that meeting, as I remember, lasted until about seven o'clock. I remember my wife being very mad at me for coming home quite late. This was just two weeks after my daughter had been born, so she was quite worried about that.

At that meeting Dr. Nelson, I believe—perhaps Mr. Batt at first, but the exact timing of when Mr. Batt left and somebody else took the chair I am not sure of now—started to go around the table asking the various gentlemen who were present to report on their operations. And it was clear that—I don't know, maybe six to ten at the most operators [fol. 1476] were present at the meeting, so that this obviously did not cover all of the gold mining industry, although it did cover most of the important firms. At that meeting I made the point that I had in my hand, these WPB 732-D forms which showed reports from various gold mining com-

panies of either the month before or two months before, depending upon what the latest report was that was available to me at the time, indicating that there were a number of firms who were still operating at that time who were not included in this list, and that in any tabulation which was made that these firms should presumably be included. And I made the point again at the time that there were obviously other gold mining firms on whom I did not have a particular report who should also be included, but I wasn't in any position to say that Mine X had so many people or didn't, but that I was quite certain that there were more mines than were listed by going around the table, and the ones that I had documentary data to show. The difficulty was, of course, that no one was in a particularly good position to say that the figure which would account for that would be X, Y or Z, except that my point was that as the tabulation was being made nothing was being allowed, and that was obviously, if anything, an understatement.

By Mr. Rigney:

Q. Nothing was being allowed for what?

A. For these other mines who were not represented at the meeting.

[fol. 1477] Mr. Rigney: Thank you.

By Mr. Barnes:

Q. Do you recall the charge being made at that meeting that you had previously stated an estimate of 15,000 to 20,000 men who would be released from the gold mines?

A. Yes. I believe it was made—I am trying to remember who said it—and if my memory serves me rightly I got up quite indignantly at the time and said that I had not said that and waved this sheaf of papers that I had in my mind, saying, "This is the data about which I am talking and represents the rough estimate, plus an allowance for those not represented in this list of labor which would be affected by this order."

Q. Do you recall whether you ever stated in any meeting or in writing an estimate that 15,000 to 20,000 men would be released from the gold mines by a gold shut-down order?

A. I don't believe I stated that in that sense. The nearest thing that might be said to come to that is this; and it is the statement that appears in this memorandum: "It is estimated that the 221 mines that would be subject to curtailment employed between 15,000 and 20,000 men in the year 1941."

By the Commissioner:

Q. Where do you get the 221 figure?

A. That was on a basis of—if my memory is correct, these figures were available on a state-by-state basis in the State [fol. 1478] chapters of the Minerals Yearbook. And we then added up the mines in this category, above and below certain kinds by states and came to this total. That is my memory of the way we did it then. I am sorry I cannot recall precisely, but I am sure that that must have been the basis. If someone has a Mineral Yearbook at hand I would like very briefly to look at it. I think that might help me to clarify that point.

The Commissioner: Do you have one?

Mr. Barnes: I do not believe there is one.

Mr. Rigney: We do not have one at hand.

The Witness: I am sorry, that is the best I can do under the circumstances.

By Mr. Barnes:

Q. When you refer to "this memorandum" you are referring to Plaintiffs' Exhibit No. 130?

A. Yes, the one you handed me earlier.

By the Commissioner:

Q. From how many mines had you received this form that you refer to?

A. The employment——

By Mr. Barnes:

Q. The 736.

A. The 732?

Q. The 732.

A. You mean of mines which would presumably be

[fol. 1479] affected by this order, because we received them on copper mines, lead-zinc mines, tungsten mines, which would presumably not be affected by this order also.

By the Commissioner:

Q. you have testified that you had a number of them at this meeting.

A. Yes, but the ones I had at the meeting were of mines which I considered would be affected by this order.

Q. How many were they?

A. I would say probably no more than 20.

By Mr. Barnes:

Q. Now, referring to this meeting which you have just mentioned, the one which I believe you said was attended by representatives of a number of the gold mines, by representatives of the War Production Board, including Mr. Batt and Wilbur Nelson, were there any representatives of the Army there that you recall?

A. Oh, yes. General Clay, General McSherry and several other people. I think the list of some of those people who were in attendance is probably given in here, I am not sure.

Q. Is that the list, I think, on page 42 of that book?

A. It says, "The following is a partial list of those in attendance at this meeting." And then it gives, from the War Department, General Clay, Mr. Harbison, and General McSherry from the Army. That room was quite crowded [fol. 1480] and there may have been other people that are not listed here. But at least those three people, I am sure, were there, from the Army I mean.

Q. Do you recall a discussion at that time as to the essentiality of gold in the war program?

A. Well, I don't think it was discussed directly, but there was an indirect reference to it which might bear on the subject. One of the representatives of the gold mines—and I am not quite sure who the gentleman was—at one point got up and said, "But these gold mines ought to be kept open so that the boys will have something to come back to after the war is over."

And the argument or the answer at that particular point was made, as I remember it, by General Clay, who said, "Gentlemen, I want to be sure that the boys come home."

Now, as I said, indirectly, I think that was a reference by the General to his belief that gold was not essential. I don't say that he said it specifically——

Mr. Rigney: I object to——

The Witness: That would be my interpretation.

Mr. Rigney: I object to the characterization put upon it and move to strike.

The Commissioner: Sustained.

Mr. Barnes: I assume you are only striking the last characterization?

[fol. 1481] The Commissioner: Yes, the characterization.

By Mr. Barnes:

Q. Mr. Lipkowitz, do you recall having attended at or about this time a meeting with Mr. Batt and certain members of Congress?

A. Yes, I do.

Q. Do you recall when that was in point of time in relation to this meeting where the representatives of the gold mines were present?

A. I think it was the day before, or it may have been two days, but it was just shortly before.

Q. Can you tell us in the first place the people present as well as you can recollect them at the present time?

A. Well, I received the call from the office of Mr. Lund, who was the head of the Labor Division, asking me to attend this meeting, that Mr. Lund was not available, and other superiors were not available, and since I was partially involved in this, would I attend.

I went to Mr. Batt's office to find several legislators present. I cannot recall the names, all the names. I recall Congressmen Englebright of California, one of either a representative or senator from South Dakota—I am not sure which of the gentlemen it was at the time—and at least one if not two other legislators, but my memory is quite vague on the names at the moment. But I do remember Congressman Englebright by name.

[fol. 1482] Q. Do you recall whether or not there was any discussion at that meeting as to the essentiality of gold?

A. Yes. In the course of the discussion, at which the legislators made a very substantial plea to Mr. Batt about

the impact of any such proposed order on the community life and the economic position of the community. I think the word "ghost town" was used quite liberally. Mr. Batt at one point turned to one of the legislators and said, "Well, you know, I wish you fellows would find some essential use for gold like you did for silver. We discovered one for silver in bus-bars and other things, and we are able to use all this silver, and we wouldn't think of doing this kind of thing for a straight silver mine, but, frankly, we have not been able to find any big, essential uses for gold. This would solve our problem very nicely if you could do it."

Q. Do you recall whether or not there were any suggestions made at that time as to essential uses for gold other than possibly a monetary use?

A. Not of any importance that I remember. There may have been some suggestion of—well, frankly, I don't remember any. The emphasis was on the monetary use of gold, and the importance to the economy, and that line of argument.

Q. Incidentally, at either this meeting with the legislators or the later meeting with the representatives of the gold mines, do you recall whether or not there was any discussion [fol. 1483] as to the use of critical materials by the gold mines?

A. Would you mind rephrasing that question, or repeating it?

Mr. Barnes: Read it back, please.

(The pending question was read by the reporter.)

The Witness: Well, I don't recall specifically, but I would say that if any discussion——

Mr. Rigney: If your Honor please, he said he doesn't recall. I think that is his answer. If he is going to assume something, I object to it.

The Commissioner: Yes, I think that he has answered the question, unless the last few words that you used were a suggestion that perhaps your recollection could be improved upon.

The Witness: Well, my recollection could certainly be improved upon.

The Commissioner: I mean by yourself. I mean if you can search your recollection and find any recollection of the point, you may testify about it, but if you start off by saying

"I don't recall" that disposes of that question unless as you proceed you can succeed in recalling it.

The Witness: I don't recall any discussion of it at any meeting with the legislators, or at this meeting with the gold mining industry. There were other meetings at which it was discussed. That is one of the points I was trying to bring out.

Mr. Rigney: You were not asked about those at this time.

[fol. 1484] By Mr. Barnes:

Q. Where you say you did hear it discussed at some meetings, what types of meetings were those?

A. Those were discussions by people within the WPB or with people in other branches of the Government in which mention was made of the savings that might occur from, for example, the use of mercury in certain processes or producing refined gold, the fuels that obviously had to be used in the treatment, the timbers that had to be used in the mines, and other accessory materials, for instance, work shop, mining equipment, repair materials, and various things of that sort.

Q. Had you given any consideration to the mechanisms whereby men from the gold mines would be moved to other non-ferrous metal mines if an order were issued shutting down the gold mines?

A. Well, the primary responsibility for the actual transfer routing of manpower rested with the War Manpower Commission rather than with the War Production Board. We obviously had very close contact with the War Manpower Commission. Our job was, in fact, liaison, but the implementation obviously rested with another agency.

Q. Did you discuss with them whether or not any implementation existed or was in process?

A. Yes. I recall a meeting in the War Production Board Building, the one on Fourth and Independence, the big [fol. 1485] building, and the representatives of the War Manpower Commission, I believe present were Colis Stocking, Louis Levine, and perhaps others, I don't know. I think there were others present, but I don't recall the names of the others.

Mr. Rigney: Fix the time, please.

By Mr. Barnes:

Q. What organizations were those men connected with?

A. With the War Manpower Commission—or the Bureau—I am not sure of the precise title—Bureau of Employment Security, and whether it had as yet been absorbed by the War Manpower Commission or was independent but working with it, I am not sure of the organizational status, but in our view that was the War Manpower Commission.

The Commissioner: Would the reporter read back the question about five questions back, the basic question that started off this line?

(Whereupon, the record was read by the reporter as follows: "Had you given any consideration to the mechanisms whereby men from the gold mines would be moved to other non-ferrous metal mines if an order were issued shutting down the gold mines?")

The Commissioner: All right.

Mr. Rigney: Would you have him fix the time of this meeting?

By Mr. Barnes:

Q. Would you tell us when this occurred, to the best of [fol. 1486] your recollection?

A. I am not—I cannot be precise on the meeting, unless perhaps this document will refresh my memory, but I believe it was after September 1st, when the freeze, voluntary freeze order on miners and loggers was issued by the War Manpower Commission.

Q. Was it prior to the issuance of L-208?

A. Oh, certainly it was, yes.

Q. Did the representatives of the War Manpower Commission make any representations at this meeting as to means that would be available to move the gold miners to other non-ferrous mines?

A. Yes, I think there were two factors: one, that they were relying on cooperation from the mining companies who needed the men, copper, lead, zinc, et cetera, and some arrangement that might be arrived at for paying transportation of the workers from the place where he would be displaced to the place where he presumably would be employed.

And I don't recall the precise assurances that were given in terms of whether they had the funds, or what precise steps they would take, but we certainly came away from the meeting with——

Mr. Rigney: I object.

The Witness: —a very strong assurance——

The Commissioner: Just a minute. There is an objection stated. When there is an objection stated you should await a ruling.

[fol. 1487] The Witness: I am sorry.

The Commissioner: And I think the objection is good, because he was about to give his impressions of what happened.

By Mr. Barnes:

Q. I think the difficulty there, Mr. Lipkowitz, is this: you may not be able to recall the exact terms that they used, but without stating what mental condition it induced in you, will you tell us to the best of your recollection what the terms were, what the language was that they used?

Mr. Rigney: If your Honor please, I object. He has concluded his answer, as I understood it, and was saying "we came away from the meeting with" and so on. Anything further would be repetitious of what he has already testified to.

The Commissioner: No, I think that he may answer with the instruction that he got from counsel. And I will give him further instruction. You can testify with regard to the substance of the meeting, but you cannot expand into any impressions that you may have received as a result of what transpired. We know you cannot remember the precise language.

The Witness: I can't possibly remember the language, I can't remember precise statements of the particular things they said they would do, but I know that we felt——

The Commissioner: That is what you cannot testify about. You can testify about the substance, that such and such was discussed in general, but you cannot say that "we believed [fol. 1488] so and so as a result of the discussion".

Mr. Witness: Well, we discussed various ways and means of moving workers from the mines that would be closed by

the gold mine order to the mines, and various lists were had of various mines that were short of workers, and discussions about appropriations, as I remember it, but I cannot remember the details of such appropriations, which satisfied us that they could do an effective job in moving those people if they were released.

The Commissioner: That is just where the objection goes, to everything that you said after the word "satisfied".

Mr. Rigney: I move to strike it.

The Commissioner: Sustained.

The Witness: I cannot recollect anything specific at the moment.

Mr. Barnes: We have a very peculiar situation here. The contention of the plaintiffs is that the War Production Board acted arbitrarily. That means that we are forced by plaintiffs' petition to examine the mental state of the War Production Board. This witness is testifying to a mental state which is ascribable to the War Production Board. It seems to me that this is competent under the peculiar contention of this case.

The Commissioner: I do not think it is all. I think that there has been testimony similar to this that has gone into the record without any objection. But when an objection [fol. 1489] is made it must be ruled upon. I have got to apply the yardstick of the rules of evidence to the question and answer.

By Mr. Barnes:

Q. Do you recall whether or not at this meeting there was any discussion of this September 1st freeze order issued by the War Manpower Commission?

A. At this meeting or after this meeting?

Q. At this meeting that you just referred to.

A. I can't say specifically, but I am sure, as I said earlier, that it was after the order had been issued, and I know that I, at the time, was relying on its being effective——

Mr. Rigney: I object to that, what he was relying upon, as not responsive to the question.

The Commissioner: Sustained.

Mr. Rigney: And I move to strike it.

The Commissioner: Sustained.

By Mr. Barnes:

Q. Did you have any opinion as to the effectiveness of the September 1 freeze order in moving miners from the gold mines, if they were closed down, to other non-ferrous mining operations?

Mr. Rigney: I object to that. It is irrelevant and immaterial what his opinion may or may not have been about the freeze order.

The Commissioner: Overruled, if that is your objection. [fol. 1490] Mr. Rigney: And it is incompetent, too, because he is asking him to give his state of mind.

The Commissioner: All right, that is sustained.

The Witness: May I insert a question?

Mr. Rigney: No, the objection was sustained.

By Mr. Barnes:

Q. Mr. Lipkowitz——

The Witness: Excuse me, I have refreshed my memory——

Mr. Rigney: If your Honor please——

The Commissioner: There is no question pending.

By Mr. Barnes:

Q. Mr. Lipkowitz, let me ask you this: Dr. Wilbur Nelson has testified here that if mechanisms had existed for moving the gold miners to other non-ferrous mining enterprises he would have had no objection to the issuance of an order closing the gold mines. Let me ask you, first, did you ever hear Dr. Nelson make a statement similar to that prior to the issuance of Order L-208?

Mr. Rigney: I object to that, as to whether he ever heard him make it or not.

The Commissioner: Overruled.

The Witness: May I answer?

By Mr. Barnes:

Q. Yes.

A. I don't recall such a statement.

[fol. 1491] Q. Do you recall discussing with any repre-

sentatives of the Mining Division mechanisms that might exist for moving gold miners to other non-ferrous metal mines?

A: I am sorry, would you mind repeating the question so I could make sure of what was intended?

(The pending question was read by the reporter.)

The Witness: I don't recall discussing it individually, but I do recall that this subject was discussed on several occasions in these interdepartmental meetings, at which time I am sure, that somebody from the Mining Division was present.

Mr. Rigney: It is too late to object, I suppose, now, but it was not responsive and I move to strike the latter part of it. He says he does not have any recollection of discussions with the Mining Division. I think that is the end of his answer and the balance should be stricken.

The Commissioner: Overruled.

I would like to ask a question at this point. I would like to ask the same question except where Mr. Barnes says "might exist" I would insert "might be employed", and I am going to ask you to read that question as it is and I will make the insertion.

(Whereupon, the record was read by the reporter as follows: "Do you recall discussing with any representatives of the Mining Division mechanisms that might exist"——)

The Commissioner: There I would insert "might be employed".

[fol. 1492] (The reporter continues reading: "—for moving gold miners to other non-ferrous metal mines?")

The Commissioner: May I expand the question to other people in the Mining Division.

The Witness: Where I find the difficulty is to recall the conversation with a particular person on a particular facet of this gold mine closing order. There were so many discussions going on with so many people at different times on the whole issue of closing gold mines that to recall whether I spoke about a specific point with a specific person or group of persons in the Mining Division or any other is very difficult at this time.

By the Commissioner:

Q. Let me ask you this question then: was there any discussion within WPB, at which you were present, at which a method of transferring gold miners—transferring is not quite the word——

A. Of facilitating.

Q. —of moving the gold miners to the non-ferrous metal mines was discussed?

A. It is my memory that that was discussed in those various interdepartmental meetings. Now, I wasn't present at all of them, but I would be willing to—well, I wouldn't say be willing to swear, because I cannot remember that well—but I am reasonably certain that that was discussed [fol. 1493] at those meetings, and if those minutes are available they would tell the story. I don't see why I should be asked to remember something that is down in writing. It is very difficult for me at this stage of the game.

By Mr. Barnes:

Q. Let me show you Plaintiffs' Exhibits 82 and 94——

Mr. Rigney: Would you mind giving the dates? It would help me to find them.

Mr. Barnes: 9-15-42 and 10-9-42, are these two.

By Mr. Barnes:

Q. (Continuing)—which are the minutes of two meetings in which I see your name listed as among those present, and I ask you whether that refreshes your recollection.

A. Yes sir. These are the meetings which I was referring to before you brought the papers here, and reading this, I note that Mr. Harbison of the War Department had outlined steps that the various agencies had taken to meet the manpower shortage in non-ferrous metals mines and pointed out that the transfer of gold miners to essential mining was being held up by the lack of a gold curtailment order. He pointed out that the U. S. Employment Service had been unable to obtain many recruits at Rapid City because the gold mines had not been closed down, although Anaconda Copper Mining had agreed to pay transportation costs.

Q. Let me ask you this: aside from your having read that,

[fol. 1494] does that refresh your recollection that that happened?

A. Yes. I remember discussing these matters at length with Mr. Harbison before this meeting.

Q. Do you recall whether or not in the course of those discussions you expressed an opinion as to whether or not means were available that could be employed to arrange such transfers?

Mr. Rigney: I object to that. I do not see how this witness is competent to testify on that. The War Manpower Commission was charged with it and was handling it. He was not with the War Manpower Commission. I don't think it is competent.

The Commissioner: Overruled.

Let us have the question so the witness understands it.

(The pending question was read by the reporter.)

The Witness: I suggested, according to this document, that an advisory committee be established with representatives from the Labor Production Division of the War Manpower Commission——

Mr. Rigney: Where are you directing your attention now, Mr. Lipkowitz?

The Witness: This is on Document 823, page 2, the last paragraph. You will notice that it continues over to page 3. It says: "The functions of this committee"—the committee that I am suggesting be established—"were, one, to review the extension of serial numbers, and, two, to recommend the establishment of machinery for transferring gold miners."

[fol. 1495] By Mr. Barnes:

Q. Let me ask you this: do you recall whether or not any such committee was established?

A. Frankly, I don't remember.

Q. Aside from these minutes, do you have any recollection of discussions with anybody in the War Production Board as to means that could be employed for moving gold miners to other non-ferrous mines?

A. Well, Mr. Buchanan and I discussed this day in and day out, so to speak, in that period. We talked with people

in the Copper Division, I am sure. I cannot recall others specifically.

Q. Did you at that time, as you recall it now, express any opinion as to the means that could be employed for such transfer?

A. Well, I am sure that I mentioned at various times the existence of that freeze order which had been put in. It was something—I had attended the meeting in the building when the labor and industry advisory people were present. I was quite well aware of this freeze order going into effect, and I am sure that that was considered by me, and probably by others as one means of—how should I put it—assuring that the mining industry and the lumbering industry would have very high priority in referrals of labor from the War Manpower Commission, because the problem had been upper- [fol. 1496] most in their minds as a result of the freeze order.

Q. Do you have any recollection as to information that you may have received subsequent to the issuance of L-208, as to the number of men who were actually transferred from the gold mines to other non-ferrous mining activities?

A. If I may preface my remarks, there were various conflicting estimates made by different people based on different sets of data. We relied, as I remember it, largely on the reports of the War Manpower Commission. I forget the form number, it was 280—I am not sure—it was later consolidated with 732. The Mining Branch and the other production divisions of the War Production Board got most of their information by communications from the companies.

Mr. Rigney: I object now to this, your Honor. It seems to be digressing from the question and not responsive. He was asked did he have any information on the number of men that were transferred, and now he is going off into some kind of answer.

The Commissioner: I think he is leaving the question. The question was: what information you had after the gold closing order.

The Witness: Yes. Well, our information in the Labor Production Division was based largely, if not entirely, on the data of the War Manpower Commission forms I referred to earlier.

By the Commissioner:

[fol. 1497] Q. Did they have information on where these miners went?

A. There were, as I remember it, special requests made to the various offices of the War Manpower Commission, largely from the western mining areas, for information on this, and those reports were made available to us.

Q. You have not answered the question. Did they have information on where the gold miners went?

A. They submitted what information they had.

The Commissioner: All right.

By Mr. Rigney:

Q. Did they have any, though?

A. Yes. I am not saying it was complete, but they had some.

By Mr. Barnes:

Q. Mr. Lipkowitz, there has been some reference here to the fact that a relatively small number of miners—and the figure again varies somewhat even in this record—went into non-ferrous mining enterprises and stayed for a period of 100 days or more. Do you feel that that is a valid measure of the operation of L-208, so far as the movement of manpower is concerned?

Mr. Rigney: I think that is objectionable, your Honor.

The Commissioner: I am going to have to overrule that objection. I take it this is being asked of the economist as an expert.

[fol. 1498] Mr. Rigney: If it is, then I want to interpose a more pertinent objection.

The Commissioner: Let us find out if it is. Is it?

Mr. Barnes: Yes sir.

The Commissioner: All right.

Mr. Rigney: Your Honor, I don't think that Mr. Lipkowitz' qualifications are such that he is an economist. I think he is a statistician, is all that has been shown so far. And if he is going to be called upon to give testimony now as an economist, in the field of economics, I should like to have an opportunity to conduct a voir dire examination of him as to whether he is qualified or not.

Mr. Barnes: In view of counsel's concession that the witness is at least a statistician, it seems to me that that question is aimed more at the statistician than economist.

Mr. Rigney: I do not want any doubt about whether he is going to be permitted to testify as an economist, as an expert in the field of economics, and I interpose an objection now to testimony from him on that score. He just collected figures, based on his own testimony, and that is all he did.

The Commissioner: Well, if you want to ask any questions of the witness, go ahead.

Mr. Rigney: Well, I will withhold that for the moment, and I take it Your Honor is going to overrule the objection that I have made to this particular question.

[fol. 1499] The Commissioner: Yes.

Mr. Rigney: We will see how far we go on this.

The Commissioner: All right.

Mr. Barnett: Could we have the question again, Your Honor?

The Commissioner: Will you read the question, please?

(Whereupon, the record was read by the reporter as follows: "Mr. Lipkowitz, there has been some reference here to the fact that a relatively small number of miners—and the figure again varies even in this record—went into nonferrous mining enterprises and stayed for a period of 100 days or more. Do you feel that that is a valid measure of the operation of L-208, so far as the movement of manpower is concerned?")

Mr. Barnett: Wouldn't it be necessary that he knows just what the evidence has been up to this point in order to answer that? Unless there is a proper foundation showing that he knows that evidence, I cannot see how he can answer——

The Commissioner: Unless you quarrel with the——

Mr. Barnett: —as to what he feels. And the word "valid" seems to be objectionable.

Mr. Rigney: And proper measure. That is argumentative and debateable, as to what is a proper measure of the effectiveness of the order.

The Commissioner: Well, unless you can find some sub-

stantial fault with the facts as posed as being present in the [fol. 1500] record, I am going to overrule all the objections.

Mr. Pittman: As I understand it, the witness has not testified that he knows how many went back in the non-ferrous mines. Until the proper foundation is laid I will challenge his right to make an observation on the matter.

The Commissioner: Overruled.

By Mr. Barnes:

Q. Mr. Lipkowitz, can you answer the question now, please?

A. I had a good deal to do with the preparation of the figures which are cited as——

The Commissioner: You are not answering the question. Read the question, please.

(Whereupon, the record was read by the reporter as follows: "Mr. Lipkowitz, there has been some reference here to the fact that a relatively small number of miners—and the figure again varies somewhat even in this record—went into non-ferrous mining enterprises and stayed for a period of 100 days or more. Do you feel that that is a valid measure of the operation of L-208, so far as the movement of manpower is concerned?")

Mr. Barnett: That question certainly appears to be ambiguous, to say the least, "is that a fair measure?"

The Commissioner: For what it is worth, I want to hear from the witness, if he can answer it. I find that it saves time—we do not have a jury here—to go ahead with the [fol. 1501] question. If I have any doubt about admissibility I resolve that pretty quickly in favor of admissibility, because I can sit back in my office and go over it.

Mr. Rigney: I am sure Your Honor will weigh it.

The Witness: You have stopped me from making certain preliminary remarks earlier, and I want to indicate why I wanted to make those remarks before I answer the question without making them.

The Commissioner: All right.

The Witness: As I said earlier, this is eleven years. I don't have the figures at my fingertips. I have not read anything on the gold mining thing for four or five years now, so

that my memory has been refreshed in the last day or so, and only partially.

I remember that this document, Special Study No. 9, was circulated while I was in the War Production Board when I had access to the data, when the data which I had prepared was fresh in my mind, and so I wish to refer to tables in this document which I know were prepared in the division I worked in, and which I am sure I had a large hand in preparing, in answering the question. Now, is that permissible?

Mr. Barnes: I don't think the question calls for or requires such a reference, Mr. Lipkowitz. I think that that is the basic problem, and maybe the objection is well taken, Your Honor, that the question is ambiguous, because I don't [fol. 1502] think that the witness has understood it, so I will withdraw the question.

The Commissioner: We will recess for five minutes.

(Thereupon, a five-minute recess was taken in the hearing.)

[fol. 1503] By Mr. Barnes:

Q. Mr. Lipkowitz, let me direct your attention to Plaintiffs' Exhibit No. 125, a memorandum from Mr. Edward T. Dickinson, dated April 22, 1943, and ask you whether you recognize the statistical information that appears in the first paragraph relating to displacement of labor and the paragraph related to displacement of labor.

A. Yes. This apparently came from frequent statistical tabulations which we in the Labor Production Division made which were——

Mr. Rigney: If Your Honor please, I don't like to be objecting here, but we are entitled to the rules of evidence and it seems to me wrong that this man be shown an exhibit and he starts out saying, "This apparently came" when it isn't an exhibit he had anything to do with, as it appears from the face of the exhibit. I think a direct question should be put to him and I move to strike what he has made so far.

By Mr. Barnes:

Q. Let me direct your attention first to the last page——

The Commissioner: Do you withdraw the question?

Mr. Barnes: Yes.

By Mr. Barnes:

Q. Do you recognize that?

A. The table as the last page of the exhibit?

Q. That is right.

[fol. 1504] A. Yes.

Q. Where was that prepared?

A. In the Raw Materials Section of the Labor Production Division.

Q. Did you have anything to do with that?

A. Yes, I devised the technique for doing this.

Q. Did you supervise the tabulation?

A. My assistants did it; I am sure, and I imagine I checked it over. We were so busy then I don't know whether I checked this particular table or not. We did it.

Q. Have you during the recess read the material under the heading "Displacement of Labor by Order and Results"?

A. Yes, sir.

Q. Do you recognize the material that appears there?

A. Yes. It refers to a study made by the Labor Production Division on the displacement of gold miners, and I recall our having made that survey in our division.

Q. I notice that the statement is made in this memorandum that the 1156 gold miners were placed in other non-ferrous mines. Now I would like to direct your attention to Plaintiffs' Exhibit No. 52, which is a memorandum from Wilbur Nelson to Howard I. Young, which is in form a commentary on the exhibit we have just been looking at; Plaintiffs' Exhibit No. 125. I direct your attention to the material under the heading "Paragraph A-1."

[fol. 1505] A. Yes.

Q. I notice in the two documents a considerable discrepancy of opinion as to the number of gold miners who were placed in the non-ferrous mines. Can you, on the basis of your experience, offer any explanation of that discrepancy?

Mr. Rigney: I think that is objectionable, Your Honor. The documents are in and they speak for themselves. It would be for Your Honor to resolve discrepancies or conflicts in the evidence, if there are any such. It is not for this witness to do that.

The Commissioner: Sustained.

By Mr. Barnes:

Q. Mr. Lipkowitz, in preparing your tabulations as to the number of gold miners placed in non-ferrous metal mines, did you give any consideration to the length of time they stayed in those non-ferrous mines?

A. It was not possible for us to give consideration to the length of time that they stayed, because we were working on a basis of statistics of employment as of one period as against another, and there was no detailed breakdown of the names of the individuals, so we wouldn't know whether everybody who was employed on a given date had come in within the last month or if some individuals had worked there for twenty years. We had no particular facilities for determining that issue. I mean in the Labor Production [fol. 1506] Division. I am not speaking for anybody else.

Q. In your opinion as a statistician in evaluating the effectiveness of Order L-208 so far as it served to transfer men from the gold mines to the other non-ferrous mining operations, is the length of time that a man stayed a significant factor?

A. It may be a significant factor to a particular mine, but it is not necessarily a crucial factor for the mining industry as a whole because, suppose that a man is moved from, let us say for example, Homestake to the Coeur d'Alene area in Idaho. These gentlemen here know that there are, what, ten or fifteen, perhaps more lead-zinc mines in that area. Suppose that the man moved from Homestake to Bunker Hill, the next day he moved from Bunker Hill to Morning—Morning is the name of another mine.

When he came to the second mine he would not be reported as a displaced gold miner because he had come from a previous job which was not a gold mine.

Suppose that he had transferred from a gold mine to one lead-zinc mine and then he had moved to another lead-zinc mine which had a higher productively that the first lead-zinc mine. The total production of lead and zinc would rise even though he were the only person who moved.

I am taking an extreme example in one person, but the principle applies. So the significance to the industry in my [fol. 1507] view is the total number of people that went to

the part of the non-ferrous mining industry which was considered by the War Production Board at that time more essential than gold mining.

Mr. Rigney: This is all suppositious and hypothetical, what you have been saying, isn't it? You are attempting to illustrate something by what you said?

The Witness: That is right. I don't recall now which men went to which mines and how frequently they moved. It is very unlikely that a man would move the next day, but I just used that as an example, as you say. But I would like to say this, if I may——

Mr. Rigney: I object to anything that is not responsive to a question that is put to the witness, and I think——

The Commissioner: Of course, if he hasn't completed his answer, he may do so. If what you want to say is a further response to the question, you may finish.

The Witness: I think it is responsive, Your Honor. You know your duty.

The controversy frequently came up among the people in the War Production Board after the order was issued as to what the effect of this order was in terms of improving the labor supply in the essential mines. We in the Labor Production Division generally took the attitude that if the total supply of labor to the essential mining industry was in- [fol. 1508] creased, that resulted in more production in that industry than otherwise would have come about. Whether the man moved from one mine to another and there was extensive oral talk, and I notice it again in this document that you handed me——

By Mr. Barnes:

Q. Plaintiffs' Exhibit No. 52?

A. Yes, from Nelson to Young. —that people came to a mine and stayed only a short time. Therefore, they didn't help the mining industry. It seems to me that statistically if you adopt that assumption you assume that these people disappeared from the face of the earth.

Q. After they left the mine?

A. After they left the first mine that they came to from the gold mine. I think that is an inadmissible assumption

with respect to this problem, because it seems to me it is incumbent on these people to prove that these people did not do any productive effort thereafter.

Mr. Rigney: If Your Honor please, I move to strike the witness's observation about what is incumbent upon anybody to prove.

The Witness: I am sorry.

The Commissioner: It may be stricken.

The Witness: I agree.

By Mr. Barnes:

Q. Mr. Lipkowitz, directing your attention to Plaintiffs' [fol. 1509] Exhibit No. 125 and particularly to the tabulation that appears at the foot of the first page of that relating to where gold miners went, on the basis of your study of this matter can you tell us whether or not in your opinion that is an accurate portrayal of what happened to the gold miners?

Mr. Rigney: I object to that, if Your Honor please.

The Commissioner: Let's have that question so I can get your objection right.

(The question was read by the reporter.)

Mr. Rigney: I object, if Your Honor please, because I think it is improper to call a witness and ask him to characterize the quality of other evidence in the record. It is a very unusual procedure and I have never heard it allowed, to put a witness on the stand to characterize another witness's testimony or physical exhibits.

Mr. Barnes: Your Honor, the witness has stated that that portion of the exhibit is based upon studies made in his division under his supervision and adopted by Mr. Dickinson in his memorandum.

The Commissioner: I am going to sustain the objection. You can put in an offer of proof if you want to. You can do it by question and answer. I think the objection is all right.

Mr. Barnes: Your Honor, I will let the exhibit itself and the prior record stand as an offer of proof. I think the record is clear as to the source of this information.

[fol. 1510] By Mr. Barnes:

Q. Let me ask you this at this point, Mr. Lipkowitz. I notice that in Mr. Dickinson's memorandum there is a reference to the fact that certain miners were placed in other essential industries. Do you recall whether or not your studies indicated that some miners went into industries other than non-ferrous mining?

A. Yes, I do. I recall that we asked the Social Security Board to make a special tabulation of the people who were employed in—I can't remember how many gold mines from the employment records for the employment tax—I believe in either the second or third quarter of 1942. I am not sure now. It was a long time ago.

The survey itself is referred to in Special Study No. 9. We ask the Social Security Board to make that survey of each individual employee who had been employed at that base date, which I can't place precisely, and where he was employed one year later, if the records showed it, so we could have some idea on this problem that you raised earlier of what happened to these people.

Suppose they had gone here and then moved on and you would never be able to trace them as a gold miner again. We wanted to know where they were, let us say, one year later no matter where they had been in between. A tabulation was made and some results of that are recorded in here.

[fols. 1511-1520] Q. By "here" you are referring again to Special Study No. 9?

A. Yes.

[fol. 1521] By Mr. Barnes:

Q. Mr. Lipkowitz, my recollection is that before we embarked on this discussion you were referring to the fact that you had had a special study made as to what had happened to certain gold miners, is that correct?

A. Yes, and that is the study referred to in the footnote that His Honor read to the reporter.

Q. That indicates that gold miners went into occupations other than non-ferrous mining, is that correct?

A. Yes.

Q. On the basis of your knowledge of the labor situation

which existed during the war, can you tell me how those [fol. 1522] occupations compared in degree of essentiality with gold mines?

Mr. Rigney: If Your Honor please, I object to that. There is no standard, I think, by which he can testify to that. It might be merely his personal opinion as to what degree of essentiality, but that would be meaningless.

The Commissioner: Sustained.

By Mr. Barnes:

Q. Do you recall whether or not any of these employees went into shipbuilding?

A. Yes.

Q. What was the labor situation in 1942 in the shipbuilding industry?

Mr. Rigney: I don't think he is competent to testify on that and I object unless there is a showing and a better foundation laid for the question than has been so far.

The Commissioner: Sustained.

Mr. Barnes: With respect to that point, Your Honor, I will rest.

By Mr. Barnes:

Q. What knowledge did you have as to the labor situation in industries other than non-ferrous mining, in 1942?

A. We were informed at various times by the War Manpower Commission, by people in the Army Manpower Office who had come in to Washington from the field or who had gone out from Washington to the field and had come back, that a number of large construction projects were being [fol. 1523] operated in areas adjacent to the non-ferrous metal mines and were drawing labor from non-ferrous mines and other industries, that many of the men had left the mines because they could secure higher pay at aircraft plants, shipbuilding plants, construction jobs—well, a number of other industries.

I can't recall all of them, but aircraft, shipbuilding, and construction were the three bete-noires so to speak, of the period, and it was quite a problem with the military establishments at the time because they were equally concerned

with the production, the shipbuilding, aircraft and in these army and naval base training centers and other construction projects sponsored either directly by one of the military services or by a contractor to the military services.

Q. Let me ask you this question: In your opinion how effective was Limitation Order L-208 in relation to its purpose or motive to move manpower from gold mining to other labor areas?

Mr. Rigney: If Your Honor please, I think that is objectionable. I don't think a proper foundation has been laid with this witness to answer that question. I think it presupposes a store of knowledge that he does not possess on the basis of the record here.

The Commissioner: Sustained.

Mr. Barnes: Your Honor, I limited the question specifi- [fol. 1524] cally to the manpower situation which the witness said was a matter he was concerned with in 1942 and thereafter through his connection with the War Production Board in the summer of 1944. I think that his qualifications have been shown. That was the specific matter with which he was charged, the manpower proposition in the War Production Board.

The Commissioner: Your first two words were "how effective" was the order. This witness may have information with respect to where these people went, but I think when he has testified concerning those points, he has done about as much as he can towards answering that kind of question. You can put it in as an offer of proof. I may be wrong.

Mr. Rigney: That kind of question, too, is tied up with the entire controversy which You Honor has to decide.

Mr. Barnes: Your Honor, I offer to prove that if the witness were permitted to answer the question he would——

The Commissioner: Do it by question and answer.

Mr. Barnes: Will you please answer the question I just put to you, Mr. Lipkowitz?

Will you read the question back, please?

(The pending question was read by the reporter.)

The Witness: May I answer that?

The Commissioner: Yes.

The Witness: I think the effectiveness in moving from the gold mines is unquestioned. The areas to which they moved [fol. 1525] were the subject of considerable controversy for quite some time. I don't think all the facts are in yet. But the fact that they moved, I think, is unquestioned, and the partial evidence which we have in various ways, particularly in the study to which referred, this letter from Mr. Corson to Stacy May, is the only study of which I know anything that indicates where these people were at a specific time later on, rather than a spot check of one particular mine on one day and how many people are still working who came from a gold mine.

Do you see my point? It is a more extensive study of that point than any that I have seen. All of the others have been very small samples of particular firms to which the men went, and they were gotten by asking the particular firms a specific question, but this was a check of the individual's employment record on the basis of tax paid by the employer, so there is a record in the Government of where he went to.

Even there, as I recall now, something on the order of—this is very vague, but probably 800 or 1,000, but I wouldn't want to be held to the particular figure because I can't remember it—people were not accounted for in this survey of the people who had been on the payroll in the base period before the gold mine closing order.

That can be accounted for, and this is a subject we talked about for some time, by their employment in what we call non-covered industries, that is, industries which do not have [fol. 1526] to pay any Social Security tax, induction into the Army, death, or unemployment. There is no way of knowing what happened to that other number. Some of them may have gone into agriculture, for example, which is a non-covered industry. Some may have gone into the Army.

So, on the effectiveness of the transfer, as I said earlier, that the people were moved from the gold mining industry is quite clear. There is more data in that sample survey that I have talked about on where these people were at a specific time later on than in any other survey. If my memory serves me rightly, it accounted for something on the order of 2,000 to 3,000 people, but I can't be sure of those figures at this time.

By Mr. Barnes:

Q. Still as part of the offer of proof, Mr. Lipkowitz, in your opinion will you tell us whether or not the order was a failure to the extent that people moved to industries other than non-ferrous mining?

A. I don't believe so, because the Labor Production Division at that time was concerned with getting more employees for shipyards, aircraft plants, construction plants, and a multitude of other industries which it would be very difficult to name completely. For example, the foundry industry. We had several of our people in the War Production Board going out to individual foundries to do some-
[fols. 1527-1528] thing about determining why people left foundries.

Again we came to the same problem, dirty jobs. It was a whole series of these industries which were seeking labor at the time. It is my opinion, and it was certainly our opinion in the Labor Production Division at the time, that the movement of these people from gold to any other productive industry was a net gain to the economy from the point of view of availability of labor.

[fol. 1529] Cross-examination.

By Mr. Rigney:

Q. Congress never passed a statute during the war which gave the War Production Board or any other agency of the Government power to compel labor to move from one place to another, did it?

A. No. I believe a request was made by President Roosevelt, but it never was acted upon.

Q. Bills were introduced to accomplish that purpose, weren't they; specifically, the Austin-Wadsworth Bill?

A. Yes.

Q. And Congress refused to enact any such legislation, didn't they?

A. I don't remember all the details. I remember the Austin-Wadsworth Bill, and I presume that it included a feature there which I am sure was not included in subsequent legislation.

Q. No so-called draft labor legislation was ever passed?

A. Not as far as I know.

Q. Your testimony was, I believe, that you became actively interested in this proposal to close the gold mines in June or July of 1942?

A. To the best of my memory, yes.

Q. And from then on until the order was issued, you had a great many meetings and conferences and discussions of it, [fol. 1530] is that right, sir?

A. Yes.

Q. You would agree with me, wouldn't you, that you were the most active member of the staff of the War Production Board in furthering this order, from the time it was originally proposed? In other words, no one took a more active part than you did in endeavoring to get this order adopted?

A. I think it is unfair to ask me to characterize my activities. You are asking me to appraise my activities relative to other people's activities at the same time. I don't think I am the best judge of that.

Q. I am not asking you to assay the quality of your work or anybody else's. I am just asking you if there was anyone in the War Production Board, to your knowledge, who was as active as you were in support of this order, from the time it was first proposed or that you first started working on it?

A. Well, there were other people. For instance, Mr. Buchanan, my associate, was equally active, although he happened to be away on field trips part of the time, so he obviously couldn't be active during the time he was away.

Q. So would you agree that you were more active than anyone else?

A. In the earlier stages, yes. I am not sure that I was, for example, in the last week or two before the order was issued, because frankly, in the last week after that October [fol. 1531] 1st meeting, I knew almost nothing about what was happening to the order until it was issued on October 8. Who was active in what way in that period, the Lord only knows. I don't.

Q. Then you would say that in June and July of 1942 until the 1st of October, you were more active than anyone else in support of the order?

A. Probably, but it is hard for me to know exactly who else was active on other—you see, there were several levels in the War Production Board at which these things were

taking place, and I didn't have direct access, for example, to Mr. Batt and Mr. Nelson. I don't know who may have been very active on that level.

Q. Just based upon your own personal knowledge of the meetings that you have testified to, the discussions that you say you participated in, limiting it to your personal knowledge, can you give us the name of anyone who was more active than you were in the period from June to October 1st, say, 1942?

A. I can't say that anybody was more active.

Q. This started out as a means of getting gold miners into the copper mines in October 1942, this proposed closure order?

A. All non-ferrous mines. Copper was the symbol, so to speak.

[fol. 1532] Q. But all of the discussion, as far as you recall, in the summer of 1942, say, June, July, and August, concerned the desirability of getting gold miners into the non-ferrous metal mines, is that right?

A. That is right.

Q. Did there come a time in September or at any other time when you decided that maybe it wouldn't be successful in that regard, although it might get them into something besides copper mining?

A. I would say that we always recognized that you had no compulsive powers over individuals; that you could not direct them completely and irrevocably as to where they would go.

Q. You couldn't direct them in any way, could you?

A. Well, you had a voluntary freeze order which was a governmental order which presumably would influence people.

Q. But all the freeze order did was to keep those who were there, in the spot they were in?

A. That is right, but it also publicized, sir, the importance attached by the Government to those industries, over and above other industries which were not so singled out.

Q. Publicized their importance, you say?

A. Yes, and their importance from the Government's point of view, and the desirability of having adequate labor for those industries.

[fol. 1533] Q. But it had no effectiveness or no power whatsoever to accomplish a transfer of labor from one place to another, did it?

A. No.

Q. So what you were really faced with was the fact that you couldn't move one gold miner from his gold mine to any non-ferrous metal mine unless he wanted to go, could you?

A. We obviously could not compel a person to move against his wishes.

Q. He had to be willing to go voluntarily, didn't he?

A. Yes. Perhaps you could induce him to go by a variety of incentives or inducements or disincentives, but you could not say to him, "You must go there."

Q. What were the causes of the shortage of copper miners as they existed in 1942? What would you say the causes were for the out-migration of copper miners and all non-ferrous metal miners?

Let me just ask you this, parenthetically: The copper miners represented the largest body of non-ferrous metal miners, didn't they?

A. Yes, particularly in the West, because lead-zinc is in the Middle West and in the East, whereas there is very little copper in that area.

Q. Copper was far more important numerically, as far as numbers of miners, than all the others put together?

[fol. 1534] A. Probably. I don't remember the exact figures, but that wouldn't be badly off, certainly.

Q. What do you say the causes were for the out-migration of non-ferrous metal miners from the mines in the summer of 1942?

Mr. Barnes: I object to that as assuming a state of facts not shown in the record: that there had been an out-migration of copper miners.

Mr. Rigney: He testified on his direct that there was.

The Commissioner: Overruled.

The Witness: There was an out-migration. There isn't any question of that. But——

By Mr. Rigney:

Q. Would you please now tell me what the reasons for that were?

A. The causes, as we saw them, were numerous. One was the relatively low wages paid in copper mining as compared with alternative employment opportunities—construction, shipbuilding, et cetera.

Two: That in these other industries, the opportunity to work more than 8 hours a day at overtime pay was readily available, whereas in many States the State law prohibits more than 8 hours' work per day underground.

Three: The occupation has certain hazards and risks which I believe are recognized in insurance, which are not [fol. 1535] present to the same degree in other industries.

Four: The replacement of, shall we say, normal turnover which occurs in any plant, was particularly difficult for the metal mining industry because the wages and the other factors were unfavorable and more people had, say, skill in one or another type of construction work than would likely have skills, let us say, in underground mining. So you had a very small supply.

Going back a long ways, part of the difficulty is that a large part of the mining labor supply comes from original immigrant families, and the flow of immigration, which was not completely checked but greatly reduced in the 20's, had a great deal to do with cutting off the long-range new supply of labor to the mining industry.

The depression——

Q. I am asking you to confine your answer now to reasons for the 1942 out-migration that you were testifying to. Confine it to that.

A. This bears on the fact that you could not get people to replace them because you could not train new people in this industry for the reasons I cited.

Q. Do any other reasons occur to you, any other important reasons?

A. In particular cases, questions were raised as to the availability of adequate housing; other factors which had [fol. 1536] particular application in particular places, but were not an over-all factor, like relatively low wages as against construction.

Q. Some of these miners were being lost to the non-ferrous metal mines by reason of Selective Service in 1942?

A. Oh, yes, of course, but that was true of almost every industry.

Q. You spoke about housing. Were you acquainted with the housing conditions at or near the principal copper mines in 1942?

A. No, I was not at that time, except in Michigan, which I had visited earlier that year.

Q. I see. You had no knowledge of that.

A. Not personally, no.

Q. But you did know, from whatever source you derived your information, that housing conditions were not good?

A. These were the statements that came in from various field offices of the War Manpower Commission.

Q. That the housing conditions were not good?

A. In a particular area, or inadequate; that we needed more people and there wasn't enough housing.

Q. In the non-ferrous metal mine areas?

A. Yes.

Mr. Barnes: All, or some?

The Witness: Some. I wouldn't say that it was wide-
[fol. 1537] spread, I don't know whether it was widespread, but it certainly wasn't universal.

By Mr. Rigney:

Q. When were you with the Tariff Commission?

A. From January 1941 to December 1941.

Q. What were your duties there?

A. Assistant and Associate Economist.

Q. You referred to being in Michigan on duties for the Tariff Commission; is that right?

A. No, for the War Production Board.

Q. For the War Production Board; I see.

Are you familiar, from your service with the Tariff Commission, with a study which the Tariff Commission made with respect to the copper range in Upper Michigan?

A. Yes.

Q. You know about that, don't you? Have you read that study?

A. Yes.

Q. When did you read that?

A. I helped prepare it.

Q. When was it completed?

A. In the first half of 1941. I am not sure whether it was

May or June, or maybe late April. I don't recall just the exact date. I think May.

Q. Didn't that study disclose that there had been a con- [fol. 1538] stant loss of copper miners to the industrial areas, particularly Detroit, which had gone on for some time prior to the completion of your study?

A. It was beginning at about that time. The difficulty with that is that the emphasis in our study was on the fact that there was a large hard core of unemployed up in the Michigan area because total employment in Michigan copper had declined over a long period of time, as the figures would show. Copper production figures had gone down. Until 1941, there had been really a hard core unemployment problem, a major relief problem. It was so characterized in various Government surveys, I believe.

At just about that time the tide was turning, but there was not a real total shortage of labor in Michigan at that time. It was merely exercising its influence in the sense that people were no longer willing to work, let us say, for the wages that were being paid in Michigan at that time, because employment opportunities in Detroit and in other areas there were opening up, and these people said, "We can get more there, and let's go."

Q. They were leaving the copper regions for that reason?

A. Yes. But we didn't feel, if I remember correctly, that there was any immediate labor shortage at that time; that this was more or less taking up the slack of unemployed [fol. 1539] which had existed up to that time.

Q. But you found that people were leaving the copper mines at that time to take work in Detroit and other industrial centers because it was more attractive to them?

A. Yes.

Q. You knew there was that migration of labor going on?

A. Definitely.

Q. Did you know Gustav Peck?

A. Yes.

Q. He was Special Adviser to Donald Nelson on manpower problems, wasn't he?

A. Yes.

Q. Prior to October 8, 1942, when this order was issued, did you ever discuss the order with him?

A. I am not sure that I did.

Q. Can you tell us whether or not——

A. I know I discussed it at various times afterwards, but I don't remember discussing it before.

Q. Did you discuss this proposed closing order during the summer or autumn of 1942 with anybody from the War Department?

A. Yes, I am sure we did.

Q. Who did you discuss it with from the War Department?

A. Certainly Mr. Harbison.

Q. He was the representative of the Services of Supply, [fol. 1540] was he, on this Interdepartmental Committee?

A. Let's see his exact title, which appears on one of these things.

Q. His title is not important.

A. He was in the Services of Supply. I don't know the exact division or branch.

Q. You discussed it with him on several occasions?

A. Yes.

Q. Anybody else from the War Department that you recall?

A. There was a Captain Long. If you would mention some names, I am sure I could remember one or the other.

Q. You were there, and I wasn't. I thought maybe you could remember.

A. I thought maybe you had the record of some of these meetings, because some of these people who were there would certainly——

Q. Did you discuss it with anybody from Secretary Patterson's office?

A. We had a meeting with Mr. Mitchell.

Q. James P. Mitchell?

A. Yes, James P. Mitchell. I believe he was attached to Mr. Patterson. He presided over that meeting. This was not a personal discussion, but obviously a group like this, and everybody talked.

Q. Could you fix the time——

[fol. 1541] By Mr. Barnes:

Q. "Like this"—are you referring to counsel table for plaintiffs or defendant?

A. Both.

By Mr. Rigney:

Q. Can you fix the time, as near as you can, by months?

A. I would imagine July, but I think that is mentioned here, if my memory serves me right.

Q. Mr. Mitchell was the consultant to the Under Secretary of War on Industrial Labor Problems, wasn't he?

A. I don't know.

Q. That may not be the precise title, but that is the kind of work he did?

A. That is the main idea, yes. I don't know what his precise title was.

Q. Coming to this meeting of September 30 which you have testified about, do you remember if Congressman Case was at that meeting, now Senator Francis Case, of South Dakota?

A. I know one of the Legislators from South Dakota was there, and I will say, frankly, I can't remember whether it was Gurney or Case.

Q. I see.

A. One of them was there. Which one, I am not sure.

Q. Do you recall about the following day, October 1st, [fol. 1542] meeting, that they were there at that time, Mr. Case and Mr. Gurney?

A. I believe so.

Q. Don't you remember Congressman Case, either on September 30 or October 1, having a specific discussion with you with regard to the figures which you were advancing as the number of men who would be made available for non-ferrous mines if the gold mines were closed down? Do you recall having some man-to-man discussion with him about that?

A. I am sure that we discussed the situation. What precisely we discussed——

Q. Do you recall that he took rather vigorous exception to the total figures which you had? Do you remember that?

A. No. I don't recall that. I am not saying that it didn't happen. I just don't recall that.

Q. I understand. I am just trying to assist you now in your recollection. Do you remember anything about Congressman Case pointing out to you that he had been at Homestake, and that he knew what the setup was at Homestake, their hospital, their offices, and so on?

A. Yes, I remember that.

Q. Do you recall that he pointed out that a great many of the approximately 2,000 employees of Homestake were people who were nurses, doctors, clerical people; that a great many of them, at least, were not underground miners? Do [fol. 1543] you remember that?

A. Yes.

Q. So there was a rather violent clash of opinion between you and Congressman Case with respect to the total figures of men then engaged in gold mining, wasn't there?

A. It depended upon one's definition of gold mining, yes.

Q. Do you recall that at this meeting of October 1 when you waved these Forms 732D, I think you call them, do you remember if you had one from Homestake?

A. I think I did, but I couldn't be absolutely sure now.

Q. You can't be sure?

A. I think I did, but I can't be sure.

Q. Do you remember Mr. Bjorge's furnishing figures? You remember Mr. Bjorge, the General Manager?

A. Yes.

Q. Do you remember his furnishing figures as to Homestake's employees at this October 1st meeting?

A. Yes. Individuals around the table furnished them on each of the mines that they represented. I know that he did, too.

Q. Let me show you Plaintiffs' Exhibit 24, the memorandum of October 3, 1942, from Wilbur Nelson to W. L. Batt. Would you look at that and tell us if you have ever seen the [fol. 1544] original of that or any copy of it?

A. I have seen the figures in this, because I think these figures were made up from that meeting on October 1, that evening, and I stayed for that meeting. I think those figures are also reproduced, in part at least, in this document. I don't know whether I ever saw the document, as such.

I would say this: I certainly did not see that document, as such, before the gold mining order was issued. Whether I saw it afterwards, I don't recall.

Q. But you saw the figures set forth there?

A. Yes. I was present at the meeting at which these were put together.

Q. The figure given, so far as miners and muckers at Homestake are concerned, was 421, is that correct?

A. That is stated, yes.

Q. If you had the Homestake Form 732D there; did you find that there was any discrepancy between it and the figure that Mr. Bjorge furnished there as 421 miners and muckers from Homestake?

A. Let me put it this way: I don't think that the 732 Form showed miners and muckers separately. I think it did show total underground employment. It did show surface employment—smelter, mill, et cetera, and auxiliary. So you could not have a completely comparable figure. There are other employees underground besides miners and [fol. 1545] muckers, as I am sure you know.

Q. But the great bulk of them are miners and muckers, who work underground, aren't they?

A. Yes, but there would be no way of checking whether there was or was not any difference, because the two things are not strictly comparable.

Q. Do I understand that you have no recollection now of having the Homestake Form 732?

A. As I said, I don't remember whether I did or not.

Q. But presumably, if you did, you would have checked that against the figures that Mr. Bjorge furnished, wouldn't you?

A. I would have looked at them, definitely.

Q. You have no present recollection, have you, of finding any discrepancy, if you did make such a check?

A. On the basis of the various suppositions, I would say yes.

Q. You would say "yes" or "no"?

A. I mean assuming all the suppositions——

Mr. Barnes: You have no recollection?

The Witness: I have no recollection.

By Mr. Rigney:

Q. That there was any discrepancy?

A. That is right.

Q. Isn't it fair to say that when these figures were fur- [fol. 1546] nished at this October 1st meeting, you disagreed or disbelieved the industry representatives as to the accuracy of their figures?

A. May I qualify that answer? I didn't necessarily ques-

tion the accuracy of a figure for a particular company. All I said was that this was not a total for the gold mining industry, and that there were a number of mines on which, as I said earlier; I had reports in my hands as of an earlier date which showed employment which were not separately listed here, which led me to believe that the total of men available from other mines here was a drastic understatement.

Q. You thought that there were two or three times as many people employed in gold mines at that time as are reflected in the figures gathered at this October 1 meeting, didn't you?

A. No, I don't believe so. I think I was talking in terms of something like 5,000.

By Mr. Barnes:

Q. Total?

A. Yes.

By Mr. Rigney:

Q. When you said 5,000, was that your over-all figure for the employees of all gold mines, regardless of what kind of work they did?

A. That was an over-all estimate, yes.

[fol. 1547] Q. Were you including in that the clerical people, women?

A. No. This would include wage earners, but not salaried employees, the customary thing which is shown in the forms of employment, which excludes clerical and supervisory help of that sort.

Q. I see. Male wage earners, excluding the groups that you have indicated?

A. In this case, male wage earners would be perfectly appropriate, because females would be quite limited in a mining operation.

Q. Isn't it a fact that at this meeting of October 1, there were representatives of gold mine companies accounting for more than 75 per cent of the total production, gold production, in the country at that time?

A. I don't know, frankly. I haven't checked it. One of the difficulties, as you know, is that a lot of gold production

comes from mines which are not gold mines, and there was no way of getting precisely the gold production from strictly gold mines at that time, without a great deal of research.

Q. When did you first begin to assemble figures on the total employees of the gold mines? Would that be in June or July?

A. Approximately. As I said earlier, I can't give any [fol. 1548] closer recollection than that.

Q. You were giving your attention to that from June or July through September, presumably, is that right?

A. Yes.

Q. Did you during that time make any personal visit to any of the gold mines to determine how many people were actually employed there?

A. No.

Q. You did not?

A. No.

Q. Had there been a time prior to the October 1 meeting when you had a figure substantially higher than 5,000 as the number of people who would be available?

A. Let me put it this way: When we started to work on the problem—I can't fix the precise date, but it was somewhere in the June-July period there—we started to try to get data from various sources. We came to figures of employment in the BLS, in the War Manpower Commission, and in the Bureau of Mines' tabulation, and we recognized that in all these cases the definitions were such as to include mines which would not be gold mines from the point of view of the purpose of any gold mine closing order, that is, to route this labor to mines producing lead, zinc, copper, et cetera, that were considered essential. We obviously didn't want to close down the Howe Sound Copper Mine in Wash- [fol. 1549] ington, which had a very high gold content, because it also produced 8,000 or 9,000 tons of copper. I am giving that as an example.

So the problem was taking those figures and then trying to break them down to something which more closely approximated where one would draw a dividing line.

The same problem came up in the administration of Order P-56, when you had a level of 30 per cent gold and

silver, and then the problem hit a lot of important mines, and exceptions had to be made.

Mr. Rigney: Would you read my question back?

(Thereupon, the question was read by the reporter.)

By Mr. Rigney:

Q. Now, could you give us an answer to that question?

A. I don't know that I definitely had a figure. I think we did cite figures of larger employment in an earlier period.

Q. Let me direct your attention to Plaintiffs' Exhibit 129 in evidence, the minutes of the Interdepartmental Committee on Non-Ferrous Metals dated August 25, 1942, and I invite your attention to page 4, where it says:

"Mr. Raushenbush asked for some information on the probable number of gold mine workers who could be transferred."

Incidentally, this cover sheet reflects that you were in attendance at this meeting.

[fol. 1550] "There was no definite agreement on just how many would be obtained. Data from the Bureau of Employment Security as of March 31, 1942, indicated that there were some 12,000 workers employed in lode gold mines and probably an additional 6,000 in placer operations, but these totals have to be revised because there has been a heavy withdrawal of workers from the gold mine industry since then."

Does that refresh your recollection that in August of 1942, you at least furnished figures substantially higher than 5,000 as the number?

The Commissioner: Did he furnish those figures?

The Witness: That is the question I was going to ask. Does it say that I furnished them?

Would you mind answering my question?

By Mr. Rigney:

Q. You are here to answer the questions, sir, not me.

The Commissioner: Just a minute. I think that the question to the witness is improper because it hasn't been established.

Mr. Rigney: Very well. I will withdraw the question, Your Honor, and proceed from there.

By Mr. Rigney:

Q. Did you participate in this discussion at this August 25 meeting?

[fol. 1551] A. Yes, I am sure I was present at the meeting. I remember a meeting with Mr. Raushenbush present.

By Mr. Barnes:

Q. Who was Mr. Raushenbush, incidentally?

A. He was the representative of Mr. Ickes from the Department of the Interior. I don't know what his exact title was; but he was sort of liaison between Mr. Ickes and the Bureau of Mines, I believe.

I am not sure that I furnished these figures. In fact, I would think that I did not, because it says "data from the Bureau of Employment Security," and I believe people from the Bureau of Employment Security were present.

I can't say that I didn't, because I don't recall that, but I am sure that these figures were not figures that we relied upon heavily, because we knew, and I will make this quite clear, that the Bureau of Employment Security did not have a good definition of the different mines as to what they produced. There were mines like Mammoth St. Anthony in Arizona, which we found was classified as a gold mine, produced very large amounts of lead and zinc. That is one I remember. There were others.

So I feel very certain we did not rely on total figures like this. It may have been a figure from which we began to make calculations in the absence of better data at the time, but I am sure that we did not rely on those totals.

[fol. 1552] By Mr. Rigney:

Q. Would your memory serve you or by reference to this August 25 minutes would you be able to tell us what your recollection is as to the figure which you had at that time, August 25?

A. It is very difficult for me to try to estimate what estimates went through my mind at different times in that kind of period.

Q. Would you say it was more than 5,000 at that time, in August 1942?

A. Perhaps, but I couldn't be certain.

Q. Will you look at Exhibit 22, minutes of September 8, and they reflect that you were in attendance there.

At the top of page 4 is a paragraph reading:

"In a discussion of the proposed gold order, it was the firm belief of the members of the committee that gold mining was now a non-essential industry and that even if the manpower released by the gold order was not directly transferred to copper, lead or zinc mining, it still might help relieve the shortage of labor in other war industries such as aircraft and shipbuilding."

I would like to ask you whether or not that expressed your view at that time?

A. In part, I would say that it did. I don't think that was the main reason for it, but we felt that if that did [fol. 1553] happen, and if worst came to worst and none of the people were moved to non-ferrous mining, it would still help relieve the shortage of labor in these other industries. We had confidence, however, that the worst wouldn't come to that worst.

Q. Do I understand that the figures which were attached to Plaintiffs' Exhibit 125, page 7, were assembled by your division or under your direction?

A. Yes.

Q. You personally, I mean?

A. As much supervising as was feasible in those hectic days. I took the responsibility. Whether I actually had a chance to review the figures themselves, I don't know.

Q. Would you agree with me that no large proportion of the gold miners went to strategic metal mines as a result of the Order L-208?

A. It depends on the definition of "large." I would say certainly less than half. I don't recall the exact figures. There were, as I pointed out to you earlier, differences in methods of calculation and computation on whether it was as of a certain date, as of a later date, how long they said, et cetera.

Q. Didn't you testify on March 11, 1946, before the Engle Committee, in response to the question right here, on page

117, "Do you think that many of the gold miners went to [fol. 1554] the strategic metal mines as a result of that close order?" and you answered, "I would say no large proportion of the men actually went to the strategic-metal mines as it was hoped would go."

A. Grammatically, it is incorrect. I don't recall now, but I probably said that it was not as large a proportion as was expected to go, and that I would heartily subscribe to. You would agree this is ungrammatical, I am sure.

Q. Is it your recollection that that question was asked and that you gave that answer?

A. Yes. I don't doubt that the question was asked or answered. I am not sure as to how well I was recorded or how well I spoke. Shall I say that.

Q. Do you remember on the same occasion, page 118, being asked the question by Mr. Byrnes of the committee:

"But you take a whole industry, the purpose of closing down those gold mines was to get more miners into the non ferrous metal mines. That was the basic purpose?"

And did you answer: "Yes"?

A. Yes.

Q. Were you then asked:

"It did not accomplish that purpose, did it?"

and did you then answer:

"The order did not accomplish it fully. You had no control of people going," and so forth, as appears here: [fol. 1555].

A. Yes, I did, that is right.

Q. You testified, I believe, that you came to the War Production Board in December of 1941, did you say?

A. December 15, I believe was the date.

Q. What was the first knowledge that you gained from any conversations or any communications that you received in the War Production Board, of a movement to close down the gold mines? How early did you hear anything about such a move?

A. I don't recall the exact time, but I recall being struck by this fact: When this thing was published in a review copy, Special Study No. 9, for review within the Board, I was struck by the fact that there had been discussions earlier, late in 1941 and early in 1942, of which I knew nothing at

the time of my becoming involved in the discussions in June-July, 1942.

Q. After you started working on this problem yourself, there came a time, didn't there, when you learned that even prior to Pearl Harbor, proposals had been put forward to close down the gold mines?

A. There came a time, but I am not sure whether I learned that before the order was issued or not, frankly. I did know about the hearings before Senator McCarran's committee on P-56, but I didn't know about these discussions which had in effect preceded P-56. P-56 was on the books [fol. 1556] and this was the order. I didn't know how it had come to be, so to speak.

By the Commissioner:

Q. What was your introduction to the problem? How did you get started on it?

A. My introduction to the problem was that I was working on the availability of manpower for non-ferrous metal mining. People were leaving in numbers the non-ferrous mines. This was considered an important industry by the War Department and other people, and we were being urged somehow or other to get labor for these industries.

One of the avenues to which we turned in the attempt to get more people was an attempt to get labor from the gold mining industry.

Q. You haven't answered my question. Did you do it on your own, or did someone tell you to do something?

A. Frankly, I don't remember how it came up.

Mr. Barnes: May we take a recess?

The Commissioner: Yes, we will take a recess.

Mr. Rigney: Your Honor, I will try to conclude very shortly after that.

(Thereupon, a short recess was taken in the hearings.)

By Mr. Rigney:

Q. You referred to Mr. Wendell Lund. What was his position in the summer of 1942?

[fol. 1557] A. He was the head of the Labor Production Division, succeeding Mr. Sidney Hillman.

Q. Where did your particular branch or office fit into the scheme of things with relation to Mr. Lund? I mean, were you under him in the chain of command?

A. Beneath him, yes, but not directly. For a time Mr. Richard Lester was the head of it.

By Mr. Barnes:

Q. Labor Priorities Division?

A. Labor Priorities Division at that time. The names changed so frequently that I can't remember them. Under him came several people, like Mr. Buchanan, who was my immediate superior, who had charge of basic industries like non-ferrous or textiles or steel, or something else. I was Mr. Buchanan's assistant.

By Mr. Rigney:

Q. I see. Do you know, did Mr. Wendell Lund represent Donald Nelson as a sort of liaison representative with the War Manpower Commission? Was there a time when he had a dual capacity?

A. I believe that was one of his roles in that. Later that office, as you know, split into two parts, Labor Requirements Division and Labor Production Division. I don't know. One CIO, one AF of L.

Q. But directing your attention to, say, September 1942, [fol. 1558] did Mr. Lund occupy this dual capacity at that time?

A. I believe so, yes.

Q. Mr. Lipkowitz, in your consideration of this problem of the issuance of Order L-208, I presume, regardless of what the figure was of the total of the employees in the gold mines, you took into account that there would be some who would not go to the copper mines or anywhere else, because of age, did you?

A. We recognized that that would be a factor.

Q. Did you take into account that there would be some of them who would be required to stay in the gold mines where they worked for maintenance purposes?

A. Yes, of course.

Q. Did you also take into account that perhaps because of reasons of health or other personal reasons, there would be others who would choose not to go to the copper mines?

A. Quite likely.

Q. And that there would be others of them who would prefer to take employment in the community in which they lived?

A. Quite likely.

Q. Let me ask you this: Was there anything about the gold miners as a group which caused you to believe that employment in the copper mines would appeal to them more than it had to the people who had left the copper mines to go [fol. 1559] into these other industries that you have mentioned?

A. No——

Q. Or to put it the other way, did you recognize that the same forces which had caused the out-migration of the copper miners prior to October 8, 1942, would be operating with respect to any gold miners that were willing to go to the copper mines as a result of the closedown?

A. We of course recognized that there were all of these factors operating in any one of these industries. One of the purposes of this Interdepartmental Committee was to take such action on the interdepartmental level—wages, Selective Service, manpower freeze, gold mine closing order, housing, and any other factor, I can't recall all the factors, but the idea was to bring together all of the agencies of the Government that had to deal with specific aspects of this and try to get a coordinated action on this.

As I think you remember, there were releases made which pointed out that this gold mine closing order was part of an interdepartmental program to do something about the whole manpower problem. There was the War Labor Board wage case, in which the War Labor Board finally acted to raise the "Little Steel" formula especially for non-ferrous metal mining because it was felt that that would help attract labor to this industry.

There were all of these things. I can't recall all the [fol. 1560] details, but the movement was as a coordinated move to take account of all these factors to help.

Mr. Rigney: Could I have the question read back, and the first part of the answer?

(The record was read by the reporter as requested.)

By Mr. Rigney:

Q. If I could just have a direct answer to that question whether or not you recognized that these factors were operating?

A. We recognized that these factors were operating, and we were doing our best to mitigate the effects of these factors by operating on the wage, on the Selective Service, on the manpower freeze, and all the other aspects that were mentioned, and have been, I am sure, put into the record in these various hearings.

Mr. Rigney: That is all.

Redirect examination.

By Mr. Barnes:

Q. Just one or two questions, Mr. Lipkowitz.

You were asked about your degree of relative activity, I suppose is the proper phrase, in the negotiations and discussions which led up to the issuance of Order L-208. Were there other people who were pushing for the issuance of such an order at that time?

A. Oh, yes. There were people in the Planning Division [fol. 1561] under Mr. Nathan. There were people in the War Department who were frequently consulting us. There were Mr. King and other people in the Copper Division.

Q. What was Mr. King's position in the Copper Division?

A. Mr. Harry King was head—Director, I believe, was the title, of the Copper Division.

[fol. 1562] Q. Were there any others that you recall?

A. I would say, broadly speaking, that most of the people who attended these interdepartmental meetings were concerned with the problem. There were several, obviously, who were not sympathetic or, shall I say, were skeptical of the effects, primarily on the grounds of the effectiveness of the transfer of men in terms of what it would do for production in copper, et cetera.

Q. Limiting yourself to these people you have referred to in the War Production Board, people in the Planning Committee, staff, Mr. King in the Copper Division, for example, where did they stand in the hierarchy of organization as compared with you?

A. Well, my answer to that is that Mr. King was a dollar-a-year man who probably would have been getting $10,000 a year if he were on a salary at the time by virtue of his position. At the time that I joined the War Production Board I was making $3,800. I may have had one raise by that time, although I doubt it. I think that is a reasonable explanation of the political heirarchy. Mr. King in effect had a position at least equivalent to that of Mr. Lester, and I indicated that I was at least two notches down. I would say that in influence probably Mr. King had more influence than Mr. Lester and probably more than Mr. Lund, who was Mr. Lester's superior.

[fol. 1563] Q. Do you recall in any of the discussions that you had with the representatives of the gold mines—did you have any other than this meeting of October first, to begin with?

A. Yes, I believe we talked with Mr. Bjorge in Mr. Lund's office, Mr. Bjorge of Homestake Mines, I believe.

Q. Do you recall any discussion at that time by Mr. Bjorge or other representatives of the gold mining companies as to other activities which they might undertake in the event that their gold mines were shut down?

A. I remember references to them. I can't be sure that the reference came in that meeting from Mr. Bjorge or whether it came in these other meetings with somebody else reporting them, but I do remember the references to a manganese mine in lower California, a vanadium mine in Idaho or Montana, I am not sure. The company also operated a lignite mine in one of its operations. I believe it produced timber for its own operations, maybe selling some. It had a very large workshop. As I recall it, I don't know whether they actually did, but I understand there was some mention of their workshops being used as subcontractors in the war effort. Whether that actually happened I am not sure.

Q. Do you recall whether there was any discussion at any time as to the increase in the timber supply or increase in the general availability of lignite to other consumers as a result of closing down the gold mines?

[fol. 1564] A. The assumption was that the timber——

Mr. Rigney: I object to assumptions.

The Commissioner: Sustained.

By Mr. Barnes:

Q. Did you give any consideration to that factor yourself?

A. I assumed that this would be available.

Mr. Rigney: I object to his assumption and move to strike.

The Commissioner: It may be stricken.

By Mr. Barnes:

Q. Do you recall whether or not the matter was ever discussed? Did you recall ever discussing the matter with anybody?

A. I remember these facts being mentioned. I don't remember any extensive discussion of the effects of them.

Q. With respect to Mr. Lund's position at this time, did you testify on cross-examination that he maintained liaison between the War Production Board and the War Manpower Commission?

A. Yes, that was the function of our division headed by Mr. Lund. I am not sure, but I believe he was actually on the Board of the War Manpower Commission. I am not certain of that, but I believe that that was the form in which the WPB exercised some voice in the divisions of the War Man-
[fol. 1565] power Commission, although a minority voice, obviously.

Mr. Rigney: That is Wendell Lund as distinguished from R. J. Lund?

The Witness: Oh, yes, Wendell Lund, the head of the Labor Production Division.

By Mr. Barnes:

Q. You were asked whether you considered the possibility that some of these displaced gold miners might prefer to accept employment in the communities where they lived, and you said you had given that some consideration, is that correct?

A. Yes.

Q. Do you recall discussions or arguments advanced by gold mine companies or by congressmen to the effect that the closing of the gold mines would make these communities ghost towns?

A. Yes, I believe I referred to that earlier.

Q. Were you in any position to evaluate the possibilities of employment in a ghost town?

A. I think it would have to be conceded that the phrase is not susceptible to precise evaluation. It is a term. I don't know what the definition of a ghost town is. I think it is just common, general usage and I think quite well understood by people in those terms.

Q. Did you at any time after the closing of the gold mines [fol. 1566] visit any of the communities where they were located?

A. I drove through Lead, South Dakota, in July 1949.

Q. But at no time during the close down?

A. No, not in the short period immediately before or after. I did get to Colorado, to Denver, in I think it was the summer or fall of 1943. I did drive around the environs of Denver and saw some of the smaller lead-zinc mines in the neighborhood, but I didn't get down to Cripple Creek, for instance.

Mr. Barnes: That is all.

Recross examination.

By Mr. Rigney:

Q. If you took into account that there would be some of these gold miners who, for the reasons that I asked you about before, would not go to the copper mines, that would accordingly reduce the number that would be available, would it not?

A. Obviously. That is mathematically so.

Q. You were aware, of course, of the distance between the principal copper mines and the principal gold mines, were you not?

A. Yes, but we were also aware of the fact that Anaconda had made arrangements, for example, to pay for the transportation of these people.

Q. You mean had perhaps offered to pay for the trans- [fol. 1567] portation?

A. Yes, that is right. May I explain that obviously I did not try to do this single-handed, and when a fact of this nature was reported to me by the War Manpower Commis-

sion I accepted it as a fact. I had no reason for doubting it and I had no reason to check it on my own.

Q. But with respect to Anaconda, what had happened was that they had perhaps made an offer to pay transportation. When you said they had made arrangements, you didn't mean by that that they had concluded some kind of binding agreement with a group?

A. I didn't know the precise form in which the arrangement took place. As I said, it was not my function.

[fol. 1568] IN THE UNITED STATES COURT OF CLAIMS

[Title omitted]

Transcript of testimony—February 14, 1953

TESTIMONY FOR DEFENDANT (Resumed)

The hearing was resumed, at the time above indicated, pursuant to the recess previously taken.

(Present: The same appearances as previously noted.)

Mr. Barnes: Mr. Anderson, will you come up, please?

HARVEY A. ANDERSON, a witness produced on behalf of the defendant, having been first duly sworn by said Commissioner, was examined and, in answering to interrogatories, testified as follows:

[fol. 1569] Direct examination.

By Mr. Barnes:

Q. Will you state your full name, please?
A. Harvey A. Anderson.
Q. By whom are you employed at the present time?
A. Western Electric Company.
Q. In what capacity?
A. Chief of the Raw Materials Development Department.
Q. What academic training have you had?

A. Graduate Engineer, Bachelor, Engineering Degree [fol. 1570] from Northwestern University.

Q. When did you receive that degree?

A. My Bachelor in 1915; my Engineering Degree in 1916.

Q. Would you describe for us briefly your experience since that date?

A. I spent my entire life in the development of materials, initially employed by the Southern Pacific Railroad, and was brought to Washington during World War I to work on materials at the Bureau of Standards and the National Advisory Committee for Aeronautics.

In the last 32 years I have been with the Bell System, ten years at the Bell Laboratories, and the last 22 years with the Western Electric Company at the Hawthorn Works at Chicago.

Q. When you refer to the development of materials, would you explain a little more what that entails?

A. The Western Electric Company is a builder of telephone equipment, and my responsibility is to specify and attempt to insure the utilization of the material which is most economical for the application. We attempt to build telephones as cheaply as possible, and still without elements in them that will fail and give trouble in service.

I have worked on metals and non-metallics for the Bell System at both the Bell Laboratories and the Western Electric Company.

[fol. 1571] Q. During World War II, were you employed by the Government in any capacity?

A. Yes. I was brought down, first, at the instigation of Dr. Jeffries to work on the utilization of the die-casting industry, in April 1941, in connection with the OPM. I was initially on a dollar-a-year basis, and then subsequently at the request of my superiors I went on Civil Service status, but still retained my connection with the Western Electric Company, from which I was on leave of absence then.

Subsequent to the work on the die-casting, my services were enlisted in connection with the possible savings in critical materials. As such materials became more and more scarce, it was necessary to make substitutions and effect conservation.

Q. With what division were you connected?

A. In the latter two-thirds of my term here, I was Deputy Director of the Conservation Division.

Q. What were the general duties or responsibilities of the Conservation Division?

A. We attempted, in so far as possible, to screen the Government requisitions which came out of the military organization and to see if we could not obtain a reduction in the amount of materials that they said they needed and, failing that and realizing the necessity for those materials, we attempted in so far as possible to divert those materials [fol. 1572] from civilian applications to the extent that it didn't cause suffering or dislocation of industry any more than was necessary, and to channel those materials into the Government, at the same time, as I say, trying to assure that the Government didn't utilize them wastefully.

Q. Did your activities at any time involve the possible substitution of one type of material for another?

A. Constantly.

Q. In what respects did that arise? Was that confined to civilian or did it include military, too?

A. Both.

Q. How did it arise in general?

A. The OPM, later the WPB, had statistical staffs which computed the available supply of materials, and those being checked, scrutiny of the requisition of the military services indicated that we needed more materials than were available, and progressively more and more materials became scarce in our economy; and as those materials became scarce we attempted in so far as possible to suggest materials which at that time were not as scarce, and suggest their use in place of the scarcer materials.

Q. Directing your attention to the summer of 1942, Mr. Anderson, do you recall what the materials situation was that existed at that time?

A. The materials situation was extremely tight. One of [fol. 1573] our first activities had been on aluminum, and the next material to become extremely tight was copper. The military were saying that they couldn't make enough cartridge cases to satisfy the firing needs of the Army in the field if larger supplies of copper were not made available to them. A great deal of our effort was directed toward attempting to reduce the use of copper for all unnecessary

needs, both in and out of the military services, and suggesting the use of other materials, particularly with respect to ornamentation and decorative items that might be made out of copper.

The WPB, in successive orders, proscribed the use of those materials.

Q. Do you recall approximately when the first order which had limited the uses of copper was issued with respect to the outbreak of war, say?

A. It was prior to Pearl Harbor. It was in the fall of 1941.

Q. Had there been, between that date and the summer of 1942, amendments to that order?

A. Yes, numerous amendments, more restrictive.

Q. Did those restrictions apply to civilian or military uses of copper?

A. The restrictions applied primarily to civilian uses, but they were also, in certain applications where the use of copper wasn't deemed to be essential, also applied to the [fol. 1574] military services.

Q. Had the effect of those successive restrictions been to bring the demand for copper into balance with the supply by, say, August of 1942?

A. Far from it.

Q. To what extent, in the summer of 1942, was the demand for copper a military demand, do you recall that?

A. It was very largely military demand. Cartridge cases were the outstanding example, and we were working in the War Production Board at the time in an attempt to make steel cartridge cases, which seemed to be the only way. With all of the restrictions placed upon copper and the limited supply available, it was not enough to make enough cartridges to take care of the needs.

Q. Had the restrictions that had been imposed on copper been on all uses, or on only large uses of copper?

A. They had not been on all uses. There were some places where it was impossible to substitute copper and where copper was utilized in connection with the war effort. If there were any applications which we were able to determine, we prohibited the use of copper in those items unless it was considered to be absolutely essential to the successful prosecution of the war.

Q. Was that regardless of the amount of copper used in that application?

[fol. 1575] A. Yes. It extended into items which were relatively small users.

Q. You spoke of the study you had made on the possibility of steel cartridge cases. Do you recall whether or not those ever were successful and the Army ever used steel cartridge cases?

A. Yes. They got into production in small quantities in 1943, but there had not been a successful steel cartridge case developed in 1942. It was too deep drawing operation to be successful in steel at that time.

Q. Do you recall in connection with the copper situation giving any consideration to the use of copper in our coinage?

A. Yes. One of the items which we seriously considered was the substitution of copper in pennies, and I talked with Nellie Tayloe Ross, the then Director of the Mint, and we explored the possibility of changing over to low carbon steel, which was more abundant than copper at that time. The Treasury played ball with us and went along with it, and we substituted the steel penny with a flash coat of zinc on the surface, which I have been reviled and persecuted about ever since. It was called the "Anderson penny."

Q. Do you recall what the use of copper was by the Mint in pennies, on an annual basis?

A. The consumption of copper by the Mint for pennies ran about 300 tons a year. In the year and a half in which [fol. 1576] they minted steel pennies, we saved about 400 tons of copper.

Q. In round numbers, during 1942, for example, what was the consumption of copper in this country?

A. I don't recall the figure.

Q. How did 400 tons compare with it? Is it a large or small figure?

A. It is a very small fraction of the total consumption.

Q. There has been some mention here of the use of materials other than copper in bus bars. Did you have anything to do with that?

A. Yes, we worked with the Treasury Department attempting to reduce the immobilization of large quantities of copper in the form of bus bars, and we continued our search to find materials which were not performing their full func-

tion in the war; and it seemed to us that silver, which was a high conductivity material closely approximating the conductivity of copper, might serve suitably as bus-bars in an aluminum or magnesium reduction plant, of which there were a number under construction at the time.

We talked with the Assistant Secretary of the Treasury, and Lessing Rosenwald, who was my immediate superior at that time, and I went over to see him several times, and finally worked out an arrangement whereby the DPC, the Defense Plant Corporation, borrowed from the Treasury something over a thousand tons of silver which was in stor-
[fol. 1577] age in the vaults at West Point. We had that melted down and rolled by Revere out in Detroit, and it went into the aluminum reduction plants in Maspeth, Long Island, and a plant outside of Portland, and some in the magnesium plant down in New Mexico or Texas. That silver was loaned to us by the Treasury Department on the understanding that it would be continually guarded, and that at the conclusion of the war it would be remelted into the small bars in which it is stored in the Treasury vaults at West Point and returned to the Treasury Department without loss or contamination.

It was used to a considerable extent successfully, and it released an equivalent amount of copper for cartridge cases and other essential uses.

Q. Would you explain for the sake of the record what a bus-bar is, what its function is?

A. A bus-bar is a conductor of electricity. It is a large cross-section piece running two to three inches thick and perhaps eight to ten inches or more wide, which conducts the power which is used in the electrolytic reduction of aluminum, which is a very high consuming electric energy reduction process. Also, similarly in the reduction of magnesium. It is a case of separating the metal from its oxide in order to make it available for fabrication.

Q. Do you know whether or not any of those silver bus bars went into what we generally came to know as atomic
[fol. 1578] energy plants?

A. Yes, it did. At that time Mr. Nelson had delegated me to certify essential applications for the use of bus-bars, and one application which he did not delegate to me was known as the Manhattan Project. I wasn't in the confidence of Mr.

Nelson with respect to the atomic energy preparations, but some of those silver bus-bars went down to the place down in Tennessee where they initially started the production of the atom, the spitting of the atom.

Q. Referring to copper, can you recall any other substitutions that were made during 1942 or that were under consideration during that period?

A. The substitutions were legion. I spoke of the fact that we attempted to restrict all uses in ornamentation, and we attempted in so far as possible to utilize glass and other ceramic materials; and at the time lumber was more abundant than metals, in some cases we substituted wood for applications. We even got into a discussion of the desirability of restricting the use of brass for church vessels. There was a considerable controversy over that.

Q. You mentioned a few minutes ago that the first metal that had been critical, so far as the relationship of supply to demand is concerned, was aluminum, is that correct?

A. That is correct.

Q. When did that become critical, do you recall?

[fol. 1579] A. Early in 1941. When the plane production program got under way, we didn't have anywhere near the production of aluminum that was necessary for the manufacture of planes for the Air Force.

Q. Had any steps been taken with respect to aluminum to reduce its consumption in non-military uses?

A. Yes. One of the A-1 orders or M-1 orders, as I recall it, was on aluminum, the first one of the conservation orders that was put out. That prohibited the use of aluminum, but the opportunity for saving by taking aluminum out of the domestic economy was far less than it was for copper, of course, as you know, because at that time the aluminum applications were relatively limited relative to those of aluminum and copper now.

Q. Incidentally, do you recall whether during this same period there were attempts made to increase scrap recovery of these metals, aluminum and copper, for example?

A. Yes. Associated with the same group that I was a member of in the OPM was a salvage group, and they conducted scrap drives throughout the country and succeeded in enlisting the services of not only the scrap dealers, but also patriotic organizations throughout the country to col-

lect old metal. That was refined under Government supervision for specified applications.

Q. Incidentally, do you remember the so-called pots and [fol. 1580] pans drive that was conducted in the fall of 1941?

A. I do, and I remember a great deal of criticism was attached to it because they said a lot of the piles of pots and pans stayed out in the village square and were the object of scorn for some time thereafter, but there was a real attempt made to collect all of that aluminum which could be secured.

Q. By the summer of 1942, what was the relationship of the supply of aluminum to the existing demand?

A. It was still extremely short. There was a large program of expansion of aluminum producing industry which, just like the production of synthetic rubber, had not yet attained large proportions in its expansion.

Q. What proportion did the aircraft requirements bear to the total demand for aluminum in 1942?

A. They were a very large percentage of the total demand.

Mr. Barnett: Your Honor, this is very interesting, but we were wondering as to the exact materiality of this testimony to the issues presented in this case.

Mr. Barnes: Your Honor, I hesitate to read this again. I have read what I consider to be the mandate of the Court so many times to counsel. The allegation of the petition, as the Court phrased it, is that the order went beyond what was required by the exigency of the situation existing in [fol. 1581] October 1942. I have to show what the exigency of the situation was, what the necessity was for reducing all non-essential consumption of critical materials. This testimony is offered for that purpose.

The Commissioner: I don't hear any objection.

Mr. Barnett: It is not made in the form of an objection, Your Honor. It is just that we felt it was not quite material.

The Commissioner: Unless I hear an objection, you may continue.

Mr. Barnett: We will make the objection, Your Honor, that it is immaterial.

The Commissioner: Overruled.

Mr. Barnes: What was the last question and answer?

(Thereupon, the last question and answer was read by the reporter.)

By Mr. Barnes:

Q. Do you recall whether or not there were any other military requirements for aluminum in 1942?

A. Yes, there were certain shipboard applications in which the attempt was to reduce the amount of load on the ship, and the shipbuilding industry required quite a lot of aluminum.

Q. Had there been any consideration given to the substitution of other metals for aluminum?

A. Yes.

[fol. 1582] Q. In what connection, if you can recall? Were there any military applications where that had been done?

A. Yes, there were a number of military applications in the form of trim, and of non-functional uses of aluminum.

Q. Does magnesium share the characteristic of aluminum of lightness of weight?

A. Yes.

Q. Is it available generally as a substitute for aluminum?

A. It isn't available in anywhere near the volume that aluminum is. Magnesium is a third lighter than aluminum, but it is more corrosive and is not suitable for substitution in many applications. It has never been developed to the extent that it is available in anywhere near the quantity of aluminum.

Q. Generally, what was the situation with respect to the supply and demand for magnesium in 1942?

A. It was short. The Air Force was planning to build the hubs of landing wheels for aircraft out of magnesium because it offered the lightest strong metal that was available.

Q. You referred to the fact that steps were under way in 1942 to increase the production of aluminum. Had anything comparable been done in the field of copper?

A. I know of no major additions, large facilities, but there had been attempts made to stimulate the production of [fol. 1583] copper. Harry King, Chief of the Copper Divi-

sion, had worked with us and used the material which we had prepared in some cases to indicate the great need for increasing the amount of copper, and foreign copper was being imported as far as it could be secured, to meet our shortages.

Q. What was the situation that existed in the middle of 1942 with respect to iron and steel?

A. Iron and steel were tight. The shortage of steel was in certain fabricated forms primarily, and in alloy steels. The alloying elements, such as nickel, chromium, vanadium, and manganese, were extremely tight, and the shortage of manganese restricted the potential production of even carbon steel, which is plain, every-day, ordinary steel, but which requires manganese in its manufacture. It also uses aluminum as a deoxidizer, which was one of the applications of aluminum.

Q. Incidentally, is molybdenum an alloying element? You didn't refer to it.

A. Yes, molybdenum is used in alloy structural steels, and molybdenum is also a substitute for tungsten in high speed steel and in certain other types of heavy duty tool steels.

Q. I take it from your description that the shortage in steel was perhaps a more selective shortage, is that correct?

A. That is correct.

Q. In what shapes or forms of steel was the shortage [fol. 1584] most acute in the summer of 1942?

A. Sheet and strip steel, and certain structural members.

Q. What do you mean by "sheet and strip"? Does that include plate, for example?

A. Heavier plate was not in as tight supply as strip, which is thinner sheet steel, a thinner grade of steel than plate steel.

Q. Had any steps been taken to cut down the uses of steel during this period?

A. Yes, sir. There was a Limitation Order applied to steel, and applications of steel, particularly of the shapes, which were shortest and most in demand by the military, had been proscribed.

Q. Do you recall the issuance of a steel order, which I think was called M-126, which listed a considerable number of prohibited uses of steel?

A. Yes.

Q. Did you have anything to do with the formulation of the schedules for that?

A. Yes, I did. We worked with the divisions which were directly responsible for putting out the orders of the War Production Board, and we attempted to temper the restrictions they made so that, if possible, we would not prevent the use of steel for essential applications which could not [fol. 1585] have a substitute suggested for them.

Q. Do you recall, with respect to the inclusion of items on that list, whether an attempt was made to weigh the amount of steel that was used?

A. Yes, there was.

Q. Did you adopt a different criterion, for example, for the use of steel in bicycles and in bird cages? Would that be a fair example?

A. A difference between bicycles and bird cages, you mean?

Q. Yes, would you use different criteria as to whether you included those in an order of that type?

A. Both of them would be placed on the order if it was felt that it could be done with minimum effect on the essential economy. In some cases the amount of steel that could be used, though, was definitely specified, but manufacture was still permitted.

Q. There has been some discussion here of a controversy with respect to whether or not the manufacture of bobby pins would be permitted. Do you recall anything of that type?

A. It was prohibited.

Q. Do you recall when that step was taken?

A. Sometime in early 1942, as I recall it.

Q. Was there a substitute available for bobby pins that you know of?

[fol. 1586] A. Yes, plastic was a successful application to bobby pins. I guess it is used extensively now, more so than steel.

Q. Is steel used in certain types of bottle closures?

A. Yes.

Q. What types use steel?

A. Most of these crimp caps on soft drink bottles are a thin grade of steel with a non-ferrous plating on them, a surface coating, to prevent corrosion, or enamel.

Q. With respect to that particular usage, do you recall what action, if any, was taken with respect to that?

A. Yes. There was an attempt made to insure the re-use of the caps and to salvage them. There used to be baskets in the stores which you were asked to put your caps in, so they could be reused.

Q. Were there any other types of containers that had metal closures?

A. Yes, zinc caps. We worked with the Ball people out at Muncie, Indiana, on the reduction of the consumption of zinc for the caps for Ball jars, and we worked with the American Flange people who make closures for gas tanks and shipping drums, and suggested—our whole attempt was to get a material which was further down in the criticality ladder, and for that purpose we published, beginning back in 1941, lists of all types of materials which indicated Class 1 materials, which were insufficient to take care of the mili- [Fol. 1587] tary and most essential civilian needs; Class 2, which was in approximate balance, in which the supply and demand were not appreciably different; and Class 3, in which the materials were in excess of demand. We circulated those lists through publications of the War Production Board, and also through all the technical journals, and attempted to get the industry of the country to utilize more abundant materials.

Q. Do you recall, for example, whether or not gold ever appeared on any of those lists?

A. Gold appeared on all of them.

Q. Where did it appear?

A. Class 3, in which the supply exceeded the industrial demand.

Q. Did you know of any essential needs for gold at that time?

A. Yes, there were limited needs for gold for lining certain types of laboratory apparatus. There were certain chemical reactions which required a material as noble as gold to avoid corrosion in the chemical reaction.

Most of the other uses, though, that came to our attention were in the form of jewelry, and items which were prohibited from using the more critical materials.

Q. What was the magnitude, if you know, of the essential uses of gold that you have referred to?

A. The industrial uses of gold have always been a very [fol. 1588] small percentage of the total production, I should say a fraction of one per cent of the annual production.

Q. Had Western Electric, for example, ever used gold in any applications?

A. Yes. We used gold to some extent in laboratory apparatus, and the back of the diaphragm in the transmitter had a plating of gold on it. The diaphragm of the transmitter vibrates with the voice of the speaker, and the electrical connection to the rear of this thin aluminum diaphragm was gold for nobility and lack of high resistance, which was insured over a long period of time with a plating of gold.

Q. Was that still true in 1942?

A. No, sir.

Q. When had that substitution been made?

A. In the late 30's. We had used gold previously also for contacts in relays in central offices, but that had been replaced some time before by palladium.

Q. What is palladium?

A. Palladium is one of the precious metals of the platinum group, which is produced very largely as a by-product in connection with the production of nickel at the Sudbury Mines in Ontario, Canada.

Q. With respect to the alloy steels which you mentioned, what were the permitted applications of alloy steels in 1942, [fol. 1589] as you recall them?

A. They were used in one application for tools, the machining of metals, in the forming of metals, drawing. They were used in certain applications in engines, motors, particularly in applications where hot gases and corrosive gases were used in connection with internal combustion engines.

Q. Referring specifically to the tank construction program in this country, do you know whether alloy steels were used in those at all?

A. They were, yes.

Q. In what connection?

A. The treads on the tanks were made of alloy steel, and some of the knuckles and bearings and parts which got most extreme wear.

Q. Is manganese steel considered to be an alloy steel?

A. Yes, when manganese exceeds a fraction of one per cent.

Q. But if it is described as manganese steel, would you generally consider it to be one of the alloy steels?

A. I would, yes.

Q. What was the situation in this country with respect to the production of the various alloys used in alloy steel?

A. The production of alloys generally was far short of the needs. We import a great many of the alloys which are used in making alloy steel. About the only alloy material [fol. 1590] which we have in this country in adequate quantities is molybdenum, at Climax, Colorado, where we are the largest producers in the world. But nickel, which came from Canada, chromium, which was imported from abroad, and tungsten, which very largely is obtained aboard, and most of the alloying elements, had to be obtained outside this country, except for relatively small proportions in this country. Our deposits are poor and rather lean ore.

Q. Do you know whether or not any attempt was made during 1942 to develop sources of supply of those metals in this country?

A. Yes, there were. We did a great deal of prospecting and attempted to increase the production from the mines that are relatively small producers in this country.

Q. What was the supply and demand situation with respect to tin, Mr. Anderson, in 1942?

A. Tin was extremely tight. Tin came from Bolivia and from Malay. The production from the Southeastern corner of Asia, of course, was already cut off, and the Bolivian supply was insufficient for our needs. The War Production Board put into effect various conservation orders to limit the use of tin in solder and tin in coatings, and it stimulated the development of the lacquered beer can and similar applications which had been considerable users of tin in the past. [fol. 1591] Q. The can that we popularly call a tin can—what is that actually made of?

A. It is a hot-dipped coated electro-plated tin on the surface of soft steel, carbon steel.

Q. Do you recall whether or not there were restrictions placed upon the manufacture of that type of can during the war?

A. Yes, there were. These restrictions which were placed were not done without consideration of the needs of the industry, and in attempting to insure that our action would be as reasonable as possible, we enlisted the help of people from industry, and out of a source of about 125 that we had in our Conservation Division, we had men from many of the large industries which had been recruited, thanks largely to the help of Sidney Weinberg, who succeeded because of his position on the Boards of Directors of various companies in pulling out technical men so as to bring them down there and help us to insure that our action would be as intelligent as possible.

I bring that up because one of our major assistants in the Conservation Division was the Director of Metallurgy of the American Can Company, and just as in all the rest of our actions, we attempted to utilize the skill of the technical men that we had recruited from the various companies interested or affected.

[fol. 1592] Q. What substitutes were available for the so-called tin can?

A. Glass bottles, of course, are the very obvious and logical answer, and we attempted to get tin cans replaced by glass bottles for the packaging of beverages, and we had a limitation on the number of types and designs of bottles that could be used, because the manufacture of new molds took some of this tight alloy steel which was one of our major items of conservation.

Q. You refered to a lacquer-coated beer can. What do you mean by "lacquer coat"? Was that a substitute for tin?

A. Yes, that is an organic paint-like material which is used on the surface of the steel to prevent corrosion and to preserve the taste of the fluid that went in.

Q. Do you recall having given any consideration to the use of silver in solder?

A. Yes. The Handy and Harman people, the chief silver people who put out quotations on silver, had for years been pushing silver solders for certain applications, and in the shortage of tin we recommended a number of applications using silver solder in place of tin-base solder, common solder being 50 tin-50 lead, or even 60 tin-40 lead solder, and not only cut the amount of tin down but also suggested the use of silver solder in place of tin solder.

Q. Does the use of silver completely eliminate the use [fol. 1593] of tin in the solder?

A. Yes.

Q. Do you know whether that was adopted to any extent?

A. To the extent that it was economically feasible to do it.

Q. Do you know whether any attempts had been made or were in progress in 1942 to increase our tin supply?

A. Yes.

Q. What was the nature of those, if you recall?

A. We arranged for the establishment of a smelter down at Texas City, Texas, which was put up with DPC funds and largely under the sponsorship of the War Production Board, in which we imported ore and refined it in this country for the first time in history. We always had been at the mercy of the foreign refiners. In the past, tin had been largely taken from Bolivia to England where it had been refined and then shipped in to us.

We succeeded in getting a certain amount of it brought directly into this country and refined at this smelter which was established in Texas.

Q. Do you know whether or not that smelter is still in operation?

A. It was the last I knew of it.

Q. How long ago was that?

A. The last I heard about it was several years ago.

[fol. 1594] Q. What was the situation with respect to the supply and demand of lead in 1942?

A. Lead was not in as tight supply in 1941, but it began to assume shortage status in 1942. Lead was never as short as tin or a number of our alloy materials, but it got onto Section 1 of our critical list in 1942.

Q. Had any attempts been made to reduce the uses of lead?

A. Yes. One of the large consumers of lead is my own company, which has used it for years for sheathing telephone cable, and we developed a new plastic polyethylene coating for cable sheath which enabled us to reduce the consumption of lead considerably. There were a number of other applications of lead bearings where we succeeded in getting the users to use thinner bearings instead of the thick bearings that they had used in such things as journal boxes.

Q. That is in railroad applications?

A. Yes.

Q. What about the familiar toothpaste tube? What is that made of?

A. A good share of them are made of aluminum now, but they used to be lead alloy collapsible tube for toothpaste.

Q. Do you recall whether or not any restrictions were placed on those?

A. I recall consideration of it. I don't remember what [fol. 1595] the extent of the action was.

Q. Do you have the recollection which I seem to have, of having to have a used tube of toothpaste to buy a new one?

A. Yes, I remember now that we had to exchange a tube when we got a new tube.

Q. Was the material in those tubes salvable?

A. Yes.

Q. What, if anything, had been done or was in progress in 1942 to expand our supply of lead?

A. My particular interest and knowledge are concerned more with utilization than it is with production. I think I ought to state that. My knowledge of the extent of the stimulation or increase of production is limited, and I am not qualified to testify on that, although I was acquainted with the fact that an attempt was being made by the departments of the War Production Board to stimulate production.

Q. Where does your lead come from? Is that domestically produced, or does it come from foreign countries?

A. A good share of it comes from this country. We get a lot of it from up in Trail, British Columbia, and we import quite a lot from Australia. But a good share of our lead is produced in this country. The tri-state field out in Southeastern Missouri is the only producer of the chemical lead, the major one, that we used in our telephone sheath.

[fol. 1596] Q. What was the situation that existed in 1942 with respect to the supply and demand for zinc?

A. Initially, we attempted to divert demand for aluminum into zinc. It was my first job and that of my predecessor in the War Production Board to attempt to get the die-casting industry of the country, which had been using aluminum for raw material, very largely over into the production of zinc-based die castings; and attempting to sell the Ordnance

Department and the other agencies of the Government on utilization of zinc-based die castings.

Of course, one of the major uses of zinc was as an alloy with copper in cartridge brass, and in 1942 the availability of zinc had also gotten to the point where the demand exceeded the supply.

Q. Was that true of all forms of zinc? Does zinc come in different forms?

There is a reference here to zinc dust. That is what I was thinking of specifically, Mr. Anderson. What is zinc dust as distinguished from zinc? Is there a distinction?

A. Zinc dust, as I recall it, is a pigment that is used in paints and protective coatings. That was one of the considerable users of zinc dust.

Q. Was zinc in that form in as short supply as zinc generally? Are the two interchangeable?

A. It is extremely wasteful to attempt to convert zinc [fol. 1597] dust to slab zinc if you largely limited the future conversion back to slab form instead of the dust form.

Q. Is it produced in the dust form, or do you have to create the dust form? Do you know that?

A. I think that you have to create the dust form, although considerable zinc dust is collected by the Cottrell process and in the smelting operation there is recovery of zinc from the flue dust.

Q. What was the situation in 1942 with respect to the supply and demand for rubber?

A. The cutting off of our supply of rubber from large plantations in Southeast Asia made it look like we might not be able to operate our tanks and military vehicles and our airplanes because of the lack of tires for land purposes, and the rubber situation was extremely critical, of course, when the President created the Baruch Committee and gave them the job of studying the possibility of early production of synthetic rubber. The program was given a high priority on the War Production Board list, and some of these critical materials which had so many demands were channeled into the provision of equipment and facilities for the manufacture of synthetic rubber, which is a combination of styrene, butadiene, two chemicals which are largely the form of tires that we are using today, synthetic rubber.

Q. Was the synthetic rubber program in process during [fol. 1598] 1942?

A. Yes.

Q. What was the supply and demand situation with respect to mercury, if you recall?

A. Our supplies of mercury used to come very largely from Spain. We had relatively small occurrences of mercury in California, and the mercury supply was insufficient for the need. The mining of mercury in California was stimulated, as well as attempts being made to get additional quantities from abroad.

Q. Incidentally, is mercury considered to be a mineral?

A. Yes.

Q. In its classification?

A. It is a liquid mineral. It is the only mineral, the only metal, I should say, that is liquid at room temperature.

Q. In addition to some of the shortages of raw materials which have existed, can you tell us whether or not there was a shortage of facilities for fabricating raw materials in 1942?

A. Yes, very definitely. The War Production Board was engaged in a program attempting to stimulate the production of additional iron and blast furnaces and also rolling mills, and expand the facilities for both ferrous and nonferrous metal production throughout the country.

Q. With respect to steel, is there any difference between steel in its slab or ingot form and steel fabricated into a [fol. 1599] finished item with respect to the availability of the two?

A. I think I answered that question earlier, stating that the tightest form of steel was in certain thin sheets and structural shapes.

Q. What about the general availability in this country in 1942 of machine tools?

A. They were extremely tight. That was considered one of the bottlenecks of the war, the insufficient supply of machine tools for processing metals into usable form.

Q. Do you recall the issuance by the War Production Board of Limitation Order L-208, which required the closing of the gold mines?

A. I do.

Q. What connection, if any, did you have with that?

A. One of the requirements that Mr. Nelson had established was that the Conservation Division should review all conservation and limitation orders that were adopted, and give our opinion as to whether or not the action was justified and whether it would produce benefits to the country and the prosecution of the war. We gave such an opinion prior to the promulgation of Order L-208.

Q. Was that part of what has been described here as the clearance process?

A. That is right.

[fol. 1600] Q. Let me show you this document and ask you whether that is a copy of the comment which you made with respect to the proposed Limitation Order L-208?

A. That is correct.

OFFER IN EVIDENCE

Mr. Barnes: I offer this in evidence as Defendant's Exhibit 52.

(Plaintiffs' counsel examining document.)

By Mr. Rigney:

Q. Is there any other document that you prepared, Mr. Anderson, prior to the issuance of L-208, in which you expressed any views on the proposed order, or is this the only one?

A. Mr. Barnes has abstracted from the files all that he could find with my signature.

Mr. Barnes: May I say, Your Honor, that this document was taken from the Secretary's file of the War Production Board which has been made available to counsel for the plaintiffs for examination by them. I will look through it and see whether there are any other memoranda bearing Mr. Anderson's signature.

Mr. Rigney: The reason I asked that question, Your Honor, was because Mr. Anderson said he gave an opinion with respect to—I don't know the exact word he used—the advisability or desirability of the order, L-208. I don't think that this particular document conforms to the descrip-

[fol. 1601] tion that he gave in his oral testimony as to

what his written opinion was, and I wondered if he had something else in mind in addition to this.

I raise no objection to the admissibility of this particular document.

The Commissioner: It may be received.

(Said memorandum, dated 9-16-42, from Harvey A. Anderson to Dr. Marcellus H. Stow, Chief, Mining Branch, War Production Board, was marked as "Defendant's Exhibit No. 52," and was admitted in evidence and made a part of this record.)

The Witness: As I recall it, Your Honor, the document to which counsel refers is probably an endorsement on a form on which we designated our concurrence in the opinion of the other departments of the War Production Board, which I endorsed as the representative of the Conservation Division.

Mr. Rigney: I don't mean to interfere with the order of your examination.

Mr. Barnes: That is all right.

Mr. Rigney, the file contains a memorandum written by Mr. Anderson November 3, 1942, with respect to Amendment No. 1 to the Order; a memorandum of July 28, 1943, with respect to a proposed amendment to the Order. It does not contain any other memorandum relating to the original issuance of the order. The file is available for you if you want to examine it.

[fol. 1602] Mr. Rigney: Thank you.

So that I am clear as to just what the answer was that Mr. Anderson gave with respect to the opinion, could I have that answer read back, Your Honor?

The Commissioner: Yes.

(Thereupon the record was read by the reporter as follows:

"Q. What connection, if any, did you have with that?

"A. One of the requirements that Mr. Nelson had established was that the Conservation Division should review all conservation and limitation orders that were adopted, and give our opinion as to whether or not the action was justified and whether it would produce benefits to the country and

the prosecution of the war. We gave such an opinion prior to the promulgation of Order L-208.")

By Mr. Barnes:

Q. Mr. Anderson, would you describe for us generally the so-called clearance procedure that existed in the War Production Board in 1942 with respect to orders?

A. The order was prepared by the division having cognizance of the particular material or operation that was under consideration, either on its own initiative or by instructions from the Chairman's office; and in the prepara-
[fol. 1603] tion of that order, consultation was usually had with the technical people in other divisions who were considered qualified to advise, and at the conclusion of the order, the drafting of the order, a copy of it was sent around for perusal and comments or concurrence by each of the some 25 or 30 bureaus of the War Production Board. In many cases, of course, a bureau having no direct relation to the problem under consideration simply endorsed it as having seen it, but the departments which were affected were expected either to suggest changes or to express their concurrence.

Then that document showing the consideration by all of the departments was returned to the Clearance Committee, and they passed the order and sent it up for official issuance.

Q. Was the Conservation Division represented on the Clearance Committee?

A. Yes.

Q. Can you tell us whether or not you had any policy as to whether the Conservation Division would ever merely endorse one of these things to show that it had seen the order, or whether it would always offer comments?

A. The Conservation Division had the responsibility of attempting to evaluate the interrelation of various materials in our war economy to the extent that divisions having specific assigned responsibilities did not have, and therefore
[fol. 1604] our advice was sought. And it was my policy, in charge of the work of this group, to insure that they did give serious consideration to all of the orders, and we usually made suggestions that were incorporated into the draft or influenced the action on all of the orders which were adopted by the War Production Board.

Q. Turning specifically now back to gold mines, to your knowledge what critical materials were used in gold mines, materials in critical supply in 1942?

A. Outside of the human type of materials, which we were not so particularly concerned with, the gold mines used critical steels in tools, they used critical materials in hoses conveying air and water, for handling some of their liquid ore. They used mercury in reduction processes.

Q. What was the situation, for example, with respect to items such as generators and compressors?

A. They were extremely tight, and the synthetic rubber program, the aluminum and magnesium program, and the copper, zinc, and lead mine programs, all required that type of equipment and in quantity greater than they were available.

It was on a definite priority list in which the War Production Board indicated—it got to the point where they definitely allocated each machine, told the manufacturer where to ship specific machines as he completed them.

Q. What was the situation with respect to seamless steel [fol. 1605] tubing?

A. It was another tight item.

Mr. Rigney: I was wondering if this is still confined to the gold mining situation, or is he testifying generally now about that?

Mr. Barnes: I might say, Your Honor, I am reading from Defendant's Exhibit 42, and from the preceding exhibit, the number of which I don't have immediately available, which shows a list of some items that Homestake had indicated as its requirements for the year 1942.

Mr. Rigney: I was just wondering whether the witness was directing his testimony now to the gold mining requirements, or generally.

Mr. Barnes: I am asking him generally at the moment. I think the other material in the record ties this up as being material desired by at least one gold mine.

By Mr. Barnes:

Q. Do you know whether or not the types of machines used in gold mines are in use in other types of mines?

A. Compressors and hoists, and a number of items of equipment, are common to other types of mines.

Q. Would that be true, for example, of drills and other underground tools?

A. In certain types of mining, yes, they use drills. In copper mining they use drills, and also use explosives which [fol. 1606] are used in gold mining.

Q. What was the situation that existed in 1942 with respect to fabrics such as burlap?

A. Burlap was tight. It comes largely from the Philippine Islands, and all of the materials which are imported from abroad, particularly that part of Eastern Asia, were in extremely tight supply.

The Commissioner: We will recess for five minutes.

(Thereupon, a five-minute recess was taken in the hearing.)

[fol. 1607] By Mr. Barnes:

Q. Do you recall what the situation was in 1942 with respect to items such as cotton sheeting and cotton duck, Mr. Anderson?

A. Well, long staple cotton from Egypt was extremely tight, but the cotton supply in this country, as I recall, was not acute.

Q. What about the situation with respect to graphite? From what sources does our graphite come, particularly the crucible grade of graphite?

A. The cruible grade graphite is largely imported, and it was a tight commodity, one that was controlled by the War Production conservation order.

Q. What are crucibles used for?

A. Melting metal. They are used in the refining operations, in the manufacture of products from metals.

Mr. Barnes: That is all I have on direct examination.

Cross-examination.

By Mr. Rigney:

Q. Now, Mr. Anderson, as I followed your testimony here this morning, you have endeavored to give us a general pic-

ture of what the situation was in 1942 and during the war period with respect to these various critical items that you have mentioned; is that right?

A. Correct.

[fol. 1608] Q. You have done it without reference to notes or memoranda of any sort, but based upon your own recollection and your own knowledge of what the situation was; isn't that right?

A. That is correct, that is my profession.

Q. Now, have you had any experience in your own career in mining, in the production end of mining?

A. No, sir. I have been down in gold mines in Colorado and observed it, but I have never been engaged in mining operations. But I am a member of the American Institute of Mining and Metal-urgical Engineers, and I have attended their conventions for a great many years and heard a great many papers, but not by direct employment in a mining enterprise.

Q. When was this visit to the gold mine that you mentioned?

A. In 1936 or 1937.

Q. Was that just kind of a sightseeing trip?

A. It was a friend's mine, in which a friend was interested. He conducted me through.

Q. Where was that?

A. In Colorado.

Q. Now, about these various items that you have testified to which were in short supply in 1942 and during the war years, the orders which you have testified about for the conservation of those materials or for the control of those [fol. 1609] materials, limited the material which went into the end product of the various businesses or industries dealing with them; is that not right?

A. Primarily, yes, M orders.

Q. And that would be true also generally of the L orders, would it not, the limitation orders?

A. In general, yes.

Q. I remember you mentioned specifically bicycles and bird cages.

A. Counsel mentioned it; I did not.

Q. You testified on that line with respect to those items?

A. With respect to the relativity of them, yes.

Q. There was power in the War Production Board by virtue of the statutes and the executive orders whereby the War Production Board could completely control these critical materials by allocating the supply under P orders or L orders or M orders, was there not?

A. That is right.

Q. It had complete power, in other words, to control that by these various orders?

A. That was my understanding of the status of the War Production Board, yes, sir.

Q. And by specifying the quantity of the material which could go to a particular industry or a particular business or [fol. 1610] undertaking?

A. Correct.

Q. So that if you were faced with a particular problem of that sort you could cure the ailment without killing the patient, so to speak?

A. Well, we attempted that in the automotive industry, but it got to the point where we had to shut down the manufacture of automobiles entirely for passenger cars, and you recall that for a considerable period of time, through progressive reduction in the amount of supplies permitted to the manufacturers, the manufacturer was curtailed and eventually it was completely by fiat of the War Production Board discontinued. I was in conference with Mr. Charles Wilson of the General Motors Corporation during that time in which we were attempting to work out methods to continue to produce a limited number, but it got to the point where it was felt that the exigencies of the war situation required such a large percentage of the materials and facilities which were used in automobile production that we entirely discontinued the manufacture of automobiles.

Q. But that was because the automobile finished product embodied the critical material in the end product. That was because of the constituent elements that went into the making of an automobile?

A. Yes, your statement is correct, not only materials but also machines and manpower were all in short supply and [fol. 1611] necessitated a complete closing down on the passenger automobile business.

Q. And they were given war contracts?

A. That is correct.

Q. The manufacturers of automobiles, they were converted as rapidly as possible to war production?

A. Insofar as the facilities were suitable, but there were a large number of facilities which were made inoperative, which were not adapted to the manufactury of tanks and weapons carriers and other direct military vehicles.

Q. With respect to the automobile industry, there was at no time, by a single order issued, a direction given to them to shut down their complete operation within a period of seven days or any particular time, was there?

A. It was my impression——

Q. I mean by that, it was a progressive curtailment of materials.

A. With eventual complete stop of the manufacturer.

Q. Of materials going to them.

A. The order, as I recall it, completely shut down the manufacturer by suitable restrictions on the utilization of materials, facilities and manpower.

Q. By that time the automobile industry was retooled, was it not, and converted to war production?

A. Well, the automobile industry wasn't convinced that [fol. 1612] their potential production capacity was utilized in the conversion which had taken place to that date, because there were definite cries for relief, and requests for postponement of the order at the time it came.

Q. Is it not fair to say that all of the large manufacturers of automobiles, Ford, General Motors, Chrysler and others which I do not mention, were all devoting themselves almost fully to war production by the end of 1942 or the early part of 1943?

A. They were devoting a considerable part of their facilities, but they were not devoting their total manpower or productive facilities to war production.

Q. But didn't a vast amount of our war production come from those very automobile companies?

A. I agree with you 100% that a large percentage of their potential productive capacity was converted to direct war production.

Mr. Rigney: I wonder if I could see those two memos of Mr. Anderson's of November, 1943.

Mr. Barnes: Yes, they are in this file right here (handing).

By Mr. Rigney:

Q. Did it ever come to your attention .. any time that Undersecretary Patterson was advocating in the summer or autumn of 1942 the complete close-down of the soft drink industry, Seven Up and Coca-Cola?

[fol. 1613] A. Yes.

Q. You did know that?

A. Yes, sir.

Mr. Rigney: Maybe you could find those, Mr. Barnes, if you would not mind doing it, quicker than I, so it will not take so much time.

By Mr. Rigney:

Q. That was never done, was it?

A. Not to my knowledge. It was a case of shutting off facilities, rather than by fiat closing them down, the distinction I understood you to make.

Q. Wasn't Secretary Patterson's recommendation or proposal that the industry should be shut down, the soft drink industry?

A. I don't remember the details of it. When you recall it to my mind I remember having heard about it, but I don't remember the details to the extent to which he recommended, nor to which action was taken.

Q. Does your memory serve you enough to say whether or not there was ever a complete shut-down? Do you recall about that?

A. My impression is it was not.

Q. My recollection is that it was not.

A. I concur.

Mr. Rigney: That is all.

[fols. 1614-1616] By the Commissioner:

Q. Did you have any direct connection with the issuance of this order in the form of conferences with any of the top policy people over there at WPB? That is, other than the exhibit that was introduced in evidence?

A. The Conservation Division had a designated representative who was under me who sat in the Clearance Committee when the question of advisability of issuing the order

was discussed, and it was the opinion of that representative that the necessity of the war effort justified the promulgation of the order.

Q. But you did not sit in on any conferences yourself then?

A. I don't recall it, no, sir.

[fol. 1617] Robert R. Nathan, a witness produced on behalf of the defendant, having been first duly sworn by said Commissioner, was examined, and in answer to interrogatories, testified as follows:

Direct examination.

By Mr. Barnes:

Q. What is your full name, please?

A. Robert R. Nathan.

[fol. 1618] Q. What is your present occupation, Mr. Nathan?

A. I am President of a company of consulting economists, the name of which is Robert R. Nathan Associates, Inc.

Q. Where do you do business?

A. Our offices are here in Washington, D. C., although we are engaged in work quite extensively in other parts of the country and elsewhere.

Q. What is your educational background?

A. I attended the Wharton School of Commerce and Finance at the University of Pennsylvania, and received a Bachelor of Science in Economics Degree there in 1931. I continued with graduate work at the University and received a Master of Arts Degree in the field of economics in 1933.

Later, I attended law school at Georgetown University and received an LL.B. in 1938, and also took some additional graduate courses in economics at Georgetown thereafter.

Q. Will you describe your business activities since you completed at the University of Pennsylvania?

A. Most of my work after leaving the University, for a number of years was in the field of government. At the

University I was on the staff for two years while taking graduate work. I came to Washington in the fall of 1933 and worked in the Department of Commerce for seven years except for a six-month period in 1934 during which time I was engaged as Associate Director of Research of the Penn-
[fol. 1619] sylvania State Emergency Relief Board.

In the Department of Commerce, I worked principally over those years on national income; and for the last five years, from 1935 to 1940, I was Chief of the National Income Division in the Department of Commerce, heading up the Government work in that field of national income, development of estimates, analysis of sources of income and uses of income.

Also, on a part-time basis in 1934 I served with the President's Committee on Economic Security as a consultant in setting up the Social Security Law.

In the spring of 1940, I left the Department of Commerce, first on leave of absence but then permanently after a few months, to work for the Defense Advisory Commission. My first task with the Defense Advisory Commission was in charge of military and civilian requirements.

Later, I was also Associate Director of Research and Statistics of the Office of Production Management, Associate Director of the Office of Progress Reports in the Office of Production Management.

In January of 1942, I became Chairman of the Planning Committee of the War Production Board, serving also in that period on the staff and for a while as Acting Director of the staff of the Combined Production and Resources Board.

Q. When was that?

A. That was in 1942.

[fol. 1620] Q. What was it?

A. The Combined Production and Resources Board, commonly called CPRB, was designed to coordinate the production activities of the United States, Canada, and England, so as to maximize the total production accomplishments of the Allied production effort.

I resigned from the War Production Board in March of 1943, and entered the Army. Later I came back into the Government, in 1945, as Deputy Director in charge of reconversion of the Office of War Mobilization and Reconversion;

and resigned from that position on December 31, 1945.

Since that date, the only Government service I have had has been as a consultant from time to time to, for instance, the Housing Expediter, the National Security Resources Board. I believe that is all.

Q. Mr. Nathan, going back to the period of your service with defense agencies between 1940 and 1943, could you describe in a little more detail the nature of your duties in the different positions you held?

A. From the middle of 1940, when I entered work on the Defense Advisory Commission, and through 1941 with the Office of Production Management, my principal job was in the field of research and statistics, assembling data and analyzing data on the military and civilian requirements for various kinds of materials and facilities and manpower. [fol. 1621] In the setting up of requirements, we also concerned ourselves with supply, and were very active in the whole problem of coordinating supply and requirements and very active in the whole task of the setting of military and civilian goals.

I was not concerned in that particular period with the methods of allocation or the techniques of allocation. Our principal concern, I would say, above all else, was designed to bring about the expansion in the supply of critical materials and in getting the military goal up to a high level for an all-out effort.

When I became Chairman of the Planning Committee of the War Production Board in January of 1942, my principal concern and the concern of the committee then was with the basic policies of mobilization, policies of expansion, policies of the use of materials, policies concerned with the setting of production objectives, military and civilian, policies concerned with the distribution of materials in so far as techniques were concerned, policies with respect to the overall economic impact of these various goals on which we were working. Generally, broad problems of mobilization of that nature.

Q. To whom did you report as Chairman of the Planning Committee?

A. As Chairman of the Planning Committee, I reported [fol. 1622] directly to the Chairman of the War Production Board, Donald M. Nelson.

Q. What kind of work does your present company do?

A. We engage at the present time in a wide variety of economic work. I would say perhaps it might fall into three categories.

One, we do quite a bit of work for foreign governments. We have been advisers to the French Government, to the Indonesian Government, to the Israel Government, and at the present time we are working in Burma for the Government of the Union of Burma, and in Korea for the United Nations, in the development of economic rehabilitation programs in those countries, development and bringing back to productive capacity those countries.

The second category concerns representation of business corporations. We make market studies for companies. We work for airlines, shipping companies. We have represented a great many firms with the Office of International Trade on export work; with the National Production Authority on controls, all kinds of controls over the use, availability, and expansion of materials, certificates of necessity, and the like, and directly advise business firms.

Third, we do and have done work for labor unions on problems of economic policy, wage policy, and the like.

Q. Aside from the foreign governments you mentioned, [fol. 1623] can you name some of the clients of your firm?

A. For instance, we represent Commercial Metals Company of Dallas, Texas; Killark Electric Manufacturing in St. Louis; Krom ex Corporation of Cleveland; Josam Corporation of Michigan City, Indiana; Lee Brothers of Atlanta, Georgia. We just did a job for the National Cash Register Company in Dayton, Ohio. Lykes Brothers Steamship Company; North American Air Lines; Steel Tape Corporation of Jersey City.

Those are most of them, I think.

Q. Going back to 1940, your first connection with the Defense Advisory Commission, what was the situation that existed then with respect to the supply of and demand for raw materials?

A. When the President appointed the Defense Advisory Commission in May of 1940—I forget the exact day in the month—it was at that time clear that the United States had a rather vast surplus of manpower and raw materials that were not utilized. I joined the staff of the Commission

within a week after they were appointed, and our first job was to pull together estimates of requirements and supply.

It was clear that for the immediate months ahead, there would be an adequate supply of materials and manpower for any undertaking that could be mounted with the greatest possible speed. However, when we began to project what might be required under a total mobilization program, it [fol. 1624] was clear to us—I say "to us"; to the people with whom I was working in the Bureau of Research and Statistics—that under an all-out mobilization program we would not have an adequate supply of steel, copper, aluminum, zinc, and materials of that nature.

We started out by making estimates of the requirements in what one might call an indirect way, because there were no military requirements under estimated total mobilization. There was no military program which one could reasonably or readily translate into specific requirements of raw materials. So we started with the assumption, which I think was pretty obvious, that an all-out mobilization would entail full employment, putting everybody to work, and producing the maximum that the country could produce.

At that time there were perhaps eight to ten million persons unemployed, and still sizable numbers partly employed. There were obvious potentials for increasing the size of the labor force by bringing in the marginal groups, and it was obvious also that the length of the work-week could be expanded. When we took the gross national product, the total production of the economy, and projected what that total product could be under a circumstance of full employment, it was obvious that the levels of production would be far, far greater than the levels at that time.

Then we began to translate those total levels of gross national product into our estimates of the requirements [fol. 1625] for steel, aluminum, copper, and other materials which obviously would be critical in a period of total mobilization.

As early as the mid-summer of 1940, I was one of the supporters of a document, one of the signers of a document, which urged an expansion in steel capacity. That really touched off the rather sharp fight as to whether or not we should expand basic capacity. The steel industry was not particularly anxious to expand capacity, and understand-

ably, because it had been through many years in which we had been using only 30, 40, or 50 per cent of steel capacity. While some of the leaders felt that a period of total mobilization might entail serious shortages for a short period of time, that over the longer run it would be unfortunate to expand capacity and then go back to an even larger percentage of unused capacity.

The steel battle that took place culminated in a lot of reports and the famous Gano Dunn Report. Gano Dunn was an engineer of eminence who came down and supported the steel industry's contention against expansion.

The whole significance of that battle, it seems to me, evolved around and still does evolve around the concept of what an all-out effort should be, and could be, and what had to be done to achieve an all-out effort.
